

# **THE WORDS AND WISDOM OF HOWARD SCOTT**

Volume 1

Technocracy Inc.

## HOWARD SCOTT

1890 - 1970

Howard Scott was a man ahead of his time, able to discern events analyze conditions, and put them into proper perspective.

He was the Chief Engineer of a group known as the Technical Alliance. The group consisted of engineers, mathematicians, scientists, statisticians, economists—all prominent in their field—who undertook an energy survey of the North American Continent. All of this was brought on by the productive capacity of the U.S.A. at the end of WW1, which had increased despite the induction into the armed forces of much of the work force. What did this portend for the future? He guided their endeavors through to fruition in 1932.

Technocracy Inc. was formed by him in March of 1933, to inform the people of North America of the findings of the Technical Alliance, and to acquaint them with the inadequacies of the Price System and make it clear what was causing their present social problems. Howard Scott single handedly set about the task of forming an organization, undertaking lecture tours of North America to set in place the nucleus of what was to become the fastest-growing organization in North America. These tours were augmented by frequent interviews on radio and in the press. As mentioned elsewhere in this magazine, the organization continued to grow until 1947, when as previously discussed the organization went into decline. He guided it through good times and bad, never deviating from his original intention of presenting only the facts and analyzing where our misguided social policies were leading us.

HOWARD SCOTT

He remained as Director in Chief of Technocracy Inc. until his death in January of 1970.

Was he a visionary or a man of great perception? Or was he a man with an analytical brain, able to see things as they were, not as people would like them to be, or more to the point, hoped they would be? He was a man of great integrity, refusing all kinds of financial inducement to set up a harmless research foundation which would have made him rich, but would have betrayed his principles. He was concerned with the practical problems of running and organizing a modern technological society; to this end he devoted his life. Events have borne out the correctness of his analysis; the predictions of Technocracy have all proved to be accurate. Whether we as a society have the wit to take advantage of these findings remains to be seen.

## PREFACE

This volume represents the efforts of Section 3, Regional Division 8141, Technocracy Inc. to assemble the most complete collection of the spoken words and significant written material of Technocracy's Founder and Director-in-Chief, Howard Scott, as recorded by transcript, disc, wire, and tape.

An addendum contains pertinent statements and observations as accounted for by a long-term member-at-large of Technocracy Inc.

An appendix contains a reduced-size copy of the first Technical Alliance pamphlet published in 1918.

The contents are arranged in the most approximate chronological order. The blanks appearing throughout the transcript are due to either voids in the recordings, inaudible remarks from the audience in question periods, or poor clarity of the audio, making it impossible for the transcriber to decipher the words at that particular point.

EVERY ORGANIZATION HAS ITS OBJECTIVES, AND THE OBJECTIVES OF TECHNOCRACY ARE THAT WE ARE AN EDUCATIONAL RESEARCH ORGANIZATION AND IT IS OUR JOB TO KEEP AHEAD OF THE EVENTS AND KEEP THE PUBLIC OF THIS COUNTRY AND THIS CONTINENT INFORMED OF THE TREND OF EVENTS AND THE TECHNOLOGICAL DESIGN MOST CAPABLE OF OPERATING THIS COMPLEX ON THIS CONTINENT FOR THE GENERAL WELFARE AND COMMON GOOD, SO AS TO PROVIDE AND DISTRIBUTE AN ABUNDANCE TO EVERYONE WITH A MAXIMUM OF CONSERVATION OF RESOURCES -- HUMAN AND OTHERWISE.

-- HOWARD SCOTT  
June 23, 1950

## THE BIRTH OF THE TECHNICAL ALLIANCE

From an interview given to Charles H. Wood,  
Associate Editor, THE NEW YORK WORLD,  
February 20, 1921

"There is no insurmountable problem ahead of the American people. We can have prosperity just as soon as we are willing to go after it. It isn't necessary to wait a single month for Europe. Forget the German indemnity. Never mind what the League of Nations does or doesn't do. As for Congress, let Congress go ahead and talk; it doesn't matter. All that we need in order to get prosperity is sufficient natural wealth, sufficient skill, sufficient industrial equipment, sufficient labor power, and intelligent direction. We have all of these things except the last, and there is no reason under the sun why we can't have that just as soon as the technicians decide to get together."

*Howard Scott is Chief Engineer of the Technical Alliance, a new organization, with very modest headquarters at No. 23 West 35th Street. It is not a business or commercial organization. It does not intend to direct any special enterprise. It is exactly what its name implies: an attempt to get the technical men of all branches of American industry together.*

"What for?", I asked Howard Scott.

"To find out what the American people want," he answered, "and to get it for them."

*The answer was simple and inclusive but why the technical men? Are there no other interests to be consulted?*

"The technicians," Mr. Scott explained, "are the only group who know how people get things. They are not the only producers, but they are the only ones who know how production is accomplished. Bankers don't know. Politicians and diplomats don't know. If these fellows did know, they would have got the wheels started before this. They all want production -- everybody does; but those who have been running things don't know how to run them, while those who do know how have not so far considered it their business."

*It took a long time to get even that much from Howard Scott. It is evident that newspapermen rank in his eyes somewhere along with financiers and diplomats. He is an engineer, and he wouldn't argue. He would answer questions if he had the answer, but if he didn't have it, he would express no views. There are no two "sides" to any question in the minds of engineers like this. If they have the answer, there it is. If they haven't, the only thing to do is go and get it. The fact that the answer is still unknown doesn't permit the assumption that there is more than one.*

*Although the Technical Alliance has just been formed, Mr. Scott has been working at the project for several years. Not trying to get the engineer's together -- that is not an engineer's method of forming an organization. He has been getting the problem together. He has been doing research work. He has been gathering data and making charts showing just how industry is being carried on today; and, so far as he could, he has been calculating the percentage of waste.*

"The whole problem may be stated," he said, "as the problem of the elimination of waste, but waste to an engineer has a different meaning than it has to the general public. People generally think of waste only in terms of potato peelings or of spending money for what they hanker for, instead of for what they think they ought to buy. If the elimination of that kind of waste could solve the problem, China should be the richest country on earth today; but the engineer recognizes that idleness is waste, that duplication of effort is waste, and that the unnecessary exhaustion of any natural resource is waste.

"If we can eliminate idleness and duplication of effort," he said, "we may have immediate prosperity -- such prosperity as the world has never known. If we can find a way then to husband our natural resources, we may make that prosperity permanent,"

"Can the engineers and technical men do this?" I asked.

"If they can't," he answered, "nobody can. Inasmuch, however, as that is only one thing which they are trained to do, the problem does not seem difficult. The simple fact is that they

have not tackled the problem up to date. They have been trying, with gratifying success, to eliminate idleness and duplication of effort within the various industries in which they have been employed, but so far they have not thought of American industry, which means, practically, that they haven't thought of it as engineers.

"The time has come, however, when the engineer must do exactly that. We are reaching a crisis, and the technicians are the only people who can find out what to do. They must survey the whole country, tabulate its resources, discover its possibilities in natural and human power, uncover the present wastes and leakages, and work out a tentative design of coordinated production and distribution."

"And suppose you do draw up a seemingly workable plan," I asked, "what are you going to do with public opinion?"

*Mr. Scott let me know that he was vastly bored.*

"It is all a technical matter," he said. "It makes not the slightest difference whether the public knows about it or not. The steam engine didn't need a press agent. The Einstein Theory doesn't require any special legislative enactment. If the only people who can bring order out of our present industrial chaos find out exactly how to do the job, we needn't worry about the next step."

"Won't you run against some political difficulties?" I asked.

"Yes," he said, "in the same way that the well known tide ran against political difficulties in the person of His Majesty King Canute. Politics is our natural approach to matters which we don't understand. When we know exactly what we want and exactly how to get it, we get it. If we don't know what we want, we vote for it with a superstitious hope that a change -- any sort of change -- will bring it out of its hiding place. Mr. Harding was elected by an overwhelming majority because we wanted something badly, and we thought that 'normalcy' might be it. Had we been in a little more pain, we should have probably elected Debs, hoping that a change in ownership would somehow work a miracle."

"Isn't the question of ownership a vital one?' I asked.

"No," he answered. "It makes no difference who owns the sun. What concerns us vitally is whether we use it properly or not. No lovers ever quarreled about who owns the moon. Neither does it make a difference who owns the earth if we can only discover how to use it. Ownership is a myth. If we once get to using our coal and iron and our industrial and transportation systems to their full capacity, nobody will be fool enough to care whether they are owned or not.

"The engineer especially is not concerned with ownership. Technicians, as such, cannot function in politics. Their training has placed them in a position where decisions are the result of intrinsic fact and not of personal opinion, whether autocratic or democratic. They cannot function in finance because their science is one of production and utilization, not one of title or credit. They cannot function in labor unions as at present organized because these unions are mere political groups in which the individual member functions not as an individual responsible for a certain detail of the industrial process but as a voter expressing some -- usually borrowed -- opinion.

"The Technical Alliance is simply an attempt to organize the technical workers on their jobs instead of organizing them as an academic group outside. In one sense of the word, this may be called the first genuine labor organization in America, for every technician is engaged in strategically important labor and is concerned primarily with the organization, that is, the coordination, of industry.

"Technical men must necessarily look on industry as industry. The central purpose of industry -- and the only purpose which the engineer, as such, can pay attention to -- is to serve humanity. Mr. Gantt, in his very conservative estimates, proved that our present industrial machine is not giving more than 20 percent of the service it is capable of giving, primarily because the machine is controlled by business groups for business ends, rather than by industrialists for industrial ends. His figures were actually far too high, because with the elimination of the business motive would come the elimination of thousands of industries now engaged in making things which only business organizations need; and because with the machine once operating

at its full capacity, there would be such an abundance produced for everybody that we would not need to protect private property as it is protected today."

*Mr. Scott is anything but an enthusiast, and yet I have never heard, an irresponsible soapboxer make more staggering statements. To multiply the nation's wealth by ten -- without waiting for new inventions and without considering a political move -- seemed to him a simple problem for the engineers when once they organize as engineers.*

*For lack of anything better to say, I asked him a question which every advocate of a new order will recognize as an old acquaintance;*

"Won't you have to change human nature first?"

*Mr. Scott smiled dryly.*

"Did they have to change human nature," he asked, "in order to keep passengers from standing on car platforms?"

"Go on," I said, "I'm listening."

"They put up signs first," he continued, "prohibiting the dangerous practice, but the passengers still crowded the platforms. Then they got ordinances passed, and the platform remained as crowded as before. Policemen, legislators, public service commissions all took a hand but to no effect; then the problem was put up to the engineer.

"The engineers solved it easily. They built cars that didn't have any platforms."

*According to Mr. Scott, the same course will have to be followed in the matter of a still more familiar prohibition: THOU SHALT NOT STEAL. Church and state, he says, have united unanimously throughout all history behind this law, but it has never been enforced. Technical administration alone, he maintains, can enforce it.*

*How? Let him answer in his own words.*

"By coordinating the industrial processes; by operating all industries as one agency for one definite purpose: producing and distributing the things that people want so that an abundance of everything shall be accessible to all.

"Private property," he said, "is generally recognized as a burden even today, and few people would want to carry it if they could be rich without having to do so. For the first time in history, though, humanity has a machine at hand which is productive enough to make everybody rich, and it has the technical knowledge at its disposal to run such a machine. All that is necessary is coordination."

"But do you expect the engineers to agree upon a program?" I asked. "They have their prejudices and differences, don't they, just like the rest of us?"

"They disagree as politicians," he said, "but not as engineers. We are not trying to organize them, however, into a society to debate something but into an alliance which will discover the facts. Engineers do not disagree on facts. They all know which direction a stone will drop. They all know that a straight line is the shortest distance between two points. If there is anything else they want to know as engineers, they find it out; and when they find it out, there isn't the slightest disagreement. Engineers are not radical or conservative. As engineers, they are no more radical than a yardstick and no more conservative than so many degrees Fahrenheit."

## TECHNOCRACY SPEAKS

By Howard Scott

Originally printed in THE LIVING AGE  
An English Publication  
December 1932

The very favorable editorial comment on Technocracy presented by Mr. Orage in a recent issue of THE NEW ENGLISH WEEKLY has prompted the editor of THE LIVING AGE to request a statement from Technocracy itself, I should like first to make two corrections in matters of fact. First, the per capita consumption of energy should be, respectively, 2,000 and 150,000 kilogram calories per day, not per annum as Mr. Orage stated. Secondly, the cigarette production is given as at the rate of 'five or six hundred per hour per man,' instead of per minute per man.

The following communication is less a reply to Mr. Orage's comments than a statement of the aims and methods of the research body known as Technocracy. Such a statement would seem appropriate after the very considerable publicity given to the specific findings of Technocracy in connection with its Energy Survey of North America.

### I

Technocracy is a research organization, founded in 1920, composed of scientists, technologists, physicists, and biochemists. It was organized to collect and collate data on the physical functioning of the social mechanism on the North American continent, and to portray the relationship of this continent and the magnitude of its operations in quantitative comparison with other continental areas of the world. Its methods are the result of a synthetic integration of the physical sciences that pertain to the determinations of all functional sequences of social phenomena. Technocracy makes one basic postulate: that the phenomena involved in the functional operation of a social mechanism are metrical. It defines science as 'the methodology of the determination of the most probable.' Technocracy therefore assumes from its postulate that there already exist fundamental and arbitrary units which, in conjunction with derived units, can be extended to form a new and basic method for the quantitative analysis and determination of

the next most probable state of any social mechanism. Technocracy further states that, as all organic and inorganic mechanisms involved in the operation of the social macrocosm are energy-consuming devices, therefore the basic metrical relationships are: the factor of energy conversion, or efficiency; and the rate of conversion of available energy of the mechanism as a functional whole in a given area per time unit. Technocracy accordingly establishes a new technique of social mensuration, that is to say, a process for determining the rates of growth of all energy-consuming devices within the limits of the next most probable energy state.

The Energy Survey of North America now being conducted by Technocracy in association with the Industrial Engineering Department of Columbia University and the Architects' Emergency Committee has found that employment of this method has not only yielded new data but has endowed already existing data with a new significance. As the above method is one of measurement, it follows axiomatically that all processes of evaluation are excluded. Value has no metrical equivalent.

Value is defined by the economists as the measure of the force of desire. It has its physical manifestation in any one commodity unit by which all other commodities or services are evaluated. Any society using a commodity method of valuation shall herein be said to be employing a price system. A 'social steady state' is a social mechanism whose per capita rate of energy conversion is not changing appreciably with time. Social change, on the other hand, may be defined as the change in the per capita rate of energy conversion or the change from one order of magnitude to another in the social conversion of the available energy. All social history prior to the last century and a half, viewed technologically, may therefore be described as the record of a steady state. Only within the last hundred and fifty years has there been introduced a technique that has specifically caused social change. Technology, as the executor of physical science, is the instrument for effecting social change.

During the 200,000 years prior to 1800 the biological progression of man, in his struggle for subsistence on this earth, had advanced so far that the total world population in that year reached the approximate number of 850 million.

During the subsequent 132 years, world population has attained such heights that it now exceeds a total of 1.8 billion; in other words, the population increase in the last 132 years has been greater than it was in the previous 200,000. Most of this increase in the human species has been made possible by the social introduction of technological procedures, that is, change in the means whereby we live as brought about solely by the introduction of technology.

## II

A century ago these United States had a population of approximately 12 million, whereas today our census figures give a total of over 122 million -- a tenfold increase in the century. One hundred years ago in these United States, we consumed less than 75 trillion British thermal units of extraneous energy per annum, whereas in 1929 we consumed approximately 27,000 trillion British thermal units -- an increase of 353-fold in the century. Our energy consumption now exceeds 150,000 kilogram calories per capita per day, whereas in the year 1800 our consumption of extraneous energy was probably not less than 1,600 or more than 2,000 kilogram calories per capita per day.

The United States of our forefathers, with 12 million inhabitants, performed its necessary work in almost entire dependence upon the human engine, which, as its chief means of energy conversion, was aided and abetted only by domestic animals and a few waterwheels. The United States today has over one billion installed horsepower. In 1929, these engines of energy conversion, though operated only to partial capacity, nevertheless had an output that represented approximately 50 percent of the total work of the world. When one realizes that the technologist has succeeded to such an extent that he is today capable of building and operating engines of energy conversion that have nine million times the output capacity of the average single human being working an eight-hour day, one begins to understand the significance of this acceleration, beginning with man as the chief engine of energy conversion and culminating with these huge extensions of his original one-tenth of a horsepower. Then add the fact that of this 9 millionfold acceleration, 8,766,000 has occurred since the year 1900.

Stated in another way, if the total one billion installed

horsepower of the United States were operated to full capacity, its output would be equivalent to the human labor of over five times the present total world population.

Physical science has outdistanced present social institutions to such an extent that man, for the first time in history, finds himself occupying a position in which a complete utilization of his knowledge would assure the arrival of certainty in a continental social mechanism. Man, in his age-long struggle for leisure and the elimination of toil, is now at last confronted not only by the possibility but by the probability of this arrival. Such a new era in human life is technologically dependent only upon an extension of the physical sciences and the equipment at hand.

But the pathway to that new era is blockaded with all the ruffraff of social institutions carried over from yesterday's seven thousand static years. The law of the next arrival is depicted by the Gaussian curve of probability, or the next most probable energy state.

### III

America faces the threshold of the new era with the greatest total debt load ever carried by any social mechanism, a debt of over \$218,000,000,000 against her physical equipment and its operation. With the number of unemployed greater than the total population of a century ago; with one of the most providential geologic setups of any continental area; still possessing more energy and mineral resources than any like area on the world's surface; having more than one billion installed horsepower of prime movers wherewith to degrade available energy into useforms; possessing a personnel of over 300,000 technically trained men in many varied engineering fields and more than 4,000,000 men partially trained and functionally capable of operating the greatest array of productive equipment ever at the disposal of man -- with all this, we have, nevertheless, failed to profit from technological advances and accordingly find ourselves -- for the first time in history -- with an economy of plenty existing in the midst of a hodgepodge of debt and unemployment.

America can expect no help in the solution of this problem from any current social theory. What has the world to offer

toward such a solution? Europe discovered America in 1492. Today America is further away from Europe than she was when Columbus sailed. The America of tomorrow will necessitate a rediscovery by Europe. European culture and traditions have nothing of worthwhile importance to offer America in this twilight period preceding the dawn of a new era. No European importations of social or political theory can have the slightest value in solving the operational problems facing America today. Arising out of areas that lack adequate physical equipment and trained personnel, areas in which only a low percentage of the population is disciplined in engineering thought processes, European socio-political philosophies and theories are the natural outgrowth of a more classified division and orientation of the entrepreneur sectionalism of the price system. No theory of social action or governance now existing or proposed in Europe would in any way be endemic to that unique setup of geologic conformation, technique, equipment, and personnel peculiar to North America.

Russia, of whose population 92 percent were tillers of the soil under the ancien régime and which had meager technical facilities and more musicians than technologists, found itself in the position of being compelled to inaugurate an industrial era under a communistic price system of production. Soviet Russia was forced to call upon the outside world for technical assistance in order to perpetrate reproductions of factories already obsolescent from an obsolescent price system. Russia, in its Parthian retreat from capitalism, has scored but a Pyrrhic victory. It mistook the name tag of one phase of the price system for that system's entirety; it abandoned the tag but retained the essential mechanics. To approach social phenomena by substituting Hegelian for Aristotelian dialectics may be an interesting intellectual pastime, but it has no functional importance: it is but one more recrudescence of the philosophic futility implicit in European tradition.

#### IV

The England of the Black Prince, with its population of 5,000,000, its wealth of oak timber, its hearty people drinking deeply of ale (made not from hops but from barley malt), its original resources of copper, lead, tin, iron ore, and coal -- this England developed under the price system of production. Inevitably, like the prodigal son, England went forth into the

world and squandered its inheritance among the harpies of world trade and debt creation.

The United Kingdom, with an area of 94,000 square miles and a population of 46,000,000 -- or a density of 490 inhabitants per square mile, with arable land amounting to only 23 percent of the total national area, finds itself in the physical position of possessing only a single energy resource, and that a declining one. Its tin gone, as well as its copper and lead, its iron requiring 56 percent foreign benefaction in order to produce steel, its coal becoming more and more difficult to mine, the United Kingdom is fast retrogressing from its position as the possessor of easily available energy to its next probable energy state as two islands off the coast of the European continent. A valiant race, fighting a losing battle, is displaying an admirable fortitude in the crisis that is resulting from excess population, declining resources, and obsolescent equipment operated by the antiquated methods of a price system.

The United Kingdom will be forced by internal pressure to adopt measures even more extreme than the flight from the gold pound. It may be compelled by the growing disparity between its own industrial operation and the world trade balance to such extremities as abandonment of monetary currency and the accompanying credit structure. In that event, a British currency of pure fiat power might be attempted as a last desperate resort. The present deflationary program may be reversed in the near future to one of inflation, a last straw grasped at in England's struggle for the export markets of the world. Sooner or later, in spite of British imperialism, the United Kingdom, under a price system, will be forced to meet a situation that will be increasingly grave in its internal operation. There remains only the colonizing soporific of bestowing a surplus population of 35,000,000 on the oversea Dominions.

Fascism, that strange but natural partnership of the Italian political state and vested interests, is a process of consolidating all the minor rackets into one major monopoly. Such a condition brought with it the sequelae of discipline and sanitation that necessarily accompany complete trustification. Italy, which is insufficiently supplied with energy and mineral resources, which possesses only a limited amount of waterpower and volcanic heat, which has some

mercury and some sulphur but no coal, oil, or gas, no iron ore, copper, tin, lead, or zinc, and which lacks a high enough percentage of arable land to grow sufficient foodstuffs for its own needs -- Italy belongs to the geologic order of areas that cannot create and operate an industrial energy civilization. Fascist Italy is rapidly increasing its dangerous overload of population by granting national bonuses to large families in furtherance of its *mare nostrum* policy. Fascism is an attempt at a last-ditch defense of a price system, an effort to maintain an unbroken front against oncoming social change, but this unbroken front is spurious in that it is being temporarily maintained by foreign importation of energy-resource materials, supplemented by the manna of the Lord.

Egypt, Assyria, Greece, Rome, and, in the Victorian Age, Imperial Britain have all led the world in their day; each in turn has been the vanguard of civilization. The past is strewn with ruins of empire. Now there is but one continental area that from the standpoint of its geologic setup, equipment, personnel, and the state of its technology is competent and ready to inaugurate a new era in the life of man.

## V

America stands on the threshold of that new era, but she will have to leave behind all the wish fulfilling thought and romantic concepts of value that are the concomitants of a price system. So, too, all philosophic approaches to social phenomena, from Plato to -- and including -- Marx, must functionally be avoided as intellectual expressions of *dementia praecox*. Economics, that pathology of debt, not containing within itself any modulus or calculus of design or operation, must likewise be discarded with the other historical antiquities. No political method of arriving at social decisions is adequate in continental areas under technological control, for the scientific technique of decision arrivation has no political antecedents.

Under a price system, wealth arises solely through the creation of debt. In other words, price system wealth consists of debt claims against the operation of the physical equipment and its resultants. Physical wealth, on the other hand, is produced by converting available energy into use forms and services. The process of being wealthy is the degradation of the resultants of

the above conversions into complete uselessness -- in other words, total consumption. To be physically wealthy is not to own a car but to wear it out. Technology has introduced a new methodology in the creation of physical wealth. It is now able to substitute energy for man-hours on the parity basis that 1,500,000 foot pounds equals one man's time for eight hours. National income under the price system consists of the debt claims accruing annually from the certificates of debt already extant. Physical income within a continental area under technological control would be the net available energy in ergs, converted into use forms and services over and above the operation and maintenance of physical equipment and structures of the area.

Individual income under a price system consists of units that are not commensurate with the quanta by which the rate of flow of the physical equipment is measured and upon which the social mechanism depends for its continuance. Individualism is therefore favored under a price system, since individualism can obtain a monetary equivalent proportional to the individual's ability to create debt. Individual income under such a system therefore depends on the extent to which advantage is exercised by means of the interference control that is dominant throughout the whole system of debt creation.

Individual income under technological control would consist of units commensurate with the quanta by which the rate of flow of the physical equipment is measured throughout the entire continental area. The unit income of the individual would be determined by the period necessary in that area to maintain a thermodynamically balanced load, that is to say, the time it takes for a complete cycle of the operating and production procedures to be completed.

Any unit of value under a price system is a certification of debt. Any unit of measurement under technological control would be a certification of available energy converted. Such units of certification would have validity only during the balanced load period for which they were issued. This method of producing physical wealth and measuring its operation precludes the possibility of creating any kind of debt. It also eliminates the entire domain of philanthropy. Furthermore, all bonds, financial debentures, and other instrumentalities of debt would cease to

exist, since they do not have one iota of usefulness in the physical operation of such an area under technological control.

Technocracy proposes no solution; it merely poses the problem raised by the technological introduction of energy factors in a modern industrial social mechanism. Continental America possesses all the essential qualifications for such a mechanism -- sufficient energy and mineral resources, adequate water precipitation, more than enough arable land of proper chemical stability, highly developed technological facilities backed by a trained personnel, powerful research organizations. All these things are entirely sufficient to assure the continuance of a high energy standard of livelihood for at least a thousand years, if they are operated on a non-price basis with the technological means known at present.

America stands now at the crossroads, confronting the dilemma of alternatives. The progression of a modern industrial social mechanism is unidirectional and irreversible. Physically this continental area has no choice but to proceed with the further elimination of toil through the substitution of energy for man hours. There can be no question of returning to pre-machine or pre-technological ways of life; a progression once started must continue. Retrogressive evolution does not exist.

THE SCIENTIST OR THE LIBERAL?  
A TIP TO TEACHERS

By Howard Scott

*[Extracts from "THE IMMINENCE OF SOCIAL CHANGE -- THE IMPACT OF TECHNOLOGY ON A PRICE SYSTEM," a speech delivered at the 71st Annual Meeting of the National Educational Association in Chicago, July 1933.]*

§ All of these things bring up questions of how we are going to handle ourselves in the very near future. The manner of arriving at decisions from the time of Pericles to today, socially, has not changed. We still do it on the basis of counting noses, quite contrary to the method used by the scientist, technologist, and the engineer in the determination of any functional sequence.

§ Technocracy therefore proposes that there be entente between those of the educational field, those of the scientific and technical field of this country, and all others in labor and in industry of functional capacity. We must realize that the day is not far distant, at the trends we are now traveling on, when we shall be called upon to decide those issues, not on the basis of foreign trade or of international war debts or the League of Nations, but of men and things in this country. You cannot laugh off 15,000,000 unemployed and 40,000,000 people on the verge of a breadline. At the present trend, it will not be long until you have 20,000,000 unemployed.

§ This is not a message of doom or chaos; far from it. To us, it is a message of hope. For the first time in a century, the human beings on this continent are being compelled to have lucid intervals. If it were not for the starvation and deprivation, I would say another three years would be even more beneficial; but the only thing about that is we are running too close to where the oscillations make it so unstable and that we have interruptions.

§ From that point of view I should like to point out that this change is coming whether we like it or not,

July 1933

whether we assist or not. Like all periods of change, you can take one of two attitudes. One, as a fabricator of conceptual equipment, is attempting to devise conceptual equipment and furniture that is capable of dealing with those changing conditions. If you assume that attitude, you will be moving forward -- we hope -- comparable with the rate of acceleration. The other attitude is to adopt the shabby tolerance of liberalism and proceed to straddle the fence in defense of an obsolete and outworn piece of junk known as the Price System. What happens in the second case is that the intellectual liberal can never make up his mind. He is afraid of a decision. He is always looking for a man on horseback, that is, he will be thought to be a man on horseback by the general public, but he does not really want a man on horseback for himself; he wants a moron on a jackass.

There are these two alternatives facing you today. The second one is probably the easier, safer, and less arduous, up to a certain point. After that it is quite different... It will be rather hard to get off the continent. So that you are faced with the proposition of either providing an objective for the youth of the New America, and at the same time security by which all the human values may be released; or if you adopt the other attitude, the youth of today -- the adults of the New America of tomorrow -- will hold you responsible, those of you who straddle that fence in defense of that piece of junk, and may God have mercy on your soul!

RADIO ADDRESS FROM STATION WEVD, NEW YORK, NEW YORK

By Howard Scott

February 6, 1935

In America's fifth year of the depression with over 12 million total unemployed and with more than 20 million human beings on relief, 126 million Americans are asked by our political leaders to find solace in the "spiritual values" of their political proposals.

The people of this continent are the most technologically proficient of the peoples of the world and yet, paradoxically enough, we are at the same time a nation of economic illiterates. Just as long as our population continued to have a yearly increment of 1,800,000 and the total physical equipment of this country was being added to at approximately 7 percent per annum, America had no social problems sufficiently significant to impel the collective recognition of the problem upon the molecular mass of the American people. That this was to be expected is only natural in view of the high pressure conditioning which the American people have been subjected to; namely, the national idiocy of a bigger and better business, a chicken in every pot, and two cars in every garage. Phineas Barnum built up the biggest show business of the circus world upon that fundamental American axiom of never giving the sucker an even break. Quoting Barnum's own words, he said, "There is one born every minute!" But in 1935, it is obvious that Barnum was wrong, for in these years instead of one a minute, it must be twins!

We have the ludicrous example of 40 million Americans in their economic desperation casting their ballots to give the mandate to a different bunch of political racketeers in order to derive the vicarious pleasure of being fooled again. You may dislike the preceding declaration, but you cannot deny that the mandate given in the last two national elections was primarily for the maintenance of this obsolete Price System and not for its abolition. Technocracy therefore contends that those of the electorate of this country who did not receive a cash reward for their ballot are deserving of Barnum's appellation, for, in maintaining the Price System, the people of this country are insisting upon holding onto an outworn and obsolete method of controlling our national operations. Technocracy insists that it would be impossible to plan a more efficient method of national

RADIO ADDRESS - WEVD  
NEW YORK, NEW YORK

2/6/35

destitution than that which the Price System has evolved and enforced upon this nation and the world in the face of potential plenty.

It must be obvious to those in possession of any social knowledge at all that the problem facing the Price System of this continent today is the provision of mass purchasing power sufficient to purchase the mass output of continuous mass production, and that this shall be accomplished with a minimum of human effort and a maximum of human leisure. The solution of this problem axiomatically carries with it the provision of economic security to all from birth to death. Technocracy contends that, therefore, there is no solution possible to this social problem as long as the Price System remains in control, because modern technology is wiping man-hours out of existence by the substitution of extraneous energy and the introduction of more efficient processes. Technocracy conclusively proves that adequate purchasing power necessary for economic security cannot be distributed through the medium of commodity valuation currency and the political administration of this Price System.

Our American Price System is dependent upon a continual creation of debt for its existence. It must create debt in large volumes each year in order to validate the outstanding debt claims and to provide those sources of future debt creation known as investments. The national debt load of the United States in short- and long-term public and private debt claims is in excess of \$238 billion. The expenditures of the National Administration to the tune of seven to eight billions per year is primarily for the purpose of creating sufficient debt through federal enactment to validate the outstanding debt structure of the country. The more the status quo of the Price System is continued in such a manner, the more will taxes be increased, government costs rise, and extraordinary financial priming be continued. In 1934, the total taxes of the United States -- municipal, county, state, and federal -- were in excess of \$9,500,000,000. The total cost of government in 1934 was in excess of \$15,600,000,000. This figure does not include any interest charges or debt amortization. Every move of our national administration and our financial interests is mad for the sole purpose of bolstering corporate enterprise and maintaining the debt structure of the Price System.

The devaluation of the dollar and the raising of prices are

RADIO ADDRESS - WEVD  
NEW YORK, NEW YORK

2/6/35

for the purpose of creating profits and dividends on a smaller turnover, the theory being that they can maintain the same rate of dividends if they raise the prices in proportion to the increase of unemployment. All of these palliative measures are only footsteps to a fool's paradise of temporary returns. The basic problem still remains, for today in 1935 in the United States of America, life does not begin until after \$40.00 per week. Technocracy's analysis of the national income shows that there are over 180 million families in the United States, comprising in excess of 77 million human beings, who are dependent upon an income of less than \$40.00 per week per family; or, as the Brookings Institute puts it, 1/10 of 1 percent of the families at the top receive as much income as 42 percent of the families at the bottom of the national income scale. It is self-evident that with a larger and larger proportion of our national income being required to bolster the debt structure and to pay government expenses, the rising prices and the cost of living will lower the consuming power of at least 80 million Americans. Life cannot "begin" for these Americans -- all that is left is subsistence of a low order. Technocracy with its blueprint of a balanced load continental control stands ready to guarantee to the 126 million Americans a standard of living for every adult equivalent to the purchasing power of \$20,000 per year in 1929, Technocracy's proposal is a technological control, functional in structure, necessitating the entire elimination of political administration. Technocracy would abolish the Price System with all its attendant social garbage.

In 1932, Technocracy pointed out that a national parade of the dumb, the halt, the lame, and the blind was about to begin. That national parade is on in full swing. We have nationalized Tammany's New Deal, the California Epic Program, old-age pension plans, pleas for social justice, and cries to share the wealth. America might just as well make up its mind that it cannot have economic planning, social justice or guaranteed security under the dominance of a Price System. The political administration of our national affairs is deemed by Technocracy to be totally inadequate and incompetent, irrespective of which political racketeer does the administering. Politics and the financial racketeering of the Price System are blood brothers conceived in the ages of scarcity along with the oxcart, the sickle, the hoe, and the spade; and, like them, they have become as obsolete and must be consigned to historical antiquity. The technology of a

RADIO ADDRESS - WEVD  
NEW YORK, NEW YORK

2/6/35

new America of plenty will not permit Price System sabotage of our national operations nor will it tolerate either a Marxian insurrection or a Fascist suppression.

No importation of any social theory or philosophy will avail America in the slightest in solving her operation problems of today and tomorrow. Communism, Socialism, and Fascism were conceived outside this continent and belong to the European philosophical proposals to divide up the results of scarcity. Technocracy is not a philosophy; it is a continental engineering design of a social mechanism for the production of plenty. Technocracy Inc. is a continental organization open to all citizens of this continent who are not affiliated with, or members of, any political organization. Yesterday Technocracy was a body of thought that was ballyhooed across the front pages of the world. Today Technocracy Inc. has organized Sections functioning from New York to Los Angeles and Miami to Edmonton, Canada.

Technocracy is the advance of physical science into the social field. It was originated and developed by Americans from out of the technological sequences of this continent; therefore, being American in origin, it is endemic to the social progression of this continent.

Technocracy is not a political party; it is the Technological Army of the New America! It is therefore the only organization on this continent that can afford to wait. No other one can, because the installation of economic security and adequate purchasing power to all in this country can only be accomplished by the Technocrats of tomorrow.

## AMERICA PREPARES FOR A TURN IN THE ROAD

By Howard Scott

March 16, 1935

*[An address at the University of Pennsylvania Club, subsequently published as an official publication of Continental Headquarters of Technocracy Inc.]*

The road of America's yesterday began at the Plymouth Rock and the James River in the dim Indian trails and the river roads, leading back into a continental wilderness. From these crude beginnings, the relentless drive of pioneer efforts propelled the canoes of the voyageur and the trapper to new hunting grounds. The "ride and tie" and the ox team carried the settler forward to open new lands. From the original settlements on the coast of Massachusetts and the James River of Virginia, men moved ever outward. In the year 1610 on the James River, the settlers had planted thirty acres of corn. America was on the move.

The dim Indian trails became roads. The ox team disappeared, displaced by the horse and buggy and the steam locomotive running on two strips of steel that spanned the continent. Three hundred and twenty-five years ago, America started on its road up to today. Shortly after the beginning of this century, the horseless carriage was born, and the road of America's horse-and-buggy days had to be replaced with a smoother pathway in order to accommodate the speed of the swifter moving vehicle. Broad bands of concrete -- smooth pathways of speed -- grew from coast to coast. These rights-of-way of rush were necessitated by twenty-five million vehicles in their demand for smoother speedways. Those original thirty acres of corn on the James River now exceed one hundred million acres producing in excess of two billion five hundred million bushels per annum, when not limited by drought or the unnatural enforced scarcity of the Roosevelt-Farley Administration's agricultural program.

## AMERICA CHANGES TOOLS

With the ox team, the covered wagon, and the horse and buggy went the axe, the sickle, the scythe, the spade, and the hoe -- symbols down the ages of the toil and servitude of men. As the roads of America's yesterday changed from the Santa Fe trail to the Union Pacific, from the Lincoln Highway to the skyway of the

Transcontinental Airplane, so, too, changed our tools. Man drove his spade with his own power; assisted by his ox, he pulled the crude plow before the advent of James Oliver, and swung his cradle scythe to reap the crops of yesterday's America. Today, the Diesel engine tractor disappears in the distance at four miles an hour, making sixty duck-foot furrows, and technology has reduced human toil to one-eleven hundredth of that of the spade -- for this machine mastodon will plow an acre in .088 of a man-hour. Our railroads of yesterday were built by pick and shovel, brawn of our ever newer Americans; our canals were dug by the same power; our mineral wealth was mined from the earth mainly by pick and shovel which, at the later date, were assisted by powder. Then followed dynamite and machine tools. Today, technology has designed and built these giant machine excavators, the modern power shovel, that will take twenty cubic yards at a bite and deposit it in the cars that move it away at an elevation above which it is dug greater than the height of a six-story building. The ghosts of six thousand men with shovels stand silently in the background of this great shovel as mute testimony to the displacement of human toil.

The modern continuous strip-sheet steel mill, twenty-one hundred feet in length, with 32,000 HP of connected motors, is rolling sheet steel ninety-six inches wide at the rate of 760 feet each minute. A few men on the control bridge tend the switches of this automatic giant of the steel industry. No more will men sweat and toil in danger of their lives from flying strips of red-hot steel. Modern technology has rendered them useless as power providers and placed them where they can watch the white-hot ribbon of sheet steel run through continuously to be finished at the end with a precision to within .004 gauge.

#### COTTON PICKERS

When Ely Whitney completed the cotton gin, he made possible the immediate extension of cotton cultivation by slave labor, Herbert Spencer said that when Ely Whitney walked out of his workshop in Georgia with the completed cotton gin, anarchy was born. Cotton, that great single crop on which such a vast proportion of American agriculture depends, remained dependent on human hands for its collection. Picking cotton has been eulogized in song and story, mostly as that delightful occupation indulged in by happy negroes amid snowy fields of white. To pluck the

snowy cotton from the cotton boll is arduous toil in the broiling sun and seldom does a man average more than one hundred pounds in eight hours. That was yesterday. If Herbert Spencer still lived, he would say today that more anarchy was spawned when the Rust Brothers' cotton picker went down the long rows of cotton at the Mississippi agricultural testing station of the Department of Agriculture. Propelled by an ordinary farm tractor, it picked the cotton from two rows simultaneously, and accomplished 8,200 pounds of picked cotton in seven and a half hours. Modern technology tomorrow will make four, six, and even eight row cotton pickers, using the Rust Brothers' original invention; but it is significant to note that this two-row cotton picker which can be attached to any power-drive tractor is going to be produced in quantity by the Southern Harvester Co., Memphis, Tenn. It won't be long before the negro singing in the snowy fields of white will exist only in the storybook.

In the sugar cane fields of north Queensland, Australia, the high cost of white Australian labor gave an Australian engineer named Faulkner his opportunity. Today, the Faulkner Sugar Cane Harvester is running down the rows of sugar cane in north Queensland and both the oriental and the white Australian no longer cut sugar cane by hand. The Allis-Chalmers Corporation of Milwaukee, Wisconsin, is now producing the Faulkner Harvester and several have been shipped to Cuba after having been modified in their construction and improved to meet Cuban cane conditions. A few more Faulknors in Cuba and the Haitian and Dominican negroes, who come every year to harvest the cane crop of the island, will no longer come to Cuba!

With the coming of the Rust Brothers' cotton pickers, the peonage of hand-picked cotton is doomed, and several million negro and white sharecroppers will be eliminated from the agricultural picture of America and also from a means of livelihood, poor though it may be.

As America grew from Indian trail to roadway, from roadway to highway, and from highway to skyway, so, too, did our tools change along with our processes and our methods. With primitive hand-driven tools, we opened up one frontier after another and, as our frontiers disappeared due to the rapid development of transportation, communication, production, and distribution, not only did our tools change but our methods of driving them and

controlling them also were altered.

#### TECHNOLOGY'S GRAND MARCH

Technology had at last started on its grand march, a march that began a little over a century ago, but is really only getting underway now; and yet, so tremendous has been the effect of technology in this short time, that not only did our frontiers disappear, but, strange to say, our employment of human beings reached an all-time peak in the year 1919 -- a peak never to be seen again so long as a Price System dominates America.

Since that time, technology has been closing the gaps and accelerating so that, while production in physical volume did not reach the maximum until 1929, employment oscillatingly declined from 1919 on. The technologist and the engineer in designing and installing modern machinery and other energy-consuming devices have inadvertently laid down a social pathway to a new economic order -- a pathway that America must travel whether she likes it or not. The history of American technology is also the primitive morphology of the New America of tomorrow.

Our forefathers in attempting to guarantee to future Americans life, liberty, and the pursuit of happiness, placed their hope of fulfillment in political liberty and reckoned not that the day would arrive when the interference control of the Price System would conflict with the development of technology -- that America would be compelled to make the rich richer and the poor poorer. The ever-expanding America of yesterday in its opening of new frontiers and the uncovering of new mineral wealth, combined with an ever-widening agriculture, was the land of golden opportunity to the emigrant peoples of Europe, providing opportunity to work their way to a higher standard of living than that which they had known in the country of their birth.

America became the industrial giant of the world in this 20th century, and then the rate of expansion of our economy started to decline. This was first noticeable in a few instances in the year 1910. After 1920, it became more evident, and men of affairs dismissed the significance of this change of rate by glorifying American initiative and invention with laudatory proclamations to the effect that new industries would be born and

would be a cure-all for this condition. The tidal wave of debt-created prosperity of the Coolidge and the Hoover regime engendered the national psychology that not only was bigger and better business possible, but that bigger and better business would continue ad infinitum.

In retrospect, the economic stupidity of our national leaders of the last decade is but a demonstration of the charming naivete of economic adult infantilism. Our national leaders of the past two decades have always proclaimed the inherent soundness of the Price System. Their voices have always been raised in defending and boosting their own America. Their America was a glorious hunting ground where private corporate enterprise was permitted the privilege of creating debt claims against others faster than they were created against them. It was heads I win, tails you lose; no one else could possibly win. Every consumer was a sucker, legitimate prey for the corporate enterprise of yesterday and today.

In the race for lower operating costs and more profits, corporate enterprise in America employed more and more technology. The technologist and the engineer devised new processes, discovered new materials, and installed faster machinery. Each new discovery, each new process, and each new machine consumed more extraneous energy in a given time period, but always its ratio of production to its energy consumption kept increasing. The efficiency of each new process or equipment increased with the growth of total equipment. As the total number of energy-consuming devices grew, so did the production, efficiency, and speed of these devices increase. Production and distribution became larger and larger consumers of extraneous energy, that is to say, they consumed more and more energy from coal, oil, gas, and hydroelectric power.

While the peak of our national employment occurred in the year 1919, our extraneous energy consumption continued to rise until 1929, production mounted also until 1929, but employment had decreased from 1919 to such an extent that in 1929 -- the year of our greatest production of physical goods and services, there were between two and three million totally unemployed adult human beings in the United States. And now, in 1935, in the fifth year of the "depression," after an expenditure of \$7,100,000,000 of financial priming which has raised the production index

fifteen points, it is interesting to note that the total unemployed varies between the American Federation of Labor estimate of 11,400,000 and that of the Alexander Hamilton Institute of 15,700,000. In March, 1935, the last figures on relief for the preceding month show the federal government to be maintaining 22,370,000 individuals on the relief rolls of the United States.

#### TAXES AND SPENDING

When one realizes that the expenditure of most of this financial priming occurred during the year 1934, when the total taxes in that year -- municipal, county, state and federal -- exceeded \$9,500,000,000 and while the cost of all government exceeded \$15,600,000,000 (exclusive of debt and amortization charges), one is compelled to ask the question whether our industrial leaders believe that the creation of more debt will cure the ills of this debt structure. It is similar to the theory that ptomaine poisoning can be cured by a further diet of putrid fish.

The creation of monetary wealth under a Price System can only occur through the creation of debt; but, in the conflict of the Price System with modern technology, this America of ours has reached the close of an era and the dawn of a new one. The increase of technological efficiency and the abundance of technological production and distribution, which in the past made possible the greatest debt creation in all human history, has at last brought about the condition where the creation of further debt only ends to aggravate the disease.

#### HUMAN LABOR

Once upon a time, the laborer was worthy of his hire, and human effort produced all wealth, but this was only true in the days of Adam Smith. Human labor today is used only where the technologist has not yet applied an energy-consuming device to do the job. Human effort costs too much to compete with the energy of coal, oil, gas, and hydroelectric power. The use of .44 of a pound of coal under the direction of modern technology is equal to the contribution of eight hours of any human being's physical services. It has the further advantage that it performs without the deficiencies of human temperament. Neither the laws of

gravitation nor energy conversion are on the statute books of our country, but they operate just the same, and no one ever disobeys them. They are their own police power and their own judiciary.

The problem, simply stated, is the conflict between the advance of physical science and our outmoded social institutions with their methods of controlling national operation. The alternative is equally clear. Civilization on the North American continent is in a much more serious position than when Lincoln declared that this country could not exist half slave and half free. Today, in order to save the Price System, we shall have to stop the advance of physical science and technology and return to the steady state of operation of an agrarian economy, or we shall have to face the advance of physical science and technology into ever more divisions of our social mechanism -- and that has but one end: we must choose between the Price System and the technological advance.

Yesterday, it was possible through the creation of debt to pay out in the production of capital goods sufficient wages and salaries to equal or exceed the capital drag-down that was added to the cost price in the sale of consumer goods, thereby creating an apparent equilibrium in the national purchasing power. This process of maintaining an apparent equilibrium of purchasing power was dependent on the proposition that our national economy should expand at more than five percent per annum, thereby enabling the debt merchant of our American Price System to capitalize this annual increment of expansion into debt claims or mortgages on future generations of Americans. As long as our economy kept growing at five percent per annum, this was possible, but the American debt merchants forgot -- or did not know -- that even debt growth comes to an end, and the America of debt has had her day.

#### PURCHASING POWER

In their haste to create debt, they called on the technologist and the engineer for ever lower operating costs, and once the peak was passed, every lowering of cost eliminated purchasing power and potential consumers. Purchasing power in a Price System is directly dependent on the total wages and salaries paid. The total wages and salaries paid out in our national economy are proportional to the total man-hours consumed

in all national operations. Three major factors have combined to eliminate man-hours and, hence, to abolish consumers. One is the substitution of extraneous energy for man-hours under the dominance of technological control and the instrumentality of the energy-consuming machine devices; second, the decline in the rate of growth of the population of these United States from an annual increment of 1,800,000 per year to less than 800,000 per year; third, that, while all other rates of growth -- both human beings and other energy-consuming devices -- have passed their inflection point and are leveling off, the rate of growth of debt continues merrily upward, bound for the blue sky of the financier's heaven! This last necessitates an ever-greater proportion of the national income to meet its interest and amortization requirements. The combination of the above three factors in conjunction with the efficient development of machinery and processes is ever increasing the rate of productivity per worker employed; so much so that productivity per man-hour has increased faster since 1930 than at any previous time in American history. From January 1, 1930 to August, 1933, the increase in productivity per man-hour was 39.2 percent, and since then the productivity per man-hour has increased considerably more, but 1936 and 1937 will witness greater increases than were ever known.

In June, 1936, the power of Boulder Dam will flow over the power lines into Los Angeles and the power from Muscle Shoals, Wheeler, and Norris Dams will be transmitted over several states. This power must be consumed, and the more it is used, the more complicated our problem becomes. The public works of the PWA projects will throw into the agricultural picture millions of acres of high-grade irrigated productive land, producing two or three crops a year. The national insanity of enforced scarcity will become more imbecilic with every technological advance. Yesterday, corn, wheat, and pork were the great items of our export trade; yesterday, the world consumed the major portion of the American cotton crop. In 1934, the world consumed only a fraction of its former consumption of American cotton, and today, in 1935, American cotton consumption by the rest of the world will be in all probability even smaller. Brazil, which in 1929 produced over a million, Brazilian estimates for 1935 production exceed 1,500,000 bales. Russia, a cotton importer since time immemorial, will this year produce, if weather conditions are normal, in excess of 3,000,000 bales, which is a long, long

jump from the primitive cotton production of prewar Russia. China, India, Sudan, Kenya Territory, Peru, Mexico are all increasing their cotton production.

#### JAPANESE LOOMS

America's foreign market for cotton will soon be a thing of the past, for the Japanese with 9,000,000 spindles operating in excess of 600 spindle-hours per month are dumping on the markets of the world 2,300,000,000 square yards of cotton goods. America, with 31,000,000 cotton spindles, succeeds in operating from 22 to 25 million of them at a monthly average of 195 hours. American citizens, the Filipinos, are gliding on the streets of Manila on bicycles made in Japan and sold in the Philippines at \$5.65 each. Russia has always been an importer of newsprint, cement, and agricultural implements. In 1934, Russia exported \$36,000,000 worth of tractors, plows, mowing machines, and other agricultural implements. Russia no longer imports cement or paper and may at any time in the near future become an exporter to the world of these products. Russia today is the largest producer in the world of plywood and the second largest in the world in the production of oil and pig iron. In 1937, Russia will be a producer of tea and who knows but that, although she's now the largest importer of tea in the world, she may become an exporter of that product?

These examples are cited to show that technological development is not the particular possession of any race, creed, color or national enterprise. With Japan exporting lead pencils, matches, electric lamp bulbs, automobile tires, rubber boots, bathing suits, silk shirts and stockings, along with a choice collection of rayon goods, toys, steel pipe, automobiles, bicycles, and even jackets for our "hot dogs," it behooves America to forget the open door in any other part of the world and to open the door to greater purchasing power at home.

#### CAPACITY TO PRODUCE

Since the advent of Technocracy in the national and world picture in 1932, there have been put forward many statements on America's capacity to produce. Some of these learned estimates of America's capacity have run into several volumes of the printed page and yet one fundamental error is common to them all: all of the estimates and calculations on America's capacity, while

inspired by Technocracy's findings, have been predicted upon the theory that America could increase her capacity under the interference control of the Price System and that the present capacity of America and the estimated possible increase could be obtained under a planned operation of all of the facilities of production and distribution; thereby introducing the totally erroneous proposition that planning is possible under a Price System and its political administration! These estimates of America's capacity to produce have been pseudo-statistical propaganda put out by the Coue psychologists of our national debt merchants. In order to counteract the growing prevalence of the abundance theory as expressed in plenty for all, these propagandists of the debt merchants have skillfully hidden the fact that their estimates are based upon a single shift in our industrial operation, which in most cases means one 8-hour shift in the 24. Modern technology defines full-load operation to be the 24-hour operation of all equipment and processes for 365 days in the year at full capacity. Thus, it is seen that at full-load capacity America has installed today sufficient obsolete industrial equipment to produce from two to three times the estimated total production of these apologists for the Price System.

Capacity to produce is impossible to determine except by defining the maximum of social usage for any product or service. An example -- one of the many thousands that may be cited -- is that a pound of special strip steel will produce several hundred safety razor blades. If capacity is calculated on a single-shift basis for the machines which produce razor blades, then full-load capacity or 24 hours a day, 365 days in the year, is several times the existing capacity. Witness now the double-dealing under a Price System. The machine that produces razor blades is not concerned whether the razor blade shaves 4, 4,000 or 40,000 shaves per blade, but the manufacturer and distributor are deeply concerned. The manufacturer and distributor of razor blades are required under the rules of the game of the Price System to create debt claims against others faster than debt claims can be created against them. Therefore, good business in razor blades will consist in selling the public a blade that has the least cost involved in its production and distribution, combined with the maximum competitively allowable price and the minimum of use. Therefore, the production of a four-shave razor blade, although ultimate social waste, is considered good business practice in

the here and now. While production of a 4,000- or 40,000-shave razor blade is social economy, it would be business suicide today. It is therefore obvious that if there exist 250 percent over-capacity in razor blade equipment for the present market at 4 shaves per blade, the same machinery can just as well produce, in the same time, razor blades of 4,000 shaves per blade and immediately the over-capacity rises a thousand times the 250 percent!

#### PRICE SYSTEM LIMITATIONS

This illustration is given to show that the full technological capacity of any set of equipment that is at present installed cannot be utilized while operated under the limitations that the Price System imposes upon any product or service; namely, either restriction in the output of raw materials or a limitation of the serviceability of mass-produced products to insure a rapid turnover. Capacity to produce can be correctly defined only as the continuous full-load capacity producing the maximum amount under a given operation, the resultant product of which consumes the least energy per unit of time-use. It must be apparent, therefore, that a planned operation of our production and distribution on a balanced-load method of operation is physically impossible of attainment under the interference control of a Price System and its political administration.

No capacity can be calculated nor can any plan of operation of any or all of the installed equipment of America, so long as we propose to control the rate of flow of goods and services coming from this technological equipment by a process of commodity evaluation. Our currency, whether based upon gold, silver, salt or sugar, is a process of evaluating all goods and services in terms of some one selected standard commodity. So long as monetary tokens arise solely through the creation of debt and are used to evaluate all goods and services in the further expression of debt, technological America can neither be measured nor controlled.

In the early days of America, say, in Andrew Jackson's time, when the total population in the United States was approximately 12,000,000, over 95 percent of that number derived their livelihood directly from the soil. Only after they had produced sufficient to maintain themselves did any goods move into the

national flow lines of transportation and distribution, and this was only a small percentage of the total production. It is well to remember that these Americans of Jackson's day lived on the soil and obtained their livelihood from it through the use of hand-driven tools. At the same time that the small volume rate of flow existed, 95 percent of the tokens of monetary wealth of that America was in the form of hard money or commodities. Today 1935 America has more unemployed than the total population of the America of Jackson's day and 74 percent of our total population of 126,000,000 Americans no longer derives its livelihood directly from our native soil.

#### ANARCHIC RESULTS

Today, in 1935, 95 percent of our tokens of monetary wealth is in debt claims and only 5 percent in currency, so that it is obvious that the control of America's economic highway of today is in the hands of the major holders of debt claims. These holders of debt claims are insisting that their pound of flesh be exacted at every tollgate that they can maintain on the highway of America's progress. Every tollgate of debt collection acts as a bottleneck which retards the flow of purchasing power instead of accelerating it. How long will it be before our national leaders of finance and politics become conscious not only that America cannot spend her way out of this national situation, but also that more of the same medicine of the Price System will lead to further social instability with its accompanying anarchic results?

America has her choice of maintaining the Price System with its rules of the game or of substituting for it a technologically controlled social mechanism for the production of plenty. In 1932, while Mr. Hoover was still President of these United States, Technocracy made the following statements in the public press of the country:

"America can no longer deal with the lack of purchasing power, unemployment or debt by individual establishments or businesses, but only as parts of our industrial concepts in a continental order of magnitude. The directors of our national enterprise will be compelled, under the exigency of a Price system, to have no choice of alternatives except that

expedient, narcotics. The next few years will witness a succession of remedial palliatives to be offered by our legislative bodies, our financial institutions, and social organizations. America in that period will witness a national procession of the dumb, the halt, the lame, and the blind, stumbling from one futile gesture to another into a final sublimation of fear. That procession of the blind will include all the essence of futility in its many varied forms from the mild buck-passing program of share-the-work to the anticipated probable legislation of rent and private debt moratorium to those twins of finality, the dole and complete inflation. These directors will now, or in the near future, be called upon to solve these problems. It is their ship of state, and if they cannot find a solution, the force majeure of continental conditions in the next few years will bring forth those who can. Technology has written 'mene, mene, tekell upharsin' across the face of the Price System."

#### PARADE OF INCOMPETENTS

When forty million Americans voted for the New Deal of the Roosevelt-Farley nationalized Tammany machine, the problem was not solved; the mandate merely transferred control to another gang. Since that time, the social ferment has been working, and, in swift succession, Upton Sinclair's Epic Program, the Utopians of California, Townsend's old-age pension plan, Father Coughlin's league for social justice, and Huey Long's share-the-wealth method to make every man a king, have blazed their way across the front page and blared through the loud speakers of every radio set. A national parade of functional incompetents is certainly taking place with a vengeance, with General Hugh Johnson as one of its leading drum majors.

The predictions of Technocracy are bearing fruit, and, as Technocracy pointed out several years ago, America nears the end of the road of private enterprise, of commodity evaluation, of debt creation and political administration. The American people have had a grand time traveling along this road. They have passed many milestones of transition in its length, but all things come to an end someday. It is a short alley that has no ash barrels, but a long road that has no turning. America's long road is

already turning and across the valley lies the fourlane express highway to a new social order. Social change is here; America is in the midst of it. And there will be greater social changes in days to come. Sometime between now and 1940, America will have to set its wheels in motion on that new express highway bound for the "New America of Plenty." America can no longer control its national operation through the obsolete methods of political decision. Political administration of the affairs of the North American Continent is a mere perpetuation of the national insanity of racketeering on a mass scale. The national leaders of yesterday were but the reflectors of public opinion. If this nation continues very much longer under the nominal leadership of the present reflectors of public opinion, America will reach the end of this road in the swamp of mob hysteria. It is high time that every thinking American realizes before it is too late that America's economics of yesterday and today is a grand and workable racket just so long as it maintains its payoff; but when it can no longer do so, it becomes a national washout.

#### AMERICA OF TOMORROW

Technocracy points out that the America of tomorrow will have to abandon political administration of its national affairs; that only a technological control of all energy-consuming devices will obtain sufficient precision and measurement for the requirements of an America of plenty; that Technocratic New America must operate its physical equipment at continuous full load with maximum efficiency in order to provide security to all from birth to death and equality of income for every adult at the highest standard of living compatible with wise conservation of its natural resources. Technocracy will provide mass purchasing power sufficient to purchase the output of continuous mass production and, as the total purchasing power of a Technate is a certification of the net cost of all goods and services, it will therefore at any time purchase the total volume of goods and services extant. Purchasing power is the crux of America's problem, and a solution to that problem can be reached only through an energy medium of distribution. The currency of tomorrow cannot be a medium of exchange. It must never be permitted to possess the prerogative of creating debt. A scientific medium of distribution must be devised. Only through such a medium can the America of tomorrow provide mass purchasing power to its people; a medium which cannot be begged or borrowed,

loaned or stolen, saved or accumulated, and possessing only one prerogative that may be exercised by the individual to whom it is issued; namely that of spending it.

Political liberty is a dead issue in America today. Political liberty confers only the power of occasional expression upon the individual citizen. There is but one real power that can be conferred upon any citizen on this continent today: that is sufficient and adequate purchasing power. For the first time in history, the power of social decision would be placed by Technocracy Inc. directly in the hands of the people themselves. Americans must never forget that as you consume so do you have power. He who consumes not is powerless. Technocracy would confer equal purchasing power upon every adult citizen as a constitutional right of the people which even the Technate of a Technocracy could not abrogate. Political power is founded on the racket of spending other people's money. It has become the established custom that the representative of the people, the politician, is the only one competent to spend the people's money. That he has been permitted to do so is chiefly for the reason that the citizens of any previous social system never had sufficient money of their own to learn how to spend it.

#### UNDER A TECHNATE

Under a Technate, the citizens for the first time would enjoy the exercise of the only power that exists in a modern social mechanism. The power to rule is therefore vested in the power to consume, with equal though not transferable consuming power conferred upon every citizen of the Technate. The decision to exercise that power may be made by any citizen every day in the year if he so desires. No citizen waits for periodic elections to express his opinion or his desire in the social mechanism. He renders his decision every time he purchases any product or service anywhere within the domain of the Technate. All people in a Technocracy receive equal purchasing power; they will require no representative of the people to spend their "money" for them.

The technology of the New America of tomorrow can be administered only by a technological control, continental in scope and functional in structure. Any mob direction of America's destiny on the basis of any horizontal stratification of our social

structure would be in conflict with the social destiny of this continent and nationally disastrous.

Technocracy points out that a vertical alignment only of all functional capacities necessary to run and control all national operations will be required and that such a vertical alignment must be welded into a disciplined body, continental in scope, under the direction of those who are technologically proficient and whose scientific training fits them to properly interpret the blueprint and specifications of the New America of tomorrow.

Technocracy stands ready when America reaches the turning of this road to bridge the transition from the obsolescent roadway to the four-lane express highway of America's tomorrow!

A RADIO ADDRESS FROM STATION KFAC

By Howard Scott

October 14, 1935

*[This radio address was made available in printed form in THE TECHNOCRAT, Aug., 1935]*

What constitutes living? There are many and varied definitions, but from the standpoint of the technologist, living is a term used to describe the functioning of any organism on the area in which it exists.

One hundred years ago, we had a population of slightly over 12 million. In the United States at that time 75 trillion BTUs of extraneous energy were consumed per annum. Our population at the last census was 122 millions, and in 1929 the energy consumption for this country was approximately 27,000 trillion BTUs. Thus, in 100 years our population increased approximately tenfold, while our total extraneous energy consumption increased 353 times. This change has resulted from the introduction of many new technical processes.

In this new industrial order, the machine was no longer conceived as an extension of the hand tool. It became a moving, mechanical element in a sequence of events, the course and rate of which had been arranged in strict accordance with the exact computative calculation of science.

The steady state of any social system of the past was set up and limited as such because no nation in history possessed any other engine of energy conversion than that of the human being. The tremendous acceleration in the rate of doing work has altered the entire physical complex of social existence.

In 1929, with a total population of approximately 123 million in the United States, of which approximately 49 million were potentially employable, the national income was \$81 billion. Now, of the total numbers of families, 42 percent had yearly incomes of less than \$1,500, and from this it follows that a total of 23 million adults had an average income per month of less than \$62.50 each. Thus, .1 percent (one-tenth of one percent) received as much as 42 percent of the families of this country in 1929.

When considering the words of those sublime optimists who hold out the enticing inducement of \$200 a month for all adults as a readily obtainable objective for the people of these United States operating under the Price System, we Americans would do well to remember the fact that such an income under the Price System rules and regulations would necessitate a national income of \$180 billion a year. This would require a national debt structure of over \$800 billion.

Since the American Price System is no longer able to greatly expand its national economy, it cannot capitalize a sufficient increment of the whole to validate its outstanding debt of \$238 billion of long- and short-term public and private debt claims. It becomes increasingly obvious that as new debt is not created fast enough to provide sources of investment for the incomes accruing from the outstanding debt claims, the liquidity of all financial institutions will tend to increase towards 100 percent, while, inversely, the rate of interest will tend to decline simultaneously toward zero. These trends are at present clearly in evidence and result in compelling the government to take over the prerogatives of debt creation from private corporate enterprise in order to create sufficient debt to save the existing debt structure and provide the rich with sources of investment.

Since 1920, the production per man-hour, as shown in 69,000 establishments, has been rising continually. What is the significance of this? A recovery to the 1929 level of production of goods and services would result in the reemployment of only 5,000,000 of those now unemployed. Technology throws people out of work. It is wiping the bottom out of all values. How can we continue to operate under this fallacious financial setup?

Inherent in the government of all Price Systems is the basic proposition that any decision may be arrived at, any problem may be solved, the conflicting opinion of all citizens molded into a common consensus, regardless of whether this consensus is obtained by democratic ballot, autocratic edict or revolutionary fiat. This basic proposition of all political administrations' control sufficed so long as man was the chief provider of power in the performance of all necessary work within the social state, because so long as such condition maintained, there was no other

means of providing energy except that converted by man from his required food, air, water, and solar radiation; and, therefore, no knowledge existed in the collective sense sufficient to incur any change whatsoever in the basic operation of the social mechanism conducted under the jurisdiction of political government.

In the America of today, the political methods of arriving at social decisions affecting continental control no longer have any meaning, and if it were not for their interference control, they would have no relevancy whatsoever to the present social picture.

With the realization that unemployment in North America is chronic and permanent will come the attempt of manufacturers and businessmen to increase the efficiency of their processes and equipment in order to lower the cost of production and distribution so that they may produce certain goods and services cheaply enough to fall within the meager purchasing power range of the 20 to 25 million human beings whose existence from now on out is relegated to that category of being just above starvation and far below a normal standard of living.

On the other hand, the operation of this continent from a technological viewpoint has tremendous possibilities. On this side of the picture, Technocracy has made some interesting calculations. If the wheat of this country had to be produced with a spade, it would take five million men to produce 800 million bushels. If the soil were tilled with the best equipment, it would take less than 5,000 men to produce 800 million bushels per annum. Or consider the subway system: the total number of people employed in a subway fare collection system is greater than the total number of employees actually operating the mechanical equipment of the system, including the power plant. From an energy standpoint, it is cheaper to provide free local transportation.

This type of calculation requires that we dispense with a number of old habits of thought. Take the matter of the kind of income we could afford to have. We have been conditioned to the idea that jobs are different and men are different and therefore justly receive different compensations. Consider, however, the fact of the enormous expenditure of effort necessary to keep the

records to maintain this differentiation of income among the people of this continent. It becomes technically unsound to attempt to differentiate between incomes when there is plenty for all, because of the cumbersomeness and costliness of such practice. We have arrived at this, not from any philosophy of right and wrong or human equality, but from the simple technical reason that to do otherwise would cost too much. If technologists were operating this country, they could not afford to penalize anyone on that basis. The cost of collecting would be greater than the advantage gained, and, moreover, this would upset the income balance of the country.

The operational as well as the sociological implications and possibilities of such a controlled system are astounding. The quality of goods to be produced would no longer be the cheap and shoddy variety turned out at present. Instead, the criterion by which goods would be judged would be the energy cost per unit of service, and those goods would be produced which by experimental test were found to cost the least energy expenditure per unit of service.

The Technate would not be interested in the expansion of consumption for its own sake, since no profits can accrue. On the contrary, the need of conserving our raw materials would discourage wasteful practices of all kinds. There would be no advertising or salesmanship. As any large retailer or advertising concern now knows very well, but for such practices the present consumption of goods would be considerably reduced. It follows that in a Technocracy, where a very ample variety and quantity of only the best goods would be available for all, the rate of consumption instead of expanding would probably tend to contract or at least reach a state of equilibrium at a moderately simple mode of living.

As a final conclusion, Technocracy Inc. clearly states that there are but two alternatives that may honestly be chosen. First, the citizens of this country may accept the vagaries of fortune of this Price System and attempt to patch it up for a little while longer, thereby demonstrating that dominant fixation of adult infantilism in an economic Santa Claus; or, secondly, the people may be convinced either by the facts of today or the relentless urge of an empty stomach that a higher standard of living not only can but must be. Let us, then, with the fortitude

RADIO ADDRESS FROM STATION KFAC

10/14/35

of our pioneering forefathers face the situation and the fact that a New America of Plenty is only possible as and when the people of this country so organize as to eliminate the outworn Price System in its totality.

AN ADDRESS DELIVERED BY HOWARD SCOTT  
(Untitled)  
AT THE ENGINEERING AUDITORIUM  
NEW YORK, NEW YORK

December 6, 1935

For thousands of years, human beings believed this earth to be a flat disk around which the sun revolved and that the earth was the center of the universe. In 1543, Copernicus published his epoch-making work, yet it wasn't until 1610 that Galileo was able to demonstrate the correctness of Copernicus' theory. Several hundred years before that, Aristotle had enunciated the beautiful proposition that objects fall to the earth at a speed proportional to their weight -- and human beings never questioned it. It was accepted as an absolute truth.

And so, too, for thousands of years man has conceived of the social system as being one in which human beings could only have a certain maximum of livelihood and that all decisions involved in human life were predicated on the just and ethical conduct of the individual. Just as Galileo and Copernicus upset the concepts and beliefs of thousands of years, Technocracy has been epochal by stating -- for the first time in history -- the mechanics of the social order in quantitative terms. So far, we have never been successfully challenged in our technical findings.

Two years ago this month, the front pages of American and world newspapers carried headlines on Technocracy. (One California paper ran Technocracy front page for 29 consecutive days, and the OSAKA MAINICHI, with over three million circulations, ran about half that space.) Yet today few people, comparatively speaking, know what Technocracy really is or what it has proposed to do.

At a conference meeting at Teachers College, Columbia University, we predicted the closing of the banks on or before the following April, and Dr. Reynolds, principal of Horace Mann School, said, "You Technocrats cannot possibly mean that the banks will fail. The banks cannot possibly fail because we have the Federal Reserve Bank." Nevertheless, the banks did close. The insanity of the Technocrats must be viewed in quite a different order.

We also stated that the North American Continent had reached

a stage of development it had never before known, and that the reason for this development was not the usual one given. The picture was not one of human quality or antipathy. Technocracy stated that the development of the Price System reached on this continent is unique in that this technological stage has arrived with a financial system consisting of debt claims, mortgages, bonds, and other forms of amortized securities.

The nation has made the transition from General Jackson's day of 1830 when 25 percent of the tokens of wealth were in hard money or commodities, to today when 95 percent of the tokens of wealth are debt claims and only 5 percent are in currency. They capitalized year after year until they had piled up a great pyramid of debt -- \$238 billion. They had a grand time doing it.

Technocracy stated in technical terms that you can only create debt provided that you have an increment of expansion upon which to create. Just as long as you can create debt, a Price System works. It was pointed out that the purchasing power of the Price System is directly dependent on the total man-hours consumed in the operation of the system, and that the total man-hours in this country reached its maximum in 1919. There has been a gradual decline since that time and a lower level of purchasing power.

It was also pointed out that as purchasing power is increased the number of human beings on the area is increased up to a maximum. The birthrate will increase until it reaches a maximum and will decline thereafter until it arrives at equilibrium. Our birthrate will level off because our rate of increase in energy consumption is leveling off, so that you can look forward to the birthrate equaling the death rate with a static population of about 130 million in 1940.

Technocracy predicted all of these things. We predicted the present situation away back in 1921. We stated that on or before 1930, this continent shall have produced 28 million automobiles and 9 million telephones, and that a crisis would arise about that time. Technocracy was wrong; it beat us by a few months, and that percentage of error can be justly allowed under the circumstances.

We have stated that you can go in for all kinds of

'juggling', but that these trends of population, man-hours, and energy consumption will be maintained. If this is so, there is no cure, no solution of the problem by any of the means used by human beings in history up to this time. We are now dealing with the mammoth problem -- one unlike any the human race has had to face before and will ever have to face again. This unique situation has come about and compelled our attention. Technocracy is the only organization that has laid down in a definite manner a social system of production and distribution that will function on a balanced load principle.

#### He who Creates an Idea

It is true that we have imitators. Upton Sinclair (I, Governor of California) proclaimed that the EPIC Movement would bring Technocracy to California. The Utopian Society has lifted many things from Technocracy -- in fact, most of its program with the exception of its ritual. We find it in all places from the President in the White House to the man on the street. They take just so much from Technocracy but stop when it comes to accepting our social design or conclusions. Father Coughlin in his broadcast the other Sunday was using a Technocratic approach very ably but ended up as a lame duck in his conclusion.

He who creates has but one purpose; to have it stolen by other human beings. Human psychology is such that if people have to steal anything, they will desire it more highly. The famous Thomas W. Lawson had a large estate in New England and offered a cherished suggestion to beautify the roads of his county; but the county supervisor did not accept the idea of furnishing the roadsides with hedges of roses; so, Lawson had rose hedges planted on his own estate, and they were so attractive when in bloom that many people from distant parts came to observe the display. One day the gardener announced that over 200 of his rose hedges had been stolen and remarked, 'We cannot allow this to continue,'

"Complain and threaten them with arrest," ordered Lawson, 'but never catch any of them, and see that you order more rose bushes.'

Today you will find rose bushes in every direction in that area. Technocracy, too, does not mind people stealing its ideas.

12/6/35

You are welcome. You will never be able to go back to the old ways. Our position with regard to all of these social propositions is the same; they can go only so far and then they will either have to stop or go the whole distance with Technocracy.

Unfortunately, perhaps, for us, we did not have the money in 1932 to put on an organization campaign. We have never been subsidized, never had an angel. We have done without money, with barely enough to buy gasoline to send men from one place to another, but we have a vitality that is astounding. We have our study classes running, and we will graduate a corps of speakers that will be trained to carry this message to the people of the North American Continent. We are organizing a type of individual unknown in history. No other organization on this continent has ever been built on a condition of functional capacity, including every range of human activity. It is more than surprising that we have experienced the growth that we have. Watch our meeting at Green Bay, Wisconsin, tonight, for instance. One of our speakers is finishing a tour tomorrow night in Appleton. That same speaker will be in St. Louis on the 12th, Chicago on the 14th, Detroit on the 16th, and Cleveland on the 17th. We have another speaker in Alberta for meetings in that area. These men have done this without any high organizing salaries. If you have any illusions about going into this organization, if you think you are going to make any more than is offered on relief projects, you are mistaken. Technocracy isn't a racket. It is entirely different from any other kind of organization that has existed in this country. We have no illusions as to where we are going; but we find, on the other hand, that many people do have these illusions.

We find that some people consider it even more respectable to be compared with communists than with Technocrats.

A prominent individual once said, 'I will tell you that we are not worried about being told we are robbers or crooks; we don't mind advertising opposition; but when someone tells us that we are incompetent and proves it, we don't like it! Calling one names means nothing, but actual blueprinting -- that becomes dangerous!

Technocracy has never participated in political action and

never will. You cannot be a member of any political party and be a member of our organization. We don't rule voting as constituting membership in a political organization, but we do look at it as one of the idiosyncrasies of the human mind. If you are intelligent enough to be a Technocrat, then you will see that you are paid for your vote.

In many ways, there is a condition here that is unknown in any other country. We have more ability than any other part of the world's surface of equal size. We can demonstrate more and better equipment than many countries put together. This has been an astounding progression.

### Intellectual Liberalism

The intellectual of foreign countries will sell out for a price, but on this continent he will sell out any cause for nothing. That beautiful double-crossing of yourself and your fellowmen is more evident here than in any other place in the world. As a nation, we have been psychologized by the politician and are so accustomed to be lousy that we don't know anything different. The politician is the louse of the Price System, and he will stick to you to the end. No engineer would attempt to decide any issue like you attempt to decide issues today. You don't vote on the engineering principles of bridge construction, power plants, etc., and if you did, it wouldn't accomplish anything. The telephone company bondholders and subscribers are not consulted when a new telephone system is designed, and if they were consulted, it would be totally irrelevant because they don't know anything about it. People are filled up with the bologna that they are capable of managing the affairs of the country. Yes, it was a wonderful country when the Indians had it, but the only trouble today is that we cannot even give it back to the Indians. They wouldn't take it! We have reached a total of 28 million automobiles, 13 million telephones, and 20 million human beings on relief.

It seems that somewhere a long time ago we heard about a full dinner pail, a chicken in every pot, and two cars in every garage. Well, you haven't got them yet. You have 4,820,000 families on relief. Perhaps you can answer Roosevelt's question: 'How do you fare under the New Deal?' You have only 13 millions more on relief than in October, 1933.

12/6/35

In the past month or so, the State of New York has been conducting publicity campaigns for the increased use of milk. Yet in spite of the campaign, 5,300,000 fewer quarts were consumed since and during the campaign than the previous year in New York State. Why can't we consume it? We have the milk-raising capacity; but in the meantime, the United States Government is purchasing skim milk, whole milk, powdered milk, and condensed milk from the corporations as it has done with other commodities.

While producing economic distribution to corporate enterprise, the government metes out starvation to the individual. The government has spent \$7 billion for relief. Five billions have gone to rescue corporations in the United States and but two billions have been claimed as the direct sustenance of the individual -- 5/7 for the rescue of the status quo!

This all presents a pretty picture. The ratio we have stated is known. Congress and corporations are well aware -- from the tons of figures from every governmental department -- that man-hours in almost every industry have been declining, that production has been rising, and that the workers displaced can never be employed again. All this data are available. You can even find Technocracy mentioned in the Department of Labor pamphlets, and yet in the face of that knowledge, Congress and corporate enterprise have the audacity and hypocrisy to lie to 125 million people in this country. They are so dumb that they cannot see what is literally in front of their noses.

There was a time when lying was considered a fine art and it was done gracefully, but now it is done on a wholesale scale in order to kid and pacify the public. The relief program of the United States Government has not had the slightest results in rehabilitating our social economy, it has not rehabilitated one single economic element -- pure nonsense! The relief program is for nothing more than soap for the people, help in blanketing such serious disturbances as revolutions, the preservation of corporate enterprise, and to inform the public that the political louse is capable of doing anything. No matter what possibilities an individual may have in this age, after four years in a political setup he will emerge as a louse, his possibilities destroyed.

The present program has the effect of getting the public worn down by malnutrition, so that no vitality or inclination to think is left. Then they have the nerve to issue a Thanksgiving Proclamation -- a fine Christian country! If Christ were alive today, He would starve to death. They wouldn't have to crucify Him. Try living on the relief sustenance. It is not even good pig food, because pigs are intelligent. That is the kind of stuff they shove out to human beings. They feel themselves that they can juggle the system and that something will 'turn up' just around the corner. This psychology is so ingrained and so well developed that after you turn one alleged corner, you believe that there will be another corner, and then that there will be another and that you will finally reach some corner around which you will discover a chiffon-covered ashcan. Instead, you will find a cast iron cover, and it will hurt you.

#### The Consolidation of the Rackets

The liberal believes that social action occurs only by means of cogitation or mental effort. If that were so, we would have had social action on this continent long ago. As a collective body, we do not act that way. Human beings are only too willing to pass the buck and 'let George do it.' Technocracy defines social action as occurring at a rate proportional to the approach of the front of the stomach to the spinal column, and apparently that is what is going to bring social change on this continent. There are over 12 million unemployed, and there would be several million more if the national Tammany organization had not pumped billions of dollars into the economic machine to give it a semblance of vitality.

It is not hard to picture exactly what has happened. Speaking in the vernacular, a mob today is a mob, and a gang is composed of those who run the racket. What happens when the mob finds the racket washed up? It seeks new territory. This is what has happened. Local politicians used to dispense from the ward bosses, but they have reached the point where they cannot hold out any longer; so, they have moved to the banks of the Potomac and consolidated the minor rackets into one major racket.

The next congress will have to spend around \$15 billion more to hold the structure from falling into the cellar. You can view the situation in many ways. You can still feel that the

12/6/35

Republican Party, now smelling pretty badly, has a chance to come back or you can feel that the Democrats will do something.

We can see that the socialists will combine with the communists in the near future. The tendency of rackets to combine is becoming more and more noticeable. Yet any combination will leave the setup in the same position. You shall witness more on relief, larger appropriations, larger injections of federal credit, and then what? The situation has not been altered one iota. The basic proposition has not been faced. No one, from Roosevelt down, has faced the issue. They have sidestepped the issue. They borrow from Technocracy, then blab about economic security under a Price System.

If present trends are maintained, conditions in 1935 and 1936 will be yet more unstable. More than \$15 billion will be pumped into the situation, and this will cause a production cycle uprise. The more that is pumped in, the greater will be the fall. You cannot have a planned economy under a Price System. You could not make money if there was a constant in a Price System. There would not be anyone to trim; therefore, it wouldn't be nice.

Technocracy has no illusions that the coming social change is going to be easy. We know that no movement can get anywhere unless it is ridiculed. We are getting it now, and we will get more tomorrow; but we can stand it. We have said before that we are the only organization that can afford to wait. No other organization can afford to do so. The best salesmen for Technocracy are not in Technocracy; they are in Washington, Ottawa, and on Wall Street.

Mr. Harriman of the United States Chamber of Commerce proposes that they no longer issue figures and statistics on industry, and that corporate enterprise issue the figures instead, because the public does not understand them anyway. Mr. Aldrich of the Chase National Bank spoke at the Commonwealth Club, San Francisco, dwelling on how serious the situation was, and the best he had to offer was the same lot of stupidity, the same lot of crooked nonsense that has been said the past four years. Technocracy would like to believe that they are deluding themselves.

Past 'leaders' in our country were unfortunately not leaders

but just reflectors of public opinion. Thomas Jefferson made the statement that all the land west of the Mississippi would not be inhabited for 1,000 years. Abraham Lincoln wanted to build the Union Pacific Railroad with a three-foot gauge. He didn't know anything about railroads. Woodrow Wilson, a college president, was elected to the presidency of the United States because he promised to keep us out of war. We went to war.

The United States and Canada require leadership and not the reflection of some minority group. We will not get anywhere by listening to Father Coughlin, the EPIC Program or any other nonsense. It was fortunate for Upton Sinclair that he was not elected. He could not have achieved anything if he had become Governor of California. Huey Long has done a good job on the state racket, and so have other local types which are all similar in that they all propose ways and means of either alleviating or solving the present situation. We have state institutions for the mentally defective, and the originators of these proposals should not be permitted to roam at large.

#### Toward Dementia

If we should ever have another civil war, let us have it for something and not for nothing. The tendency of the natural liaison of big business today is for a furtherance of fascism. Technocracy defines fascism to be 'a consolidation of all the minor rackets into one major monopoly for the preservation of the values of the Price System.' We are trying fascism in a subtle form, and the general trend is in that direction.

The problem facing America is so serious that it will transcend every other problem in history. If there were 17 million more out of work, we would face it more quickly. Our only regrets are that there are not 17 million going out of work tomorrow morning.

They are going to try sustenance farming. They are going to subsidize corporations so that they can declare a profit. (A few corporations have declared larger dividends during this period because they have succeeded in lowering their operating costs, and if the 1929 production was repeated, they would employ less people than they do now.) In other words, the people are such fools that they permit the corporations to be saved. They permit

800,000 depositors who hold two-thirds of the nation's deposits to be insured to the detriment of 13 million others. Suckers? No, they are simps. If they are not trimmed, they don't appreciate anything.

It was just the same in the gold movement. Technocracy pointed out that on or before September 1, 1933, Roosevelt would declare a partial free market of \$30 an ounce. He did, at \$29.62, three days before September 1. They send money abroad and then they bring it back at \$35 an ounce. Call it a racket? The rest of the racketeers were pikers. They use the funds of the United States Treasury to wash up several millions profits for the gang. You take it and like it. Of course, that wasn't stealing at all! Technocracy defines a criminal to be a human being with predatory instincts and living under a Price System without sufficient capital to start a corporation. When done on a large scale, it is high finance -- not stealing.

Well, what are you going to do about it? Nationalized Tammany will utilize the funds of the treasury to build the machine larger. There are now 682,000 government employees -- the most since the war.

Speaking of war, we now have a war on but don't know it. The only ones who are satisfied under this system today are those who possess large debt claims or hold fat government jobs. There are not enough of these fat jobs today, but the tendency is toward increase. We are always in favor of paying a bonus under the Price System, Technocracy is strongly in favor of bigger and better bonuses, for the sooner they spend into complete insolvency, the better. Now they are trying to cut out work relief and build up home relief. Americans are not entitled to a decent livelihood! Fifty cents a day has been reduced to 26 cents a day. Technocracy would be in favor of abolishing relief entirely, but we are not in favor of reducing the payments one penny. Make them all suffer -- fine!

If they try to save the situation, they will not succeed. They are going to spend billions more to keep the boat from rocking to preserve the status quo. You find a very definite feeling growing on the Pacific coast and other places, and they are afraid that it will become epidemic -- far larger than the epidemic of 'Sixty-nine' -- in the movements for old-age

pensions. Everyone has a movement to save everyone else, but everything will remain just as it is as far as these movements are concerned. A few more niceties and a few more laws are all that will result.

Technocracy states that no political movement is competent to operate the technical equipment of today. It might have been possible in Thomas Jefferson's time but not today. The Constitution was written with the spade and a sickle. We are not out to destroy the Constitution. We wish it to be perfectly preserved, wrapped in cellophane and placed in the Smithsonian Institution where it belongs. It was all right when the nation consisted of log cabins and small farms but not today. We must get rid of it.

Our monetary system is just as obsolete. You don't run a power system by senatorial decision. You don't take a vote to determine the load or power factor. You have evolved a method of control in modern powerhouse operation today that is peculiar to the apparatus -- a method that has no precedent in all social history, a method of technological control.

#### Science versus Chaos

The clash is on. Democracies and all forms of the Price System are antipathetic to modern technology. You can't have both. You must either stop technology or throw the Price System overboard. You will have to close research laboratories and prevent discovery by law or your lousy Price System will fail down around your ears.

Technocracy is not a social theory. It is a social mechanics, a methodology of accounting the rates of growth of all energy-consuming devices, organic or inorganic, applied to an order of human affairs on a definite, quantitative basis for the first time in history. It is a far greater jump to Technocracy than has ever been made by any other social system. Plutocracy, aristocracy, etc, are terms which mean nothing in this modern day and age. There are so many decisions made today -- take the telephone, for instance, in which neither the stockholder nor the subscriber are consulted -- that are made with a high degree of accuracy.

Socially, and where the people are vitally concerned, a method of decision is still used that was highly considered in Plato's day. Do you have to be kicked in the lower end of your spine in order to be rid of this idea? No amount of trial and error will bring social change. Technocracy is proposing an extension of technology on the North American Continent. Ideas must be reconstructed. No philosophical, political social system yet promulgated can provide production and distribution on the balanced-load principle.

You can dump all your social institutions in the garbage can. You cannot design, construct, and operate one piece of equipment with any social theory ever heard of from Karl Marx on down. The physical equipment has gone way beyond the concepts and the institutions. This problem today is a technological one and not a political one. You cannot, by political legislation, alter the standard of livelihood. By juggling, you can only stave off the inevitable and prolong the final disaster.

Maybe it is less painful to die from malnutrition. (In Germany after the war, you saw children that were apparently seven or eight years of age but who were actually thirteen or fourteen. They did not have the proper nutrition and never grew up.) Malnutrition is frightful. It has only started here. A noted increase of cases is now observed, and it will continue to rise as long as this nonsensical Price System is continued.

During the recent election, several millions of morons chucked ballots into the boxes hoping that it would change something; but you don't change a racket by agreeing with it, which is what you do when you vote. You must find another way of doing it. Even a political organization which had all of Technocracy in its preamble -- still organized only to get a vote and having convinced millions of Americans -- would not be capable of operating anything in this country.

The same mistake was made in Germany, and they never changed any of the means whereby they lived. They changed the nameplate on the door -- the facade; then a man with a mustache came along and put the lid down. It will probably blow off someday, and there will be more hell. On this continent, we must build a system organized along the lines of the functional sequences of the North American Continent. We must have an organization to

take over the functions. Technocracy is trying to show that in the growth of the organization. Our Sections are developing and increasing without money. We are going to be dealt with as an organization from the Panama to the Pole and from the Atlantic to the Pacific.

Continentially, if the present trends continue, you are going to see a new alignment -- a new alignment that will puzzle a lot of people. You will see republicans, democrats, socialists, fascists, and communists all on one side of the fence. They will all smell the same. They will be totally incompetent of running the continent. They won't like each other much, and, put together, the smells on that side of the fence won't agree with the different varieties of molecular bombardment.

You will see that the Protestants will definitely have to make up their minds whether to defend or attack the Price System. They have shown more tendency toward the attack. This places other religious beliefs in a rather interesting position. Fascism has always developed mainly from a Catholic background. Catholics are a minority in the United States. The policy of the Farley-nationalized Tammany cannot be carried much further, because it will not be possible to identify fascism with a religious belief. If that is so, it will force a division in the religious beliefs in this country. There will be one terrible mixup. It would throw the question of race and religion definitely on various sides in this battle. This alignment will come about partly from these forces I am discussing.

We are just citing the forces at work. There are more components at hand of the nature of nitroglycerin in the United States and Canada than anywhere else. Just carry out this policy of national Tammanization and you will get it -- and how -- the biggest blowout you ever had!

PUBLIC LECTURE  
HOWARD SCOTT  
EDMONTON, ALBERTA, CANADA  
DECEMBER 1935

This lecture was held at the New Empire Theater in Edmonton to a capacity crowd; as a matter of fact, many people were unable to get into the hall and others standing in the wings. The talk lasted for two hours and was followed by a question period of forty-five minutes. This accounting originally appeared in THE TECHNOCRACY DIGEST, Tabloid Edition, Vol. 3, No. 4, in December 1935.

---

MASS LUXURY

He pictured homes of a new type, air-conditioned and equipped with every modern convenience, of cookery by high-frequency current that will make housekeeping a matter of minutes, of automobiles -- one of which is already built -- that will make 120 miles an hour, have a life of 350,000 miles and be driven by two-cycle opposed piston Diesel weighing 30 pounds, giving 42 miles to a gallon of crude oil; of a standard of living eighteen times more rich than our present standards when every man and woman will have his and her own money furnished by the state; when all the work of life can be accomplished by each man between the ages of 20 and 45 working four hours a day, four days a week, for eight months of the year, with education until the age of 25, and leisure after 45, and each citizen be assured of a fair division of the goods of the technocratic state in right of his or her citizenship.

POPULAR PICTURE

Applause punctuated the speech of the Technocrat throughout his address and at the close of was given an ovation.

Although the meeting was advertised to start at 8:30, every seat in the theater was filled by 7:30, and the chairman, E.S. Cowper, announced at 7:30 that the meeting would begin.

With crowds standing jammed in the lobby of the theater, waiting in the hope of being able to gain admission or to see the distinguished visitor, Mr. Scott's secretary, Miss Helen Hockett,

PUBLIC LECTURE, HOWARD SCOTT  
EDMONTON, ALBERTA, CANADA

December 1935

who was in charge of the literature table, undertook to keep the lobby crowd entertained. For over an hour, she spoke on Technocracy, repeating many of the things her chief had spoken on his 100,000-mile trip. Each time she attempted to stop, the crowd urged her to, "Go on; don't stop." She continued for an hour and a half to an audience of 250, while Scott was speaking inside the auditorium to an audience of nearer 2,000.

#### PLAIN-SPEAKING

Scott took a delight in hurling thought-provoking facts at his audience. At one time he told them: "We're not politicians. We haven't come here to tell you how clever you are. We're here, frankly, to tell you what dubs you are -- to insult you and make you like it -- to try and get some barbs under your hides that will make you think." And the audience applauded back. They liked his frank manner and his interpretation of facts. "People today," he told them, "are divided into two main classes -- the chisellers and the suckers. The aim of the ambitious sucker is only to become a small-scale chiseller."

#### OLD ORDER OBSOLETE

"I'm not blaming the politicians and the bankers," he told them later. "They're the products of a system that had its origin when the only power in the world was manpower. Modern engineering and technology in this power age has created a new set of conditions and made the old social mechanism obsolete."

"They have got to be put out of work," he told them. "Every new advance in machinery puts men out of work. We're going to put machines into operation that will put more men out of work than ever before. What is there about work that you like? There are 37,000,000 people in United States dependent on the collection of taxes. When we force more armies of men onto relief, we are taking the quickest method of putting this outworn system on the scrap heap and making way for a scientific system that will fit the facts of life in the new age of extraneous power."

#### RELIEF NO STIGMA

"You've got to rid your minds of the old idea -- that had its roots in the old English poor law -- that there is something

December 1935

shameful in being on relief and you may just as well get used to it. Being on relief and learning how to use your leisure is good preparation for the time when you'll only have to work 660 hours a year in the years between 25 and 40, and have leisure for education and the enjoyment of life."

The tall Technocrat made it clear that he has no more use for Communism and Fascism than for the other parties whom he criticized as being props for an outworn system. "The operation of a high energy civilization has nothing to learn from the social mechanics of Moscow or Berlin or Rome," he said, amid loud applause.

#### ANALYSES SCORED

"What about Social Credit?" someone called out. "I regard the Social Credit wave that struck Alberta," said Scott, "as an expression of the people of this province of their impatience with a social system that can no longer function to give you people the necessities of life. Its defect, and the defect of all other social credit plans, like the Townsend plan, is that it doesn't touch the real cause of your social collapse. Apart from that, they have this defect, that they are dependent on collecting funds from your scant purchasing power and must deduct the cost of collection and the cost of distribution before they make distribution. In so doing they reduce purchasing power instead of increasing it."

"I'll say this for your Social Credit premier," he added. "He will have the distinction -- if he survives his five-year term -- of being the last premier of Alberta. Before five years are over there will be great and far-reaching changes in government all over this northern continent. It will help the processes of collective disillusionment that must take place -- and you are going to be disillusioned."

#### BIRTH OF MOVEMENT

Speaking of the genesis of the Technocratic movement, Scott said that it was started 16 years ago, at the close of the Great War, by a group of engineers, who gave not only their time but three percent of their monthly incomes, to carry out the research. Technocracy jumped into fame because of efforts of the

December 1935

publicity department of Columbia University discovering that it had 260 engineers on research work. They were pleased to write it up as a buildup for academic education -- then when the heat was turned on, they ran into the hole and dragged the hole in after them. Since then we have gone forward.

SEEN DECADE AHEAD

"In 1920 we predicted this condition of depression would start in 1930. We predicted it as a growth of kilowatt loads brought about by the increased use of motors, internal combustion engines, electricity.

"We predicted that by 1930 this would bring about a serious change in conditions on the North American continent. It came in 1929, and we are still in it. In July 1932, we predicted that there would be a national frigidity which would result in the closing of all the banks in the United States on or before April 1, 1933. The banks of the U.S.A. obliged us by closing somewhat prior to that date."

HAD NO AID

"We have done quite a bit of work but nowhere near what we would like to or which we would do if we had the money. This organization has done what it has without a subsidy of a single dollar from anyone. The only money we have is obtained from membership fees. We have not had a dollar from any corporation or financial institution. We don't want it, because we refuse to accept money that has any strings attached to it. No officer draws salary or makes any money out of this corporation."

TOO BUSY TO GYP

"In this way it is the most unique on the North American Continent -- but we have not had time to gyp our fellowman. This is not because we are more moral than anyone else, but it is because we are too busy doing something else.

"We are trying to picture to the people of this continent something vastly different to anything past or present. It is not a presentation of any political opinion, and is in no way concerned with any political party. No one can belong to any

political party and be a member of Technocracy Incorporated."

#### ALL ARE RACKETS

"The reason for this is that we have no time to recondition human beings or change them from a racket, and all political parties are rackets in one form or another. We have no objection to a good racket as long as it maintains the pay-off, but when it does not maintain its pay-off, it just becomes a washout; and that is the state we are in now."

"We make very little distinction and play no favorites; a Republican or a Democrat, a Liberal or Conservative, or a member of any other political group smells as bad as a Communist. They all belong to an old order of things; they belong to that day of civilization when there was a conflict of opinions."

#### VIEWING HISTORY

"If you think back and view history six or seven thousand years ago, the most ancient monument we have is the great pyramid at Gizeh composed of two or three million blocks of stone. It required 100,000 men working 20 years to build it. Without the use of machines used in building the Panama Canal in 1904 we would still be digging the big ditch in 2007, and the original diggers would not see the finish of it."

#### SUCKERS-CHISELLERS

"The social system is divided into two classes -- chisellers and suckers. It is the desire of every sucker to graduate and become a chiseller. When you have been trimmed, you immediately drag your friends in and watch them get trimmed also, so you can have the fun of watching them. One of the axioms of the great showman Barnum was 'Never give a sucker an even break' and business never has. That is no reason why you should blame the banker or the businessman. It is your own fault. If you are sucker enough to be trimmed, it is your own fault, not theirs. Do not blame any individual for the present condition. It is the fault of the system, and it was inevitable from the beginning. It is the mechanics of corporate enterprise."

#### MAXIMUMS GONE

December 1935

"In the year 1920, we had maximum employment and never again will human employment go back to that figure. It will decrease continually from now on; however, there is one rather consoling thought, 'No one but a sucker ever tried to get rich by working.' The only way you can get rich is to get a bunch of suckers working for you; but the chisellers and suckers are now in the same boat, because the racket is all washed up. We will now see how it came to be all washed up."

"A century ago, in President Jackson's day, in the United States there were 12 million citizens; 96 percent of the citizens of the U.S.A. were living on the land and derived their livelihood from it; 95 percent of the total wealth was in hard cash or commodities; and 5 percent was in debt claims, such as mortgages, bank loans, or other amortizable securities. Now 95 percent of the total wealth is in debt claims, and only 5 percent in cash money or commodities. There is an entirely reverse situation existing now to that existing a century ago."

"The output rate of human energy is low -- it is equal to about what a 1/10 h.p. motor could do in 8 hours. Anybody can purchase for a few cents a 1/10 h.p. motor that can do all you can do and won't talk back. The introduction of power machines has forced millions on relief, and tomorrow there will be more. We are now converting 153,000 kilogram calories of energy per person, and the rate of growth of energy consumption shows a possible increase of 30 percent or more from now until 1940 and 1942. If 153,000 are ruinous to your social structure, now consider what 200,000 per person will do. Not a single social institution will be out of the dump heap. All labor will be in the ash can. A modern Diesel tractor will cultivate soil in 1/1000 of the time taken to do it with a spade. The new equipment will do the work in 1/3600 of the time it takes to do it with a spade."

#### GLASS BLOWER GONE

"Anyone over 45 can remember in the history of this continent when the Glass Blowers' Union was one of the strongest unions we had. Where is the glass blower today? He has entirely disappeared."

"You can remember how difficult it was to get into the Glass Blowers' Union; in fact, a man had to be born into it. But your engineer came along and out went the Glass Blowers' Union. In 1923 came Colborne of the Toledo Glass with a machine requiring a couple of people on the switchboard to operate it. It rolls the glass out in a continuous sheet; cuts it, boxes it; puts the cover on the box; labels and addresses and plants the boxes in files. Machinery now blows lamp bulbs at a rate of 52 per minute. There are new plants being built that will blow 1,100 per minute. There will be only a couple of those machines needed to blow all the lamp bulbs we can use."

#### MACHINE DEVELOPMENT

"We technologists say, 'Why not?' There is quite a bit of humor in it no matter what field you are in. Take, for example, the cigarmaker. We can remember when the cigarmakers used to roll out the cigars. Where are they today? The cigars are made by the Washington machine at the rate of one million cigars per year with four girls operating the machine. We will have a machine in the next year and a half that will turn out 10 million cigars, with no girls."

#### THOSE BAKESHOPS

"Many of you have seen the modern bakery, the bread oven many times wider than this stage, fired by gas or oil, slowly moving and turning around -- that is just a bunch of junk now. The new oven is much smaller and the loaves come with the speed of newspapers coming off the press. The bread is not cooked from the outside in as we have it now but from the inside out. A lot of stoves are due for the junk pile. We can go on and on giving examples to show how extraneous energy is being substituted for human energy."

"It used to take 36 hours to do a 3-color photoengraving. Today there is a machine that can do the work in 30 minutes flat without the engraver. It can do engraving 3,000 miles away; it is transmitted by wire or by wireless across the continent. As for the linotype operator, we don't need him anymore. You slip a paper into the transmitting machine, it sets the type anyplace on the continent on either one machine or ten or twenty. You can have the whole makeup of one paper or a hundred all made up and

December 1935

sent over the wire and all the type set automatically. Well, why not?"

#### NEW MINING PLANS

"In Illinois, a coal mine produces ten thousand tons of bituminous coal in eight hours with 800 men. This is considered high speed. We propose a new type of process that will go into your mine and produce thirty thousand tons in 24 hours with 12 men. Well, why not? Where is the particular virtue in mining coal; why should a man mine coal if it can be done by machinery? So we propose to do away with the job. Most coal miners are so dumb that they won't quit, so we shove them out of their job and shove them onto relief; and we would like to install a machine right here in Alberta. We just want to help put more people on relief."

#### INSURANCE GROWTH

"If you have a mortgage or life insurance policy, you have that holier-than-thou feeling in regard to your fellowman. Over 30 years ago, in 1900, there were only two billion dollars worth of life insurance premiums. They continued to grow until they reached a peak of 108 billions a couple of years ago. Then they started to decline and today we have 68 million life insurance policyholders with invested assets of 21 billion. If the life insurance companies were to continue in their growth (of approximately 7.78 percent per annum), the life insurance companies would own 85 percent of everything on the North American continent; so that if the life insurance companies don't get you, the Technocrats will."

#### MERE DEBT CLAIM

"Most of you still have that strange idea that when you go down town and deposit money in the bank that the money is yours; well, that just proves how dumb you are, because it is not yours at all. You sell a debt claim to the banker for a time demand. You do not own a dollar in any bank on this continent or any other. They are not your deposits. They belong to the bank, not to you. In normal times, all the bank requires is cash for eight to ten percent of the deposits. They loan the other 92 percent. It is a process of creating debt. Since the war and up to 1929,

we were creating annually between twelve and fifteen billion dollars of new debt claims."

#### BANKING FORECASTS

"In 1933 Technocracy predicted the closing of the banks in the U.S.A. and pointed out that the banks would be only opened by accepting federal funds. We said it would result in a new condition where the federal government would have to take over the prerogative of debt creation from private enterprise, and every businessman in the United States owes Roosevelt a debt of gratitude for keeping them from going down entirely in the last few years. Today private corporate enterprise is only creating 2% to 3% of annual debt creation instead of 5% and 6% as is required. Governments are taking over to where they are practically the sole creators of debt today, which means that 76% of all large incomes are reinvested in the new debt claims of economic expansion. Therefore, if there are no new debt claims, funds become frozen; as this approaches 100%, the interest rate tends to decline towards zero."

#### HAVE THEIR LIMITS

"Now, to go on a step. As there are no new debt claims, your financial institutions will be compelled to invest more in government debt claims. Then we go on. When more than 60 percent of the financial institutions have more than 60 percent of collateral invested in government debt claims, they will not be merchandisers of debt; they will have to return the deposits to the depositors or be nationalized by the government."

"We are sorry for the banker. He has done a good job of debt creating up to now, but his day is almost done. It will be like the case of the organ: 'It was a good organ while it lasted, but it's done played its last tune.' We are faced with that in the near future. In the United States, at the next Congress, they will vote the soldiers' bonus, and they will not increase taxes before the elections but will do so immediately after. We may expect larger and larger appropriations for taxes."

#### BIG INCOME TAX

"In the next couple of years, the federal income tax will be

PUBLIC LECTURE, HOWARD SCOTT  
EDMONTON, ALBERTA, CANADA

December 1935

\$738 per year on a \$5,000-per-year income in the United States, and you will have the same thing here. It is the same sort of institution. It is a sweet proposition to consider, but it is one that must be faced."

"Now where is it all leading to? In 1932, thirty-five million morons in the United States were interested enough in politics to vote. They thought they were going to get a new deal. Well, they got it, but what does it amount to? They just helped someone get what they wanted, and still they are dumb enough to help someone else get something and get nothing for themselves. If you vote at all, you are supporting the existing status quo; and by voting, you are allowing the same status quo to continue."

"A man who votes has no integrity. No man who wears a necktie has any integrity; no law compels man to wear a necktie -- he wears it because of fear."

#### WEALTH VS INTEREST

"When the majority of the men wear neckties, the individual hasn't the courage to go without one. A man who has a million dollars has an integrity about as thick as a piece of tissue paper; and a man who has a billion dollars has an integrity such that he can donate dimes to little girls without impunity,"

"For thousands of years you could count noses and arrive at the only social divisions, but when you count noses today you are just wasting time and merely adding noses. Democrat, Republican, Socialist or Communist makes no difference. What powers of decision have you?"

"Do you decide the design of your radio, your car, lighting equipment, or anything like that? There are only two decisions you ever make for yourself. One is, you decide to purchase, provided you have the wherewithal -- and so few have the wherewithal these days. The other is the decision to die, and there are damn few around who decide this. You just allow inertia to creep up behind you and catch you."

#### VOTING SUCKER

"When you go down and mark X on your ballot, what do you

think you are doing? Participating in the government of the country? Like hell you are. You are being made a sucker, that is all. Because counting noses does not decide the problems facing this country at this time."

"The problems of this country are technical problems of providing money and purchasing power. You are not going to do that by voting in any political party on this continent. If that is your racket, that is all right. We Technocrats have no ruling against voting, except that if you are intelligent enough to be a Technocrat, you will have to be intelligent enough to get a cash reward for your vote; because that is all you will ever get for it. Wonderful, isn't it?"

"Of course, 30 years ago or 100 years ago, you could not have changed things even if you wanted to. You could not have altered the standard of livelihood one percent. They talk about bringing China up to our standard of living. How wonderful! Well, to do that you would have to multiply 470 million by 153 thousand by 365 to get the number of energy calories required. Quit kidding yourselves about these ideas. The fact we are faced with is that of running this civilization today."

#### PRODUCTION-POPULATION

(Mr. Scott used the blackboard to show that the rate of production is increasing faster than the rate of population; the rate of debt increase is greater than either; and the rate of energy production is growing faster than all three.)

Continuing, he said, "The man hours per unit produced are declining, and there is no solution. It is quite a mathematical problem. You reach the period where political machinery and valuation of currency are no longer capable of running the social system. For the first time, technology is rendering the Price System totally obsolete, and there must be a distribution of income and purchasing power on a new basis. The individual citizen will contribute less than he does now and we must find a way to distribute purchasing power. This is not the Townsend Plan or Communism or Socialism, it is Technocracy. There will be no debt plan. We do not propose to divide up anything,"

#### EXASPERATION VOTE

December 1935

"What about Social Credit, Mr. Scott?"

"Well, you asked for it and we might as well hand it to you," replied Mr. Scott. "In California and several other states, and in Alberta, people vote for many things because of exasperation; they vote to get rid of the other fellow. We are not in any way deprecating the sincerity of anyone. You want guaranteed economic security. Well, you cannot get it with the Townsend Plan or any other social political eczema on this continent. You people of Alberta have one satisfaction; you have elected a premier who undoubtedly will be the last premier of the province -- if he lasts for his five-year term -- because the next five years you will witness a lot of changes. You cannot in any state or province introduce an innovation that will enable the citizens to furnish sufficient economic security out of wages or salary under this present system. We would like to believe it, but we have no belief when it comes to physical equipment."

"You can have a transaction tax collected from each transaction, but the cost of collection and the cost of distribution must be deducted before distribution, and that would make the total net purchasing power less instead of more than when we began."

"Any movement that promises the people any solution under this Price System we consider a good thing, because it is an educational disillusionment. Ninety-nine and 99/100 percent of you are still suffering from posterioritis. You want to sit down and let George do it. You want the parcel post to bring it to you. Well, it is not going to be done that way."

"We Technocrats are different from any political party. We do not come out and tell you how wonderful you are so we can make suckers out of you. We frankly insult you in the open so we can drive something under your skin to wake you up. We are trying to find out those who think and those who have the guts of our pioneer forefathers. In a few years the people of this continent will have to make up their minds."

"We do not care if you agree with us or not. We are not trying to sell you anything. A new kind of social mechanism is yours for the asking, but if you voted 100 percent to put

Technocracy in tomorrow, you couldn't do it, because you are not capable of running peanut stands on wheels as an organized body. You think putting X on a ballot is all that is necessary. Wish fulfillment or psychology do not run factory or powerhouses. We can devise plans and struggle along without money, but if you are going to build an organization on this continent to prevent chaos, you had better get going. Unless human beings of ability on this continent realize that they must build an organization to supervise the functional operations on this continent, you will see something that will make the Russian Revolution look like a splash in a mud puddle."

#### WORTHLESS VOTE

"It is not a question of voting one bunch in and the other bunch out, because that will maintain the status quo. You might use your vote to abolish this Price System and bring a system of Technocratic order about, but if you cannot organize a disciplined party, your votes are not worth a damn."

"How would it strike you to know that wheat can be grown from the seed to the finished head in ten days? There are two machines in Jersey producing wheat and oats for chicken farms experimentally. Operating 365 days a year, with less than 12 men, they would replace 35,000 acres of the finest wheat-producing land on this continent. These things are on the move. We are trying to get you to prepare for it. Physical Science has invaded the Social field. For the first time you will have a currency of distribution and not a medium of exchange."

#### CURRENCY PROBLEM

Mr. Scott then went on to explain currency under the Technate: "Currency would be a medium of distribution, not transferable; you cannot loan, borrow or give it away. Male and female both receive the same income. Every woman will be economically independent of each and every male. The female will be denied the pleasure of going down into the male pants pocket on Saturday night, because under the Technate the male currency will not purchase female requirements, such as silk stockings or mink coats. She will purchase her own stockings and coats -- but the male will no longer be able to purchase the silk stockings and mink coats for her, because the male does not use such

December 1935

things, and with the male currency he cannot purchase female requirements. The currency will be watermarked for a balance load period of approximately 15 months or two years, at first. The balance load period will be brought down to a year and then your currency will be watermarked for a year only."

"Everyone would have the same income; requirements of citizenship under a Technate are 660 hours of service, 165 days of four hours each, every year for 20 years from 25 to 45 years. After 45 years, the color of your currency changes, and you are free to spend your income playing tiddlywinks in the Bahamas or making mudpies with the Eskimos. Your currency will bear a designating numeral of the occupation of the recipient. We are not taking these numbers out of our head. If we had the organization tonight, we could print the entire proposition tomorrow morning at seven o'clock."

#### PLENTY SCARES AHEAD

"It scares you, doesn't it? Well, you will be scared a lot more in the next five years. Under the Technate, there are no insurance policies and no taxes, no litigation. Ninety-six percent of the legal fraternity will be given the same income as anyone else at some other endeavor. You will not be able to sue for breach of promise, alimony, breach of contract or probate of will. If you do not wear a necktie, your economic security is in no way threatened."

Mr. Scott went on to show on the board how the numbers on the bills designated the man's occupation, experience, address, male or female, time, etc.

"Color of currency changes at 45 showing you have completed the requirements of citizenship; footprints and handprints of every infant would be on record; there would be no lost children; people would be medically examined every six months from birth until death; we would have a maximum of health. You would not be able to tip the waiter. No person will be penalized for commission of a statutory offense. The income of any individual cannot be taken away from him unless he leaves this continent or dies. We propose to run the equipment at the highest load and maximum conservation and minimum of human effort. Any who would refuse to work the 660 hours -- if physically able -- will starve

quicker than at any time in history under any other system."

NEW TYPE HOMES

"Many of you think you have homes. How would you like this kind of a home? Where a square yard of wall, floor or ceiling would stand a temperature of 750 degrees C. for 24 hours and not show more than 5 degrees temperature rise on the other side. A home with doors which have no hinges or knobs, which would open when you speak to them. Homes that would be fireproof, waterproof, and soundproof, and would last 1,000 years. They would be air-conditioned; you would heat them or unheat them just as easily. Quite a different kind of thing to what we have now. For the first time, we would have real privacy -- you could beat hell out of your wife and the guests would never know."

"With the new type of cooking equipment, a soft-boiled egg could be done in 2-1/4 seconds with high frequency; a five-course dinner cooked while you drink your cocktail -- and I hope when I come next time I will be able to show you that right here on the stage. You cannot have this under the Price System though."

"You will have cars that will run 42 miles or better on a quart of crude oil, with a life of 350,000 miles. Do you think any automobile company would make that kind of a car now? Socially it would be cheaper to produce this kind of a car than some of the cheaper models you get now. Those are just a few of the things. You have to face the facts -- man-hour and human employment is a declining proposition from now on."

"This new age will be brought about by the impact of technology against the Price System, and technology is bound to win," he continued.

"The Price System cannot run on for very much longer. Technocracy is proposing a new kind of social order. Hard-boiled technological facts are what the engineer and scientist have on their counter."

"We are dealing in the fact of what we have and what can be produced technologically so as to give the greatest purchasing power and the maximum security for all."

PUBLIC LECTURE, HOWARD SCOTT  
EDMONTON, ALBERTA, CANADA

December 1935

LEAVES FOR CALGARY

Mr. Scott proved himself an adroit and witty answerer of the questions that poured on him from all parts of the theater. At the close, a large number of the audience joined the local Technocracy group under Capt. George Koe, the supply of literature on the subject being sold out completely.

Following the meeting, Mr. Scott left on the midnight train for Calgary where he is to deliver two addresses and continue on his way eastward through Canada on his way to New York. He expressed a hope to return to Edmonton in June, when he may have with him the high frequency cookery appliance and the new Technocratic automobile to which he referred in his lecture on Saturday night.

TECHNOCRACY AND THE 1936 NATIONAL PICTURE

A Radio Address

by

Howard Scott

STATION WEVD, NEW YORK, NEW YORK

January 23, 1936

Technocracy Inc. speaking from Continental Division 7340 to the radio audience of Station WEVD, New York.

In 1936, the citizens of the United States will again be asked to decide by the ballot their preference in political parties and candidates for the political administration of our Price System for the next four years. The press, the pulpit, the radio, and the screen will resound with ardent appeals and denunciations from conservatives and radicals, liberals and Bourbons. Big business and little business will extol the virtues of a business administration. There will be ardent appeals made for a return to the "good old days of 1929". Simultaneously, there will be brought forth the demand that a mythical proletariat would be the best managers of this Price System. Amid the claimants of these two extremes will appear the intellectual liberals, ready to endorse all parties in their progressivism and to console each in its difficulties. The conservatives, reactionaries, and Bourbons will hold forth for the Constitution and the creation of debt as guaranteed by the Constitution, vintage pre-1929. The liberals, progressives, and radicals will be clamoring for a modification and amendment of the Constitution so as to permit their particular brand of incompetency to be perpetrated by public opinion. Outside of the participants in the race for political power, propaganda coercion will be brought to bear by those organizations, which, while not political parties, are in actuality national lobbies -- such as the United States Chamber of Commerce, the National Manufacturers Association, the Liberty League, the Townsend Pension Plan, and Father Coughlin's Fascistic Union for Social Justice.

Technocracy Inc., as an organization with a social objective, stands alone. Its position is unique. It is not a political party. It neither runs candidates for political office nor does it endorse and support any political program or party. Technocracy Inc. furthermore does not attempt to coerce the probable candidates for political election in any municipal,

1/23/36

county, state, or congressional electoral district.

What do the people of the United States want? Stated simply, they want a material abundance to be produced, with sufficient purchasing power placed in the hands of all citizens to insure the distribution of that material abundance. The people of these United States want this economic certainty to be guaranteed from birth to death with a minimum expenditure of human effort and a maximum of leisure. The people of these United States want a maximum of good health obtainable by all as a basic requirement of national citizenship, and no longer subject to the hazard of insufficient individual purchasing power. The people of these United States want an educational system capable of providing efficient education for the entire youth of the country, subject not to the economic limitations of individual income but only to the inherent capacity of the individual to learn.

The citizens of the United States are convinced that an abundance for everyone can be produced, and that this continent can produce it here and now. They are convinced that this country and this continent can produce more physical wealth than any other like surface of the globe, and that a scientific means has been found for the distribution of any material abundance that may be produced.

The majority of the citizens of the United States is not interested in dividing up the monetary wealth of this Price System. We Americans have never been dividers; we've always been multipliers. They are not interested in sharing the scarcity of this status quo, because they unconsciously know that it is not enough. What the people of these United States are interested in is a rearrangement of our social and economic order so that plenty for all can be provided for the nation.

This country and this continent have had no time in the last 400 years of rapid expansion to acquire the traditions of philosophic speculation or to indulge in political preambles. We've been too busy going places and doing things; making big ones out of little ones. We have been so busy that we have never had time to acquire the traditions of social classes. There is really only one class in the United States today -- those who consume -- and this one class is divided into two major divisions, chisellers and suckers. It is the secret ambition of

every sucker that he will someday graduate into being a chiseler. What is a chiseler? Well, briefly, a chiseler is he who acquires the most with the expenditure of the least effort. Strangely enough, the only way that we as a nation can obtain more is when our individual citizens contribute less human effort. It is only through the progressive elimination of human toil by the further introduction of electric power and automatic machinery that an abundance of physical wealth may be produced for everyone.

A mature Price System -- such as we have in the United States in 1936 -- has only one criterion of social success; namely, the acquisition of monetary wealth. All tokens of monetary wealth in this Price System -- whether they be mortgages, bonds, bank loans, or currency -- are debt claims against the total operation of the system; therefore, monetary wealth in our American Price System can only be created through the creation of debt, and to get rich in terms of this Price System, one must create debt claims against others faster than they are created against him. The creation of debt is only possible in an economy of scarcity; an economy of abundance is only possible after the process of creating debt is abolished.

National business in the United States today is running on the priming power of \$17 billion of newly-created government debt, brought about by the legislative enactments of the Roosevelt-Farley administration. Private corporate enterprise can no longer create sufficient new debt every year with which to validate the outstanding debt -- public and private -- of the country; therefore, the federal government must assume the prerogative of creating debt from private corporate enterprise and create it itself. The federal government in this administration has loaned over \$6 billion through the Reconstruction Finance Corporation to corporate business in these United States. It has paid out slightly over \$5 billion for all relief expenses. Technocracy Inc. asks, "What is business kicking about?" It got the largest share of the financial gravy from the federal treasury, and the millions on relief got the miserly dole. The beautiful part about it all is that the people of the United States will be taxed to pay both the government bonds for relief and the huge government loans to corporate business enterprise. Corporate business should be overjoyed that the people of these United States don't know when they have been taken for a ride. The best business in the world is that business

1/23/36

which can borrow from a lender and then compel the lender to pay back his own loan.

On November 3rd, a national election will be held, and millions will cast their votes with the hope that if their candidate is elected, conditions will improve. This national election is simply to decide which political party administers this Price System for the next four years. Regardless of whether the party is republican, democratic, socialists, or communist, they will all be seeking to elect their party members into some political position in the administration of this Price System scarcity. The fundamental problems facing our country and this continent will neither be met nor enunciated. They will very carefully be avoided.

There is only one issue facing this country and this continent, and that is whether we, the citizens of the United States, shall maintain this Price System with its attendant 12 million unemployed and 20 million relief dependents, with all of the economic insecurity, insufficient purchasing power, ill health, and general malnutrition of this age of scarcity, or whether we shall vote for the abolition of this Price System and the institution of a technological era of abundance, with guaranteed security to all, with equitable and adequate purchasing power sufficient to consume the mass output of mass production, with a technological administration of this social order that will render these things to all citizens an economic certainty. It is here that Technocracy Inc. says to every voter in the United States that, when you vote in 1936 in the national election, you are casting your vote in favor of the political administration of this age of scarcity of this Price System, regardless of what party is elected.

Remember that when you vote to elect a candidate into political office in this Price System, your vote is an endorsement and a support of the system in its entirety. You are helping the debt merchants and the politicians maintain the status quo. In other words, your vote, collectively speaking, is a permit to allow the chiselers four more years of action; so, frankly, all you'll get for your vote is the satisfaction that you haven't changed anything. Sometime in the next decade, you will be able to use your vote to decide the fundamental issue. You can only have scarcity under this Price System; you can only

A RADIO ADDRESS OVER  
N.Y. STATION WEVD

1/23/36

obtain economic security and abundance when you abolish it. Technocracy Inc. will never ask for your votes to elect candidates into the political administration of this Price System. It will ask for your vote for the elimination of this Price System. The technological march of events will make this fundamental issue more apparent in the next few years, and, as electrical power and automatic machinery displace human effort on one hand -- while taxes and government debt and insecurity rise on the other -- it will finally compel you, the voters of these United States, to decide the greatest issue of the age -- scarcity or abundance. Regardless of your present condition of economic servitude, Technocracy Inc. wishes you a happy landing in the New America.

## TECHNOLOGY AND LABOR

A Lecture by Howard Scott  
To the Chicago Painters Local Union No. 637  
May 20, 1936  
Published in FEDERATION NEWS, JULY 4, 1936

All of you here are members of labor organizations. You are accustomed to paying dues and carrying a union card. You are educated in the theory that in union there is strength, and you are familiar with the battles that organizations of labor, in this country, have been in and are fighting.

The point here is that a labor union is also a business institution, sometimes even incorporated in some states, and subject to the same laws, the same advantages and disadvantages, that any corporate enterprise under this price system is subject to. The product which your organization has to sell is man-hours. This product you have to sell, these man-hours, are in ever-diminishing demand as the market for your labor grows smaller and smaller. That is only characteristic of all business enterprises under a price system.

The significant thing about a price system is that, once it arrives at maturity, as is the case in the United States, then the man-hours required in production of goods and services decline, so that the price for those man-hours tends to fall. Thus, you are up against the same proposition that corporate business enterprise is up against: high production, falling prices, vanishing profits. The greater efficiency of productive processes reduces the number of man-hours required for all operation, making both you and your unions less and less important as time goes on.

The maximum employment in this country was in 1920. I need not tell you what it is today. It will never go back. It will not even remain what it is today but will rapidly diminish from year to year. Of course, you can blame the technician for devising more efficient machinery, but that will not stop the introduction of further labor-saving processes, for many of these processes already invented in recent years are being held in reserve by big industrial concerns. We already have much more efficient equipment than that which is in use today. The consuming public would have had the benefits of it long ago except for the interference control -- the price system -- which cannot yet see

its way clear to install it.

But why blame the technician anyhow? Why not go ahead and eliminate labor in every possible way? We engineers never did have any use for hard work. It always hurts us when we see anybody working. We are always pained when we witness human toil. Not that we are indolent -- we will work long hours and days without number to devise a piece of machinery or a process that will go right on with any kind of monotonous job, while the worker is released to do something less exacting -- or even to go his way doing nothing at all. It is only the demented person who keeps right on doing the same thing over and over again. The man who fights for the chance to do work that a machine can do better only demonstrates what a damned fool he is. More of you will have this demonstration in the next four or five years.

The experiences of labor organizations in this country have been interesting when viewed in historical perspective. They have been fighting a losing battle all along, and their chief adversary has not been the employer. It has been technological progress. From the use of the simple handtools of a century ago to the machinery we have now, there has been a series of clashes between those who work and those who operate labor-saving equipment. The principal threat to the continued existence of trade unions has not been employers but technological unemployment.

Take one outstanding example. Many of you may remember the Glass Blowers Union. The glass blowers were the ones who brought out that crack about the working class wearing silk shirts. They had a union that any of you might be proud of. They had an organization so tight that the only way a man could get into it was to be born into it. Where are the glass blowers today? Did their union fail them, and were they put out of their jobs by the hostility of employers in the industry? No, they were not. They went out of existence because of the development of machinery. Along came the engineer and out went the Glass Blowers Union.

In 1923 came an inventor named Colburn of the Toledo Glass, with a machine requiring a couple of people at the switchboard to operate it. Now you have a piece of equipment 1,300 feet long which rolls glass out in a continuous sheet, cuts and boxes it, puts a cover on the box, labels and addresses it by putting a

stencil on the box. An operator sits in a chair watching it when he is not reading a detective story, while thousands of would-be glass blowers are walking the streets. Well, why not? Five plants, operated to capacity, will supply the whole window glass industry. The capacity is 20,000,000 boxes per annum.

Machinery now blows lamp bulbs at the rate of 552 a minute. New plants are now being built that will blow 1,100 per minute. Only a couple of these machines will be needed to blow all the lamp bulbs we can use.

Take the wrought iron puddlers -- there is another instance. Ever since iron has been made it has been made by the old puddling process. Up to 1926 we were making it by the same laborious process employed centuries ago. A man could only puddle about 200 pounds -- his own weight -- each day or a little more, but the Aston process today will make wrought iron at the rate of 500 to 1,000 tons per day and make it better than it could be made by hand. The wrought iron worker and his union are out. And why not?

You will appreciate the joke after a while -- we haven't got to the painters yet. No matter in what field of labor you are serving, you and your protective organization will have to face the same trend of events. Many workers, squeezed out of employment in the industrial centers, have turned to the farm as a last refuge. They found that even the farmer is faced with dilemma.

In Andrew Jackson's time, they used to till land with a spade. It was a day of hand axes, sickles, and oxcarts. We were a pioneer nation at that time. It took 96 hours for a good man to spade an acre of ground. Any man who tries to spade it today will find that it would still take that long. The muscle power of a man is no greater now than it was then. It shows you what kind of an animal man is. You can't beat certain standards of production doing things in the same old ways. New ways reveal new possibilities. Today a man with one helper, using a tractor, can work 22 acres a day. They can plow an acre in one seven-hundredth of the time it takes to do it with a spade.

The combine is an improvement of about thirteen-hundred to one over the method of reaping grain with the old cradle. That is

better but not much. Still better methods of grain farming are in prospect. We are concerned about more leisure for the farmers of the country. There are about 26 million people on the farms. They still have the idea that they want to earn their bread by the sweat of their brow, and it is pretty hard to get into their heads that they can only produce more by working less. If it were still possible for them to get a good price for their produce, those morons would still go on farming in the old way. Modern technology is making the first invasion into agriculture in the history of mankind.

Out in Arizona, there is being used a new process of growing food for man and beast without the use of soil. They only use the soil as a vehicle for supplying the water. You dig a trench four feet deep and fill it with water, which is warmed by electricity. You dissolve the necessary eight or ten ingredients of plant food into a barrel. Stretch a chicken wire over the trench, about two inches above the water. Cover it with straw or excelsior. Plant your seeds in that, followed by another layer of excelsior, and you are off. The roots of the plants thrust themselves down into the liquid and from it draw their nourishment. You don't have to cultivate or bother about bugs. By such a method, we can raise 2,500 bushels of potatoes to the acre. The growing process goes on 24 hours of the day, every day. The average for the whole United States today is only 116 bushels, grown by the old haphazard field method, which only operates on days when the sun shines, the temperature is favorable, and the rain supplies enough moisture.

How would it strike you to know that wheat can be grown from the seed to head in ten days flat? There are two machines in New Jersey producing wheat and oats for chicken farms experimentally. Operating 365 days a year, with less than 12 men, they would replace 35,000 acres of the finest wheat-producing land on this continent. These things are on the move. We are trying to get you to prepare for them. We can grow over 200 tons of tomatoes to the acre. Tomato plants will grow 15 feet high. These things can be done. Your farmer wouldn't do anything about it, so we had to.

You can't educate the human being easily. The conditioned reflexes have to be reckoned with. Most individuals have that proverbial "hamburger sandwich psychology." The moment they get enough to eat for the day, they are satisfied. Why, if the

average fellow should happen to get a \$15.00 a week job tending a gasoline station, the poor fool would go out and get married. He has gotten his hamburger sandwich.

The peonage of hand-picked cotton is doomed. Several million of white and colored sharecroppers will be eliminated from employment and means of a livelihood, poor though that may be, by the use of the new mechanical cotton picker invented by the Rust Brothers. The southern farmer is the lowest paid worker on this continent. It was Technocracy that three years ago first introduced that to the world. After that, it was front-page news. The machine picks two rows at a time at a cost of 98 cents per acre -- compared with ten to twenty dollars per acre by hand methods. It picks 8,200 pounds of cotton in 7-1/2 hours. We are looking forward to the production of 12 bales of cotton to the acre and having it picked by the Rust Brothers' cotton picker. There are 2,000,000 cotton pickers headed for the relief rolls.

Of these 26,000,000 farmers in the United States, 35 percent have an income for themselves of around \$2,200 per year. They produce more than 65 percent of the agricultural produce of the country. Sixty-four percent of them receive an income of less than \$360 per year. They produce scarcely more than their own subsistence, so their labor is not needed to help sustain the country. There is no reason why we should not eliminate the farmers. It would be just as well if they were subjected to enforced leisure, but you couldn't teach them that. The advance of technology alone will teach them -- put them under a process of producing without long-suffering toil.

We just love to put people on the relief rolls. We are only sorry we cannot put 15,000,000 more on relief. When you get that, you are going to have social readjustment quickly. Social action has never come about through cogitation -- the spontaneous working of the human thought process. It always comes about at the rate of approach of the stomach to the backbone. When you have that, you will get social action, not before. So we Technocrats are trying to help you out.

We are not getting anything out of this work. No officer of Technocracy is getting any salary. We are getting along all right. You can live fairly good in some places on \$10.00 a week. So we haven't anything to sell you. What we are trying to do is

the reverse of that of the politician. He comes along and tells you how intelligent you are. Because you are a citizen, you are supposed to be capable of running the affairs of this country. We tell you that is a lot of "cockeyed nonsense." We don't try to soft-soap you. We are not trying to be nice to anybody. Your opinion doesn't matter. You can have your beliefs, your superstitions, and your fears; but that is not what it takes to operate the technological processes upon which the future livelihood of the people of this area depend. What you do about it remains to be seen. So, in our approach, we do not flatter you -- we insult you, and leave you with a lot of questions in your minds. If we can't do that, we are a failure.

We are on our way to a new social order on this continent, but the form it will take will not resemble anything in history. The new order that will come about in America will make Communism look bourgeois. What we are trying to point out is the inevitability of the trend. It doesn't make any difference whether any particular group of people are for it or against it. The trend is on, and any form of political interference control only makes matters worse. Every time you develop more efficient equipment, every time you consume more extraneous energy, you are helping to displace more of the men who have been educated to think that the only way to produce more is to work more. We try to teach you that the way to produce more is to work less.

The price system cannot run on much longer. We must realize that the growth of population has been steadily upward for over a century, practically under full employment, so that could always buy back with its wages what the country produced. You could draw a chart and plot the growth of population in the form of a curve. The curve would rise gradually over the past 100 years; but today it is leveling off. By 1940, the population of this continent will have reached its biological equilibrium, after which it will remain stationary. The meaning of this is that there is not going to be any increase of customers each year. That is not good for business because, at the same time that the population growth is leveling off, the productive capacity of the country will continue to grow. Productive capacity, even in the past five years, has been increasing by leaps and bounds; but the rate of debt creation has been increasing faster than either population or production.

In Andrew Jackson's time, there were 12 million citizens, and 98 percent of the population derived its livelihood from the soil. Today there are less than 26 percent of our population dependent upon the soil for their livelihood. It is the only example of its kind in all history; and 2/3 of those still on the soil are practically useless except for their own subsistence. Today, 74 percent of the population is dependent upon other than agricultural pursuits for their purchasing power.

Again in Jackson's time, 95 percent of the tokens of monetary wealth were in the form of hard cash or commodities, and only 5 percent was in the form of debt claims, such as mortgages, bank loans, and other amortizable securities. Now, 95 percent of the tokens of wealth are in debt claims and only 5 percent in cash money or commodities. The situation existing now is exactly the reverse of that existing then, only a century ago.

The increase in debt came to a point in 1929 where even the rank-and-file of the people had their wages and salaries mortgaged 2-1/3 years ahead. Business ran to full inventories. We started calling in our loans and shutting down our plants. Yet today, our machinery is two to five times as fast as it was then. We have had more acceleration of speed since 1929 than in any previous period in history.

Today, national business is running on the priming power of 17 billions of newly-created government debt, brought about by the legislative enactments of the Roosevelt-Farley Administration. Private corporate enterprise can no longer create sufficient debt each year to validate the outstanding debt, public and private, of the country. The government, under this administration, has loaned \$8 billion to corporate business in these United States through the Reconstruction Finance Corporation. It has paid out slightly over \$5 billion for all relief purposes. Technocracy asks: "What is business kicking about? It got the largest share of the financial gravy from the federal treasury, and the millions of relief got the miserly dole." The beautiful part of it all is that the people will be taxed to pay both the government bonds for relief and the huge government loans to corporate business enterprise. Corporate business should be glad that the people of the United States do not know when they have been taken for a ride.

But we Technocrats are not interested in fostering class antagonisms. The problem will not be solved by calling Rockefeller, Morgan, and others names. If you or I played poker, we would have to play under the rules of the game. If you are going to play dice, the rules are different, but there are rules there, too, and you would have to play under the rules of that game. There is no sense in calling names. If you had to operate under the same system, you'd operate it worse. There is really only one class in the United States today -- those who consume. This one class is divided into two major divisions: chiselers and suckers. It is the ambition of every sucker to become a chiseler. What is a chiseler? Well, a chiseler is he who acquires the most with the least expenditure of effort. It is the ambition of Technocracy to graduate all of you suckers into chiselers. It can be done.

Nor are we interested in trying to solve these problems by the vote. Here we are in a technological age still trying to kid ourselves into believing that we can somehow solve these technical problems by counting noses. On November 3rd, the national election will be held and millions will cast their votes in the hope that if their candidate is elected, somehow conditions will improve. Yet the national election will merely decide which political party will administer this economy of scarcity, under the price system, for the next four years. Regardless of whether the winner is the Republican, Democratic, Socialist or Communist, it will merely win the right to install its members into the respective positions in the administration of this price system scarcity. After the election, then, the fundamental problems facing this country and this continent will still be facing this country and this continent. They will not have been met nor even enunciated. They will have been carefully avoided. What will have been done, then, is merely counted noses. Oh, it is fine to feel, when you have voted, that you have done your part to run your country. It is magnificent, as it was in 1916 when you elected Wilson the second time. You elected him as you will remember, on his promise to keep you out of war. He kept you out long enough to permit the fiscal agents of the Allies to pile up several billions of loans from our people through the big bankers that cost our government 24 billion dollars to collect. And that isn't all it cost. For every spot of French soil occupied by our equipment or materials, we paid rent. We paid rent for them right up to the end of the war, and we pay rent now

for every American grave on French soil. Talk about suckers! We are a pretty sad lot.

So, vote for what? When they voted Wilson in, they voted because they were against something -- not for something. We have always voted because we were against something. Now, of course, we have the New Deal; and some of us are developing an idea that we should vote against that, too. If we voted that out, we would be just as stupid as when we voted it in. If you are intelligent enough to be a Technocrat, you are intelligent enough to get paid for any voting you do because you will know in advance that you are not going to get social change by voting for a political party. If you are married and your wife votes, get five dollars for the two of you. The promises the politicians make cannot be fulfilled. Nothing that they can do will increase the production of goods and services except at a prohibitive cost.

Even when politicians run on a platform made of planks borrowed from Technocracy, they cannot possibly make good, because Technocracy and politics will not mix. Something is going to happen up in Alberta pretty soon. They can't pay the \$25.00 per month they promised to every citizen. They can't even pay the salaries of the employees of the Province; so, they are going to be faced with a proposition of resigning. Politicians undertake such programs for what they can get out of them for themselves. They would not be interested if their own pay depended upon their making good on their promises. They do not want to take the rap for failure when they are getting nothing for it.

We, in the United States, are up against the necessity of devising a technological control to replace an outworn social order, the price system. Political palliatives cannot be effective. You have seen what has happened in the past three years. Even the asinine legislation of the present administration has been outlawed by the Supreme Court -- and we deserved what we got.

Anybody who works for a living belongs to the class of undeserving people. You really do not deserve anything. You really don't. Nobody but a sucker ever tried to get rich working. The only way to get rich is to get a bunch of suckers working for you. You know it. I am not trying to kid you. When man-hours decline more and more each year as more modern equipment comes

in, the proper attitude for you to take toward work is clearly indicated. You cannot continue to work, even if you want to. There are no new frontiers, no new spaces to open up. The economy of this country is no longer expanding at 5 percent per annum.

In the steel industry, for instance, you have 14 continuous strip mills going in this year, and I believe they have a union. By 1937, the Amalgamated Sheet Steel and Tin Workers will not amount to very much, in spite of all that the Committee for Industrial Organization can do for them. Now you should not condemn the employer for putting in these technological improvements. The employers can't help it. It is in the line of progress, even when it confers enforced leisure upon great numbers of workers. As I said before, Technocracy only hopes it can throw another 15 million out of work, because we do not like work. We are trying to throw people out of work fast enough so they will get a chance to appreciate the joys of living -- and the prospects are very good for doing that by 1940 or 1942.

You people who still have savings accounts, if you have that "holier than thou" feeling, I would advise you to get rid of that. Maybe you think this is pessimistic. The optimist is he who thinks this is the best of all possible worlds. The pessimist is he who agrees with him. We Technocrats are not one or the other. We are just trying to point certain things out. The next administration will have to pump more billions during the next three years than during the last three, because we can't run our industrial equipment without that. This means that government debt and taxes will continue to go up. Wait until they get going. With three or four more years -- by 1939, assuming they are going to use more billions -- you are going to have all of it in taxes, plus some of that pumped during the past three years. Small businessmen and some others are going to be paying \$736 in tax on an income of \$5,000. That means it is going to be nicer and cheaper to quit business and go on relief. You really will.

Now the banker is in a very funny position. I know a lot of people entertain a sort of resentment against him, having read a certain type of emotional articles calling him a plunderer and a robber. He is only exercising the rules of the game. The banker was saved in 1933 by federal funds. The financial institutions were unfrozen with federal money. It was so successful that now the banker is in danger of being frozen in his own liquidity,

with no place to invest his funds except in government bonds. Technocracy predicted, of course, that the banks would close on or before the first of April, 1933. Well, they did. We also pointed out that they would be saved by federal funds, and they were. We also predicted that the interest rate would tend to decline toward zero, and it is well on the way toward that point now. There is a new Canadian loan at .878 of one percent. You are going to have a lot of fun; but be sorry for the banker, not angry, because he isn't going to be a banker much longer, not because you do not want him to be a banker, but he is going out of business. He can no longer merchandise debt, and his business is to buy and sell debt claims.

A lot of you are under the fallacious assumption that you own deposits in a bank. There is no depositor that owns any deposit in a bank. You sold the funds to the bank when you deposited them. You don't own a nickel in any bank -- don't kid yourself. The banker is a merchant, and the only reason he stays in business is because he hopes to buy and sell debt and make profit on it. Now the banker's investments are running heavily to government bonds. When this reaches a point where 65 percent of the collateral investments of the banks are in government securities, there will be only two alternatives: they must be taken over by the government or return their deposits to their customers and go out of business. So, just be sorry and tell the banker not to worry -- it won't be long now. His troubles will soon be over. No longer can he create sufficient debt each year to validate the outstanding debt; and when we can no longer provide investment opportunities for the creation of new debt, then we cannot validate the outstanding debt. The price system rests upon that foundation. The only way we can save it for a little while longer is by government-created debt. Even that will not save it long.

Most of you still have that cockeyed idea that there is some moral virtue in laboring for everything you get. You have a suspicion that it is not quite respectable to get a living without perspiring -- that living on cash relief, for instance, is not nearly so noble as chasing leaves for the W.P.A. Well, maybe some of you painters will choose to work up a sweat painting cupies on the walls of a kindergarten for the W.P.A. when you can no longer get legitimate employment.

All labor organizations are formed to fight for the right of their members to wear overalls. You have to come together and fight to protect what you do; yet, in the long run, the trend is totally wrong. You should never try to wear the overalls yourself; rather, you should organize to put the overalls on the machine where they belong. Each year in the future there is going to be more machinery and less human work; but the machines must be kept busy. Their output in goods and services must be made available to the whole consuming public. There must be a system of social administration of the output of our technological equipment. We cannot distribute sufficient purchasing power in the form of wages to provide adequate consumption to keep our equipment going at mass production.

A price system is any system that uses any commodity as a medium of exchange with which to distribute goods and services; and any system using such a medium of exchange, regardless of whether it is collectively owned or privately owned, is a price system. Russia still has a commodity valuation system under a corporate scheme of financing by means of external bonds which bear interest. This is debt creation. The buyer of the bond invests his capital, draws interest on it and someday he will get back his dough. That is the same old system used in other countries and they have not changed it one iota. A different set of people are running it, that's all. A 1936 Ford would not be any different no matter who runs it.

Technocracy is proposing a functional administration -- one administration of balanced production and distribution, from Hawaii to Bermuda and from Panama to the North Pole. We will donate the Philippines to anybody.

The possible income per individual to be expected under such an administration of the productive resources of this country would be from 15 to 18 times the 1929 rate. That means that the income that would be available to each adult citizen would be equivalent to a \$20,000 income. Of course, such an income would not be instantly available. It would take from 10 to 15 years to build up to a full balanced load, but you would achieve most of it in six years. The distribution of the social income would not be a game of exchange -- not a matter of negotiation between human beings; and when you get it, you cannot hoard it, mortgage it, assign it or give it away. There is only one thing you can do

with it, and that is spend it. Each and every one of you would get the same amount. Citizens will not be awarded different incomes according to what they are worth. We couldn't afford to discriminate between persons -- not because of any theory of equality but because it would make too much work to administer a graduated income system. And why should we? When you have enough for everybody on a high income basis, why hang onto a scarcity philosophy for the sake of keeping some on a lower income? So, you will have to dump a lot of your old ideas about nobody getting any more than he is worth.

Under an accurately balanced system of technically administered production and distribution, each and every citizen will be assured of real and substantial economic security from birth to the grave, and the end of life will be somewhat deferred under such a system. But when you do go, you will not have anything to leave to your children except your name.

Housing under such a system would rapidly do away with the rat-traps we have today, and in their place erect the finest homes on earth. Anything less would cost too much to maintain and operate. From this viewpoint, the present \$20,000 home is just as lousy as the "rat traps." These houses will be designed with a view to minimum labor, maximum comfort, conservation of non-replaceable resources and minimum cost of maintenance. There are only two homes in the United States of this kind today, and we have the good fortune to own both of them. The type of house I am speaking of can be built in quantities of 56 million, and with that number, everybody can be adequately housed. These homes will be soundproof and heatproof. Being thoroughly insulated against sound, you might beat hell out of your wife and nobody would ever know. They would be heated and lighted and air-conditioned from a central plant and automatically controlled. The walls might be subjected to a heat of 750 degrees Centigrade for 24 hours without damage or even noticeable change of temperature on the other side. That kind of a home when built in big quantities, on a continuous straight-line plan, could be erected with no other tools than a screwdriver and a socket wrench, and once up they would last 1,000 years. There would be no carpenters, no painters, no plumbers, no brick masons or any other tradesmen. They all will be out of a job; and why not? A lot of you are out of work now, and we want to put the rest of you out of work.

Now in this house we have projected another development which will be of interest to the women. Instead of using the same old process of cooking, they will follow an entirely different process. It will inaugurate the first real improvement in the method of cooking in the history of man. Instead of using ordinary fire heat applied from the outside in, we will use electrical heat applied from the inside out. By this method we do not use any water to boil an egg, and we cook it in 2-1/2 seconds by the process called diathermy. A giant Idaho potato is cooked in less than a minute -- in the time it takes you to drink your tomato juice, or a martini if you are lucky. And the women will have to find some other way to occupy their time than in cooking. It grieves us to see either a woman or a man slaving over a cookstove. Can't you see where all these things are leading? There will not be enough labor left, in a few years, to justify the organization of a union. Under the price system, you wouldn't have enough income to eat, much less pay dues to a union. And what are you going to do about it? Organize a farmer-labor party and vote for a new list of candidates? In other words, demonstrate your moronity? If you do go out and vote and do not get \$5.00 for it, you are a sucker. No voting you could possibly do would be of the least benefit under the circumstances, unless you could use your vote toward the authorization of a technological army to take over and run the economic resources of the country to the end of instituting a better social order.

You know, we don't have to have Technocracy. We can have chaos, and without preparations for an orderly change, that is what we will have. We can have civil war in this country -- get that through your head. But a change of regime through revolution in the European sense, we could not have. The country is too highly industrialized; it could not hang together under stress. The big cities like Chicago would be imperiled first by interference with the public services. Why, if your water service here were tampered with, it is 5-1/2 hours to the deadline. If the forces of order were interfered with, it would only be a matter of hours until the lights would go out, gas supply would stop, and transportation of foodstuffs would be at a standstill. And God help the fat man, for he will go first. You are up against a proposition of continuation of technological services during an orderly transition -- either that or chaos. If there is any unintelligent interference in the operation of your equipment, you will not have a chance.

The other day when the power went off in New York, officialdom nearly threw a hemorrhage. You could see panic in people's faces. Thousands were trapped in basements five stories underground, as well as forty stories up. Nothing worked.

The greatest hindrance to decisive action we have in the United States today is liberalism. The intellectual liberal is the man who has acquired so much erudition that he is only capable of deliberating endlessly. In a time when decision and bold action are necessary, the most he can do is to "decide to decide not to decide." The effect of his attitude is not greatly different from that of the uneducated man cursed with the hamburger psychology. He persistently refuses to let us face the actual physical facts that are in front of us on this continent.

We Technocrats do not run candidates. We believe in organizing the intelligent people along functional lines. We have organized Sections all the way across this continent, from New York to Mexico and from Miami, Florida, to Vancouver, B.C. We are not democratic in our methods. We do not believe in counting noses. We do not believe there is any sense in it. We are looking for those who can take orders or give orders, or both. We are looking for functional people who can contribute effectively toward a continuation of the orderly operation of our equipment when the present price system, interference control, comes to the end of the road. This is our country, isn't it? Well, let's organize it.

There are only 37,000 families in the United States now whose children are worth kidnapping. These families received \$10 billion a year, while it required 12 million other families to equal another \$10 billion. Is America the richest country in the world? It depends upon whose America you are talking about. If you want an America of scarcity, go right on like you are doing, voting for this political party or that, and you will have it.

If you are not certain -- if you can't make up your minds -- wait a little while longer and your minds will be made up for you under a fascist regime. You know it and everybody else knows it, if you don't want that, then get out and organize your functional capacity. But you can't do it except by vertical alignment. With anything less than that, you will not "go to town." You will only

TECHNOLOGY AND LABOR

land down in the sewer.

RADIO ADDRESS OVER STATION WCFL, CHICAGO, ILLINOIS

By Howard Scott

1937

Technocracy wishes to present to the radio audience of this station some of the salient features in this critical stage of the Price System.

The Lincoln administration, in making the Fourteenth Amendment to the Constitution, paved the way for American corporate enterprise. A century ago, with ninety-odd percent of Americans deriving their livelihood directly from the soil under the dominance of man-driven tools, 95 percent of the tokens of monetary wealth were in hard money and commodities. The debt claims of modern enterprise were practically unknown, and the overwhelming majority of things produced was consumed in direct subsistence -- only a small portion of the total volume of goods produced going into the exchange markets of that time in exchange for the tokens of hard money.

A century ago, the oxcart was the chief freight transport vehicle, and the spade, the hoe, the crude drag and the plow, along with the sickle and the scythe, were the chief agricultural implements of that day. Man, with the crude implements of that time, took 96 man-hours to spade an acre, a year to produce 800 tons of iron ore, and a year to produce 25 tons of pig iron. The application of technological procedures to the means whereby we live has finally solved for man the age-long problem of producing sufficient for his needs and more than enough for his wants. Today, 95 percent of the tokens of monetary wealth are represented by the debt claims against the future and only 5 percent are in currency. The transition from the primitive hard money stage to the advance maturity of a debt-claim Price System was rendered possible by the increasing technological development of modern physical science. The steady growth of the physical equipment of this country since the Civil War, and more especially the rapid acceleration since 1890, has altered the order of magnitude of our social problems from want in the midst of need to want in the midst of plenty.

The growth of physical equipment and the increasing use of more efficient technological procedures made it possible for the entrepreneur to increase the tokens of monetary wealth in ever-

increasing amounts. As long as there was a continuum of growth of the physical equipment, the entrepreneur could mortgage the future deeper and deeper. The continuum of physical growth over the last fifty years has enabled the debt merchant to cover the mistakes of the current year with the yearly increment of the next. This progression of mortgaging the future of America proceeded in spite of temporary depressions to ever-greater amounts of debt claims until today it is estimated that there is outstanding against the physical equipment of this country and its future operation \$238 billion of long- and short-term public and private debt claims.

At the same time that the entrepreneur was creating this Himalaya of debt, the technologist was continuously improving the technological procedures of operation. Each succeeding decade witnessed a further decline in the man-hours per unit produced, technologically lowered the physical cost of operation by more efficient machinery and processes at higher speeds, substituted extraneous energy for man-hours and increased the total energy consumed by the industrial system. The increasing consumption of extraneous energy and the increasing declination of man-hours per unit produced was not obvious or apparent in the American industrial picture as long as there was an annual increment of growth in the physical equipment. When the growth curve of the physical equipment of this area began leveling off in the last eight years, the energy curves and total man-hours were even more accelerated in their drop than hitherto.

Total purchasing power in a Price System is directly dependent on the total man-hours involved in the operation of the physical equipment. Wages and salaries are paid on the basis of man-hour participation of the individual. It therefore follows that, as the rate of production and rate of man-hours per unit produced increases, apparent purchasing power can only be maintained by an ever-expanding growth of the physical equipment. When this ceases, purchasing power falls, inventories pile up, plants close down, unemployment becomes general, and breadlines are a common spectacle.

It must be borne firmly in mind that the prosperity of a Price System such as ours can only be maintained as long as it can create debt claims in huge volumes each year, American corporate enterprise has arrived at that position where it can no

longer create debt claims in a sufficiently large volume per annum to validate the outstanding debt claims in existence. It therefore willingly surrenders its prerogative of debt creation to the federal government of these United States in order that the government, through the power of the federal state, can for a short time create debt claims fast enough to save American corporate enterprise for the benefit of those few Americans, the majority holders of our debt certificates. It is a policy of spending our way out of the so-called depression back to the halcyon days of prosperity -- a last desperate expedient of the Price System to prolong the agony of its passing.

In President Jackson's day, the commodity valuation currency had some relationship to the rate of production. Today, with the human effort supplying only 2 percent of the total energy consumed in our industrial system, any and all commodity currencies are unrelated to our rate of operation. No modification of this Price System methodology of debt creation will have more than a passing temporary effect. No revaluation of our dollar on a gold, silver, or any other base; no revamping of our fiscal credit system; no rearrangement of our banking system will do more than act as a temporary soporific. No juggling whatsoever of these instruments of the interference control of the Price System is capable of providing a solution to the problem of providing mass purchasing power sufficient to buy the output of American mass production.

The old line political organizations have induced the American public to support them in the past through their propaganda slogans and their party machine organizations. Every political party is a great racket just so long as it can muscle in sufficiently on the general operations of the area to maintain the payoff for its machine henchmen, in a social crisis, all political parties realize that the old time racket is washed up and therefore seek a new bandwagon more attractive than the former for the sole purpose of inducing the voter to come aboard. Racketeering, political or otherwise, is a component part of a Price System of production. Technocracy is under no illusions that any political racket can abolish the Price System, and that until a technological control is substituted on this continent, all political maneuvers, whether made by republicans, democrats, communists, or fascists are but racketeering four-flushing in the face of the progression of American technology.

The social problem of administration of production and distribution on this continental area is a technological one. Just as technology has solved the problem of production, so, too, will the problem of distribution and operation be found in the technological field. A Price System, whether privately owned or collectively owned, is still a Price System irrespective of whether it is in the United States or the Soviet Union. A Price System, with its pricing of goods and services for the creation of exchange value debt claims, no longer possesses sufficient accuracy of control to arrive at the physical costs necessary to be known in the technological operation of America's physical equipment.

Technology has written "Mene, Mene, Tekel Upharsin" across the face of the Price System, and all the political subterfuges and financial legerdemain evolved in the ages of scarcity can only momentarily delay its going. America is at the crossroads, and no foreign importation of any social theory or philosophy such as communism, socialism or fascism will avail her in the slightest. Here in the soil, in the equipment and structures of this continent are to be found the technology of the new social order -- a social technique for the operation of the era of plenty wherein for the first time a purposeful design can be projected of the complete functional administration of an American Technate, a technological administration of this continent wherein economic security and equality of income is guaranteed to all with a maximum of leisure.

American labor has formed unions, societies, and associations for the right to wear overalls. Technocracy points out that the time has arrived when the people of this continent must organize to put overalls on the machine.

The following letter was written by Howard Scott to correct gross errors in an article published in THE NEW YORKER of October 31, 1936:

The New Yorker  
25 West 43rd Street  
New York City

Attention: Harold Ross, Editor-in-Chief

Gentlemen:

May I extend my compliments for the altogether amusing resume of Technocracy and myself that you presented on pages 20 and 21 of your issue dated October 31, 1936, under the ubiquitous title, "The Erg Man."

The New Yorker's description characterizes me so delightfully mysterious and at the same time some kind of a near "bogeyman" and big bad wolf of the economic technological world that it appears as if you were attempting to do an Allen Raymond a la Herald Tribune.

May I be permitted to suggest that if your publication and others of the press persist in endeavoring to present me in this intriguing manner to your public, you will succeed in creating a Howard Scott legend that will place me on a par with Franklin Delano Roosevelt of being all things to all people. In view of this possibility, while I do not object to what you infer or imply, or how you qualify my reputation, may I correct as follows certain statements made in the issue of your magazine mentioned above.

1. My automobile license carries my height at six feet five and not at six feet two, a mere matter of three inches you'll say. Of course, even in a pinch we could let that pass, but, after all, this is a correction to the record and no doubt you would like to have your record straight.
2. Further to keeping your record straight -- you state that I was not an engineer in charge of Muscle Shoals No. 2 plant during the war but "merely a worker in a concrete gang." May I state that I was employed as equipment engineer by the Air Nitrates Corporation, a semi-government

The New Yorker  
25 West 43rd Street  
New York City

corporation, at U.S. Nitrate Plant No. 2 at Muscle Shoals, Alabama, in charge of installing the equipment of the cyanamid, calcium-carbide, and liquid-air divisions of that plant. Furthermore, I was promoted to designing technologist of the Air Nitrates Corporation in their offices in the Postal Life Building, 511 Fifth Avenue, New York City, and resigned in order to go into private engineering practice.

3.       Apropos your statement of my being suspected of being a spy -- that is also a funny one for the book, since spies are never six feet five, and I have never been guilty of the great honor you confer, having never been employed in the intelligence service of any government or any organization.
4.       Have never been a member of the I.W.W., the Communist party, the Republican, the Democratic, or the Socialist parties -- in fact, to put it mildly, have never been a member of any political party, or labor union, or liberal, or reform organization of any kind, not even a college fraternity. Nor have I at any time been in sympathy with any of these organizations.
5.       Neither have I at any time organized or been a member of any association or "bureau to teach workers to run industry after they took it over."
6.       If you can produce a copy of the Congressional Record that bears any inquiry of my activity at Muscle Shoals such as has been brought out in your magazine, I assure you that the Division of Publications of Technocracy Inc. will gladly make you a present of an annual subscription to each of ten different magazines now published by our organization. In the files of Technocracy Inc., there is a record of the senate investigation of Muscle Shoals by Senator Graham's committees which no doubt is the inquiry to which you erroneously refer. While I am mentioned in

The New Yorker  
25 West 43rd Street  
New York City

that investigation, you will find that it is only because I had several secretaries and a car, and seemingly possessed the power to issue oil and gas books on the Standard Oil, which I will admit is just a little too much swank for a concrete mixer.

7.           You state that a banquet for 500 technologists at the Hotel Morrison in Chicago, June, 1933, was called off upon my announcement "that Technocracy would use bayonets if necessary." You no doubt refer to the convention held under the joint sponsorship of Technocracy Inc., the All American Technological Society, the National Technological Congress, and the Continental Committee on Technocracy, in the Hotel Morrison of Chicago, on June 27, 28, 29, and 30, 1933. The entire proceedings of this convention were stenographically reported, and you are entirely incorrect in your quoted statement in that no such statement was made at that meeting or at any other time by Technocracy Inc. or myself. The convention was called off because of the heat after four days of convention fighting, in which Technocracy Inc. absorbed all of the other attending Technocratic organizations except the Continental Committee of Technocracy, which has since passed into the great beyond.

8.           You state that the Duron Chemical Products Company was established by me three or four years ago in Pompton Lakes, New Jersey. The Duron Chemical Products Company was incorporated in Delaware in the early part of 1923 and operated as a going concern until 1933, when it was liquidated. Its products were used over that time by the Medical Center, the Gresham Realties, Neurological Institute, New York Floor finishing Co., Brooklyn Edison, et cetera.

I have gone to this trouble in making these corrections for your record because I am certain that you do not care to be in the hazardous position of making libelous statements. As one publisher to another, I know that you will accept this

The New Yorker  
25 West 43rd Street  
New York City

communication in your own humorous spirit. More power to you, and  
a happy landing!

Howard Scott  
Director-in-Chief  
TECHNOCRACY INC.

EXCERPTS FROM A HOWARD SCOTT ADDRESS IN CLEVELAND, OHIO

on March 8, 1937

ORIGINALLY PUBLISHED IN 8141 MAGAZINE IN MAY, 1957

- § Four years ago the New Deal was brought in with the promise of something to relieve our plight. Last fall the New deal was renewed on the promise of more gains. It wasn't the Democrats who elected this new administration. It was a majority of the people of the United States. That fact in itself was quite an innovation. Last fall they buried the Elephant; soon they will have to move him over to make room for the Jackass.
- § We Americans have more wealth, more goods, and more technical ability than anyone else. Yet when it comes to social institutions, we are economic illiterates. We have never had time to bother with social problems up to now. We were too busy getting money. The need to consider social trends was not pressing.
- § We are still a funny combination here in America. We enjoy the best food and the best equipment and want both. We have everything possible that human beings want -- but with millions of our fellow Americans on Relief. Technocracy takes the stand that anyone who administers relief as it is now being administered should live the same way. If you want to know how that is, go to our relief flophouses. Would you Christians treat Christ that way? Remember you throw your bread upon the waters. It will come back.
- § In 1919, there were 10,800,000 people in the manufacturing industries of the United States working an average of 54 hours per week. In that year, the total number of man-hours was 29 billion. In 1929, there were 8,800,000 people working an average work week of 48 hours. The total man-hours were 20 billion. In 1939, there were 7,600,000 people in these same industries and the total man-hours were 11 billion. If you would observe this on a chart, it would look like that old sign -- "Going, going, gone." In 1936, we had a work week of 38 hours. In 1939, with the same relative employment in the manufacturing industries, you will have to reduce the work week to 22 hours. But to keep up the purchasing power, you will have to pay three times as much for one-half the

3/8/37

man-hours of 1929. Do you think this will be so? Dumb as you are, you are not that dumb!

§ We are not worried here with any class warfare. We haven't a permanent peasant class or working caste in America. There is really only one class of people: consumers. And those are divided into two groups -- chiselers and suckers, with the suckers all trying to be chiselers. That is why you went to school. There was a time when parents and grandparents learned about the "honor of industrious labor." They were brought up with the idea that to be a reputable citizen, you must work hard to achieve success. Now the graduates will look at you and say, "So what?" They know it is a lot of hooey. Nobody ever got rich by work.

§ Right now, 400,000 miners are fighting for a 200-day year and a \$6.-a-day minimum. Fighting for a living of \$1,200 a year! Mr. Lewis is putting up a pretty fair battle, but there will be 120,000 less coal miners on the date of the next contract than today. We are mining coal today not with pick and shovel; we are using coal cutters, power loaders, etc. A mine in Illinois is averaging 10,000 tons in 8 hours with 600 men. We are fast on the way to eliminating the coal miner. Why not? There never was any sense in mining coal by hand. No one ever acquired social prestige in a coal mine. The miners know this. The era of the coal miner goes by and he appears on relief.

§ Two years ago, Technocracy Inc. publicized these new developments in raining, along with the strip mill, the cotton picker, etc, FORTUNE MAGAZINE said Technocrats were using the cotton picker to frighten people with. Five years ago, Technocracy talked about sodium lamps. I remember when General Electric questioned us about it. They said it was still in the laboratory; but Holland at that time had a lighting system of one and one-half kilometers of sodium lamps.

§ The steel industry is also "bowing to progress." Giving a 40-hour week to common labor appears as a great victory. What does it mean? Of the 500,000 or 600,000 workers, how many are common laborers? Seven percent or 35,000, with a 40-hour week, they will have to stagger crews in the mills.

Now there will have to be two divisions, neither working more than 20 days per month, for \$862.50 per year. Life on this continent does not begin until after \$50 a week; and on \$75 per month, you can't even live in sin in this country!

§ Many of you don't want labor eliminated. Some people still want to work. Lord knows why. Probably it's a hangover. Back in 1842, the first bathtub was made for \$1,200. Five states passed laws that they were unsanitary and ungodly. Three states still have these laws. So you may readily understand why it takes so long to get over this idea of work. Each of you wants a good job. Here's an idea: If everybody in Cleveland took a bath every day and washed their faces and hands three times a day, the amount of domestic water used would be 2-1/2 times the amount that is now used. Somebody is not coming clean.

§ The small farmer may as well go, also. There is no social prestige to be gained by following a plow. Just the scrubs stayed on the farm in the 1920s. The smart boys went to California; but the crash came and they lost everything. California is the home of the "Escrow Indians." If the boom had kept up in 1929, they would have Los Angeles sold out to Denver. They may or may not start up again. Now, due to the Faraday Fluid Feeding Process of raising food, the commercial farmer is running his product to market in competition with the regular farmer. Even the thrifty Jap farmer cannot compete and is being run out of business. Of course, this is one way to make America safe for Americans.

§ There is much propaganda today against auto accidents. We have great safety campaigns, yet accidents increase. Why? Not because drivers do not know how to drive. With split highways, one-way traffic, raised or sunk crossings, poles and trees moved back 15 feet from the road, with 4 degrees horizontal and 4 degrees vertical curves only, and with the highways lighted by sodium lamps, accidents would be reduced by more than 90 percent.

§ Look in the public libraries. Libraries carry books on new social trends and Technocracy on the same shelf. The Cleveland Library now has an outside panel window display at one end on "How to Maintain Democracy" and one at the other

3/8/37

end on "Social Engineering and Technocracy." Even your library admits that our imported democracy cannot be maintained.

§ Technocracy never tries to convince you against your will. Technocracy Inc. is looking for those who must and are compelled to do something. There is plenty of room for all, provided you are an American citizen. Technocracy was originated on and is limited to this continent. Its objective is a New America far ahead of anything we have ever known. Functional operation of all equipment and facilities would result in a balanced load economy, where there would be an abundance for all. You could not create debt and could not chisel fellow Americans. Remember, we Technocrats are not intending to do all this. The people are going to do it and because they will be forced to do it -- not from any will of ours, but because conditions will compel them to do so, we will tell you what to do, how to do it, and when. If you want an orderly transition, get going and find out what it is all about.

§ There won't be any revolution in the United States. It will either be an orderly change or chaos. Make up your mind. No barricades as in Russia, Italy, and Spain. Our larger cities are too technical to permit a revolution. In New York, if power and water were cut off, it would be 5 hours and 18 minutes to the deadline; therefore, there can be no revolution under these conditions. Either orderly transition or chaos. Merely voting gives no hope. Sometime within this next decade, this country must make a major decision. We did not do so in 1776 nor in the Civil War.

§ This organization will be three years old next month. It started out without any literature, never has been endowed with money, and the officers receive no salary. Most of the officers would feel they were in luxury if on relief. It is a curious organization. It receives no help from any other group. It did not borrow its writers or speakers; it developed its own. It publishes eleven monthly publications, three in Canada and eight in the United States. We are strongest where the percentage of illiteracy is the lowest. This is true in both the United States and Canada.

- § Technocracy Inc. has offices in every city in Canada from Victoria to Winnipeg. In another year, at the present rate of growth, the Technocrats in Canada will be the dominant group. We are now down south, on the Pacific Coast, in Arizona, Utah, Montana, Kansas, Ohio, and many other parts, including Massachusetts for the first time. We have a lot of allies among those that fight against us as they tell what a wonderful America this is via the billboards; and these same billboards stand next to the relief lines, telling what the machine is doing. Technocracy is very grateful for the help of those fighting against it. If this keeps up for a few years, we will be bigger than any organization ever seen.
- § Technocracy Inc. is not a political party, nor are we a labor union. Our approach is quite different. We must have a social engineering blueprint. It is rather difficult to realize this. Every other approach has been on the basis of conversion; that is, if you could convert quantities of human beings, it was right. Politics is the natural approach of morons to something they do not understand. Our problems of today cannot be solved that way. The mass of human beings are important as consumers, but not as deciding factors on how to operate our high energy technology.
- § Conditions cannot be tolerated much longer. This continent will have to make the next gift to the civilization of man. It will be the civilization of tomorrow; and it is in your hands. Whether you like it or not, you have to have it. You will have to make the New America, where there is no toil, poverty, disease or mental defectives; but we cannot change a system without your help. Nobody can do it for you. It is up to you to find out where you stand.

EXCERPTS FROM A PUBLIC LECTURE GIVEN BY  
HOWARD SCOTT, DIRECTOR-IN-CHIEF, TECHNOCRACY INC.  
CONWAY HOTEL, APPLETON, WISCONSIN  
AUGUST 27, 1937

I am glad to be here and see all the faces of people promoting the growth of Technocracy. Permit me to say that there are similar organizations of Technocracy gathering in many places from the Panama Canal to the very far north in Canada. We have members in all of these places. It is an American organization, and it is composed of 99.9% of what is called the American type.

We have gone a long way from where we were five years ago or even three years ago -- a very long way! Today, on this tour, we are using the largest seating capacity building in every city from the Great Lakes to the Coast. We have the trolley car advertising sewed up in every city for days in advance. We have the wireless working and thousands of posters placarded on poles all over the country.

We want this continent to know that an organization is on the move. We are not a political organization. We do not permit any political party to gain membership in Technocracy. In other words, to be a member of Technocracy, you must resign from any political party. You must be a citizen, and that is all we ask. This is a new kind of nationalism, because it is nationalism on a continental scale.

When I first entered Canada three years ago, it was 20 below zero, the snow was falling, and there was one man -- just one Technocrat -- standing in the falling snow. Today in the same city, there are thousands. There are Technocracy Sections in every city in Alberta, Canada. This organization has moved up to its present position without political backing. We owe nothing to anyone except to our own members. We have no funds, except the membership dues of members and contributions from those who join. It is the only organization that makes you pay for the privilege of working as a Technocrat. There are no immediate benefits for the simple reason that any organization on this continent that attempts to do this is bound to go down.

The labor unions are all playing up to the immediate demand. They are all trying to satisfy something now, and the moment that you design an organization, or build a structure of an organization, for such a purpose, it is bound to go down, as it

will not be able to satisfy all its members. We have not made this mistake.

The first organization that sprung up in 1932 was followed by several hundred Technocracy groups in this country and Canada. We had to go through the groups and eliminate some of them. You had the racketeers in Green Bay attempting to run on a Technocracy ticket. We had to rub out Technocracy in Green Bay because it got off to a bad start. This was repeated in a few places in this country, but today there are no organizations trying to horn in on the game.

Today Technocracy is stronger and growing larger. It did not skyrocket as others have but has continued a steady growth because we did not fool ourselves that we were going to get anything through a political racket. A new organization was needed, one different in design. Different in structure, and different from anything that happened before, and Technocracy has achieved this as an organization. While we are on this subject, I would like to point out that our growth in Canada is an example and also our growth on the Pacific Coast. We will continue in Canada and will be the dominant organization there. We will have more than any political organization in the Western Provinces.

In the last election a few months ago in the Provinces of British Columbia and Vancouver, the vote was reduced 50%. We do not have to reduce the vote another 50%. No political power on earth would dare hold power with 30% of the electoral votes for it. Remember, a racketeer is smart because he never likes to stay where the heat is turned on and is wise enough to get out.

The Province of Alberta cannot pay salaries anymore. Thousands in Saskatchewan are on emergency relief. The drought wiped out these people. The wheat crop in Saskatchewan used to be 321 million bushels; now it is 140 million bushels. There are only 1-1/4 bushels per acre in the planted area. There are 800,000 people in Canada liquidated by the drought. With a continued relief load, the situation in Canada is going to be sweet. It is so sweet that Technocracy is making great headway.

We have a cotton crop in the United States in excess of 15,400,000 bales, and the government holds 1,700,000 bales. In 1930, the United States produced 15,000,000 bales and the rest of

the world 10,000,000 bales of cotton, and this year the rest of the world produced 19,000,000 bales. The consumption is only 16,000,000 bales if we run at the consumption of this year and last. We have practically a three-year supply of cotton on hand. While we had less than a million acres of cotton this year in the United States, we may ask what is Washington going to do when it has to consider the abandonment of 16% of the cotton acreage of the United States. The foreign countries are enlarging their industries, and the market for the United States cotton has practically disappeared abroad. Unless we have a drought, we can expect to have a lot on hand -- unless we change our policy. We will have to plow up four out of five acres instead of every other one. What are we going to do if we have to eliminate 20,000,000 acres in our cotton area?

This year we will have 950,000,000 bushels of wheat and 2,000,000,000 bushels of corn. We made these estimates in the month of February, and they were estimated by Technocracy on acreage basis of March 1937. We have had an uncanny way of being accurate on crops for quite some years. It would be better for the government if they just took our figures, because as it is they correct theirs to meet ours.

The trend of events in the last 5 or 6 years has changed greatly. I remember the time when we publicized the sodium lamp some 6 years ago. The General Electric Company at that time claimed our statements unfair, stating that it was only a laboratory experiment; but we begged to differ with them. Today we are lighting our highways with sodium lamps. We publicized the first cotton picker and the first stripping mill. Going back further, frosted foods were devised by two Technocrats over 12 years ago, and frozen foods are sweeping the country today -- a revelation in the handling of foods.

There is another particular process which Technocracy is publishing all over, and that, of course, has to do with the method of raising food. For thousands of years, the only way man knew was to grow food in the soil, and we have had the man hoe, the man behind the plow, idealized for centuries. That day is not going to be long, because there is no sense in raising food in soil, because soil is only about 4% efficient, whereas water is 98-99% efficient. There are five farms in California working on this scale, and Dr. Gericke is supervising them. It has produced

at the rate of 3,000 bushels of potatoes and 213 tons of tomatoes per acre. Production is raised faster and better. Potatoes are raised so fast the bugs haven't even got a chance.

Very shortly the housewife and the restaurants are going to have another development, and that is the cooking and serving by another method. The method employed in cooking the meal served this evening is the same as was used 6,000 years ago. There is a slight improvement, but the process is the same. Technocracy is really going to give us something. We will have the food cooked and kept in glass containers, and all we will have to do is dial it in and the food will come in cooked in a few seconds. A soft-boiled egg, which takes 3 minutes now, will be cooked in 2-1/2 seconds. The food will be served mechanically so that there will be no employees in the kitchen, and the only employee in a restaurant will be the cashier. The food containers will be stacked up each day and hauled away. We never heard of a female acquiring social prestige over a cookstove.

The moment that you can organize as one single bargaining organization, the cooperation of that organization will eliminate many minor difficulties. If the CIO were to succeed 100% in this country, you would have the establishment of a corporate labor dealing with corporate industry. Washington would be holding the balance of power. Putting it mildly, you would have fascism under a cockeyed democracy. In General Motors, seven weeks ago, you had a strike which should have paid at least \$5,000,000, cause production was running ahead of sales. The strike slowed down production. Five million dollars would be just a fair commission. Put the blame on the strike. General Motors sold less cars in 1937 than in 1936. The automobile industry is worried, but there are a lot more besides them getting worried. Eighty-one percent of the orders of this country are war orders. We are supposed to be the best country, yet our expenditures for war equipment exceed the expenditures of any country in the world. The war would be a very easy way out.

If F.D. Roosevelt leaves a cruiser down there in Shanghai -- and perhaps that cruiser will get a few holes in it, then we might have a way. Then it would be worse than if we had Hoover. Not that it's Roosevelt's fault, but we must remember that we have peculiar characteristics. We didn't defeat Hoover at the polls because we wanted Roosevelt. We always put somebody out

because we have something against them. You know what happens when you promise your child or your wife something and you don't come across. You are in a tough spot! Stop and think of what happens when you promise 128 million human persons something, and then you can't come across. It is going to be tough. No one who leads a political party can come across. No matter who is in the White House, they are helpless to do anything except by compromise and promise. In order to get in on a political program, you must be something to all and nothing to everybody.

Lewis and the CIO were smart enough to know that they had better get out before the United Mine Workers fell in on them. There was \$460,000,000 worth of machinery going into the coal mines of the U.S. The mines in Illinois were mining 10,000 tons of coal in 8 hours with 600 men. Twenty-five of the giant 50-ton shovels, of which 8 have been ordered since the publication, could dig all the coal needed for the U.S. on 8-hour shifts. Underground mining is moving up. We can dispense with most of the men underground, and it is possible to mine 30,000 tons of coal with less than 100 men. These men will be merely machine tenders. You know that no person ever acquired social prestige mining coal.

The same trend is on in distribution stores. One of the newest thing in stores is where you come in and there are no goods on open shelves at all. All goods are behind glass, and you are given a key. You walk around and insert the key in the lock for each type of goods you want, and each time you insert the key, a package comes out all wrapped. You come back to the desk, turn in the key, and when the key is inserted in its slot, you get your slip. Well, why not? You have to put that store clerk out of business anyway, and there are too many of them anyhow.

You have read about the continuous run stripping mills for steel in your newspapers. This is only a start. In Baltimore, a plant is being erected for the continuous rolling of strip steel. The steel comes out put into one continuous strip steel. The glassblower saw Samuel Gompers rise to the head. The blowers are no more, and now the plain steel roller is on its way out. And why not? Many instances could be cited where manufacturing will go on in a larger scale with fewer men.

Paper is one of the chief products of Wisconsin, and the new

plants run 1,800 miles of paper a day; and they are automatic more so than any paper plant they ever had. It employs less men and does more work. The industrial plants in the south are greater than they have been in the last 40 years. There are enough rayon plants at the present time that if we expect to keep them running to full capacity, women will have to wear two pairs of stockings and two dresses at the same time.

On this continent, with more brains, more ability, with our elevation and climate, with a fortuitous setup better than on any other continent, more trained human beings than anywhere else, and with the best and greatest machinery known to man, with all this staring at us, we had to create \$17 billion worth of government debt since 1932. There are 8 million unemployed in this country today. Industry in the U.S. today is overemployed. There are 4,300 employees in the Bell Telephone service in this country who are not needed today. We would fire them because we don't need them.

The United States Steel has too many employees. Upon completion of the new steel plant, there will be 70,000 full-time employees who will not work in the steel industry again. There will be 160,000 coal miners who will not be required to mine coal on the next contract date. How are we going to solve this?

There are 5,600 counties in the United States, and there are 175,000 political bodies employing 4,400,000 political parties in the 5,600 counties. Can you imagine any political party saying that they will have to commit suicide? The only time they become extinct is when they are washed out and there is no payoff. When there is no payoff, it is a national washout. That is what we are headed for. There was a time when the local communities could meet over cracker barrels in the general store, and with the slow means of communication and transportation they had, Washington could do mostly anything and their lives would not be changed. Today, they hardly get started in Washington before we know all about it. Did you ever hear of an engineer trying to improve his paper plant by counting noses of employees? If you did, you'd lock him up. When we get a pain down here on the right side, we go to a doctor to find out what is the matter. We don't vote on it first, because if we do, we die. You can't vote on your blood count. Just remember that. You can't vote on any problem that affects 170,000,000 people on this continent.

The last time I was in Alberta, I was invited to a dinner by a certain politician with the hope that he could persuade the Technocrats to support his party. "Mr. Scott," he said, "Why don't you and Technocracy come in and stand back of the Social Credit Party and show us what to do?" I said. "Show you what?" The Premier was unable to answer because he didn't know, and no politician does know.

Do not think that after the United States goes off the Price System that we would not be compelled to assume operating responsibility for the rest of the continent. Canada would be taken over in less than a year, and Mexico in two years. The moment the Price System is abandoned, it means an economic responsibility for the continent.

The Old Age Benefit Law is probably one of the biggest jokes on the citizens of this country. There is a maximum of \$85 per month that you could receive, and in order to get this \$85, you would have to receive \$4,300 per year for 43 years. How many adults in the United States are earning that amount? The Social Security Act is another racket. It is a process of building a fund in order for the government to purchase bonds, which, in reality, are only pieces of paper. It enables the political administration to have huge revolving funds to manipulate.

In the endeavor to arrive at a technological solution to all our problems, we dare not consider anything of a political nature or structure. Technology is moving up all over the continent, and as every manufacturer and businessman seeks to lower his operating cost, he will put in faster and more automatic machinery, and as this happens, more energy will be converted and conformed. The only way we can attain abundance is by having humans work less.

In all the human history, we have fought and died for the right to wear overalls, and now modern technology comes along and shows us just how stupid we have been. Let's put the overalls on the machines where they belong. We can obtain the leisure and security we desire on a basis never before dreamed of -- not by any political force, but by building a disciplined and trained organization. You can have it orderly or disorderly. The only proposition is whether your organization will have an orderly

disciplined social change or whether you have chaos. You cannot have a revolution. The choice is yours.

There are enough people in this room to go out and organize the State of Wisconsin in no time. Remember, I can't do it alone as an individual. It is your organization. We do not make any money on it. All we get is our meals and clothes and \$10 per week. I get the same as everyone else. No matter how large it grows, the proposition will never be different. We are asking every American to get going and go out and really set up an organization, because it is your organization and nobody else's. It is not bought and paid for by any organization on earth. Let's see what you can do.

#### QUESTIONS AND ANSWERS

Q. What would happen to a man who committed a crime and tried to hide out and escape the authorities?

A. A man wouldn't be able to go very far because we could follow him by his purchases. Provided you are an identical twin, working at the same occupation, then you might have a chance in four billion of beating us. We don't have to worry about counterfeiting, because there are no checks. The certificates are non-negotiable. You can't save it and you can't give it away. You are not compelled to spend it, but if you don't, the load is cancelled out. The moment a man tries to hide out and buys anything on this continent, we would have him. The moment that any one individual bought, say, 30 pairs of shoes in a month, the wards would have him for examination. We would have a check on venereal diseases and any other diseases, also,

Q. Would we have the privilege to travel to a foreign country, and what would be our purchasing power?

A. You could go to the Bureau of Foreign Exchange and exchange your certificate for the amount of foreign money desired. You could enjoy yourself, but you could only return and go on an American ship carrying an American flag. There would be no company building ships abroad for this country. You could spend your

certificate abroad.

Q. You state that there are 8,000,000 men unemployed in this country. We were under the impression that there was no accurate figures dealing with unemployment. We were wondering if your organization conducted a survey of this or if you have it how they went about it?

A. It is rather difficult to check the unemployment records of this country. The population is increasing at 800,000 per year, and the manufacturing agencies are not employing the men they did in 1929. In 1919 and 1920, there were 27 billion man-hours in industry. There are around 53 and 54 million people working. Our figures run around 9 million. We can't say they are accurate because they are taken from other records. We don't take a census.

Q. What about the young people?

A. There is never any inducement required for the youth if you can show him the way. There are some 34,000 radio stations on this continent. You don't have to worry about the youth entering into football, baseball, etc. Once you offer an opportunity, the youth will do the rest. Anybody who doesn't wear a necktie today is the only one who has integrity. There is no law on this continent that compels a man to wear a necktie. The only thing is that he is afraid of the consequences, social disapproval, and the system under which he lives. The moment that you change the conditions of the human beings, you do not have to worry about the youth.

Q. Why do you use the Monad as your symbol?

A. The Monad is one of the oldest symbols known, and it was chosen because of its simplicity of design. The two parts are named "yin" and "yang". It is of striking simplicity, and Technocracy is the only organization that uses it in vermillion and silver.

Q. Is the certificate issued at the time of birth or at the age of 25?

A. It is issued at the age of 25, but there is a separate maintenance set up for the child previous to the age of 25. Education as we now know it would be abolished, because it is, as we know it now, administered by a bunch of chiselers. Under Technocracy, when the child is born, there is subsistence for every child apart from the income of every parent, so that if the child doesn't want to live with you, they won't have to. Most parents ruin their children. In most cases, the women bring the children into the world for penance mostly because of a mental disease, according to a private survey by the New York Hospital; therefore, the child will have a budget and an allotment for it. The checkup by the distribution system shows whether that budget is over and above the estimate.

Q. If there are to be no deeds, how would the property be distributed or taken care of?

A. Under Technocracy, you will have a purchasing power, and with this power goes transportation, housing, etc. If you want additional housing or houses, you would have to surrender purchasing power. Houses as we know them now are not houses but just a place you call home. When Technocracy comes, there will be homes constructed as follows: The walls will have to withstand a temperature of 700 degrees without showing more than 10 degrees rise on the other side. It will be soundproof, heatproof, waterproof, and will not require any paint, plaster, lath, wood doors, hinges, and will not have doorknobs. For the first time, you can have real privacy, because most of the people in modern apartment houses are scared to death to live for fear their neighbor will hear them. Now you will be able to knock on the door and no one will hear you. It has a beveled edge, including a photoelectric cell, airtight and watertight. It will be a steel structure with rods running through, and all you will need to put it together is a socket wrench and an electric drill. It is built on a mass-production basis 150 miles per day in 20-foot sections. It is fabricated steel with wool, and it is faced on the outside with the colors

magnetized. The floors and walls will be the same material. It is not heated with radiators. The human body will take care of that. Of course, this will bother us a lot.

The women are going to like this, because they will be economically independent of every male. The woman has her own income until she dies, for the first time in history, the male will really have to be good -- and how!

Q. Why aren't these put in use?

A. When I first announced it in 1932, it was photographed, and the National Bricklayers Association and some 100 other different organizations all protested against it, because we don't intend to use the present-day material and workers. You will have no need to use the present-day material and workers. You will have no need to carry insurance, and if you don't want the house in the present location, you can take it apart and move it to another location.

There are also some blueprints out on the automobiles to be used. They are streamlined, tear-drop design, 6 cylinders and 2 pistons in each, diesel, flat in the rear, with no mechanical brakes. The wheels turn 180 revolutions at a top speed of 120 miles an hour; 6'4" wide inside measurement; seats 4 people side-by-side. The automobile is built to run 350,000 miles.

Q. What about the new leisure we will have?

A. Life has been up to now a preparation for death. Hitherto, your country has asked you to die for it. Technocracy asks you to live for it. As for leisure, when you change conditions, you are changing the entire conditions of 170,000,000 people. It is impossible to change the biological structure, but you can change the conditions. Today, we have a great competition, the desire to acquire decorations. We do a lot of funny things and courageous things in trying to acquire these. We will change the condition so that people will

spend more thought in getting rid of decorations. We simply will confer on children of a certain age certain decorations. Every child will have to wear them, and, as they grow into adults, any time they achieve anything of note, one is removed. We will design the cities with parks and boulevards and pass the regulation that those who are decorated must ride and those without any decorations will be permitted to walk. There will be the most intense competition to get rid of the decorations; therefore, there will be plenty to do in your leisure time.

Technocracy is asking you to live, not to die. Of course, some people probably will be so affected by so much purchasing power and leisure, they will kill themselves off. But that will be a small percentage. At 45 now, you are all worked out. There will be thousands and millions of things to do if you are not burned out. It is up to you to use it. If you want to kill yourself, that's your business.

- Q. Will we ever experience a corporate state, and, if so, how long will it last?
- A. I doubt whether it would last 18 weeks. The City of New York has 1,535,000 telephones alone. The problem of operating New York is a greater problem than operating one-half of the world. The U.S. could take over New Jersey as a policing job for only about 72 hours. Twenty-four hours after that, they would have to take over the other states, too. The United States is not big enough to have a fascist suppression in this country. Chances of fascism in the U.S. is just as remote as a celluloid cat catching an asbestos dog in hell.

## SOME SALIENT POINTS MADE DURING HOWARD SCOTT NATIONAL TOUR

August 22 through September 1, 1937

### HOOVER, THE ENGINEER

He never was an engineer. The country turned on him with the greatest animosity I have seen in years, and I venture to predict that in two years you will see the people turn on Franklin D. Roosevelt with the same animosity. He is no better and no worse. He is merely a politician attempting to pull up this Price System of ours by legislative means.

### CONGRESS

Every time those 600 individuals that we send down there start to deliberate on a problem, before they get half way through with it, the problem is entirely changed. So you see, it is rather difficult for any representatives of the people, so called, to really do anything about it. You cannot blame them. They are representatives of a system, and while it worked very well when our forefathers opened this continent, it no longer serves the people today.

### VOTING

The people in Vancouver frankly admit that Technocracy has caused such a decrease in voting that only 50 percent of the people vote. There are only 70 percent eligible to vote, and we have reduced that figure. How much farther will we have to reduce it before the political party will quit? When 66 percent is against any political office, who wants to take office? In Arizona, we reduced the vote 37 percent. It will probably take us a couple of years to move east.

### THE STEEL INDUSTRY

You know, the United States Steel Corporation was in a very great hurry to sign with the CIO, and there was a very good reason for that. U.S. Steel had contracts with Great Britain for armaments, and J. Pierpont Morgan & Company advised them to sign so the armaments could be delivered on time. Don't think for a moment that the CIO gained a victory. Mr. Morgan gained the victory. There are a hundred independent steel mills that likely will go out of business in the next 18 months. That will

naturally release between 70,000 and 80,000 men. Those 70,000 or 80,000 will never have a job in the steel industry again. Where are they going to work? That is hard to say. Washington has an idea that this can be remedied by giving relief, and the faster it gives relief the faster business in this country will take a slump.

#### AUTOMOBILE STRIKE IN THE SPRING OF 1936

The CIO should have been paid \$5 million cash because General Motors was oversold, and the strike saved them \$5 million. Had it not been for the strike, there would have been 200,000 more cars on their hands than were produced last year.

There are so many rayon plants in the U.S. that each woman will have to wear two dresses and two pairs of hose at the same time in order to absorb the output. Where is all this leading to?

The poor workers in these industries are suckers. They like to think that if they organize on the basis of a union they can get somewhere. And where do they get? The cigarmakers were well organized and had built a fairly sound labor organization. Where are the cigarmakers today? There are only about 8,000 left in the country. The machine ran the hand cigarmaker out of business. Even if we organized the entire country, it wouldn't help. There are 52 million human beings, at least, capable of being employed.

#### CANADIAN RELIEF ROLLS

In Saskatchewan, the sand is blowing across the railroad tracks today. Their great wheat yield in 1928 was 40 million bushels. This year their yield is 1-1/4 bushels to the acre. Millions are affected by the drought in Western Canada, 936,000 were on the relief rolls in Canada the first of July this year. Canada has a much higher per capita debt than the United States.

#### NEW ORGANIZATION NEEDED IN NORTH AMERICA

Life on this continent now requires a new type of organization, not a labor organization and not a political organization. We have a technology and a mass production that is so far ahead of anything else on earth that that organization has to be developed here. Technocracy and the application of physical

science can solve our problem, and they are the only things that can solve it. We have the ability. We have more trained people than all the rest of the world, and yet we are so childish. We have to organize on an entirely different basis and not protest by street demonstrations. You go on strike. What do you go on strike for? To get a raise in wages, and you get a miserly raise in wages. The easiest way out is the best, we think. Just so we can send our children to school. We want our children to be able to get by without working. We have more potential chiselers in the U.S. than there are in the whole world. There is no class struggle here. There are only two classes -- suckers and chiselers.

Society will progress in the future, not by working human beings more in an economy of scarcity, but by working them less in an economy of abundance. Under engineering management, 3,300,000 men -- even now -- could do all the necessary work on this continent. Work was never intended for human beings anyway, and we engineers know it better than anybody else. The only way you can beat technology on this continent is to throw all the machines into the sea and shoot all the technologists; but if you are going to keep this technological civilization and push it to even greater heights, you have to keep the machines and technologists and put them into a position of dominance, eliminating the interference control of politicians and businessmen.

#### STATUS OF TECHNOCRACY, THE ORGANIZATION

Technocracy is now operating in over 30 states. We are also in Canada and Mexico. Technocracy will be the dominant organization in Canada in the next 18 months. It has been said, "God is on the side of Technocracy, and it is very peculiar, but He seems to be so." In other words, God has to be on the winning side. In Napoleon's time, God was on the side of the heaviest artillery.

## "CHALLENGE TO COMPLACENCY"

Extracts from 1937 Lectures  
by Howard Scott  
From THE TECHNOCRAT MAGAZINE  
Published January 1938

### ON PRESENT CONDITIONS

\$ The greatest struggle in history is now going on. It is a struggle between two methods of doing work: one by a maximum of human labor, the other by the maximum application of technology, with a minimum of human effort.

\$ While preaching the inherent right of every citizen to work, the government is financing industry toward more technology, thus actually reducing the opportunities for work. Washington and Ottawa are both in possession of the facts, but they practice misrepresentation with misinformation.

\$ By underwriting the boys at the top and providing a dole for those at the bottom, government is liquidating the Great American Middle.

\$ There has been more damage done in this country by sincere damn fools than by unscrupulous crooks.

\$ As the financial institutions approach 100 percent liquidity, the interest rate approaches zero.

\$ The faster debt is created, the shorter will be the time for the life of the Price System.

\$ Every businessman is just as much on relief as the reliefer -- but the man on relief knows it.

\$ While a hue and cry is being raised over the 19 million or so venereal cases, less is said of some 48 million citizens who will carry the effects of malnutrition on to the second and third generations.

### PREDICTIONS

\$ That "Banks would close in April 1933," was predicted by Technocracy in July 1932, (They went us two months better and

Jan. 1938

closed in February. The relief measures, which later constituted the New Deal, were also pointed out during the Hoover administration.)

§ Fifteen major predictions have been made by Technocracy; 14 of them have proven correct. The 15th is not yet due.

§ In 1933 at the American Association of Arts and Sciences in New York City, with a continental radio hookup, Howard Scott made the following statement: "The day will come when the banker, politician, radical, working man, and businessman will all be in the last ditch, all fighting to preserve the values of the Price System," (Note the recent proposal of Lammot du Pont to spend \$25 billion to stimulate industry and therefore prop up the values so necessary for the existence of his kind. Note also the struggle of the labor unions for the right of the laboring man to struggle.)

#### OPINION

§ Only when there is zero opinion in the arrivation of social decisions in the operation of a technological totality will there be a maximum of personal selectivity, choice, and opportunity.

§ There could be one time -- under this system -- when we might make a decision by voting. That would be by a referendum to vote the existing political system OUT and the Technate IN.

#### POLITICS

§ Our present political mechanism is as much of a useless heritage as the habit of an apartment-bred dog imitating his wild ancestors by circling before lying down on a terrazzo floor to trample grass which isn't there.

§ Politics is the natural approach of collective moronity to something it does not understand.

§ No one but an idiot would attempt to be logical about an illogical problem.

§ Democracy is an institution wherein we permit the citizens to believe that they are free and that they are participating in

the national decisions. This is our greatest blockade to social progress.

\$ Just because Democracy is on the way out does not mean we must necessarily substitute any other European philosophy of government.

\$ Society cannot pull itself up by its philosophic bootstraps.

\$ Every time you vote for any political party today, you are voting your approval of the status quo.

\$ A party platform is made to ride in on, not to stand on.

\$ Communism is a moral philosophy proposing a more equitable distribution of a scarcity.

\$ You can only have a fascism when you have more than 65 percent of the people on the soil. We are 80 percent urban.

\$ The nominal government consists of the officials elected to office; the de facto government consists of the major holders of debt claims; the nominal government is just the office boy for the de facto government.

#### APPROACH TO A TECHNATE

\$ Contempt for the status quo has never yet occurred at the top of society -- only at the bottom. (It is now occurring in every social stratum.)

\$ If Jefferson, Jackson, Napoleon, Plato, and Socrates could all dine together, they would understand each other perfectly; they lived in the same kind of world. They would be lost now and total strangers to this modern world of technology. Population has increased ten times since Jackson's time while power production has increased 353 times -- mostly since 1903.

\$ When the scalar quantities are changed, that is, when there is a change in magnitude, the problem is entirely changed. This is true of our social mechanism. We are now operating on a scale of such magnitude that our social mechanism has become a technical -- not a philosophical -- problem.

Jan. 1938

§ When the Wright Brothers made the first human flight in a powered heavier-than-air craft, the Western Union refused to transmit the news -- it wasn't so. The NEW YORK TIMES refused to print it -- it wasn't so. Our present condition has never had any precedent; therefore, to the minds of Price System apologists, Technocracy's correct analysis of it "isn't so."

§ The conduct of human affairs on this continent will have to conform to the technique of operating our energy-consuming devices.

§ The proposal of Lamot du Pont that industry spend \$25 billion to put three million men to work is the first demonstration in history of the dominant social group financing itself out of the picture. Twenty-five billion spent for new technological equipment will just about do the job.

#### CONDITIONS UNDER A TECHNATE

§ The Technate will be the first government in history to guarantee the livelihood of man from birth to death.

§ For the first time, you would have the governance of man by the physical operations.

§ Decisions in a Technate will be the closest approximation of the existing data.

§ In a static society, it is almost impossible for real functional ability to rise.

§ In a pile of potatoes in the field (static state), the big potatoes will be found outside near the bottom. After a transcontinental trip in a freight car (dynamic state), the big potatoes will be found on top. It is not the desire of the big potatoes to be on top that puts them there; it is the tendency of the small ones to gravitate to the bottom, the position of least action.

§ The human being as a source of energy is not so important as he used to be. He will be more important in the future but in a different way -- not as a contributor of effort; for example,

QUOTES FROM THE 1937  
HOWARD SCOTT TOUR

Jan. 1938

Peoria, Illinois, and several other cities are generating power from city sewage. A 5 percent addition of cornmeal to breadstuffs will increase by 150 percent the extraction of methane gas. In the Technate, a citizen will be more valuable for his excreta than for his physical labor.

§ Transportation by water, being one-tenth as costly as by railroad, will be used on a continental scale after the development of a Continental Hydrology supplying water routes from border to border.

§ Houses will be designed as "machines for living" and will be provided on a continental scale. Present concepts of professional architects as to housing will have to be scrapped. The majority of people are now living in unhygienic rat houses.

DINNER SPEECH  
Valhalla Restaurant, Chicago  
August 26, 1937

Published in FEDERATION NEWS, September 6, 1937

Howard Scott, Chief of the Technocrats, stopped off in Chicago August 26. Accompanied by Harold Fezer, his tour manager, who had driven through from New York, he was on his way to begin what he calls his annual continental tour of more than 200 organized Sections in western United States and Canada. No formal lecture was scheduled for Chicago, where the number of Technocrats is comparatively small, but local adherents had arranged a dinner in his honor at Valhalla Restaurant, 5250 North Clark Street. There was a total attendance of about 100 members and friends, among whom were many members of local labor unions. In a short speech, followed by questions and answers, Scott explained how advancing technology and machinery spelled the doom of labor and its organizations, bringing in their place abundance and leisure "whether we like it or not."

"Increased use of power," he said, "is synonymous with unemployment. It is only a matter of time until machines and technological processes will put most of us out of work for good. If a lot of you live another 10 years, you won't be doing any work. Enforced leisure is going to be hard for you to take, because you have been accustomed to think that if you can only get a job, you will really be going places. But you will not -- you will only be going to work! For 6,000 years you have had preached to you the morality of work, which is a myth. Nor did anybody ever build up any social prestige by working. Nobody ever got rich by work; if he got rich at all, it was by getting other suckers to work for him. That would give him economic advantage. Without that, he would have no economic power. Society will progress in the future, not by working human beings more, in an economy of scarcity, but by working them less, in an economy of abundance. Under engineering management, 3,300,000 men, even now, could do all the necessary work on this continent. Work never was intended for human beings anyway, and we engineers know it better than anybody else. The only way you can beat technology on this continent is to throw all the machines into the sea and shoot all the technologists; but if you are going to keep this technological civilization and push it to even greater heights, you have got to keep the machines and technologists and put them into a position of dominance, eliminating the

interference control of politicians and businessmen."

"Modern technology has already wiped out a good many things formerly dear to us. It has seen the passing of such institutions as the glass blower union and the cigarmakers union, in which Samuel Gompers got his start toward bigger things. The Washington machine now makes the cigars. You can make a million cigars a year by a machine photoelectrically controlled."

"John L. Lewis goes out and starts the C.I.O. because he foresees that his base in the United Mine Workers is going to pass out soon. He was smart enough to know that coal mining is on the way out; \$460 million worth of labor-saving coal mining machinery is being put into use. And why not? Did anybody ever acquire either wealth or social standing working in a coal mine? The same process is going on in the steel industry. One after another, the intermediary jobs between the smelter and the mill are being eliminated. Direct rolling of steel is almost here now. The direct rolling of metals is not merely a dream. The time is not far off when they will be forged in one process from the electric furnace to the mill, without ingots, billets or slabs, the molten metal going directly to the mills through a tube. Where will all your open-hearth workers be then? They were the skilled and indispensable workers who drew the big wages. Soon their jobs will be no more -- and why not? There never was any sense in running an open hearth or even a blast furnace if a better way could be found."

"We organized Technocrats are responsible for popularizing a new process in the growing of foods. It is known as the Farady Process of soilless plant culture. Soil only serves as a vehicle for containing the food for plant life; and as a vehicle, soil is very inefficient. On the other hand, water is 99 percent efficient as a vehicle for plant food. The tank method of raising vegetables is now in commercial production, not only in the west but also in the east. Dr. Gerricke, who is the foremost sponsor for the system in this country, has gone from California, where he lives, to New Jersey to supervise the installation and operation of several units there. These will be in regular operation by next spring and may be expected to outdo the old methods in every way, including economy of production. All the process requires is a tank with 6 inches of water in it, covered with a chicken wire screen holding up a layer of wet excelsior,

straw or other fiber. Seeds or plants are set into this, liquid chemical fertilizers are squirted into the water, and an electric heating unit installed to maintain a favorable temperature. This method will produce 3,000 bushels of potatoes to the acre, 217 tons of tomatoes to the acre, and tobacco 14 feet high. In other words, we are going to put the farmer out of a job. Why not? Nobody ever acquired any social prestige following a plow. The only way a farmer has ever been able to get rich was by employing other suckers to follow the plow for him."

"Some years ago, somebody discovered a new and better process of preserving perishable foods -- the quick frosting process. It catches and holds all the crispness and flavor and attractive appearance of fruits and vegetables fresh from the garden, without the deterioration caused by ordinary freezing and thawing. The process can handle anything from cabbage or spinach to fish. The preservation of quality is so perfect that experts declare foods put up by this process are the only ones worth eating. And simple? Why, the housewife merely buys them at the chain store, takes the wrapper off, and they are all ready to eat or cook as the case may be. This, again, is going to throw a lot of men out of work."

"During the recent depression, many businessmen, in despair at results of the impact of oncoming abundance upon the price system (which must depend on maintenance of scarcity), jumped out of 20th story windows and landed on the sidewalk. During the next depression, they will jump out of 40th story windows and crash right through to the sewer! But you won't have any revolution in the United States. It is impossible. You can have revolution in an agrarian society like Russia. It is comparatively easy to carry on a revolution, over long periods of time, where 90 percent of the people can go right on living their lives without being aware of it. In this country as a whole today, 76 percent of our people do not derive their living from the soil. They derive it from technical equipment; and in the big cities, the situation is even more appalling. In New York, we are all dependent, every day of our lives, upon the continuous operation and smooth functioning of our technical equipment. The deadline for water supply and electric power in New York is 5 hours and 15 minutes. Neither the Marxian proletarians nor any outfit of fascists could succeed with a coup d'état there. There would not be sufficient time before chaos would ensue, frustrating all

their plans. They couldn't take and hold onto the State of New Jersey, much less the U.S. All this talk of a railway strike at present is sheer stupidity. You can't have a railway strike anymore in the United States. No interruption of the railway service in this day could be tolerated for a moment. You would probably be mobilized into the United States Army. Such tactics on the part of labor belong to yesterday. Today they would be suicidal."

Clad, like his tour manager, in a striking plain gray suit with shirt of darker solid gray, black tie and shoes of tan, he explained that this is soon to be the regulation dress for all Technocrats everywhere. Asked if such uniform style of dress would not savor of fascist methods, he adjured his questioner to look to his definitions. "Fascism," he said, "is defined by us to mean all the minor rackets welded into a major monopoly for the preservation of the Price System." He explained that Technocracy would abolish the Price System, including business, politics and the wage system of distribution. The government would handle all the production on a balanced, engineering basis and distribute the products according to need. Money, not being wealth in itself, but only debt certificates, would be no more, and the entire resources of the continent would be devoted to providing every man, woman and child with an independent income in goods and services, with assurance of security from cradle to grave. Asked upon what he based his prediction of imminent collapse of the Price System, he cited the mounting debt, governmental and private; the ever-increasing utilization of natural power, and the resulting unemployment of men. Consumption of extraneous energy (non-human power), he said, is increasing by leaps and bounds. "We are now converting 153,000 kilogram calories of energy per person per day, and the rate of growth of energy consumption shows a probable increase of 30 percent or more from now until 1940 or 1942. If 153,000 or less were sufficient to so upset the social structure as it recently did, consider what 200,000 per person is going to do. Not a single social institution will be out of the dump heap. All labor will be in the ashcan."

PUBLIC LECTURE  
HOWARD SCOTT  
CIVIC AUDITORIUM  
WINNIPEG, MANITOBA  
SEPTEMBER 1, 1937

QUESTION PERIOD

WHAT DO YOU THINK OF SOCIAL CREDIT; ALSO ABERHART?

Social Credit in the Province of Alberta is a cumulative approach to dementia praecox. It is a fine way of messing things up, but you cannot produce abundance under the Price System. Social Credit proposes to have a dividend. All credit is debt, and you have to have it and scarcity. You cannot produce abundance with any form of credit. You have to eliminate debt and credit.

As for Aberhart, we have sympathy with him. He promised \$25 a month and didn't deliver; but he isn't on half the spot that Franklin Delano Roosevelt is on. You know what spot you are on when you promise your kids or sweethearts something. Well, Roosevelt promised 120 million people something. Aberhart can't deliver -- couldn't if he wanted to.

SOMEBODY IS TRYING TO BE FUNNY. WHO WILL SELECT THE MASTERMINDS UNDER TECHNOCRACY?

The Technate will be composed of all those who function, wherever they function; therefore, all the technically proficient -- whatever field they are in -- will form the Technate. It is a new design, construction, and operation of the processes necessary for your social system.

DO YOU THINK SOCIAL CREDIT COULD BE USED AS A STEPPING-STONE TO TECHNOCRACY? IF NOT, WHY NOT?

I think that is perfectly obvious. Any such approach is only used to maintain the Price System by modifying it.

HOW WOULD YOU KEEP SOMEONE PRESSING THE BUTTON WHILE SO MANY TECHNOCRATS SIT AND BASK IN THE SUN?

Under a Technate, the contract of each member requires -- to

maintain your citizenship -- that you put in the years from 25 to 45 of your life. At 45, you have completed your social service of citizenship, and you are free to spend your income wherever you want -- making mudpies with the Eskimos or playing tiddlelywinks on the Gulf of Mexico. You cannot be compelled to work, although you may offer your services. You cannot be compelled to work after age 45. That is quite different than today.

WHAT PROPORTION OF THE PEOPLE IN ANY COMMUNITY WOULD BE WORKERS OR NON-WORKERS?

Under Technocracy, your calendar is divided into 364 working days and one zero day. There is no sense in the New Year (as is). That was only to have it close to Christmas and have a buying proposition in cold weather. The new year would be the first day the sun passes the equator -- the 22nd of March. Your calendars would never have to be reprinted. They would be eternal. There would be 3/7 of the population working at any time in any center; the other 4/7 would be off. There would be no rush, as the same proportion would be working each day of the year. You would have a balanced load.

WILL HOWARD SCOTT PLEASE TELL US: HOW IS THE TRANSITION TO BE ACCOMPLISHED WITHOUT A BREAKDOWN IF THE POLITICAL MACHINE IS NOT USED?

Transition can be done fairly easily, provided you have the organization. Unfortunately, you have not the organization -- not large enough in spite of its enormous growth -- to say it could be responsible for a social transition. Now, what the man had in mind in asking the question -- if you want to know the tactics, frankly, what do you want to know for? For the same purpose as to know the exact time, so you can sell everything short.

IN TECHNOCRACY, WOULD PRAIRIE CITIES EXIST OR WOULD PEOPLE TEND TO MOVE TO MORE ATTRACTIVE LOCALITIES?

That is a good question. Why not? The wheat farmer, aided by Morgan, fell down on the job for a very simple reason. He only used 58 days of the year. If he had five such areas, he could have cut down his overhead in Montana. Businessmen aren't smart -- they are penny ante chiselers. If that were the case, why should you live in places it is not agreeable to live in or not

necessary to live in?

Your housing here in the Red River Valley -- you have similar in the Black Mississippi. Some of you will say it is better, but down there it isn't cold. You can have openings in the wall. It doesn't matter. You wonder how they live in them in either place.

There is no reason, under Technocracy, for having individual farms. You will move the cities to where there is water, climate, and enough energy to maintain them. Cities under Technocracy will have no postmen, garbage men, package delivery, no traffic men. That is all taken care of automatically. It is an entirely different design.

COULD A TYPEWRITER BE INVENTED TO DISPLACE A STENOGRAPHER?

That isn't what a businessman wants a stenographer for; and considering the way he is treated in a lot of homes, you can't blame him.

HOW WOULD YOU MAKE THOSE WHO CONTROL WEALTH LET GO OF IT?

You don't have to let go of it. The interest rate approaches zero. Financial institutions have more money than places to lend it. As each government unbalances its budget further, they have to borrow more, and as they borrow more, it makes more borrowing easier. Get some banker to explain that to you.

A banker is a merchandiser of debt. As the interest rate approaches zero, it becomes harder and harder, and the banks carry more and more government securities. Over 400 banks in the United States have gone into voluntary liquidation. They didn't fail; they were just smart. The State Bank of Oklahoma had to get a writ to compel the depositors to come and get their money.

The rate of growth of insurance companies is 7.78 percent per annum. Another 35 years at that rate, and the life insurance companies of the U.S. and Canada will own 95 percent of all that is ownable on the North American Continent. If the life insurance companies don't get you, Technocracy will.

Not only does technology produce more goods, it also enables

you to amortize at the highest rate known. So the life insurance companies, who have been responsible for financing the installation of equipment, will find themselves with not one billion but four to five billion they won't be able to invest. As money becomes plentiful, it also becomes valueless. If money has no value, you won't bother to hang onto your money.

WILL YOU PLEASE EXPLAIN THE TEACHING SYSTEM UNDER  
TECHNOCRACY?

You have what is known as an educational system. Each father or parent has earnestly sought the best education for their children. It is just that that sort of inheritance should be passed on. It is not the fault of people but of school boards. Our educational system is not for training the children to be functionally-competent but for the indoctrination of chiseling so they may acquire sufficient astuteness to avoid toil.

Macy's requires salesgirls to be college graduates in order to sell lingerie or toilet paper. Standard Oil is going to require it next.

WHAT WOULD BE DONE ABOUT HUMAN INSTINCTS LIKE GREED, ETC.?  
WOULD SOME NOT TRY TO WRECK THE SYSTEM?

Instincts are a very interesting proposition. An instinct does not necessarily have to be of any use. An instinct is an habituated action pattern. You have noticed the dog. Of course, out here they have more chance to get out in the open. Still, in the cities dogs that have never been out in the bush, yet on a marble floor they turn several times to trample down the grass. Once upon a time that was the instinct to make a bed and it was necessary; but when used on a terra-cotta floor, it is an example of stupidity in dogs.

People say you can't change human nature. We of the engineering profession approach it in another way. The only method of regulating has been to prohibit. You have noticed the sign, "Passengers are prohibited from standing on platforms," in railway cars. Engineers came along and designed a train without platforms and said, "Stand on them if you can." Go into a modern plant and you will see signs: "Employees who do so-and-so will be subject to immediate dismissal." It doesn't stop an employee from

being hurt. (Illustration re accident-proof presses) You cannot be hurt by any operation of the machines. Put your hand in, and it won't work. Even cigarette smoke will stop it. The product can be made responsible. The creator is only responsible occasionally.

WHEN MAY WE EXPECT TECHNOCRACY TO TAKE CONTROL? YOU SAID 18 MONTHS.

I am sorry. We made no such statement. I don't like to deceive you. Somebody must be in a hell of a hurry. We hope it doesn't come that fast, because you aren't ready for it, and you know you aren't ready for it.

Yes, if we had the personnel, we could issue that entire distribution system -- all interlocking file numbers -- tomorrow morning at 7:00. There are some 30,000 commodity and service numbers out. That takes an organization of all the continent. We don't expect to have that in a few months. As to when it will occur, that is something we don't know. It is a choice, and it depends on the choice of the people. Frankly, we don't give a damn.

HOW DO YOU PROPOSE TO EFFECT THE TRANSITION FROM THE PRESENT TO TECHNOCRACY?

Somebody here with the Marxian theory of the assumption of power. Communism is too bourgeois for this continent. We have to have a real organization. You don't run a system on Marxian any more than laissez-faire values.

WHAT DO YOU MEAN BY "DO SOMETHING?"

Technocracy wants those with functional ability. We want those who can give orders and those who can take orders, or both. If you want to know what to do, get into the organization and make it something.

HOW WILL THE MANAGERS BE ELECTED?

In every functional sequence they come up automatically by training. At present, you can elect a paperhanger to be president of a railway. I believe the last two Ministers of Railways in

Canada have been paperhangers. They plastered you with enough paper.

In the sequence of public health or hospitalization, all plants and equipment for the maintenance of health, doctors, dentists, ambulance drivers, are in one organization. They are responsible for the execution of any health program. They have authority, but they also have to execute their own proposals. That is kind of tough. So you couldn't have a paperhanger rising to be chief of the public health or a real estate operator running the coal raining organization. They are trained in their field, and as they demonstrate their competence, they move up.

IS IT TRUE THAT THE U.S. GOVERNMENT HAS PURCHASED 57 INVENTIONS?

It is doubtful whether the U.S. has to purchase any inventions. Corporate business and finance does all the invention buying. Government in the U.S. is like Canadian government. It does what it is told. Roosevelt is just an office boy for the holders of debt. Fifty-nine or two hundred fifty-nine people in Canada -- what is the number? -- get all the gravy.

WHAT IS YOUR OPINION OF ABERHART'S ATTEMPT TO HELP THE UNDERDOG?

These people -- Upton Sinclair, Long -- are quite sincere. The majority of the members are quite sincere. They want more, but the generalship of all of them is cockeyed and lousy. You can't get abundance under the Price System no matter how you kid yourself or juggle. We don't wish Aberhart any trouble, but if he stays in another four years, he may be the last Premier of Alberta -- if he lives that long.

IS THE AIM BEHIND TECHNOCRACY TO REACH THE STANDARD GIVEN BY JESUS?

May we point out that regardless of what you believe, there is only one way of raising the standard of living of any social system. That is by increasing the consumption of energy per capita. The conversion in the U.S. this year will be somewhere between 154,000 and 160,000 kilogram calories.

The doctrine preached by Christ was one of the greatest doctrines ever preached, but had there been 100 percent conversion to Christianity in the Mediterranean area, it would not have greatly increased the standard of living. All that could be done was to convert people to the idea at the time he was on earth.

While I am on this subject, may I say that the technological application of physical science is the only approach that makes it possible for you to be a Christian. Today you are only a Christian one day in seven. The other six days you are out making a sucker of your fellowman, and you know it. All right, for the first time in history, you can be a Christian and be proud of it. Try it today and you will land on relief. We are not attempting to malign anybody's belief, but we are being frank, and we dispute anybody's talk of being a practicing Christian unless he is a Technocrat, because you don't mean what you say; because you are tolerating scarcity and poverty, and when you tolerate it, you accept it.

May I ask you, did Christ tolerate it? Go down and look at the relief lines in any city. Would you permit Jesus Christ to get his food on the relief stations of this country? If you have guts enough to answer that question, you have guts enough to do something about it.

#### HOW WILL YOU BRING TECHNOCRACY IN?

Those of you who were in the army -- did you ever ask your commander what the tactics were? If you did, you got no answer (except perhaps a "posteriore") except an "as you were." If he was dumb enough to tell you, he would be removed.

#### WITHOUT POLITICAL CONTROL, HOW WOULD YOU EFFECT THE CHANGE?

I may tell you this: If Technocracy were offered the support of all large corporations, it would refuse, just as it would refuse unanimous election on the part of the people of Canada and the U.S.; because it would be an emotional act in one case and a financial subsidy in the other. If it reached that stage, we would give specifications of this state and of the new. If there is 66-2/3 percent support, you can put in the new system. Make your decision on specifications and not on personalities.

HAS RUSSIA A BETTER DISTRIBUTION SYSTEM THAN WE HAVE?

It is the same system. It is not better and a little worse. We still have a higher standard of living. When you go off the Price System, it will be the first great social change.

HOW WOULD PEOPLE BE SELECTED?

By competence.

HOW WOULD TRAVEL BE FINANCED UNDER TECHNOCRACY?

Your energy medium of exchange you take to the Bureau of Foreign Travel, and you are then permitted to purchase foreign currency; of course, as import licenses are not granted, you could bring back only trinkets.

You could only travel in bottoms of this continent flying the flag of this continent.

RE NUMBERS ENGAGED IN DISTRIBUTION.

1,700,000 stores. Retail stores are open a small part of the time and have customers part of the time. We can design a store with only one person, just as there only has to be one person in a modern restaurant -- no cooks, waiters, busboys -- only a cashier. Same thing with a store. There is in existence in the U.S. today a couple of them. When you walk in, you are given a key. The goods are all behind glass. You turn the key for a package of this or that. You walk through to a desk and turn in your key, and all the time packages you have turned on have been packaged and the account slip comes to you and you pay the cashier -- in Chattanooga, Tennessee.

DID YOU READ EDWARD BELLAMY'S, "LOOKING BACKWARD"?

I didn't read it until a few years ago. It is ideal, imaginative, projected in much the same sense as Jules Verne's "Twenty Thousand Leagues under the Sea." It is a sincere attempt and worth reading, but you couldn't design a submarine from Jules Verne's "Twenty Thousand Leagues under the Sea," nor a modern technological control from "Looking Backward." There is no

precedent for this condition, and the solution cannot be on precedent. All the social theories ever written aren't worth a damn except to make Kleenex and such.

Those who create a civilization will eventually dominate it. The engineer and mechanic created this civilization and will eventually dominate it.

WILL TECHNOCRACY TAKE CONTROL OF THE BANKING SYSTEM?

There will be no banks under Technocracy.

DO YOU KNOW OUR CITY WATER IS DANGEROUS?

Algae does bother boiler tubes and other tubes. I think there are a lot more dangerous things. As one explorer said, "It is much safer with tigers."

HOW WOULD YOU TREAT THE BLIND?

Under Technocracy, there is complete public health and hospitalization, isolation and necessary treatment for those injured or disabled through accident or inheritance. These are taken care of with no charge on the relatives -- just as the children receive sustenance apart from their parents. So, you have a new system and attitudes. Today, with the drudgery, fatigue, and tension, it is almost impossible to give children a break. Most parents ruin their children. They can't do anything about it. Just as gastric ulcers are from tension -- doctors cure them, but they come back under the same tension.

IF YOU HAVE AN INCOME OF \$10,000 A YEAR, WOULD THERE BE ANY INCENTIVE TO IMPROVE THE MACHINE?

What do you think we technologists do things for -- to earn money? Because we are fundamentally lazy. These people with talent mix things up. The people who carved the beautiful doors of Italy, they also want to go in for proprietary rights, without change. This reached the greatest height in India, when you had to be born into the occupation of gravedigger. We technologists have open season on talent all the time. As far as \$10,000 a year stopping competition -- no, no. That would only increase the game. Do you really want machinery to do everything for you?

PUBLIC LECTURE BY HOWARD SCOTT  
WINNIPEG, MANITOBA

9-1-37

Because we can design them for you, but I hope you don't.

Now I think I have done my best with these.

EXCERPTS FROM HOWARD SCOTT TOUR IN SOUTHERN ALBERTA, CANADA

QUOTED FROM "THE FOOTHILLS TECHNOCRAT" CALGARY, ALBERTA

Issue A-7, September, 1937

IN SYLVAN LAKE, September 18

The Price System is predicated upon scarcity. The continuance of the operation of this continent under a Price System depends completely upon the maintenance of scarcity; yet, under the inflexible rules of the Price System, in which every man must increase society's debt to him -- his claims upon the commodities of the system -- faster than society can create debt claims against him, we must all produce more, sell more, save more and more.

So it is that the Price System must work wholeheartedly at the creation of its own annihilation. The Price System must inevitably create abundance wherever abundance is physically possible, and abundance must inevitably break down a Price System. Price or value is, in general, the inverse function of available quantity and can be maintained only by scarcity.

In a state of abundance, price tends toward zero. The march of technology, with its increasing abundance, will destroy every value of the Price System. It is a clash between obsolescence and modernity, between technology and value, between science and chaos.

Technocracy is a double-barrel organization. It is devising ways and means of cutting down human toil as the only possible way of making human beings into a technological army to direct the orderly transition of this continent from the era of scarcity into the era of abundance.

IN RED DEER, September 18

The values that were created by scarcity have brought about a conditioning of human beings that certain things have always been so and are likeable and desirable. We all have our pecuniary hangovers from the Price System -- the sins of scarcity. We are sinful people, we humans, and how our sins stick! We believe in the morality of work. We have always believed that if we were industrious, honest, thrifty, and so on, we would be able to

Sept. and Oct., 1937

obtain some security in our old age. Yet look at the people of Saskatchewan. We passed them on the road -- moving out. It is true, you are better off than they are in Saskatchewan, yet your problem is not any different than it is anywhere else on the continents. Don't think you can get rich by work. Nobody but a sucker every tried.

You have been led to believe that you could, because political governments -- no matter what kind -- have had a fine time riding high, wide, and handsome on this continent for a long time. They won't last much longer.

By the "long-wall" process, we will mine 30,000 tons of coal in 24 hours with less than 100 men, and they won't be coal miners. They will be machine operators. We won't have to use explosives. We use 5,000 pounds pressure of compressed air, delivered through a steel-enforced rubber tube now being developed by the Goodyear Tire Co. We load the coal on conveyor belts at the rate of eight tons a minute.

John L. Lewis saw the handwriting on the wall and organized the United Mine Workers of America. The U.M.W.A. will see the handwriting on the wall -- when they run into the wall. That's the way we get the miners out of the mine and why not? It's easier the other way. Nobody ever got social prestige raining coal. People get social prestige by hiring some other sucker to do the work.

In Estavan, Saskatchewan, they have an eight-cubic-yard steam shovel. That shovel today is only a teaspoon. They thought it was a great big shovel, but in open-pit mining today, under modern methods, we are using a 40-cubic-yard shovel, 125-foot boom, and 90-foot stick. It lifts 50 tons to the height of an eight-story building every 50 seconds. It operates by push-button control.

We don't like to see a machine operator doing a lot of work pushing and pulling levers around; we want our technicians to give their attention to the niceties of machine operation. The controls of that machine look like the keyboard of a typewriter. An engineer is basically lazy. That's why he devises machinery, so that he'll never have to do it again.

Sept. and Oct., 1937

The cigarmakers' union was strong enough once to elect a president of the A.F. of L. Today there is no more cigarmakers' union. What happened to it? Was it suppressed by the idle rich? Were the leaders bought over or put in jail? No. Present modern methods of machine manufacture of cigars in huge quantities, from leaf to finished package, use four girls to operate some phases of the process. The next installment of equipment will multiply production and eliminate the four girls.

Plot your cigarette production and you will find that the production curve rises as the employment curve falls. Why not? No sense in working if you can do it by scientific procedure. It is time you realized that.

The glassblowers' union was so strong, the only way you could get into it was to be born into it. It was the first union to wear silk shirts. You couldn't buy your way in. Today, the glassblowers' union and the glassblowers are almost as extinct as the dodo. We don't need glassblowers except for a little special fancy work. Today, we run plate glass in an endless strip by a continuous straight-line process that cuts it, packs it in cases, and piles it in counted lots. The work usually killed the glassblower at the age of 45. Now they're all well, happy, and on relief.

We puddled wrought iron for 1,600 years, right up to yesterday. Production per man was limited by the size of the ball a man could swing. Today, we produce 1 million pounds of wrought iron without any human beings. The wrought iron puddler has gone to join the glassblower.

The steel roller was one of the highest paid men in the industrial world. Where is he today? Non est. The new Republic steel plant in Hio runs steel in a continuous strip at the rate of 2,100 feet per minute and is operated from a control bridge by a dozen men watching instruments.

We'll get around to agriculture in a minute: so hold your breath.

British manufacturers squawked when Japanese shoes were dumped in England at two shillings and sixpence a pair. They were righteously indignant about the low wages Japanese labor was

Sept. and Oct., 1937

getting. We had to explain that when a sawed-off Nipponese slams his foot down just once on a control pedal of a machine and 240 pairs of shoes are soled, it doesn't matter a bit whether you pay him a dollar, fifty cents or ten dollars a day. The labor fraction is so small that it would hardly pay to add it up.

Great Britain was one of the largest cotton producers in the world. Today Japanese competition has chased Britain right out of the markets of the Far East.

American Venus pencils were dumped in New York from Japanese factories at 22 cents per gross. Technology is no respecter of person, race or color. The only question is: can you run it?

The boasted superiority of any group comes down like a house of cards if someone else has the machinery.

In the Ford plant, human beings used to watch gauges. We now use the photoelectric cell and the cathode ray to test pieces for size, weight, or what-have-you. Why wear out human eyes? Let's have the machine.

Women have cooked the meals of the world from the beginning of history. You cook them now by the same means and in the same way in your nice, shiny stoves that the savage used 20,000 years ago. You cook them from the outside in.

We technologists decided that there is really no use having a woman cook her life out over a stove. No woman ever acquired social prestige that way. If you want to boil eggs, you have to build a fire, boil the water, then cook the eggs for at least 3-1/2 minutes. We cook eggs now in 2-1/2 seconds without the boiling water. We cook from the inside out.

Bacon cooks so fast, it sounds like somebody tearing a sheet. The woman of tomorrow will cook her five or seven course dinner while her guests are drinking a cocktail.

Individual farms were all right in the handtool days, but you can't have decent houses on individual farms. Your homes are only fit for rabbit warrens. What use are individual barns for raising cattle? The Rotolactor washes and milks fifty cows in 12-1/2 minutes and measures the milk from each cow.

Sept. and Oct., 1937

We have chicken farms with half a million chickens now in operation. The U.S. Government has 500,000 million pounds of tobacco from last year's crop.

It has 17 million bales of cotton. We only consume 6 million bales a year. Our cotton situation is worse than your wheat. You can use it for feed or burn it for fuel; but you can't eat cotton, and it won't burn. Over 4 million will go on relief this year from the cotton belt.

Soil as a medium of plant culture is only 4 percent efficient. Water is 90 percent efficient. We have a process called the Faraday fluid feeding process. You can raise five tons of tomatoes to an acre of soil under favorable conditions. We can raise them in tanks at 217 tons per acre. Potatoes will yield 115 bushels to the acre of average soil. Sometimes you can force about 300 bushels.

The Faraday process raises 3,000 bushels to the acre of surface. We use excelsior, water, chemicals, and light and heat for forcing. It gets underway so fast the bugs kill themselves trying to keep up. You don't dig the harvest; you just roll back the blanket of excelsior and there they are -- all the same size. You don't have to brush and manicure them. If you're worried now, you'd better leave for you have a lot more worrying to do yet.

Wheat is grown on endless belts. The wheat is sown on endless belts, and the harvest is taken off the other. The crop grows from seed to finished stock in ten days flat. One battery of these trays in a wheat factory will grow as much as 17,000 acres of land capable of yielding 170 bushels to the acre.

Technocracy is the world's largest experimenter in this field. We have 200 tanks in operation. Why not? You have no crop here anyway. Even without fluid feeding processes, all the requirements of this continent could be grown on one-fifth the present acreage.

Foods produced in tanks have several times the vitamin content of soil-grown foods. We'd just have to put in about ten of these wheat-growing plants and we'd run all you farmers onto relief.

Sept. and Oct., 1937

You see what all this is headed for. In 1919, the manufacturing industries employed 11 million on a 58-hour week. In 1929, the employment had failed to 8.8 million with a work week of 48 to 54 hours. Thus, the total man-hours for the year 1919 were about 29 billion. By 1929, these had dropped to 21 billion. In 1935, that total had decreased to 11 billion. In 1944, it will be one awful job to work 20 hours per week; yet, we will be producing 45 percent more.

Now I suppose you think we're going to promise you some dividends. Don't fool yourselves. Neither we nor anyone else can deliver on that or any other wild promise under a Price System.

In 1929, you took an awful flop into the worst depression in all history so far. Speaking metaphorically, you fell from the 20th story and landed on the sidewalk. The shock you received at the lower extreme of your spine may have been transmitted to the upper and knocked some sense into your heads.

It is really a shame that education can only be accomplished by such a posterior method, but you asked for it; and I suppose you'll have to get it that way. Before very long, you're going to run into another depression. This time you'll fall all the way from the 40th story, and when you hit the pavement, you won't stop there. You'll go right through into the sewer.

This Price System civilization is characterized by various social diseases. In the United States, we have 12 million cases of syphilis at large. Medicine will cure that if we can get around to it; but poverty -- the 60 million cases of bad housing, underclothed, and malnutrition -- is a disease that not all medicine men of the 175,000 political governments of the United States can cure. It requires a much more drastic treatment.

The worst of all social diseases is one called "intellectual liberalism." It occurs among people who are well educated. They usually have the best of all in that line that can be provided, and all they use their erudition for is to decide not to decide.

You must decide.

There are several ways of meeting the situation.

Sept. and Oct., 1937

You can have a swift, orderly transition into an era of abundance or you can have chaos. If you continue to do what you are doing now, you will get chaos and get it decidedly messy. You cannot have, either, a communist revolution or a fascist coup d'état. In Petrograd, they could smash up rail, telegraph, and telephone communications and put barricades across the streets and keep them there for sixty years. Nobody in particular would be affected by it. The population is largely agrarian and self-supporting. But if you tried that in New York City, 9 million people would be at the deadline in just five hours and eighteen minutes.

If the armed forces of the State of New Jersey were to take over the state and operate it, within 72 hours they would have to take over and operate 38 states. Our system here is tenuous and interdependent. If 130 million people in the United States want to abandon the Price System, the balance of the continent would have to follow within a year.

What would happen if rail transportation were tied up on the western prairies for ten days in a blizzard? It is a long way to wood or coal. You'd have a lot of frozen meat.

Technocracy does not have any "assumption of power" theory. Such a theory is European, philosophical and has no bearing on the situation here. Over there, all a government can do is assume power. When it has it, it's through. No European government can by that or any other means raise the standard of living one iota.

Over here a technological control would raise the present load factor of all industrial equipment from .05 to .90. This would mean an immediate increase in the standard of living by 18 times.

Another way you could meet the situation is by shooting all your technicians and dumping all your plants and equipment into the sea. That would suit us perfectly, for then our troubles would be over; but yours would only begin.

In 30 days you would be eating each other -- and they'll eat the fat men first. We don't develop any feeling of anger against those who would like to shoot us. What we resent is those who

Sept. and Oct., 1937

make us live this way.

You women have the power to bring about a functional control. You have all heard about what a fine thing it is to give your children to your country in the time of need. When you find that you can no longer take care of your children, just take your year-old babies and give them to your country. If you cannot take care of your children, it is only just and meet that your government should do it for you.

The children would not suffer. Not a single one would die. Within 24 hours, every doctor, dentist, and nurse would be conscripted to care for them. They would be working for their country. They would be all through with the lucrative chisels called private practice.

A load like that would wreck any political government overnight. The transition to a functional control would take place immediately. Your children belong to your country. Then give your children to your king!

IN DRUMHELLER, September 19

Everyone who is cognizant at all or who has any powers of observation is aware that something is basically wrong. Technocracy alone finds itself in a position to explain the situation that exists. People need not develop an inferiority complex because of that, because Technocracy, previous to becoming incorporated as a continental organization in 1933, had functioned since 1919 as a research organization.

The really regrettable thing is the widespread belief that if something is voted into existence, we can find a way out. Alberta is no different from California with its half-dozen movements that came and went. People want security, purchasing power, and a world in which their future and their children's future will be assured.

The equipment is here; the resources are here; the personnel is here; the need is here -- yet here we have more want in the midst of greater abundance than the world has ever seen.

We have voted in one organization after another in the hope

Sept. and Oct., 1937

that the law of averages would somehow produce the "right man". Our political ideas came to us from Europe and Asia, but they have always been dominated by and motivated by scarcity.

Abundance is something without precedent. The problem becomes entirely technical in nature. Technocracy does not question the sincerity of purpose of any of these movements -- the Utopians of California, the Epic Democrats, the several million Townsendites, the Share-the-Wealth movement. Republicans, Liberals, Conservatives, Communists, C.C.F. or Social Credit; but we have voted them in, one after the other and today we are no further ahead than we were five years ago because of them.

The bull that charges the C.P.R. locomotive has sincerity of purpose no doubts but when he meets a dynamic converter of energy, there is bull all over the place.

Any group constitutionally elected is by nature pledged to the maintenance of the Price System of values and scarcity. When any group promises security and purchasing power, it does it on a basis of mass deception, whether intentional or otherwise. Their promises are only air because they cannot come through. Long ago, we realized that social change is not brought about by legislation or education.

We Technocrats have done more in the installation of labor-saving equipment than any other group. Devising means of raising more money, profits, dividends for corporate enterprise is enlarging the possibility. The way to teach people not to work is to literally shove them off the job.

The way to bring a Price System to its logical conclusion is to give it enough rope and let it hang itself. We don't want the politician thrown out, we want him to stay there as long as he can run it. Let the politicians run the system right into the ground -- then take the rap for it. Let them run until human intolerance cries, "Stop! This is enough!"

Technocracy is out with the specifications for technological control. It does not care who runs it, provided the specifications are adhered to. We are scared to death we will have to do the job by the way things are going. A mandate must be created by 66-2/3 of the people of this continent to install the

Sept. and Oct., 1937

control according to specifications.

That will be Technocracy's first election and your last. We will refuse to have anything to do with "power" or "office". By running for political office, we would be pledging ourselves for maintenance of the status quo. Nobody but a louse would do a thing like that.

Technocrats are trained never to interfere. We won't interfere with your politicians; but politicians are such that they can do nothing else except interfere. All politicians are lice. If you insist on operating as a louse, sooner or later you become one. Four years in political office are enough to make anyone a louse.

It all goes back to your chiselry document. Here it is the B.N.A. Act. In the U.S., it is the Constitution. Voting is only an attempt to reduce all the individual differences of opinion to a common consensus, and the .304 percent of intelligence that is in Canada and the United States is thereby reduced to the general level of moronity.

By voting you have only counted noses. It doesn't matter whether the noses are red, white or blue, the result is the same. All political parties are the same -- they contribute only to the anarchic confusion of the political entities of the Price System. Marx's "Value, Price and Profit" was a Jewish moral philosophy. Fascism is an Italian moral philosophy.

Adam Smith's "Wealth of Nations", the bible of the Price System, was a Scottish moral philosophy. They all deal in price and think in terms of value. Science has no values -- it has systems of mensuration in any field which it invades. Today it is invading the social field for the first time under the name of Technocracy.

Technocracy is in favor of Social Credit. We would like to see Aberhart reelected. Social Credit is sufficient of an innovation to increase on a large scale the social anarchy of Western Canada.

It has been touted on the party presses that if the people of China were 100 percent Communist -- or Social Credit -- the

Sept. and Oct., 1937

continent would immediately be transformed into a land of abundance. Such people either don't know the facts or they are deranged.

A status of plenty on a par with that of North America could only be attained in China by importing 4 million barrels of oil and 27 million tons of coal per annum, not to mention the astronomical figures of gas. Chinese to the number of 270 million will have to be eaten by the Japanese before the rest will have a chance to live.

So it is with Britain. Great Britain squandered her resources on the harpies of world trade. It got the world trade. Trade followed the flag. Then Japan chased Britain from the seas in the Far East. Now trade is following the flag home. They are mining ore of 27 percent Fe content. To us, that is just rust. They are buying up old bedsteads as scrap iron. If Britain used the same number of automobiles as the United States, they would have to have 9 million cars and an equivalent number of buses and trucks.

Without bothering about the problem of where to run them, where would you park them? They'd have to hang them up with sky hooks! In Britain, an army examination showed 42 percent of the young men to be suffering from malnutrition. They have rest camps where they feed four meals a day to bring the cannon fodder up to size.

A political body may propose, but it is never responsible for the execution of its proposals. Under a Technate, those who propose would be placed under full responsibility for the efficient execution of their proposals. Your government is bound to do nothing but protect you suckers from mythical enemies and protect all the chisellers so that you suckers can be easily and properly trimmed.

Under the Technate, we will be responsible for the health and well-being of every human being. That is more than any political government ever did. We wouldn't double-cross you, but don't ever try to double-cross us.

Our political system was not designed. It is the haphazard increment of growth. In the U.S., we have 5,600 counties and

Sept. and Oct., 1937

175,000 political governments. In Canada, you have nine provinces and relatively few governments. You certainly are intelligent in Canada. There are fewer morons in Canada than in United States. That is because there are fewer people in Canada.

The Vancouver Province this year credits Technocracy with having reduced the registered vote by 50 percent. In Vancouver, they have compulsory voting. No political party will ever attempt to run an administration on only 30 percent of the vote. The politician knows that if this keeps up, he will have to get out. If he waits much longer, he will have to use burnt cork so you won't know him when he passes you in a cloud of dust.

Nobody ever got rich by working. Nobody ever acquired social prestige by mining coal or following a plow. Not until he got some sucker to work for him, or he went into politics, or into the mortgage or banking business, was he able to pile up enough debt claims to buy social prestige. We have no aristocracy, no hereditary landed or professional class to stand in our way. Yet we kid ourselves.

There is no class struggle. There are only two groups: the chisellers and the suckers. The sucker doesn't hate the chiseler; he admires and emulates him. It is his secret ambition to graduate into the chiseler class. All your social institutions are institutions of scarcity and your culture stinks. There is not an institution that is not fit for the garbage can.

If you want to maintain your institutions, your chisellers, your orchids of culture, just remember that social orchids grow only in social manure piles. When you abolish them, you abolish your orchids; you only have a race of human beings.

Do you want to bring yourselves to the level of those 42 percent of Britishers? Just keep on doing what you are doing. A Price System is any system of commodity valuation based on any one commodity as a standard. That commodity may be gold, silver, salt, humming birds' eyebrows, or anything. To keep up price, you must maintain scarcity. Where there is abundance, there is neither price nor values.

There is one thing that is absolutely essential to every one of you. You couldn't live five minutes without it; yet you do not

Sept. and Oct., 1937

value it -- it has no price. It has never been cornered or monopolized; no mortgages have ever been issued against it; it has never been the subject of dispute in a court of law; no government ever voted on it or passed legislation about it -- and that thing is AIR.

You never hated the man with bigger lung capacity than you because he took more air than you did. No chiseler ever got any money out of it. All anybody ever got from air was health.

Your method of Price System control is antiquated and obsolete. Your system is based on the capitalization of waste. You burn up enough straw on these western prairies to make the automobile bodies of the world. They make better bodies than steel and look like glass. Could you make them under this system? No. The material would never rust and that would not do.

The cars are like a teardrop, with no outside projections, everything flush, streamlined aerodynamically. Steering wheel turns through 180 degrees. Turn them on a dime or drive sidewise. Can't be skidded or turned over. The only way you can turn it over is by driving it up to the edge of something and running it over.

The car is driven by a six-cylinder opposed piston type diesel, 2,000 r.p.m. Four-wheel drive, six foot four inches wide, inside measurement, with a maximum speed of 116 m.p.h., so far. Has an estimated life of 350,000 miles. But you won't get it under a Price System. Your requirements would all be filled in four years; then there would be plant shutdown for the next 55 years.

Stage after stage, the same thing is true. The Bell Telephone Company is holding 3,400 inventions out of use.

In another year, most of the people of Saskatchewan will move into Alberta if you have the same desertization again. Do you think your British North American Act will place you in a position to withstand that? In two years, you will have 40 million more unemployed in the United States. Do you think the constitution is going to withstand that? No, you are going to throw them in the garbage can and say, "Boy, yo' was a good ole organ but yo' done played yo' last tune."

Sept. and Oct., 1937

IN CALGARY, September 20

I'm glad to see you Calgarians have a sense of humor. After what I told you last time, I didn't think you were going to like me, well, hang on to that humor. You are going to need it all.

The first major battle of the Price System in Canada was fought on the Plains of Abraham. It looks as if the next one will be fought out west on the Prairies of Aberhart; but after the battle, what are you going to have? Just what you have now -- only more of it!

Your bonanza farming has made Saskatchewan a desert. I told you, God doesn't like it. You thought Bill (Aberhart) was on the "in" with God; but God's on our side, not on Bill's. In Napoleon's day, God was on the side of the heavy artillery. Today He's on the side of the march of power. If you haven't seen that yet, you'd better get right with God.

What a lot of fiction is perpetrated in the name of belief. Here you believe in the British North American Act. Legally, there is no Province of Alberta or Saskatchewan. Have you ever seen a copy of the B.N.A. Act? Your judiciary organization across the sea that corresponds to our "Senility house" hasn't got a copy of it either.

It isn't law. It didn't pass the third reading. Our nine prostatic old gentlemen of the Supreme Court at least live on this continent. And you want to solve your problems by amendments to an act that isn't here, by people who aren't here and who aren't sure that such an act even exists.

Don't you know that an amendment to a contract abrogates the contract? When certain sovereign powers called provinces and states agree to perpetuate the channelization of the resources and wealth of this continent, they are really usurping God's prerogative. No wonder God is getting sore.

In the United States, we have confederate government -- emphasis on the "con." It is the world's biggest "con" game. The finest chiseling racket that has ever been devised for the perpetuation of the fleecing of a race of suckers. It provides

Sept. and Oct., 1937

that chiseling shall be conducted only in the constitutional manner. The same applies to your B.N.A. Act.

Whose country is this anyway? You don't own it and you don't run it. In this province, you have portfolios. You elect men to those portfolios who resign or are fired from their positions; then you consolidate your portfolios.

You believe in gold. You break your necks trying to exchange the resources of this country with other countries for gold or paper. Gold is the world's most useless metal. If an inhabitant of another planet came to this country and saw you digging for gold, he would ask you what you use it for. "We dig it up and take it east," you would reply, "Why do you take it east?" "We take it east and bury it again. That's what we use it for." Wouldn't he think you were crazy? He'd ask for a one-way ticket back to his own planet.

One of the lowest social diseases is the belief in the morality of work. If you want to know what work has done for you, go home and look in the mirror and see what a mess you are.

Carry an electric iron across Europe and see how many sockets the plug will fit. There they believe in rugged individualism. All our political philosophies from laissez-faire to communism are imported from Europe. Most of the European philosophies brought over here from Europe and transplanted have died. The rest have turned into pigweed. So we have politicians. They say there were no rats in this country until they came over on the boats.

Political government in all history has been superimposed upon the actual physical operations of mining, farming, production, distribution. Stalin doesn't occupy any official position in the Russian government; so there you have a Russian tyranny superimposed upon the Russian government -- a parasite upon a parasite -- a double racket.

No government in all history has ever assumed responsibility for the livelihood of individual citizens. It never has -- and never would -- because it daren't.

Technocracy demonstrates that you need a new form of

Sept. and Oct., 1937

control, endemic to social operations. The constitutions were sufficient for the cracker-barrel democracy of the country store, but they are incompetent and incapable of operating the present technology of the continent. They have simply outlived their usefulness, that's all. You need a different method of control as your scale of quantities change.

When we moved out of the hand-tool age, it didn't matter what decisions we made; but now we have to have a method of control that conforms to the needs of this civilization. Those who create a civilization must ultimately control it. It must be administered by the same methods that created it. In the last analysis, the governments of this continent are those who operate it.

There are several thousand ways of controlling the water running out of a spring -- a bundle of rags or anything. Step the water up to the size of a city supply running through the mains at 5,000 pounds pressure to the square inch and you need a motor-operated gate valve. But power is now being developed from a waterfall so high that a wineglass of water falling from the top develops one horsepower. If you attempted to control that by a gate valve, the force of water would whip the penstock across the mountainside like a piece of macaroni across a plate. Same water each time. It is the magnitude of the force that varies. A hundred and fifty years ago, 98 percent of energy consumed was human energy. It is the same in China today. Today in North America, only 2 percent of energy consumed is human energy; the rest is the energy of coal, oil, gas and hydroelectric power. Our present consumption is 156,000 kilogram calories per capita per day, as against China's 4,000 kilogram calories.

In Canada you started this year with 960,000 registered relief recipients. This winter you will have several hundred thousand more. What you believe does not matter.

If a man goes out of a 20th story window and hits the pavement, it doesn't matter whether he wanted to go out, whether he just fell out, whether he wanted to commit suicide, or got thrown out, whether he believed he could fly or could never die. The result is always the same when you come under the law of gravitation or any other natural law.

Sept. and Oct., 1937

In the past fifty years, your system has undergone a series of changes, oscillations, which have been coming closer together and increasingly violent. It is similar to the voltage in the arcing grounds of a high-tension transmission line. The oscillations increase with time in frequency and amplitude between zero and infinity but never reaching the latter. The equipment breaks down first. The mathematics of this situation are the same.

If some Communist tells you that a certain pants presser, or something like that, is going to run all the power plants in the country, you know he needs his head opened. A good pants presser is a good pants presser, but he doesn't know a thing about powerhouses.

You could collectivize all your equipment and all your land but that wouldn't change the thermodynamic laws, the rate of conversion, load factors, or any of the physical fundamentals a particle.

Members of the defense forces of Canada and the United States are welcome as members of Technocracy. They are welcome even if only on a visit of investigation of our aims and methods. Technocracy guarantees to keep any police investigator busy for the duration of his visit and return him to his superiors a better and more proficient officer.

The abolition of rent, interest and profit is only a legal fiction. On the other hand, when you talk about nationalization of banks and debt moratoriums, you're only stalling. Anyone who promises the people of this continent abundance, security, leisure, health, wealth, happiness, and the Price System all at once is a liar. Here your government forms a partnership with God, and you expect the corporation to pay dividends. They won't be paid this side of heaven. You'll have to die to collect them.

Technocracy doesn't ask you to die for it; it asks you to live for it.

The only difference between Liberals and Conservatives on the one hand, and Communists and Fascists on the other, is that some of the standpatters are washed better. Frankly, we prefer

Sept. and Oct., 1937

too little soap to too much.

You have an irrigation and rehabilitation scheme at Moose Jaw. It is a scheme for the construction of 12,500 homes, the clearing of governmental responsibility for 12,500 families, the creation of 12,500 farm loans, 12,500 mortgages, 12,500 suckers.

You businessmen call yourselves Christians. You like to believe it, because for two hours on the seventh day of the week you make certain professions. You go home with a holy feeling, reinforced by the knowledge that you have a few mortgages or bonds, a few debt claims in the old tin box; but just go out on the streets of Calgary and see the sad state you're in. You can't tell a Christian from a liberal.

Go down to the relief kitchens, then ask yourselves if you could tolerate seeing Jesus Christ on that relief line. Then you're getting somewhere. The reason you want these people to go up to the Peace River is that when they go up there and get stuck in the mud, the rest of Canada won't be able to hear them.

Your governments are not on the level and you know it. No government that would do a thing like that is entitled to the respect or even the toleration of any one of you. You think you'll hold on to those debt claims in the hope that we're wrong. Mister, get rid of them quick. If you don't, they'll slap you down. With 40 million on relief on this continent, they'll go over you with a fine-tooth comb.

Relief is the only growing enterprise on this continent. That is because it is the only one that pays its customers to loaf. It won't be safe not to be on relief. All of you will either be on relief or employed by the government.

Do you have to wade into it right up to your necks before you will say it?

Does any businessman believe that prosperity is really here and headed for the infinite blue? There are a few who are collecting a little more profits and dividends, of course. That's fine. Go ahead and trim them. We don't blame you; we blame the suckers.

Sept. and Oct., 1937

These businessmen, these small-time pikers, don't think they'll ever be on relief. What the dumb clucks don't know is that they are on relief right now.

If the Dominion Government stopped creating debt, corporate enterprise would collapse like a house of cards. They have to keep it up. If they did stop, taxes would rise so fast the businessman would be better off on relief.

Now all you smart, sensible businessmen who are sitting on the lid, don't you know that it's dangerous sitting on a safety valve?

Technocrats need not worry about opposition or interference from business. The way will be cleared of politicians and businessmen.

I want to tell you now that your educated man in Canada or the United States is yellow. He is shirking his duty. You have all that your country, your civilization can give you. You know that with your superior education, your knowledge, you should be out in front leading the people; but the first thing you try to do is get into a political party and ride into office or get into some other lucrative chisel. Just keep up your chiseling rackets if you like. The march of events will catch up with you, and it won't be nice -- it won't be pretty. If you want to go on believing that you can solve functional problems, continental problems, by the inflation of your own ego, take the consequences.

Don't get the idea that Technocracy is going to do the job. You are going to do it. Here's the greatest thing that ever offered itself in all history. Don't think you are going to sit back and say, "All right, we'll take it. You do it."

You ask if Technocracy will mean regimentation. Did you ever ask what you have now? You get up when the whistle blows, you knock off when the whistle blows -- and there are a whole lot more things you do when the whistle blows. You are so regimented, you can't do anything unless the whistle blows.

Technocracy is not a political organization. We were not born of the depression or any political psychosis. We became

HOWARD SCOTT TOUR IN  
SOUTHERN ALBERTA

Sept. and Oct., 1937

organized on a continental basis in 1933. Prior to that time, we had been a research organization since 1919.

Technocracy is building a technological army of the functionally competent. Your educated man is not competent. He has only been taught to chisel. Until he becomes a Technocrat, he can't function -- he doesn't know how.

Large meetings of Technocracy are not conducted to explain in an hour-and-a-half the details of a construction it will take you at least an hour-and-a-half to understand. Technocracy is stronger than all the veterans' organizations or any possible Fascist army. Don't get a burr under your tail and try to join this organization at the last minute. To tell you the truth, you won't be any use. Just now we are bucked on the one side by the Chase National Bank and on the other by the Communists. All we need now is Mr. William Randolph Hearst to buck us, and we'd kiss him.

Technocracy would rather be recommended by its enemies than damned by its friends.

If you cannot make up your minds, we cannot make it up for you. Only God can do that in the march of events.

Salute and Happy Landings.

A RADIO ADDRESS

by

Howard Scott

STATION KOMO, SEATTLE, WASHINGTON

November 2, 1937

Technocracy salutes the radio audience of KOMO!

Technocracy presents to the radio audience of KOMO some of the national highlights of the dilemma of the continent.

The United States and the North American Continent are involved in the greatest dilemma of history. The dilemma, stated simply, is the attempt of political government and the Price System of production to raise prices, to raise wages, to guarantee increased dividends, to insure the value of all outstanding private and public debt, to subsidize the capital goods industry, to stimulate all business, big and little, to provide work for the worker and markets for the farmer -- all by unbalancing the national budget and by further inflation of national credit.

Each time the government inflates the national credit and unbalances the national budget, it creates more federal debt and more taxation. The capital goods industry installs faster and better machinery with each injection of governmental salvation and each increase in national credit inflation. Only our larger corporations are enabled to install better machinery to lower their operating costs and to reduce their payrolls, thereby liquidating the smaller units. It is obvious in the United States that the New Deal process of the salvation of the Price System is, in plain language, for the majority of Americans, what may be summed up as the underwriting of the higher income groups and the larger corporations by the federal government simultaneously with the maintenance of a federal distribution of subsistence to the 40 million underprivileged Americans at the bottom, resulting in the liquidation of the great middle.

The results of this national policy are a long way from the abundant life that was held forth to the citizens of this "land of the free and the home of the brave." The present policy of the Democratic administration of these United States is resulting in the reclamation of poverty on a national scale.

RADIO ADDRESS BY  
HOWARD SCOTT, KOMO SEATTLE

11/2/37

Our political government in Washington is turning out a greater flood of propaganda than any previous administration. This propaganda is centered around the theme song of being all things to all people and nothing to anyone, except the prospective party vote. It busies itself with proclaiming the need for a more abundant life for our fellow citizens. This propaganda announces that 30 to 40 million citizens of these United States of America have practically no purchasing power and that the government in Washington intends to do something about having the purchasing power of these millions increased. How little or how much is never stated. Never expect any political statement to be quantitatively accurate in its definition!

Technocracy asks the question: Is it possible for any political administration of the Price System on the North American Continent to produce and distribute abundance to its citizens? The answer is only too obvious when one realizes that for each inflation of the national credit, more technological equipment will be installed, and, in turn, more energy converted nationally from coal, oil, gas, and hydroelectric power; which means in simple terms that each time technology takes a step forward, toil takes a step backward, with the result that human beings in the United States will work less and less to produce more and more. How can the values of this Price System and its structure of debt be maintained when the overwhelming percentage of national purchasing power, namely, the purchasing power of wages and salaries, faces a declining future of less and less man-hours for more and more production?

The political governments of North America are preaching the morality of work of the oxcart era in the midst of this Power Age of today. The "morality of work" is evident in every WPA program and in every governmental stimulation of business. In their preachments of this morality of work, the political governments of this continent acknowledge their incompetence and inability to deal with the technological problem of the American Age of Power. Their doctrine is but a thinly disguised national charity and a temporary insurance against social revolution.

The morality of work in the Power Age of America is but the persuasive palliative of the chiseler's sucker bait to the 40 million underprivileged Americans. It is at the same time a national soothing syrup to the American businessman; but the

RADIO ADDRESS BY  
HOWARD SCOTT, KOMO SEATTLE

11/2/37

morality of work is not working out so well, for each time that the political administrations in Washington and Ottawa save business with a fresh inflation of national credits and more government debts, the larger corporations avail themselves of greater funds of cheaper money for the installation of more productive technological equipment of lower operating costs.

The morality of work is therefore, in the year 1937 of our Lord in these United States, a national hypocrisy, for it is contained in every preachment of our government, our press, our radio, and our screen, that the citizens of the United States should make their livelihood by honorable toil, when our government on a national scale is financing and assisting the corporations to finance the elimination of toil.

Which policy of our political government are the people of the United States to believe?

The policy of honorable toil and of a job for every American citizen as preached to the public or the opposite policy -- the elimination of toil and jobs for our citizens by the further installation of technological equipment for the production of more goods and services with less wage cost per unit produced, as practiced by our federal government and our larger corporations?

The technological application of physical science to the means whereby people live has set the date for this continent's rendezvous with destiny. This country and this continent cannot avoid this rendezvous with destiny. This country and this continent will meet this rendezvous within the next five years.

It is imperative that on our national and continental way to this rendezvous the people of this country and this continent recognize quite clearly that the social conflict of this continental area is the conflict between the 7,000-year-old method of producing physical wealth with a maximum of human effort and the recent technological production of physical wealth with a minimum of human effort.

Any national economy depending chiefly on human effort for the production of its physical wealth dooms the majority of its people to starvation and the arduous toil of scarcity. Any national economy producing the major portion of its physical

11/2/37

wealth by human effort is compelled to justify its social futility by preaching the morality of work. Scarcity and human toil are the twin social resultants of any civilization depending upon human effort for the production of its physical wealth.

The low energy civilizations of the rest of the world are therefore compelled to propagandize their citizens to make them clamor for the right of every individual to wear overalls; in fact, it might be said that overalls should be the national uniform of all low energy civilizations. But here in this country and continent, the morality of work and the right to wear overalls ought to be relegated to the Smithsonian Institution along with all the other anachronisms of the hand tool age.

Technocracy contends that the conduct of human affairs in the United States of America must, in the light of modern technology, be redesigned and reorganized so as to conform to the precision technique of operating our national technological equipment. Technocracy contends that only by a further application of technology in our means of production and distribution can abundance and security be rendered available to all. It must be realized that abundance cannot be produced by a maximum of human efforts that abundance can be produced and distributed only by a minimum of human effort.

Technocracy flatly states that abundance and security cannot be produced and distributed nationally and continentally under any political administration and under a Price System. Technocracy contends that only under a technological administration can the rate of production be increased sufficiently to produce and distribute abundance, security, and the higher standard of living to all.

The social well-being of abundance cannot be initiated by national preaching of the morality of work and the forcing of our citizenry to wear the badge of toil, the overalls. Only through the installation of more and better machinery under the direction of technological planning, operated under technological control, can a high standard of living be provided for the citizens of this country and this continent.

Technocracy contends that advancing technology will ultimately compel the consolidation of the North American

RADIO ADDRESS BY  
HOWARD SCOTT, KOMO SEATTLE

11/2/37

Continent from Panama to the North Pole, and Hawaii to Bermuda, into one self-contained economic organism for the distribution of abundance to all -- a blue-printed New America of Plenty -- this continent's rendezvous with destiny!

This continent's rendezvous with destiny will permit of no direction from Rome, Berlin, London, Moscow, or Tokyo. For the technological problems of America's Power Age are solvable only by the American solution of more technology and less human toil. Communism is too bourgeois and fascism too antique for the Continent of North America. Democracy in this continent's Age of Power is but the national debris of our national chiselers. So let us Americans of this continent face the physical fact that we must organize nationally and continentally, not for the right to work and the right to wear overalls but to take the overalls off the human being and to place them on the machine where they belong. Let us organize to put the machinery of this country and this continent into overalls for the benefit of the human being and for the production of social well-being to all.

Technocracy salutes the audience of radio station KOMO and wishes them a happy landing in the New America.

A RADIO ADDRESS

by

Howard Scott

STATION WGAR, CLEVELAND, OHIO

April 17, 1938

Technocracy salutes the radio audience of WGAR!

Technocracy presents to the radio audience of WGAR the dilemma of this country and this continent.

The United States and the continent are endowed with natural resources sufficient to meet the raw material needs of our citizens for centuries to come. The United States and Canada possess more installed horsepower and more machinery than all the rest of the world. The United States and Canada have more trained men and women capable of efficient operation of the technological equipment for the production and distribution of the social needs of their people than any like area on earth.

Restated simply, this country has the men, the materials, and the machines. It has the brains to devise greater technology for greater social needs; and yet the United States and Canada today, while possessing all the necessary elements for social well-being, are stymied by our antiquated political and economic structures.

The social institutions that sufficed in the United States in the days of the ox cart and the horse and buggy are today simply junk, blocking the road to American progress.

The recession has deepened into a depression. Our government admits that 18 million Americans are on the various relief rolls of the country. It admits further that the United States Employment Service has over 6 million applications for employment in its files; and at the same time it is generally admitted that unemployment is approaching the precarious total of 14 millions. Technocracy asks, "Where is the prosperity of yesteryear, and what has happened to our promised 'abundant life'?" and in answer to these questions comes the magnanimous declaration of our federal government that it is going to spend its way out of this depression with the slight sum of \$4,512,000,000 -- merely a sweetening of the national jackpot!

The federal administration in Washington and the Dominion administration in Ottawa both proclaim that the national policies which they have formulated are the best and only possible methods of procuring national well-being under the existing conditions. The national governments of both the United States and Canada promise many things. They promise higher prices for the farmer, more business for the businessman, higher wages for the worker, better banking for the banker, and a higher national income for everyone. Their promises are so many that they are all things to all people and nothing to anyone.

Technocracy states frankly that in view of the technological factors of this country today, such a policy on the part of our national administration is the rankest hypocrisy that could possibly be perpetrated upon a sorely suffering people. Technocracy points out that national business supports our national administration in this great hypocrisy; that both are guilty of collusion and misrepresentation of the facts of our national operations. Such hypocrisy in these times is as deadly and dangerous -- and even despicable -- as that of distributing chocolate-covered arsenic to high school students.

#### BUSINESS AND GOVERNMENT FUTILITY

National business and national government contend that they both, singly or together, can rectify the national dilemma facing this country and this continent today. National business contends that it can solve the dilemma of unemployment, insufficient purchasing power, and want in the midst of plenty, if it is permitted to indulge in more business with less government interference. National government contends that it could obtain the solution if it were permitted to have more government and more business.

These claims on the part of both government and business are the rankest of barefaced assertions. Neither government nor business, regardless of what they do, can possibly rectify the critical situation in which the United States finds itself today, for the United States and Canada are engaged in the greatest social conflict in human history, and a conflict which, at this time, does not exist anywhere else. It is the conflict between two systems of producing physical wealth. For 7,000 years of social history, man has produced his physical wealth by human

toil, and now in the country and on this continent, the technological process of producing physical wealth is shoving the old process onto the scrap heap. Business and government are shrieking loudly for North Americans to obtain a higher standard of living. We must increase our national production of physical wealth, we are told.

This statement sounds fine to the uninformed public, but the facts of the case are these: the technological production of physical wealth in the United States requires an ever-smaller total of man-hours per year to produce an even-greater volume of physical goods and services. When greater physical wealth is produced, America will produce it; but the more physical wealth America produces, the less human effort we will consume in its production.

These facts are obvious to any student of our national situation; and yet our national leaders have the barefaced effrontery to claim that more wages and salaries will be distributed when America produces more physical wealth.

From now on, the United States and Canada will produce more and more with less and less human effort. And why not? Toil is the morality of slaves. Gears never tire, machines never sit down, and technological machinery will do the work of America's tomorrow.

#### LESS PURCHASING POWER, MORE RELIEF

In the face of this, Technocracy states that it is physically impossible to pay out sufficient purchasing power in salaries and wages to the American public to buy back the increasing productivity of our national machinery; and if an ever-smaller number of Americans are going to work fewer hours per year, can you possibly conceive how either government or business can raise the purchasing power of our citizens to where relief and unemployment will be totally eliminated?

Technocracy wishes to make clear that the national problems of the United States and Canada are technological problems, and that they therefore cannot be solved by any process of political democracy or chicanery of financial economics.

As relief lines lengthen, foreclosures increase, and retail sales fall, business begins to scream at Washington for its own salvation. Business and government are sick; they are sick from obsolescence and antiquity of 7,000 years of scarcity; but their cure will cost more than their demise, for in this conflict there can be no compromise. Either the people of this country and continent must destroy their technological equipment and expurgate their science and return to the human toil of hand tools, with its accompanying shibboleths of democracy, or they must face the stark realization that there is more and greater technology to come than America has ever known; and Technocracy asks again, "Why not?"

Why should this country and this continent be condemned by the political machinations of democracy and the ineptitude of national business to the national anarchy of more relief, more unemployment, and more crime? If national business and our political government cannot solve the dilemma of America, then it is high time that they step aside and make way for that which can.

#### A NEW LEADERSHIP COMING

As the millions of Americans who have been liquidated by the oscillations of the Price System are increased by more millions in the greater oscillations that will occur in the near future, there will arise a mass demand, Continent-wide, for a new leadership capable of directing America to her rendezvous with destiny. National business is going to insist on its pound of flesh and Technocracy predicts that America will be compelled to liquidate national business once and for all. National politics is going to insist on the privilege of continuing its national bungling, and it will join national business in the coming liquidation. It is high time that the citizens of the United States and Canada realize that politics and business stand in the road, blocking the pathway to North America's future.

This country and this continent have the men, the machines, and the materials to provide every American with the decency of the highest standard of living in the world, from birth to death, with the minimum of human effort and the maximum of leisure. It is high time that we Americans enroll in the Technological Army which will make America safe for Americans!

RADIO ADDRESS BY  
HOWARD SCOTT, WGAR CLEVELAND

4-17-38

America has no war off this continent. Americans have nothing to gain and everything to lose by participating in any warfare abroad. America has only one war: a war to be fought here and now, on this continent, alone. It is the war of plenty versus poverty, of leisure versus toil, of abundance versus scarcity. It is a cause not to die for but one to live for. Technocracy contends that it is high time we enlisted in this greatest of all wars, for this war will have to be fought and won within the next five years if civilization on this continent is going to avert the chaos of national anarchy. Enlist now, before you are conscripted by the march of events.

PUBLIC ADDRESS

by

Howard Scott

WINNIPEG AUDITORIUM

October 25, 1938

With your kind assistance, I would like to conduct a little census of this audience. How many people in this audience are economically and monetarily better off than a year ago? Will you kindly put up your hands? I see about half a dozen or more in this entire audience. Well, how many in this audience this evening are absolutely satisfied with the existing economic structure, the existing political structure, and feel that it requires no modification and no redesign whatsoever? No answer to that one at all.

Don't think it is strange, because what we have seen here happens in every audience from coast to coast and from Peace River to the Rio Grande. We are all in the same economic muddle, and it is a wonder it isn't a great deal worse; because the press of the U.S. and Canada, the radio, screen, and pulpit are indulging in the greatest run of misrepresentation ever foisted on the people of this continent. They play up every item of foreign news, capitalize every murder and scandal. If some foreigner stubs his toe on a doormat, he gets headlines; yet the most important events in history are not dug up at all. Why not?

The people of this continent are the most intelligent, capable, and highly trained of any people in the world individually. They have more knowledge of facts, and they could take more facts and data; but our press, radio, and screen are withholding the facts of our physical situation and are doing it deliberately. You know; I don't have to drive it home to you. You will read what some politician says about nothing -- half a page. If a banker has a sore toe and decides to comment on foreign affairs, they print it. I don't know why. A banker today is *non compos mentis* anyhow.

After nine years of the greatest debacle this continent has ever known, the situation of the U.S. and Canada today is more dangerous than ever, because we are feeding the public the pap that it is going to be all right if we can only pump in enough bug juice. MacKenzie King plays the same kind of tit-for-tat as F.D. Roosevelt does in Washington. The only difference is that

one is in Washington and the other is in Ottawa. That may be a distinction but is certainly no difference.

The National Association of Manufacturers and the U.S. Chamber of Commerce are telling the nonsense that government and business and labor ought to cooperate so as to kid the sucker public along a little longer. They ask you to vote. In the U.S., it is on whether to keep the old bunch of racketeers or put in another bunch; of course, up here in Canada, you have your rackets a little more tightly cornered. You have the Senate of 96 appointed for life. The only way you remove them is when they die. They get \$8,000 a term, and 43 of the Canadian Senators hold directorships representing \$8,500,000,000 of Canadian investments, or over 53 percent of the total investments in Canada. The Canadian Senate is in a very interesting position. In the U.S., they are only penny ante chisellers -- in Canada, they are tops; of course, you haven't any Supreme Court in Canada in the same sense as in the U.S. The Supreme Court of the U.S. is the national referee of chiseling. You get appointed there when you demonstrate your ability to referee in chiseling. You arrive at such an appointment when you have reached a certain stage of mental prostatitis. Here it is quite different.

Canada is larger in area than the U.S.; in fact, the unoccupied portion of Canada -- 3,400,000 square miles -- is greater than that of the U.S. Your population -- most of it -- is within 100 miles of the boundary; 90 percent is within 200 miles. The great Canadian Shield, from Labrador across and splitting the lakes on the way north, will never be inhabited, except for pulpwood, mining, and power. We know that; yet you are kidded that there are great open spaces that the escrow Indians can palm off. The escrow Indians are the greatest tribe of North America. Their home habitat is southern California. Generally they are known as real estate agents.

In the U.S., the people consume 96 percent internally of what is produced, exporting 4 percent. In Canada, export runs up high in a lot of fields. If Canada were to consume its products, you would be floating in physical wealth; but you export it so as to give to the chiseler and keep the Canadian close to relief. You have another export. From 1901 to 1931, Canada admitted 5,200,000 immigrants; and in the same years, it exported 4,200,000 Canadians. That is a hell of an indictment, ladies and

gentlemen. They didn't want to go; they had to go. Only 96 Canadians can be Senators.

We are up against a situation in this country and this continent that has no parallel in history. It is not analogous to the situation in Great Britain, France, Italy, Russia or Japan. It is unique in social history. There is no precedent for it. There are physical factors that do not exist elsewhere. Try to realize the vast difference.

What is the difference? The difference is that in all other human societies they produced the physical wealth of their time through human toil, and the only way physical wealth could be increased was by working longer hours or increasing the population. Here in U.S. and Canada, we have a different proposition. It has come in the last 40 years. Over in Europe, they are still glorifying the morality of toil. Hitler has them marching around with shovels. What a country! That is all right for a European. He hasn't anything else to look forward to. Here, the only place you have a shovel is on the WPA. We give them to workers to lean on. Canada is no different. Your politicians and businessmen are the same. They haven't the guts to give the relief workers engineering equipment and direction, because they would rebuild Canada. They are still fooling with the Trans-Canada Highway. We didn't do that with shovels. You can keep people busy with shovels, but you can't get the job done. You can't build a modern highway with shovels.

We are up against an entirely different proposition. Looking back a few years -- a century ago in U.S. -- 94 to 96 percent of the population were deriving their livelihood from the soil directly. They made a living with hand tools: a spade, hoe, axe, and covered wagon. Today it is all changed. Seventy-six percent of the population of the U.S., no longer derive their livelihood from the soil. Of the remaining 34 percent, 64 percent only produce 35 percent of agricultural wealth; the remaining 36 percent of the agricultural population produce 65 percent of agricultural production and earn \$2,278 per year. Ninety-seven percent of the population is dependent on the productive and distributive equipment and not on direct application to the soil. Germany and Italy are still preponderantly agrarian. They are not industrialized. Travel across Italy and Germany with a flat iron and try to plug it in. You can't unless you have a dozen

fixtures. They are still delivering milk in Italy inside the cow. Here it is quite different.

In Great Britain, they are mining coal at the rate of .8 of a ton per man per day. That is also the rate in the Ruhr and Saar. The average in the U.S. is 5 tons per man per day -- 25 tons bituminous coal per man per day.

There is \$380,000,000 of coal mining machinery on order. When mechanization is completed, 4/5 of the United Mine Workers -- and John L. Lewis -- will be on relief. Why not? There never was any sense in working anyway. All you have to do is look at yourself in a glass. Work has been noble. Look at yourself and see what the hell it did to you. Nothing to be proud of as I look over any audience.

Why? Because on this continent we know today we are not worshipping the morality of work. We are a smart people. We dumped that over with the Model-T Ford and the outdoor privy -- they are gone. The concept is overboard. We are not up against the same ideologies and concepts and purpose as in Europe and Asia. We do not take 190 years to build a cathedral. We build a better building in six months.

Something has happened, it hasn't happened in Europe and Asia. There is the only place it could happen. That is what is baffling our businessmen and politicians, bankers and labor unions. Where there are technological processes for production of physical wealth, as and when we produce more, we produce it with less human beings working less. Yet our trade association has the idiocy to proclaim that the way to produce more is to work more. The way to produce more is to put in more machinery and put more people at leisure. Why not?

Last year in the chief cotton-producing counties in Texas and Oklahoma, the number of tractors rose about 45 percent and mules declined correspondingly. Rural population declined 17 percent -- tenant farms wiped out. Population declined 17 percent in 1937. Where did they go? On relief or north looking for a job. They tell me that the Province of Manitoba has bought more tractors than in any year in history. You are going to get it, too. There never was any sense in following the plow, competing with horses.

We are peculiar. You never heard of a mule working overtime or dying from overeating or overwork. It is only the human jackass that does those things. Yet we are being told by political governments that all you have to do is be tolerant until Bennett gets enough shots into the national arm.

Where is all this leading to? What kind of situation is it? Let's have some comparisons. In Germany, they had monetary inflation. That is quite different from credit inflation. Inflation in Germany was introduced to abolish the external debt and reduce the internal debt. It accomplished that in the main. It could have gone on to 40 zeros, and it would not have altered the internal operating mechanics a bit.

Now in Canada and U.S., the credit inflation is rather interesting. Credit inflation here and in the U.S., is for the prime purpose not of abolishing debt but of increasing total debt, so our governments can borrow more. The credit of a private corporation is limited; but the more a government borrows, the more it has to borrow before it sinks. The credit inflation process on this side of the water is only available to the large corporate bodies. The results are peculiar. Each inflation pushed out obsolete equipment and put in equipment that increased the production and decreased payroll, purchasing power, and the time of capital payoff; so that payoff which used to run 40 years takes only a few months with equipment. The Corrigan Plant -- 2,300 feet in length, with 2,200 feet a minute speed -- if operated at capacity pays off in thirty months.

What effect has this process? Six years ago, Technocracy warned this continent that credit inflation would be indulged in and further credit inflation would lead to liquidity of financial institutions and interest rate would approach zero. Well, the liquidity is increasing and the rate of interest is going toward zero. Of course, here you have the Bank of Canada. You don't have the diversity here. Your government is in banking here, and the U.S. will shortly have to take over the banks. You can shed a tear for the banker. He was a smart boy 20 years ago, but he is just another sucker today. The more he has of money, the worse off he is. The Continental Illinois Bank of Chicago has \$1,200,000,000 in deposits. Morgan & Co. has \$410,000,000 in deposits -- \$403,000,000 in cash and governments. It is getting

so a poor banker has no place to invest except those poor-paying governments.

Here we are, loaded up with more money than the world has ever known. The U.S. has \$200 billion available for immediate use. Are we going to use it to help the people? No. Exactly as you are doing here. You grew too much wheat here, so the government pays 80 cents Fort William and markets at 61 cents and will subsidize it as an export game. In the U.S., it is difficult because they have more production. They are loaded with cotton to the eyes -- 26 million bales of cotton -- wheat, corn, tobacco, canned goods, and butter. Butter in the U.S. was 212 million pounds in storage as of October first. Cheese was close to the all-time high. We packed 25 million cases of peas, with 5 million carry-over from last year. Well, you are in the same condition up here. What are you going to do?

Listen to the proposals of Secretary Wallace -- his proposition on export of farm produce. Abroad they haven't the money to buy our surpluses; so, Wallace will give them money to buy it, when there are 13 million families in U.S. that cannot buy what they need. We haven't got guts enough to consume our own surpluses.

You are going to be ballyhooed in 1939 by a great war scare. What is the scare for? To stimulate capital goods industries in U.S., and Canada. U.S. will call for 30,000 anti-aircraft units and 120,000 mobile anti-aircraft guns -- all built up to save what? To make the country safe? Hell, no. You spend the money to keep this cockeyed system alive. You went out to defend something a little while ago and left quite a few Canadians in the fields of Flanders. The U.S. thought it was going out to make the world safe for democracy. Democracy doesn't smell any better than communism or fascism. Why distinguish between stinks in a power age?

Our process of producing physical wealth is totally different: more people on relief; larger bank deposits; more machinery and trained men and women than all the rest of the world; more brains and ability than all the rest of the world -- individually. Collectively, we are the most backward collection of homo sapiens. We are not using our collective brains -- we are sitting on them. It seems we have to be kicked in our brains

before we get action.

Do any of you expect the Conservative Party in Canada or the Republican Party in the U.S. are going to do anything for you, or the C.C.F., or Social Credit, or \$30 every Thursday? There is more sense in the last than in the other rackets; at least, it will ruin the other rackets. You can laugh at \$30 every Thursday. It is sheer nonsense, of course; but behind that there are millions who are driven to grasp at straws. They will grasp at anything if they think they can get it. Thirteen million families are receiving the same total annual income as 280,000 families. God's country! It might have been once, but it has gone to hell now.

What are you going to do? Install Liberals, Democrats, Republicans, Conservatives, C.C.F., Social Credit, Communists, Fascists? They are all the same. To the Technocrat, the Republican and Conservative smell just as bad as the Communist and Liberal; and Democrats stink just like Fascists. They are all after a political job to maintain the status quo. One proposes a little more democracy than the other. Democracies are going to make a fine mess of it. They have to go on saving business to save themselves; but the more the inflation, the more equipment is modernized, and the greater the equipment, the lower our purchasing power. Let us put it this way:

If the U.S. pumps in enough credit inflation to increase the physical production of the U.S. 12 percent greater than in 1929, it will be followed by an immediate downward oscillation in which 40 million citizens will be on relief. It doesn't make any difference where you are in North America -- when 40 millions are on relief, you can kiss your institutions goodbye. It is hard. We have to be uncivil. We are not out to flatter you. You would know we were crooked if we told you that.

We can't do it by a political party. A political party is out to maintain the status quo. A labor union exists only as long as corporate enterprise. It is a horizontal alignment that can't achieve anything continental. Bankers are in the same boat. Yet they are asking you to vote, and you still go out and vote. What do you get for it? Did you ever get a change in conditions in the last nine years or the last ninety? You never voted on fundamentals, and you never will under a political party structure. You vote on party members; so. If you are going to

vote, get two dollars for it. It is all you ever will get. The political machine in Chicago votes the telephone directory and gravestones. In Winnipeg, of course, you don't do anything like that.

Another interesting thing is any city of the last 40 years with industrial planning. Technology is destroying the basis of taxation based on assessed values. As long as this was increasing, the income of the municipality was increasing. Today we require less plant space to produce more. A 50,000 kW turbogenerator unit is replaced by a 165,000 kW unit, and we have boiler space left besides. You don't increase assessment. The rubber plants of Akron moved out and left the plants. The citizens will take their exercise on the space because there is nothing left there. The municipality will have the employees and the buildings. In Cleveland, there are 300,000 people on relief out of 900,000 -- Akron the same. Paper is moving out of Wisconsin and going south. There are ghost towns in Wisconsin.

You have a little coal situation out west. The CIO raised a little hell in Estevan and on to Drumheller. The Canadian Coal Operators Association is trying company unions. The little boys caved in and the open pit mines are running. In order to get over the situation, they will have to mechanize, and the CIO members will be out of a job. Isn't that lovely? "The mills of the gods grind slowly but they grind exceedingly fine." Raise labor costs -- compel mechanization. Same in the coal fields -- more miners on relief in western Canada. The sooner you can put most of the miners and families on relief, the sooner you will change the system.

We have a hamburger psychology. A man is making \$15 a week. An organizer gets him a \$3.00-a-week raise and what does he do? The damn fool goes out and gets married. That is the kind of moronic stuff we have. You have to put them out of work until you have enough of them out of work. Some of you feel that is tough. Social action never has arrived from cogitation or thought processes. Social action is mass action. It is not gentle and it does not come from cogitation. It is hard to realize our fellow citizens are so damn dumb. Here we are in a power age such that we can expect it to give us security and abundance. Technocracy points out no political government of any kind can provide a higher standard of living or economic security. It cannot be done

by any political government. It cannot be done under a Price System or by maintaining a scarcity.

We have the men, the machines, and the materials on this continent. We can give every human being the highest standard of living from birth to death, providing we quit sitting on our collective brains. It can only be done as a mass movement. Russia wanted to impose Bolshevism -- 94 percent of the Russians were on the soil. Bolshevism was a minority movement imposed on the majority. Fascism in Italy was a minority movement imposed by church and state on the people. When Mussolini got his army trucks for the trip, he found there weren't enough truck drivers. He had to hire them. It was a minority movement. In Germany, there was also a minority movement. Why were they minority movements? The factors were entirely different -- the majority of the people were on the soil or in small establishments. All factors here are quite different. It is impossible to have a communist revolution or fascist coup d'état and to continue this democratic business is impossible.

Those of you who remember the general strike in Great Britain a few years ago -- in London, there was no great danger, because London is one of the great distribution points. The danger was the rest of England. Here on the North American Continent, we do not distribute from them in the case of basic commodities; we distribute to. In greater New York, there are more telephones than in half the world -- more than in China, India, Russia, and Poland combined. There wouldn't be time to erect communist barricades in New York. You could fight a revolution in Russia with 94 percent of the population on the soil. Here, 90 percent of the population would be involved in 72 hours. Cut off water in New York, and you reach the deadline in 5 hours and 18 minutes. Your city would be on fire in so many places that if there were no other trouble, it is doubtful if you would overcome it. The technological tenuousness of this continent is totally different from any place else. You can't impose the moral philosophy of Karl Marx to be administered by a political oligarchy -- it won't work here. Nor can you impose a fascist philosophy to be achieved by a coup d'état.

We will have an entirely different situation -- not one for counting noses. Do you realize today that to count noses is very well, but it doesn't solve anything. Have we solved a single

economic problem in the last 9 years? We have not. We are getting closer to greater liquidity and greater productivity and more surpluses.

Well, what has to happen to the people of this continent -- can you organize yourselves? I am trying to drive home that you have to organize as a mass movement for the first time in history -- 90 percent are involved. In other cases -- only a few percent -- you could impose a minority movement. Here, 90 percent are in the same boat -- tall or short, fat or lean, clean or dirty. If this system breaks down, you haven't got time. If you are not organized, it doesn't matter.

In two years you will reach three times the average standard of living of 1929. The conduct of human affairs has to conform to the technique of operating our technological equipment. No political government in history has ever assumed the responsibility of guaranteeing the economic status of every citizen from birth to death. Technology imposes that on us. We will be compelled to be our brother's keeper. We all profess Christianity, but your professions mostly amount to about two hours a day, one day in seven. The other six days and 22 hours you are out chiseling to make good your pretensions on the collection plate on Sunday.

This country and continent can be so organized -- men, materials, machines, and resources -- that, operated on any appreciable load factor (it can be operated at 18 times the average load), it means an abundance for every citizen. It means a new system of distribution. Functional governance must assume to guarantee the economic status of every citizen. The citizen receives his purchasing power for fulfilling his contract. Some of you will not like that. You will remember when the Lord said, "Go into the vineyard and I will give you a penny a day," and all received a penny. Well, measure yourselves by what the Lord said and see how you measure up. Are you going to object to your fellowman getting an abundance? Can't you take your Christianity if it comes into actuality? You will have to live up to it for the first time in 1900 years. If you have any of those debt claims -- insurance policies, mortgages -- you can't take them with you, and they won't be good much longer; so, you may as well cash them in and have a good time.

We are headed for a social change the like of which was never known. Not merely a change in political government but a change in design and functional setup; not only that, but a complete change in the process of arrivation of social decision. Social decisions have always arrived by resolving a conflict of opinion into a consensus of opinion. Whether the opinion was minority or majority, it still was opinion. Opinion, in a power age, smells and is totally useless. There will have to be a different process of arrivation. Under a Technate, that will result from the close approximation of the functioning of the physical equipment of this continent. Only when there is no consensus of opinion will there obtain a maximum of personal choice.

Here is something brand new. Here is a blueprint not filled in in detail but schematic and general, viewing this country as an operational problem in the light of modern technology. A brand new progression comes up. No relation to anything yesterday -- a new thing, born of technology: the first social movement to be developed, manned, and run by North Americans.

We can only do it as a continent-wide organization. Remember, we come to you as a nonprofit organization. We get \$15 a week -- \$5 more than last year.

How many labor leaders are working for anything but to try to chisel you for a large salary? No chief beneficiary becomes a leader of a new regime. He isn't going to disturb the status quo. A new type of leadership and generalship is necessary.

INTERVIEW OF HOWARD SCOTT  
BY ASSOCIATED PRESS,  
UNITED PRESS, AND  
INT'L NEWS SERVICE  
JUNE 28, 1940

HS: What is on your mind?

AP: I want to find out, among other things, what was behind this rumpus in Canada closing up the Vancouver -- or, rather, the Victoria offices of Technocracy Inc.

HS: The Provincial Police apparently closed up a few little offices. We are to a certain extent in the dark as to what is basically behind this; in other ways, we are not. An order-in-council PC 6280 was presented in the Dominion House of Commons to the Minister of Justice, which was tabled (tabled generally means that it was deferred). The order-in-council is not legal in the United States. It comes under the so-called Governor-General. An order-in-council is issued when Parliament is in session. Although the order-in-council declared our organization illegal in Canada, we have had no confirmation of such from the Minister of Justice of Canada.

We have 206 offices in Canada in 8 provinces. Offices run up to 6,000 square feet, have lecture rooms, shortwave, our own study classes, orchestras ... We have 9 offices in Vancouver. All other organizations -- political parties -- have been banned under the War Act, but we have been running wide open tours -- 3 or 4 tours are on right now.

AP: What is a tour?

HS: A speaking tour. So far as we know, we cannot ascertain on what grounds they can declare us illegal. We have done nothing to warrant such a declaration. We have been a perfectly legal organization.

AP: Could your announced idea of the consolidation of the North American Continent be at the bottom of all this?

HS: Of course, that is undoubtedly the basic reason for all

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

of this. In our new publication, mention is made of the continental defense area. We are calling for a three-year continental defense training -- 18 to 21 years of age -- containing a standing army of a million soldier-mechanics; a conscription law to apply to manufacturing, communication, and transportation.

We are not anti-British any more than we are anti-German or pro-American, but we are the only organization that is for the consolidation of this continent.

Countries on this continent are no menace to the United States, so that national defense as now proposed is tantamount to traitorism no matter who proposes it, and this is the substance which is back of the trouble in Canada. Ours is one organization that did not cripple its membership in Canada since the declaration of war.

AP: How many does that make? I mean, how many new members?

HS: I do not know offhand -- 5,000 or 50,000.

AP: What do you attribute that to?

HS: What do you mean -- the growth of Technocracy since the war?

AP: Yes.

HS: It has been growing since 1935 -- never had a setback. We have been having a number of tours in Canada. There is no arena large enough to hold our meetings. Winnipeg Auditorium and several others mentioned.

AP: Seems to me that much more marked enthusiasm has been shown in Canada than in this country.

HS: It has been growing rapidly.

AP: You mean in proportion to the population?

HS: Yes, and you have the same rate of growth here.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

UP: How long have you been growing in this country?

HS: About 8 years. We have not always been a membership organization. Our first tour was in February 1934.

UP: Do you think that the Canadians might be a bit peeved at what may be termed as the isolationist attitude which you have in regard to the United States?

HS: Ours is not an isolationist attitude. It is an insulationist ...

UP: Rather a mincing of words.

HS: This country has to dominate this continent and consolidate it -- take over all the Danish, British, French, and Dutch possessions on this continent, as well as the Spanish -- within the confines of Greenland, south of the Rio Grande, French and Dutch Guiana, West Indies ... We bear no enmity or prejudice against any nation -- just a case of continental defense.

INS: What form would your continental consolidation take?

HS: You cannot consolidate under the existing setup any more than you can meet the defense program.

I was Equipment Engineer at Muscle Shoals during the World War. One hundred twenty million dollars were spent producing nitrate plants and they never produced one pound of nitrate. The Ordnance Department spent \$4 billion from April 6, 1917 to July 9, 1918. Britain wanted 20,000 guns of all calibers -- they only got 133 or so; France less than 106 lots of ammunition.

HS: We will not get anywhere on the old basis of governing. Under the present conditions we will have more profits, more millionaires, more unemployed, but I will be damned if we will get continental defense out of it. You will have to produce equipment, have unity of purpose, and design of control to achieve it.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

We have members in Canada, Alaska, the Panama Canal; we are all citizens. We do not accept aliens or Asiatics. We have no subsidies, no endowments, and carry no advertisements. We are the only organization in the United States that has gone to town in Canada, and under peculiar circumstances.

If England cannot survive ...

AP: What is your total membership now?

HS: We never make a statement on that.

AP: Do they pay?

HS: Yes.

AP: How much?

HS: \$5.00 a year.

INS: What does a member get for \$5.00 a year?

HS: Study courses, literature. The smallest unit organization has a chartered Section covered by a Board of Governors of 11: Director, Chief-of-Staff, Regional Division Boards cover 10 or more Sections -- 2,000 members in one Regional Division, Area Board.

It's a matter of coordination, a unique proposition. Without a number of facilities or help from anybody, we have gone this distance. Although we have had as many as hundreds of paid admissions, the press ignores us. A cockeyed communist on a soapbox may get a handful of people to listen to him, and he gets two columns in the newspaper.

AP: How long do you think it would take to effect this transition -- your proposed setup -- if the public was favorable towards it?

HS: Merely takes a referendum.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

AP: Months or years?

HS: Inside of thirty days.

AP: Would that include putting into operation your old plan of knocking out currency and people working only four hours a day?

HS: Yes -- by putting in machinery, it will.

UP: You want to create a United States of Americas?

HS: The consolidation of a continent. You could not call it a United States. It is a federation, a federal government of the United States is a confederate government -- has not the power to issue a charter.

UP: There is to be one political group?

HS: One functional government, one language, one people, one and indivisible.

FEZER: There would be no individual states. You could not run it under this political mess.

UP: What form would the functional government take? Would it be a democracy?

HS: We have a democracy now.

UP: Well, what is a functional government?

HS: Balanced load operation. You have it in a powerhouse, telephone company, steel industry ... No autocracy, plutocracy, and so on.

UP: How are you going to sell the public the idea if you cannot define it?

HS: We can define it.

UP: But you have not defined it to me.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

HS: It is an executive administration by function. Communication is a function; so is public health. Representation by continental function.

AP: How would your administration become active -- supposedly by capability?

HS: By technology. Take the telephone right here. The stockholder has nothing to do with the design of it.

AP: Yes, they have this to do with it: they indirectly name the people who design it.

HS: You do not name the advertising manager.

AP: Some mention made of Gifford.

HS: Now you are incorporating value.

AP: They select Gifford. He selects ...

HS: In other words, President Roosevelt cannot get a doctor to design the Hudson River Bridge. He could select all those he wanted to, but they could not design a bridge. It is limited to function. You are limited to functional law. If something goes wrong with you, you cannot have a barber operate upon you, but you can select a doctor -- trained people.

Here we have one billion six million more prime movers. We did not get that by the old method. Equipment runs by virtue of the training of the technological application of science. So far as we are concerned, technology is up-to-date, but the social institution is in the days of the outdoor privy and oxcart. You want to ride in an automobile, but you do not want to go to the outdoor privy. We are producing physical wealth by extraneous energy. In Europe -- physical wealth by hand tools -- human beings work longer hours and produce less. Here in this country, less Americans work less hours. The more physical wealth you have, the more extraneous energy must be used in order to produce

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

more.

Our predictions of trouble to this system taking place in 1942 are already coming to pass. We have not missed yet.

AP: In 1936 you said consumption of extraneous energy was 153,000 kilograms per capita per day, that if it bounced up to 200,000 kilograms by 1942, things would be bad. Has that rate been climbing since then as you anticipated?

HS: Yes; 1937 on schedule -- September 1937, nose dive; 1938, did not have an increase; 1939, pickup. Twelve or fourteen percent ahead.

AP: Extraneous energy -- by that you mean your natural resources, not human energy?

HS: Yes, coal, gas, and so on.

Getting back to the Canadian situation: We are proposing the consolidation of the North American Continent under one government, one language, one people, one and indivisible.

AP: Inasmuch as you will have a lot of people equally capable in one field, under your functional administration, how will you overcome this competition?

HS: You do not have competition insofar as directors of research are concerned. That only comes with the soapbox orator.

UP: Then our political and social system is a lot of fluff?

HS: We do not have it in the steel industry, telephone, etc. A typical demonstration of your politics is the Republican Convention -- a lot of ballyhooing for individuals. We think if we indulge in an escapism of ballyhooing of individuals ... It does not matter if you put Jesus Christ on the platform or someone else, it would not alter it. You are playing under the rules

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

of this game. No matter how good the player is, the rules of the game prohibit any real change. We have to change the rules of the game. Technocracy does not wish to change it. Technocracy is pointing out that you have to change it if you are going to meet the internal and external troubles which America is facing today.

It does not make any difference if British or German totalitarianism wins; in one case we would face the totalitarianism of Germany and the other Britain and France, and we are totally inadequate to compete with either.

UP: Which is the worse of the two evils?

HS: Well, the Nazi is traveling faster. It is more imminent in its threat; and it does not look as if the British Empire is going to survive very long. In 1932, I predicted as and when this would happen.

It is not a question of disliking the British -- after all, we are more closely tied up with them and have shown more sympathy for the Allies; but if we are to continue with the same national policy and foreign policy and internal operations we have used so far -- spending \$25 billion in social conflict -- how do you expect we can defend ourselves?

We cannot do the job here.

AP: What is fundamentally unsound ... high consumption of extraneous energy ...

HS: You are producing ever-increasing high activity. Total man-hours are declining. It is an American phenomenon. It does not relate to the foreign powers. Theirs is still an economy of scarcity. Ours is an economy of potential abundance. The more that we can do, the more abundance. This is not blaming Rockefeller or Mellon. We would still be in the same boat. There is no personal objective in this thing. With the increase of abundance, purchasing power declines, because your total man-hours decline. When you first put in an

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

industry, employment rises. We can show you charts. Then it reaches a peak of employment -- peak of production activities and down goes employment; and this will get more serious as they continue to mechanize. This is denied by the National Association of Manufacturers and others. We cannot reabsorb 11 million unemployed, but as soon as you slap that equipment into use, it becomes more efficient, and then you have more unemployment.

Now here is something if you want detailed figures. That is the trend for the last 30 years in the United States.

Railroads: Diesel engine trains. Sixty percent of the railroad locomotives are over 20 years of age. Obsolete equipment. It is the modernized equipment that has displaced most of the men.

Private business has refused to create new debt each year. If there were sufficient producing capacity, they could not run what they have to make a profit.

AP: Under the Technocratic setup everybody would get an equal number of credits -- equal amount of work?

HS: It is not tied up with the amount of work a person does. It is because he is a citizen of this country.

AP: Then every individual family would get a house, a bathtub, and so on?

HS: Minimum housing is already dedicated before he gets individual purchasing power.

UP: What determines how much credit the individual gets?

HS: That depends upon the total energy converted in the national setup.

UP: No greater reward received for the amount of effort expended?

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

HS: Not when he gets all he can. There is no social distinction.

AP: What kind of police power would you have? Wouldn't it be possible for the smarter individual to have more than the others?

HS: You have an abundance under a Technate. When you have an abundance, do you have to rush out and take what someone else has? Therefore, would it be necessary to have a police force? Individual purchasing power is nontransferable. You cannot hoard, and it cannot be exchanged.

INS: Who is going to prevent you from hoarding it?

HOLCOMB: You cannot hoard it. There is no value. Nothing represented until you spend it. If you do not spend it within a two-year period, then it becomes null and void.

INS: Suppose you want to buy a yacht?

FEZER: You would not buy a yacht or an automobile. You would not have any more three cars standing in a garage to bring out your social standing in the community. You could always get the use of a car on a time basis. You could always stop at a service station and pick out any car to take you to a given point.

HOLCOMB: The automobile that you have now is not the finest that science can make. Under a Technate, when you would not have to bother about a resale, an automobile would be made that would knock the spots out of the ones made today. Technocracy has a design for one. The car would last too long to have it made up at the present time. It would put an end to the resale of cars.

Also, take, for instance, the razor blade. The ones on the market today are good for but one shave; but science has developed a blade which will shave innumerable times. Why don't the razor blade companies use it? It is obvious.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

FEZER: And when you take one or two problems and try to analyze them out of thousands of problems, the whole setup looks very silly.

AP: There are an equal number of people in the country who are fitted around grocery stores and filling stations. Who is going to select which does which?

FEZER: They select their own field. There would be no grocery stores and gasoline stations as we have them now. Not everybody wants to be a professor -- or a ditchdigger. Not everyone wants the same job.

HS: This is not a lot of Utopian nonsense; and as far as the Nazis, Communists, and Fascists are concerned, they all stink alike. And why distinguish between the stinks in this power age?

We are not doubting their personal integrity at all.

We cannot handle America's problems in the old-fashioned covered wagon and Chick Sales high emporium method. That would not bring about the right design for this continent.

Here is a brand new social approach.

When your technicians design a bridge, they design it so that the saint and sinner have equal availability as to the structure. It does not have anything to do with the morals of the saint or the sinner, for the one does not contribute one iota more than the other to the construction of the bridge.

We are facing the end of an epoch here. United States consumes 96 percent of what it produces. It has not been a foreign trade country. The greatest foreign trade carried on was in 1918 and 10 percent of total exports were munitions.

South America is a producer of raw materials -- mostly agricultural. South Americans are fundamentally

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

Fascists, dominated by European thought. We are not going to make good neighbors out of them. The only thing that they would respect is force, not a good-neighbor policy.

Cordell Hull -- as far as his position as Secretary of State is concerned -- is like a Leaping Lena of Lima. He fails to mention to this country the true conditions in South America. Billboards throughout Buenos Aires read "Fascism is Argentinean." Photographs have been sent here but chucked out in the Press Bureau. You can get them, of course, but the papers will not print them.

Cannot deal with the changed situation of the world.

Europe is going to be consolidated with Fascism-Nazism and Communism, and unless Canada becomes a part of this continent, she is liable to ruin 500 billion bushels of wheat, as the only foreign market for this wheat will be the Nazi of Europe; and this will happen whether the Canadians like it or not. If she does not sell to Europe, it will be ruined, as she has not enough storage room to keep it.

And we are in the same position. We are not going to get anywhere with our present policy. Our program of national defense as it now stands is one part sincerity and five parts government fund stimulation of capital goods industry, and six parts political opportunism in national electioneering.

INS: Under Technocracy, who would have authority?

HS: There would be Chiefs-of-Staff, functional series, or sequences. This is a long story. You could not discuss the subject of physics in one interview. We have been at this for twenty years. It is not new with us at all. We did not develop out of the depression.

We were a research organization -- have been for a number of years -- and are now a membership organization, a continental membership organization. No

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

members of Technocracy have bothered anyone or have any  
been arrested at any time.

AP: The closing of the Victoria office was the only time  
legal action was taken and was that the only one  
closed?

HS: Oh, no. All the offices in Victoria were closed. We  
have something like 60 offices in British Columbia  
alone -- and 7 or 8 closed and the rest were ordered  
closed.

AP: What are you going to do about it?

HS: We are obeying the law as we always have.

AP: Have you Americans employed in your Canadian offices  
who you have to bring here?

HS: United States citizens cannot be members in Canada.  
Canadian citizens are members in Canada, and United  
States citizens are members in the United States.

AP: Have you members in Canada employed full time?

HS: Slews of them. Each office has at least one member  
employed full time, and some have complete full-time  
staffs, publications offices -- we publish about 16  
periodicals in Canada.

AP: How many in the United States?

HS: About 36 or 38.

INS: Will this affect the publication of the 16 periodicals?

HS: Under this Order-in-Council, everything becomes  
illegal. The Order-in-Council reads --

INS: That is the Canadian setup? These offices that have  
been closed are only in Victoria?

HS: The B.C. police took the order to jump the gun.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

FEZER: We will not operate against a legal order from the Dominion Government.

HS: The whole situation is just politics; however, we are the only organization that can afford to wait. This situation as far as Canada is concerned will be precipitated before Christmas.

AP: Do you still maintain that there will be (?) million unemployed before 1942?

HS: I never made any such statement.

AP: How will the situation be solved before Christmas in Canada?

HS: Well, if the British Empire collapses, it will throw Canada into the lap of this continent. I am not solving the problems internally, but the die is cast if that happens.

AP: \$2.00 ???

HS: If you did not get \$2.00, you would not get anything. You are not deciding any national problem by casting a ballot under the present setup. No national problems have been decided by the ballot. We do not vote on problems and issues. We vote on parties and individuals. You understand the difference. If you voted to have a continental high school, then you would be voting on a proposition or an issue.

AP: Occasionally somebody votes for A instead of B because A promises ...

HS: We fling them out of the White House because we are agin them. Thousands are anti-Roosevelt; they are agin him. The same for Hoover and so on.

UP: There are many for Roosevelt in his domestic policy, but agin him in his foreign policy.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

HS: Natural psychological trait -- agin something rather than for something. Take, for example, in a baseball game ...

This is the most critical time in the history of the world, and America faces simultaneously both opportunity and disaster. Unless we have unified control and direction, we face disaster, whether the flood comes up from the cellar in our own house or comes from the outside. You cannot introduce foreign philosophy here -- Fascism or Nazism -- they would not work here.

The technological situation would not permit it. We have a problem of handling an abundance. Theirs is a problem of maneuvering scarcity.

AP: Why is there such a basic difference between Britain and America? They had a lot of machinery before we did.

HS: France -- average 5.3 percent hand-tooled craftsmanship. Germany is not industrialized; neither is Great Britain or any of the other European countries.

112 hand-drawn forge hammers ... we would hit a man over the head with a wrench if he tried to do that here.

First building in 1927 -- construction for a swimming pool.

France, building a house, puts on the plaster and then rips it off to put in the pipes -- still craftsmanship.

Germany -- the Krupp works.

France -- more production means more people employed and longer hours.

They shovel coal into cars by hand in Germany, France, and Great Britain. Garbage pail efficiency: save the scraps.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

Most people in France and Germany are peasants. Population is 60 percent on the land. Percentage on the land here is 6 million farmers, less than 20 percent on the land. Sixty-four percent of our farms produce 35 percent of our agricultural production. We still have too many people on the land on the basis of marginal land and starvation.

Europe has to do its agricultural trade by hand. Nine-tenths of its manufacturing is hand-tooled; for instance, in a shop where there are four or five people employed and papa is the boss and mamma works the cashier's cage, they can shut it down, drink beer, hoe the garden, and it has not the social effect it has here.

Technocracy is not questioning the sincerity of the national leaders, but it is questioning their intelligence.

HS: We, as a country, should state that we are going to take over Bermuda, Greenland, and so on, because we will have to take them over eventually. We will have to operate under one technological control. We are not announcing what we are going to defend. We can only defend the continent. You cannot defend the hemisphere, but you can protect the hemisphere and make it so deadly nobody will bother with it.

Churchill River on Hudson Bay is only a few hours from our central manufacturing district. Roosevelt did not go into that. It is closer to Europe than to New York. We cannot organize to meet external or internal problems and free economy trade basis through the Pax Britannica. We have to substitute a Pax Americana.

AP: How do you measure consumption of extraneous energy?

HS: That is measured by instruments. When you pay your bill at the electric light company, it is metered. You can meter anything. It is not a form of guesswork. It is a matter of continental accounting. You are not measuring

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

individual ability.

AP: I just wondered how you did it.

HS: You do not have to worry about so-and-so getting a little more than you do when there is an abundance.

AP: How do you get your figures?

HS: They come from standard sources of the government, countries, and corporations. We only collate the data from standard sources.

AP: Your statistics come in the form of barrels of oil, tons of coal...?

HS: Hydroelectric energy, cubic feet of gas, kilograms ...

AP: The amount of use you get out of it is the amount of energy you get out of it? It is the use that counts in affecting people's lives?

HS: It is the use of everything that counts in ownership.

HOLCOMB: You have the greatest inefficiency at the present time.

UP: Are those Technocrat suits you are wearing?

HS: We have been wearing them for a number of years.

UP: What is their purpose?

HS: Regulation dress. It's an American color. The cloth is made to our specifications: 64 percent Delano wool, made to measure, and sell at \$25.00. You cannot touch it anywhere else for less than \$60.00. You do not have to wear it, but you have to get a permit to wear it.

INS: It is just for your staff -- not for your members?

HS: It is not compulsory. Both staff and members may wear it once they are granted a permit.

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

(Scott shows a photograph of staff members wearing the regulation dress.)

AP: Is it not warm?

HS: We have a lighter weight material for the summer.

AP: At the rate we are going now, how long do you think it will take before the water comes up cut of the cellar?

HS: It already has. Ford, the biggest single individual tool manufacturer, offered to make aeroplanes -- also predicted that he would be sabotaged.

UP: Is it not true that Ford was going to use an English patent?

HS: Yes, and we should confiscate all patents.

UP: Isn't that being rather high-handed?

HS: We have to be high-handed. This is not the time to be ticklish about that. We have the technological science and equipment. We have no unity of purpose, no direction, no objective.

UP: I have to get back to the office.

AP: Since 1935 you have been engaged in what might be called a process of education, and at the rate you have proceeded, how long do you think it will be before you have sold enough people with the idea to put Technocracy across?

HS: We are not selling the people. It is the march of events. We do not beg anyone to join our organization. We take the opposite attitude. We insult our audience. No one in this organization is making any money. It is not a racket. We all draw the same salary.

INS: Is that your title -- Director-in-Chief?

HS: Yes, and we have Directors of every Section. I am Chief

INTERVIEW OF HOWARD SCOTT BY  
ASSOC. PRESS, UNITED PRESS, AND  
INT'L NEWS SERVICE -- 6-28-40

of the executive offices.

INS: Is your salary made public?

HS: It's \$20.00 a week. The stenographers, clerks -- everyone -- at CHQ gets the same amount.

AP: Do you think that is enough to live on in New York City?

HS: We know damn well it is not easy; however, we are not trying to be martyrs, but somebody has to do this job. The job has to be done or we face chaos. The object is to get all the money we can for the expansion of this movement.

AP: I think all of my questions are answered.

EXCERPTS FROM TALKS DELIVERED BY HOWARD SCOTT  
DURING VARIOUS LAKE ERIE BOAT CRUISES

Originally published in EIGHTY ONE FORTY ONE MAGAZINE

CRUISE OF JUNE 30, 1940

Our organization, in the past six years, has been ignored by nearly all outside publicity agencies and lied about by a few, only to arrive now at the point where we are told that we are correct.

America is not adequately provided with defense, and we are not going to town with our 48 sovereign states, our 165,000 or more diverse governmental groups, and our 80 million adult citizens with 800 million different opinions as to what is to be done. There is no menace to the United States in this Continent -- we are the dominant power; but the United States alone is not sufficient in the Western Hemisphere. Our defense must comprehend the Continent from Alaska to Venezuela and from Greenland to Bermuda, including the Pacific Islands westward to the International Date Line. Contrary to Roosevelt's and Hull's contentions, South Americans are not "good neighbors," They are definitely fascist for economic (trade) and cultural reasons. And remember, this Continent offers the richest loot in the world. Only an adequate show of force on our part can keep South America from opening the door to European invasion.

Regarding politicians and their relation to defense problems, during the U.S. experience in the World War of 1917-18, it took several months and an expenditure of \$4 billion to put about a hundred guns in France. And now the Republican Party has nominated for President, "Windy Willkie, the Futility Candidate." Americans are hard to get organized. They are always looking for escape through baseball, movies, night clubs, politics -- anything to avoid facing their pressing problems. Technocracy Inc. is different; it is the one American organization in origin and purpose which is striving to bring home to Americans the seriousness of our situation and the need of disciplined action to pull us through. But this cannot be done by any minority. It must be a mass movement of an overwhelming majority. If you don't organize, this continent will be taken from you. If Technocracy is correct, you must join us or join your ancestors.

CRUISE OF SEPTEMBER 15, 1940

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

Very few people realize that this is the turning point in the affairs of America. Business, with its nose in the Price System trough, does not realize it. Business is only anticipating another 17,000 millionaires, as in the First World War boom; but the situation is somewhat different now. In 1917, the national debt was \$2 billion; it is now over \$45 billion. There was little unemployment and no relief in 1917; now we have 10 million unemployed and many more millions on relief.

Another inflationary boom is on; but technology is now so much more efficient that we can double our production every 90 days, a speed which Europe cannot touch; for instance, if the airplane manufacturers of the United States were to start off with an initial production of 1,000 planes per month, at the end of three months they could be producing at a rate of 2,000, in six months at the rate of 4,000, in nine months at the rate of 8,000, and in one year at the rate of 16,000 planes per month. This geometrical rate is also possible for boats, and if that ratio were continued for any length of time, the United States would have to create a navy for the women.

The Burke-Wadsworth Law, with its provision for one year's military training of single men between 21 and 35 years of age, is wholly inadequate for defense. You cannot create an army in one year. Under this law, then, the armed forces of America will automatically marry the WPA. With from 6 to 8 millions unable to make money, these will also object to any other person making any money.

In place of this Burke-Wadsworth setup, we need a permanent standing army of a million or more engineer-mechanics. We require a two-ocean navy; naval bases at strategic points on the continent and outlying islands; an adequate air force, with land, water and air divisions under separate operational control, and cooperating whenever and wherever needed under orders of the Commander-in-Chief of the armed forces. With up-to-date planes, the air force would be the first line of defense. These planes would have a range radius of 2,500 miles from their bases. All other resources of men and materials in industry and agriculture must be made available for defense needs without Price System restrictions.

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

Meanwhile, the chisellers and the politicians will blunder along with no idea of what they are to defend, and with the hope only of making more millionaires through an inflationary boom. Germany spent more than \$13 billion on her war preparations. The United States would have to spend in excess of \$100 billion for adequate defense, but if the Price System chisellers should have their way, we would be spending several hundred billions without getting what we need.

That which will most probably accompany this inflationary process under American conditions is interesting to contemplate. European production increases so gradually that it would not stall in years. America will be in an impasse in a few months with wide open production. So this chiseling of profiteers will increase the pressure against the chisellers, because defense must go on.

CRUISE OF JUNE 15, 1941

These are strange times. A few years ago, a group of us were like John the Baptist, crying in the wilderness; we were unknown. We made an analysis of this continent and foresaw the date with destiny. We have been called a lot of names. Many people have had a lot of different ideas regarding us; but today across this continent, this organization has the unique privilege of calling the turn of events of America, while others have guessed wrong. We have occupied a unique position.

Today in Washington, there are 149 dollar-a-year men, the biggest businessmen there are. They advised this country a year-and-a-half ago there was no need to increase the capacity of the steel industry, and that we had sufficient aluminum; we didn't need additional capacity for magnesium, that we had plenty. They fought those increases as they have fought off a New America. It is ironic that the threat from abroad is the power that is bringing these same shortsighted businessmen out into the limelight where they belong. We had them in the last war, and they were no good; and they are no good now, in this war.

True, there has been a lot of talk and a lot of propaganda, trying to make out that every laborer is a "red"; a few are, but the majority are forthright Americans trying to make a living. On \$18.00 a week, they are trying to keep a wife and family, and

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

they are accused of being "reds." That is the sad state it has gotten into. Out in the North American Aviation plant, the same way as the Volte, the starting wage was 50 cents an hour and they worked less than 40 hours. Eighteen to twenty dollars a week and a fine bunch of Americans; yet because they wanted to get a living wage, they were called "reds."

It's the same all over the country; but our newspapers are kidding us concerning this danger, while real danger is not admitted. They quote you figures of man-days lost by strikes. The number of man-days lost by sabotage of Big Business is over 400 million, compared to 2,734,000 man-days lost by strikes. It's a sweet picture, but the press won't tell you that because it is controlled by the same men that are making money out of the war.

Technocracy's program is well known. We have only one position and we don't care who knows it. We are not out to reform the world. Try to understand that. We are for defense of this country and this continent, first, last, and all the time. It's time we realized what we are faced with today, the job to be done. We advocate total conscription of men, machines, materials, and money, with profits to none and with gain to none. In other words, if this job is going to be done, let's do it all for one and one for all and cut out all of this nonsense. We are not: on the level; we sent the Army into the North American Aviation plant. To take over the plant? No, to break a strike. It puts the Army in a very difficult position. The orders were to take over the Aviation plant until it resumed normal production and then give it back to the owners, which is a subsidiary of General Motors. That is going to happen a few more times; but you cannot get a total defense with the present competitive basis of chiseling. We are either going to get defense and throw over the chiseling or throw overboard the defense and all chisel. We, in Technocracy, have no position in the political government; we are not doing this for personal gain; we have no axe to grind. All of you who belong to it, do so because you wish-to.

You are going to see a lot of changes. They have ordered a decrease in the total number of automobiles, but that isn't enough. We need to make only two types of automobiles: one 95 hp, the other 135 hp, differing only in the engine size, size of the body, and tires.

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

We have to have efficiency at home because the job requires it. Most people have the idea that we can draft men into the Army and give them a uniform and a rifle and we accomplish defense. We'll do no such thing. In Napoleon's day, one man at home could keep two men in the army. In the World War, five men at home kept one in the army, and with the more highly mechanized equipment, it requires twelve to fifteen men at home to maintain one man in the Armed Forces. That is something that is necessary; a design of operation and internal efficiency, unknown in the history of man. We Americans must achieve it here, and we face social change in doing so, because the more machines we put in operation, the less man-hours we are going to use. When we achieve total all-out defense, we automatically achieve social change. That is what is scaring our businessmen to death; they are afraid there won't be any business when defense is attained. Now many of you feel the same way about it, and you probably thought that Technocracy's program for defense was drastic when we proposed conscription for males and females. You never thought the wife of the President would advocate conscription for women. You'll find it in your public press. The government follows Technocracy in this country. This being minister without portfolio is not an easy job.

The head of a large corporation in New York said the other day, "What will we do if you quit?" Well, seeing that they got Willkie and the Republicans on the same bandwagon, it is very amusing. We used to have political parties here. They had an election last year. I'd like to know how many are really satisfied that you got what you voted for in the last election. That is the sad condition our country has gotten into. Wall Street ran a futility candidate. The idea, of course, was a coalition government. When you get all the people that don't count to run your country, you are in a mess of a situation.

Now we have to realize we have a job to do, and we have to do that on our own initiative. Here we are carrying on an organization across this continent, without pay or political jobs, and yet we are growing. In Los Angeles, we led the Memorial Day parade. We carried all the disabled veterans there were in Los Angeles County. We were awarded first prize in the Portland Rose Festival Parade. We are doing the same thing in other cities. You have seen what we have done here in Cleveland. This Armistice Day parade -- we are participating in that in various cities on the coast. We will put over a thousand cars in one city

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

alone. Now we have done all of this on nothing. We are not affiliated with anyone. We are average Americans, doing our daily jobs, whatever they are. We stand for a new type of America, abundance to everybody. It can be done without aid or profit to anyone. Let's realize that.

We have the resources on this continent; we have the machinery and men and a social design that will operate this continent for the benefit of those living here -- not for the benefit of aliens living 5,000 miles away. We, as a nation, up until now have had a glorious time of it. We have never had to bother very much whether we planned anything. Individually we are the most intelligent and the most competent. Collectively we are the most moronic. Well, you voted in the last election, didn't you? We, as a people, were never organized, and Technocracy proposes to do that job. Right now we are refugees from reality, and we have to cut it out, because there are too many refugees here now. Now, it is time we made this country worth living in.

We play at helping the Chinese; at the same time, we send equipment to Japan. At the same time, we are all for helping the Chinese, we ship Japan the fuel to carry on the war. We are nice Christian people. We like to help the Chinese and we like to finance the Japanese. We shipped them over 20 million barrels of petroleum last year. They only produce a few million barrels themselves. After all, if we didn't, they couldn't carry on the war. We're shipping oil to the Canaries right now. Standard Oil tankers are carrying oil and other companies are landing aviation fuel in the Canaries. There were 59 Nazi, French, and Italian ships in the Canaries the other day. What a sweet proposition. Well, we haven't bravery enough to play it wide open. That is what Technocracy is asking for. If we don't get defense, let's go back and all chisel.

We are asking every citizen to get in this organization. You can't make money out of it, but remember you must be an American. We do not take aliens, Asiatics or politicians, and we won't promise you the "four freedoms". Neither will we put over any lend-lease bill, a better name for which is "give and forget."

There will have to be greater organization attained in this country in all of our industrial and defense production. In the last war, plans were drawn for a uniform dress for women in the

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

United States. The reason it did not arrive was because the war ended a year too soon. Regulation dress for women is on the way in the United States now, and you'll see it very shortly. How do you like it? That means whether you are in Technocracy or not, you'll be in regulation dress; so those of you that didn't like our idea will now have to do it as a patriotic duty. You see how nasty we are. We get our government to do it for us. You see, the good Lord said that it was better to give than to receive, and Technocracy has been giving for a long time; and, of course, you'll be on the receiving end.

Now, we are calling for more regulation gray in this area and more official cars. We want to see the day we can jam Euclid Avenue for 25 blocks with painted cars from curb to curb. Why not? After all, we in this country are God's children and are going to get wings and all go in the same direction at the same time, and we might as well go under our own power than have the job done by the metallic element on the business end of a rifle. It can be done. You have seen it here, but it's not only here; it is all over. There are Technocrats here today from north of the latitude 49th parallel; they are not Technocrats -- they are Canadians. They are here from Chicago, Louisville, Cincinnati, Dayton, Columbus, Toledo, Detroit, and one here from Alaska. Seems they have a funny way of getting together, but you'll meet them in Panama and you'll meet them in Alaska. We are out in faraway Hawaii. The first Section in Hawaii is being set up now, mostly Navy men at Pearl Harbor. The other day, in the movies, they were showing the Ski Troops in Newfoundland with their commanding officer. There are two shots taken of them in white uniforms, so that it can't be mistaken, you can see the Monad on the white uniform of the officer.

Our Flying Wing design is the largest designed bomber of the world. Our tank designs and ship designs will be out shortly. We talk of helping Britain. We require three and four hundred ships in operation a month to maintain England's food supply, to say nothing of munitions. One thousand of the flying wings cost less than a quarter of the cost of an 8,500-ton ship and only 24 hours to make a round trip, while the ships take 30 days to make the trip.

The only protection against mass bombing is to bomb the sources of the bombers. Our flying wings are 330 feet, no

EXCERPTS FROM HOWARD SCOTT TALKS  
DURING VARIOUS LAKE ERIE BOAT CRUISES

fuselage, carrying one hundred 1,000-lb. bombs. They could leave this continent and bomb any city in Europe from New York, and fly back to Los Angeles; in other words, if we are going to build ships and equipment, let's design it for the job and not to sell to foreigners. A prominent banker, two officials, and an aircraft official objected to our offering these designs for one dollar to the United States Government, inferring that if we offered them for a million dollars, it would be more easily facilitated. That is the kind of thing you face today. They are patriotic for profits. If they can't get their profits, they are not going to play.

The United States is going to take over the regimentation. Now is the time to get into this organization.

"THE DEFENSE OF AMERICA"  
A PUBLIC LECTURE BY HOWARD SCOTT  
AKRON ARMORY

April 22, 1941

How many of you voted at the last election? [A show of hands indicated about 85 percent.] Now, how many of you are satisfied with the results?" [Only about 5 percent raised hands.]

Here is a little background for some history illustrating American social behavior:

Prior to 1776, George Washington, the "richest man in America", had no idea or intention of forming another country. Neither did the merchants of New England who staged their famous Boston Tea Party. Many of the leading Virginia rebels who were hunted as outlaws by Great Britain prepared to hide away in the mountains of that state until the storm blew over. There was no planned social change, but economic pressure brought progress beyond the vision of the leading participants.

Shrewd old Sam Houston, in his struggle for the freedom of Texas from Mexico, understood his soldiers too well to take any chances. Knowing that with the first discouragement they would stampede back to their homes, Houston burned their homes and burned the bridges against retreat by either the Texans or the Mexicans, so they would have to fight; and when he had won the fight, Houston became so disgusted with the behavior of his people afterwards that he went back to the woods to die with the Indians, Americans have ever been thus -- changing only when economic pressure compelled them to do so. They have always been ready to express their opinion by voting, but voting has never solved any problem.

We are now facing a problem which will have to be solved by us under pressure, but meanwhile, propaganda agencies are bending every energy to keep us confused regarding the same. Take the European war: we are and have been fed with falsehoods concerning events over there. During the Russian-Finnish War, Americans were told that the Russians were badly equipped, etc. Pictures of inferior tanks were shown and labeled "Russian". They were, in fact, Finnish tanks. The Russian tanks were of the best makes and smashed through the Mannerheim Line. We were told the Maginot Line was forced by the German Panzer units; but we were not told

that there was a hole in that unfinished line of fortifications, and after the French generals withdrew 200,000 veteran soldiers who were guarding it, the German forces passed through easily.

The German-American-British fellowship of munitions and other interests was another Tory setup of prewar days which, unfortunately for itself, failed to reckon with Hitler's purposes and his more up-to-date war preparations. The Allies still hold to the nonsense of "big battleships", while airplanes and submarines have made Admiral Mahan's "Sea Power" as antiquated as Robinson Crusoe. Convoys make a nice game of suicide. But we are not told these things because the interested propagandists don't want us to know. When General Billy Mitchell of the American Army pointed to the passing of sea power and demonstrated the efficacy of the air bomber, he not only was not listened to, but was court-martialed and dismissed from the Army for his heresy.

Technocracy and its predecessors of The Technical Alliance have been trying to bring to the attention of the American people the essentials of adequate continental defense for more than 20 years. Technocracy was asked to testify on the Lend-Lease Bill but declined. Said we would honor a subpoena, but the Congressional Committee did not want to subpoena anyone, because in that case the witness would have to take an oath to tell the truth. Lindbergh's testimony that America did not need more than 10,000 planes and that America was not attackable was not correct. We shall need more than 10,000 planes, and we can be attacked.

In fact, not a single concrete proposal for adequate defense has come from any of the "America First" or other groups. American engineers and technologists have designed the military equipment which the U.S. discarded and which Germany picked up and used so effectively. Technocracy, however, has designs for bombing planes and tanks, which we are ready to offer to the U.S. Government, which are vastly superior to anything Hitler possesses, and which if used along with our other measures for defense of this continent will render America invulnerable to attack from the outside or to any attempted invasion.

But none of these things will be applicable under the present inadequate program of defense. You cannot train an army drafted for one year only. Technocracy proposes a three-year

training period for both males and females between the ages of 18 and 21, with a standing army of not less than one million engineer-mechanics; a two-ocean navy of swift-moving up-to-date ships; air bases at strategic points around the continent and on the continental islands; planes of Technocracy's design having a range radius of 12,000 miles and capable of dropping 265,000 tons of bombs in one hour on some distant European city and then returning, if necessary, to a base as far distant as Los Angeles -- all of these divisions of the Armed Forces under separate expert commands and coordinated under the unified control of the Commander-in-Chief.

What are we fighting for? Liberty? Justice? So we are told by press and radio writers and speakers. But we can't eat liberty, and most of us have never seen any justice. (This sally was loudly applauded by the audience.) Millions of our homes are unfit even for housing our dogs. Herbert Hoover talks much about relieving hungry Europeans, but when President of the United States, he ordered out the army to chase hungry unemployed from the nation's capital. It seems that if we Americans are to get relief, we must first go abroad. We are being told that our foreign trade will be gone after the war if Hitler wins. But our foreign trade is only about 4 percent anyway and has been "going" for a long time.

Still, the resources on this continent are ample if used as Technocracy specifies to guarantee a standard of living 10 times the present standard for 4,000 years. That is worth fighting for. Technocracy's proposed aid to Canada, suggested two months ago, is now bearing fruit; the politicians of both countries are getting their heads together to put Technocracy's suggestions into effect without, of course, giving us credit. A U.S. Minister without portfolio has a tough job, but they always do what we tell them in the end.

U.S. Defense is now in a bad way, with management and labor holding up production; but we can't blame Mellon, Lewis, and the others. We the public are to blame. We voted for what we are getting.

But progress must continue under the pressure of events. Increased production will accompany improving technology. It will take \$100 billion for defense alone. George Washington's physical

"THE DEFENSE OF AMERICA"

HOWARD SCOTT, AKRON, OH

4-22-41

prowess was heralded far and wide when he threw a silver dollar across the Potomac; but Franklin D. Roosevelt throws \$700 billion across the Atlantic with the greatest of ease.

Taxes have just begun. The government must keep on creating debt. Soon we shall have propaganda from the America Bankers' Association to have the government take over the banks and put the bankers on the Civil Service payroll. So, if we are not now on the government payroll ourselves, we should get on without delay. If any of us are of military age, we should get into the army and thereby get on the government payroll. Remember that song: "You're in the Army now; you can't get rich"? The Army is now married to the WPA at \$21 per month. In this process we may finally arrive at the goal of "one for all and all for one". We Americans are asked to go out in the world to make other people free from want, fear, etc.; but we haven't done that in our own country yet. Our stumblebum statesmanship doesn't want to change the chiseling game. As for our people generally, they have become "refugees from reality" trying all forms of escapism.

We can't solve these pressing American problems of disease, malnutrition, and others under the present economic and political setup. "Business as usual" will be succeeded by "no business after the war," America can operate wide open only for two more years. We are developing new automatic processes in all lines of production. It is practically certain that maximum productivity will arrive in America just ahead of maximum unemployment, with at least 34 million unemployed.

Technocracy is trying to wake up America. In the European war, neither Russia nor Turkey will fight. We are asked to go to Europe, Asia or Africa and die to try to preserve something that is already dying. Meanwhile, in order to gain time for our defense preparations, let us help Hitler, if necessary, as well as England, to keep the war going in Europe. With our inadequate defense preparations, it will take some time to set our house in order. Technocracy is trying to show us the way. It will not be easy unless we take more than one month in four years in which to show interest in our country.

MEMBERSHIP MEETING  
HOLLENDEN HOTEL  
CLEVELAND, OHIO  
WITH HOWARD SCOTT  
SEPTEMBER 27, 1942

Ten years ago, in this very room, was the first time your Chief spoke in the City of Cleveland. A great many people in the City of Cleveland didn't like it then; but it's funny, they are afraid they have to like it now. At that time, there were no Technocrats in Cleveland and very few across this continent. Today, there are offices across this continent and in faraway Hawaii, Panama, and Alaska, and you have done this by voluntary effort. It is the only organization of its kind in the world, and you can be justly proud in what you have done. Realize that.

CHQ is not a labor organization. It could not coerce you by economic power or threaten you by the loss of your job; neither could we excommunicate you; neither does it have the power of an army; so that what we have done has been done by the efforts of the individual citizens of the United States joining together for a common purpose and unity. We have no endowment, no subsidies, no income. The total donations ever received by Technocracy in one year is yet to amount to \$400. Outside of our campaign for the ads -- which was raised locally -- \$400 is the total donation in one year. It has never exceeded that. We have never had strings on us and, incidentally, never will.

All of you have experienced something in your community. You have found out that you have been considered slightly balmy, slightly demented. Well, remember Technocracy's definition of a crazy person: An individual exactly as the rest of us, only more so. We Technocrats are Americans exactly like the rest of them, only more so.

We can look on the last ten years and repeat every damn thing we said, and the statements would be just as valid today as when we said it ten years ago. Of course, it would be unfair to the Democrats, Republicans, Socialists, and Communists to have them repeat what they said. They have had to change their past statements periodically every time anything moved in the last ten years. It would be a crying shame to confront them with some of their statements. No political leader in the past ten years would want to acknowledge them. The fact is they are ashamed of them.

We are the only organization that has laid down the trend of events in this country -- and generally that of the world -- and hasn't been found wrong. It is an astounding record. If we had the financial background, the funds of the National Association of Manufacturers or some other powerful organization, it would still be a surprising miracle to have done what we have. We haven't the funds and no powerful friends, and yet we continue to grow. There is no other organization in the world like it.

It is only to happen here in America. Realize that it has been a natural here on this continent. Movements in other countries of the world were ones of trickery, conniving, and all kinds of chicanery. This organization has yet to stoop to association with any other organization. We have laid it on the line clean. A great many people in other organizations haven't liked us, and, as the organization said years ago, that Technocracy would rather be recognized by its enemies than damned by its friends. We are proud of it.

Many people thought several years ago that Technocracy was too drastic, that it would never come in our time. Well, may I remind you, this is the year 1942.

This country has been brought up to more soft soap and baloney than any other 130 million people in history. You have had to contend with it in your community. You know what it means. Here we are on one side of the national picture -- we are in the greatest boom, the war boom, and across the United States those of us that are fortunate enough to be in the war boom are enjoying being "nigger rich", and a great many people think it's going to continue. This organization knows different. In Mobile, Alabama, that only had 30,000 population, 90,000 have moved in. There isn't anyplace to sleep there. They will rent you a pillow but no bed. In one section of Mobile, there is only one water tap for 50 people. Any kind of piece of corrugated metal, packing case, under a tree suffices.

You have many such cities across the United States. An acute congestion occurs in Newport News; New Britain, Connecticut; Seattle; Illinois, and Detroit. We warn that, under these conditions, epidemics are liable to break loose this winter, and it will be a rather serious condition. Of course, the army is drafting vast numbers of the medical, dental, and professional

men. The armed forces are also taking the obstetricians out of the hospitals. Just what they want with obstetricians is a mystery. We hope the boys in camp haven't come to that yet. One of the largest hospitals in the Great Lakes Area is unfortunately not using antiseptics, but don't blame the doctors. It is not their fault. It is the confusion and anarchy due to the refusal to plan anything at any time. Business and free enterprise must dominate our social structure. It has dominated it up until now. What a sad spectacle to us!

The only propaganda that is widespread is the propaganda to buy bonds and war savings stamps. Not that we are deprecating that, but we are pointing out that it is the only efficient, nationwide campaign -- as if you could win a war by buying a hundred dollar bond! If every American bought all he could, you are still not going to win a war with dollars. A total war is won by men, machines, and a planned strategy, and not by a checkbook. Yet we have been conditioned by this concept of success that if a man made a million dollars, regardless of how he made it, he was an intellectual leader in our society. Well, all we have to do is look at many of them today and they are sad looking specimens.

The WPB in Washington is the most gigantic lobby that business has had. The successful men have lost their astuteness. Business has always told the politician what to do, but in this instance of total war, business has lost its sense of proportion and instead of letting the politicians remain in the driver's seat, they have insisted on driving themselves -- mainly the WPB. Therefore, they are going to be held for the conduct of the war production in these United States. Well, that is a pretty tough position to be in. If they fall down on the job, they are going to have a long, cold swim to another continent, and they are scared that is what is going to happen. Those of you working in a war plant can smell it. Your Director doesn't have to tell you all the details. We got them from across the country; they all stink alike.

Here we are in the midst of the greatest war -- the only total war -- in history and a world revolution, and we are still more concerned with whether we are going to make money, whether we can better our personal position, and to hell with the country. We don't say that openly, only actually that is what is happening. We are more concerned with the postwar position of

corporate and free enterprise than with winning the war -- what the postwar will bring -- than being defeated by the Axis. In fact, they are scared Technocracy might come in. Oh, very definitely you are a dangerous lot of people, don't you know. What makes you dangerous is because you are the only ones that have an idea. Your fellow countrymen are only nice, and nice people always raise hell when it comes to a crisis, because they are damn fools. It is tough language, but a person has to think about it. When economically stable, there was no pressure. He didn't know how others lived, let alone across the continent.

I have been riding the streamliner train and met four successful businessmen. They looked out the window of the lounge car, out on the jungle buzzards along the tracks. Why, those men and women out there with a piece of tin or corrugated iron, they weren't Americans; they were bums, runny, the bums were better looking than those riding in the streamliner. That is the kind of utter complacency and self-satisfaction we have. We have a structure of false values of successful enterprise, and that successful enterprise is coming to an end, not because we want it or because anybody else doesn't like it, but because the march of events is taking the props out from under, and it makes very little difference whether you have a hundred, a thousand, or millions, it isn't going to be long. Then you can have the grinning satisfaction of saying, "Well, sucker. Homo Sapiens Americanus!"

A man on the train coming up here said to me, "Mr., Scott, I have been with one corporation 12-1/2 years, but I have recently decided I can't take it." "Why, that is astounding. What is the matter?" "Well, under normal conditions it would be all right. Under these war conditions, there is just no sense trying to make money."

Let's review the war program for a moment. General Hershey, Director of Selective Service, issued a statement that we need 13 million in the army -- including the navy, marines, and coast guard. It will probably be closer to 15 million. Fifteen million Americans who will have to surrender private chiseling and don uniforms. Fifteen million Americans for whom the United States will have to assume economic responsibility: food, clothing, shelter, transportation, and health.

An armed force of that size will require 32 million in war production alone, plus 32 million in necessary national services. That is 64 million humans for the entire operations of the country -- 79 million Americans dependent on the Government of United States. There has never been a greater mobilization in the history of mankind, realize that. We in this country never prepared to mobilize anything. Remember the M-day mobilization? What in hell happened to it? The army did a lot of work on it. They surveyed clear across the country, but one thing they left out was they proposed to mobilize on M-day all the productive equipment and still left business intact. So, they didn't do it.

Now, under the stress of war, we are compelled to induct men into the armed forces. The internal situation is so critical that we will have to introduce into the United States a compulsory national service. You cannot move males and females from one location to another location or from one occupation to another by voluntary measures. Now the moment you have introduced compulsory national service, then into the picture must come the assumption of economic responsibility by the government of each and every individual involved in national service -- 15 million in the armed forces, plus 64 million in the home services -- 79 million adult citizens for whom the government must assume economic responsibility.

Now, do you think for one moment that there is going to be any business? Where in hell is business going to operate? It can't. The United States Government will be sole operator of every single necessary function in the United States of America and for its armed forces abroad. Now it isn't a question of worry about what is going to happen to your house or to your bank account. Total Conscription is moving every day in that direction.

Several years ago, the American Legion didn't think that our program was necessary. They thought the country could get along, and it would never be required. The American Legion, at its Kansas Convention, passed in its program the resolution of Total Conscription. To conscript all the resources, business, and males and females. Does it sound familiar? Never forget that: Technocracy leads, always has, and the rest of them follow; not because we asked them to, but because they can't do anything else. Technocracy's tactics over these last ten years have been

dirty, very dirty. We never try to coerce. We only told you what is going to happen. We didn't knock you downstairs, not at all. We tripped you on the top step and you fell down the rest of the way yourself. You see it happening in your community, and it is happening across the country.

Now we are worried about farm labor. We want farm labor differential written into the Farm Parity Act; but farm labor has already left the farm. Eighty thousand tons of sugar beets unharvested; wheat piling into school houses, barns, houses, boarding up the windows and pouring the wheat into the chimney. Technocracy told them in Canada that would happen. It did. It is happening here. In Kansas, they are proposing to fill the Governor's mansion. Well, that is the most effective use that mansion will ever have.

This organization predicted that the day would come when the United States would mine New York City for its metals, did it not? There are 9,000 buildings marked for demolition for scrap. They are pulling down a 14-story building. What a civilization! Remember that those things went up because of our genius of successful people.

Just as today, we are short of rubber. Although rubber originated on this continent, no Asiatic saw it until it was discovered here. We permitted rubber to be developed, to be controlled by foreign countries. Although the life of this country was dependent on rubber, 90 percent rubberized on wheels, we permitted the Dutch and British to be the greatest rubber producers in Java, Malaya, etc. We can produce all the natural rubber we need from Brazil, Venezuela, to Mexico, without going to other plants. The Soviet Government, the largest producers of synthetic rubber, presented its process to the Government of the United States free-of-charge. Has it been used? No. Why? Because the Soviet Government presented its processes, techniques, and manufacturing details to the Government of the United States and had forgotten to present the processes to private business in these United States. It is a fact. One damning indictment after another.

Here we are at war, and we haven't declared on France. Vichy France is shipping its people to work in Fascist war plants in Europe. We cannot take over Guadalupe, Martinique, and Guinea. We

must admonish them and slap them on the wrist. What kind of a war is this? When the Russians are compelled to retreat in the face of superior forces, do they leave a city intact? No, they leave it in ruins. That is total war. When Bengazi and Libya were taken, did the British destroy anything? Did they destroy Malaya and Penang? Not a bit. That wouldn't be proper. You had to leave it to the enemy to enjoy.

When we retreated from Manila when the japs moved in, their headquarters was the Army and Navy Club in Manila. We forgot to destroy it -- or we didn't have any concept of total war. Were any plantations in Malaya destroyed? No, it took too long to burn rubber trees. What are we? All damn fools? They could have used a strip of dynamite on each side of the tree and wiped it out of existence. Any kid could do it. The rubber companies suspended dividends, and when this is over, they will be resumed, and there will be little loss in rehabilitation. It is their property. It takes eight years to grow a rubber tree, and you mustn't destroy property.

Well, is that the kind of war you are going to fight? The enemy isn't going to fight that kind of war. It isn't being nice about it. The Germans came over Great Britain and sailed down into a street and machine-gunned the people. Well, it's war. But when the RAF flew over France, it mustn't shoot the French people. There are orders that you mustn't bomb a train unless at the same time that train is a troop train. How are you going to distinguish whether it is a troop train or not? Are the Germans going to write it on the roof for you? That is the kind of nonsense that is going on.

In the Dieppe raid, there were 67 percent casualties -- mostly Canadians. Did they use bomber airplanes? No. They thought they were going to sneak in on rubber shoes. We may be dumb, but the enemy is not that dumb. Dieppe is only 60 miles from the coast of Britain. There are bomber bases which could have sent 150 bombers in at least three round trips, and there would have been nothing in Dieppe. Was it done? No, Dieppe held up -- as an example of the impregnability of German defenses. Well, it is peculiar that we know here -- or anybody that has a map of the French Coast -- that it is not hard to get to. You could drop 50,000 bombs and there wouldn't be any German batteries left -- but you mustn't flatten a French town. There is something

peculiar about it. You may think the Frenchman will revolt. They are like hell! The few French left who have any idea about opposition are either dead or those remaining are insignificant; in other words, we are not facing facts at home or abroad.

Russia has the most gigantic trained manpower on earth. Russia doesn't need manpower; they only need tanks, trucks, and planes -- need them desperately. Did we send them? No. We sent her Wendell Willkie! No wonder they got a cold reception in Moscow. In the last war, the Russo-German front over the entire period that the Russian army was fighting, the Germans were losing over 2,000 of their army a day. In this war, the only real large-scale fighting is being done on the Russian front. All the rest are desultory defensive action. Regarding the argument of a second front, you can say you are in favor of only one front -- the Russian front. That is the only place to do a job, isn't it? Now you don't have to like the Russians -- nobody is asking you to be buddies -- but they are doing a swell job. Understand this, if they turn those Germans back at Stalingrad, they will turn them back alone; and if they turn them back alone -- and this is what is bothering Washington and Britain, they won't need the rest of the United Nations. We can't blame them. You can hardly expect a nation of 196 million to respect the Honorable Winston Churchill, for the treaty Russia and Britain made in May did guarantee a second front. That is in the treaty, but when the Anglo-Americans met in London, there were no Russians there and they decided not to do it this year -- without telling the Russians! You can't blame them for getting sore. Suppose that 6 million men and tanks invaded this country and advanced 700 miles into the United States? I wonder if you would do as well as they have. We would still probably be fighting about the Farm Parity Bill, or about getting time-and-a-half, or of conscripting married men.

When Technocracy proposed Total Conscription, it was too drastic. It would never come in our time. Well, it is sweeping across Canada, too. You will see it in Canadian papers from coast-to-coast. Funny how these Canadians do something first and we follow. They have up to date. We have to inevitably. We cannot move the thousands upon thousands that will be required to move from one location without it. We have to put every American on the same basis. Well, if the United States does that, it has to take any property. They will issue a United States Certificate

for the hotel, apartment, factory, plant, or your bank account and safe deposit boxes. It is not transferable, and they won't do you any good until six months after the war is over.

General Motors' executives, along with others, were at a private home a few weeks ago, and one prominent man said, "You know, the way things are going, I wouldn't be surprised if the S.O.B. in Washington put in Technocracy. Just like him to do something like that."

Another man said, "We have to be prepared for drastic changes, and if the public is for it, you can't fight public opinion. If they demand Technocracy, we would have to bow to superior forces, even have plants taken over."

"It wouldn't be so bad, at that. We would have our personal funds, our bank accounts."

An engineer present said, "Oh, no, you got it all wrong. The day that some man in uniform came into a General Motors plant, took it over, and enlists everybody, at that same time someone would freeze your bank account and safe deposit boxes too."

"Why, we have been calling the wrong man a S.O.B. That S.O.B. of a Technocrat will accomplish in 24 hours what took Hitler and Mussolini twenty years to do."

Now comes the payoff. The chief engineer said, "Well, why not? He is one of our boys, isn't he?"

They see the handwriting on the wall. The head of the National Manufacturers Association came into CHQ, believe it or not. The only corporation we haven't had in there yet is the United States Chamber of Commerce, but it won't be long. What they are worried about is how the public is thinking. Plants across the country are showing Total Conscription leaflets on their bulletin boards, with a nice little hand sign above showing if it's good enough for the boys in the army, it is good enough for the rest of us. The manufacturers are getting worried, because if it gets to be popular, you are not going to be able to fight it.

The other day in New York -- Thursday to be exact -- on the

scrap campaign kids were told that if they brought in a hunk of scrap, they would be admitted to the baseball game and to deposit their scrap in a spare lot across from the stadium. Twenty thousand kids showed up, and 75 policemen tried to stop them and got hit with all the scrap. Fourteen of the policemen lost their clothes and the police went down. In the end 20,000 kids were in the Yankee Stadium. In other words, don't start anything that becomes a mass movement. If you do, you'd better get the hell out of the way.

Total Conscription isn't going to hurt anybody. It is the only way we can win this war. We are not winning it now, understand that. We are not going to win if we keep up this damnable nonsense. Conflicting private group interests and everyone going their way and putting their interests ahead of the nation. It cannot be done that way. The entire country will have to organize on an efficient plan basis. Take the plants in Detroit. The machinery remains in the old position, then they try to produce war goods. That is a fact. Labor organizations, of course, think we are anti-labor. George Selles of IN FACT accuses Technocracy of being anti-labor. Labor and liberal leaders in the United States were all in favor of Technocracy's plan to conscript wealth, plants, and machines, but when we also proposed to conscript labor unions, they were "agin" it. What is the matter with the labor leaders in this country? They are as dumb as the corporation leaders, are they not? They must be, because they are receiving somewhat similar salaries. Labor leaders conceive themselves as bigshots and think in the same way as the corporation leaders.

One of the top officials said Total Conscription was all right, but if he made \$25,000 a year, would Technocracy take that away, too? Petrillo, head of the Musicians Union, gets a huge salary, plus a \$16,000 house in the bargain. Your average labor leader is a piker. Yet labor is fighting Total Conscription. The only opposition that organized labor can offer to the fascist conscription of labor is Total Conscription. It is the only thing they can fight it with. The CIO came out with equality of sacrifice and a limitation on incomes of \$25,000 a year after taxes.

The farmer wants higher prices for his commodities, and you can't blame him. A combination of prices, profits, and wages is

spiraling upwards; so is your cost of living. It is going to be rather difficult for the average person to eat decently this winter. It is becoming a problem. The United States Government will be compelled to open public feeding establishments, just as they are being compelled to open nursing centers and establishments for female employees to take care of their children. Why not? It is our government, is it not? It is our country. Why shouldn't it be organized efficiently?

The Alka Seltzer program was interviewing some executives and managers of the Air Cobra plant in Buffalo the other day, and one of them proclaimed, "The Air Cobra was the finest constructed plane for what it was built for. It was proven all over the world. True, the Japanese went to higher levels, but just let those Japs come down to our level and we'll lick the hell out of them!" What kind of idiocy is this? What is the Japanese Zero plane? What is its engine? They were designed right here in the United States.

Just as we shipped the Japanese and Germans scrap, oil, nickel, and other war materials eight years previously. Remember, Technocracy was the first organization -- back in 1933-34 -- to protest the shipments of scrap to Japan, Italy, and Germany. Did we stop shipping to them? No. It was good business. In 1937, we shipped over 22 million barrels of petroleum to Japan, and now we are getting it back. It is hard to realize that, but our boys are shot down with materials that probably came from here.

Our men in the armed forces are better fighters, better trained, but unless they have the best equipment in the world and get it fast enough, that won't do any good. Remember that in a technological total war, individual heroism does not count. You could be a hero in front of a tank but not for long. This is a different kind of war. It is a war in which every man, woman, and child is involved whether you are in uniform or not. We have to realize we are fighting that kind of a war.

The situation in the Solomons and New Guinea is not too nice. The United Nations from Hong Kong on has been a series of defeats, retreats, and disasters. Let's hope the next six months are not like the last six months. We will have to plan for it, and we are asking every Technocrat to carry into his plant, factory, PTA, or anyplace else the message of Total Conscription.

Don't be backward. Make it a fighting issue, because it is a fighting issue. Carry it into anyplace, into your plant, etc. Don't think you are going to be fired. What of it? How long can you stay fired? Not very long.

This area is the biggest industrial area, and you have to be a militant ambassador of this organization. You don't have to be afraid of anybody, because you won't be out of work long. But they are not going to fire you. You see sailors and others come in with their shirts stuffed with Total Conscription leaflets. Why, just the other day, the Engineers Corps of the United States, based near Persia, passed a resolution for Total Conscription for the folks back home. It came through the censorship. Funny, isn't it? Well, that is the way they felt about it. We have 5 million in the armed forces today, and when they get 13 million in, do you think they are not going to have anything to say about it?

Well, I might as well tell you the latest Communist attack on Technocracy. The Communists say that the United States Army is behind Technocracy, that the United States Army is using it to put a military dictatorship in this country under the guise of Technocracy. The United States Army has a job to do. It is not bothering to play tricks on the public. Neither is Technocracy, but if the United States Army is behind us, well and good. We have never had a disagreement with the Army or Navy, and in fact, both of them seem to appreciate what we are trying to do. Technocracy is the first organization to propose the base pay for the armed forces. The only thing it didn't do was to raise the maintenance -- what we also wanted -- but they will. You will also notice that we wanted the government to take over the Galapagos Islands. The United States will sooner or later. We have been in the position of a minister without portfolio.

The situation in the very near future will become more involved. There will be food rationing and transportation rationing. You can see the signs on the wall, but reducing the motorists to 35 miles per hour is some more political nonsense. It won't cure anything. The cars are built to run faster. Thousands are living distances from their work. If they are limited to 35 miles per hour, it will take several hours to get to work and back, and you can't keep up with terrific overtime. There is only one way to solve the situation, and that is to take

over all the motor vehicles, passenger and trucks, and conscript them, and assign a sufficient number to each plant or each area and operate both day and night and not bother individuals about the purchase of gas, tires, and costs of upkeep. That will also stop all black markets. It will also provide a surplus of cars, so you can junk approximately 12 million for the scrap pile.

For instance, in Detroit and Cleveland and other large cities, we got out a map of them and marked off a number of blocks and counted up the number of stores in a retail district, say, four blocks. Why should you have all those stores? They are a mess. Why not have one store of each kind in each four blocks, and no matter where you live in the four blocks, one truck driver could deliver the morning paper, the milk, cream, cheese, baked goods, etc. Well, what is wrong with that? The only thing wrong with that is that the trucking companies will be put out of business and the unions will holler. Well, we can have grandmother drive the truck and have somebody else deliver the things out of the truck. We have grandmothers working in plants.

Now this mobilization will require the mobilization of between 13 to 15 million women. There were quite a number of women in the last war, and the boys coming back found their places taken by women. In this war, they are going to find that their job isn't even there. The place where their job used to be will be a different kind of place, and a woman is going to run it. Plants on the Pacific Coast found a way with women -- furnished them with uniform outfits, moved in beauty shops right into the plant. Well, here is the picture of the changes that are coming.

We have to realize that as an organization we stand out preeminently in our diagnosis and analysis of the physical conditions of this country. Technocracy has only one program; namely, let's win this war! If we don't win it, there is no use thinking of postwar problems. On the other hand, if we do win the war, Technocrats alone know what kind of postwar world there will be on the continent. As for the rest of the world, we are not so much interested in them, because they have to find their own solution. We can find ours here. This can be done, but it requires a militant effort on the part of every Technocrat everywhere. Whether he is on the job, in church, or meeting -- wherever he goes. You might just as well practice and become an

MEMBERSHIP MEETING  
WITH HOWARD SCOTT, CLEVELAND

organizer of one, if there is only one. It isn't going to hurt you.

Clothes will have to be rationed in 1943. Among that will be shoes; so, if you haven't got more than one pair of shoes and if you have the price, you better buy them, but buy something that will last. And don't worry about trying to buy nylon stockings. It will probably be rayon, but the legs will be just the same inside.

We have tried to give you something to think about. If you have any questions, give me a few minutes, and I will come back and try to answer them.

PUBLIC LECTURE  
HOWARD SCOTT  
LOS ANGELES, CA  
NOVEMBER 26, 1942

There is a concept in this country, promoted and fathered in part by our educational institutions and partly by our laissez-faire economy; namely, that peace was a normal state of human economy. Nothing, of course, could be farther from the facts.

Since the year 1600 B.C., there have been less than 350 years of peace in the world; so, peace is abnormal behavior of the human economy, and war is normal. Kind of upsetting to those nice, kind people who never thought we had to prepare. Naturally, with that kind of a doctrine permeating our social behavior, and, coupled with the fact that the United States has had only 28 years of warfare in its existence, we were naturally led to believe that we never had to prepare for anything beyond next year's expansion. Always in our economy, in our past history of 166 years, we had been an expanding economy. We could always cover last year's mistakes with this year's expansion and credit our individual genius and ability as being the cause of any success. No wonder commercial enterprise touted itself as being a particular reason for all progress in the United States, when in actual fact progress in this country of ours has resulted from a peculiar process -- a fortuitous combination wherein certain numbers of our citizens through their own initiative have fought their way economically and physically into an impasse; and having arrived in that impasse have called upon their government for aid. Our government invariably, as a matter of political expediency, rushed to the aid of that particular group of citizenry, thereby resulting in social progress. Yes, I know, the facts are a little hard to face, but nevertheless that is a correct analysis of our past progress.

The world has fought many kinds of wars, but all the wars up until yesterday were fought by a human toil and hand-tool economy, and, up until the last century, the armies of those human toil, hand-tool economies fought with hand weapons with the slow mobility of infantry and with cavalry. Probably the fastest troop movement prior to the mechanization of technology was that of Genghis Khan in the early 500s, but all of these were fought from a hand-tool and human toil economy, always with the concept in view that the army could live off the territory of their enemies. Julius Caesar, with his Roman Legions, could not have

conceived of or fought a total war, although he fought many miles from Rome.

In Napoleon's day, one man at home in the home economy could maintain two soldiers in the armed forces of the Grand Army. Our 9,970,000, or approximately 10 million, entering our armed forces -- what does that mean in the home economy? That means an organization on the home front of 34 million employed citizens in the war production of the United States, plus 30 million employed in the consumer service goods and services, for a total of 64 million. It is time that we realize that no nation ever before in history was ever called upon to face a problem of this order of magnitude. Napoleon's problem was a peanut-sized problem compared to this. So was any country's problem in the last war, and please do not try to confuse the issue by saying that Great Britain or Russia or the united nations or the belligerent fascist powers in this war have a similar problem. They have not, for the simple reason that the quantities and the order of magnitude of the rate of flow in United States has no comparison with any country in the world. In order to mobilize 64 million human beings, which is our problem here, and the concomitant technological equipment, resources, distance, climate, and agriculture, calls for an integration, the like of which has not been envisaged by any peacetime economy in the history of the world nor has it been attempted by any wartime economy. It is all very well to say that we are attempting to do this today with priorities, price ceilings, and the WPB. An attempt isn't good enough. All that priorities mean is that there is a competition between all the units engaged in consumer goods production and services and those engaged in war production and the government services and the army and navy included; in other words, it's a nice hell of a mess that you think you're going to magnify private enterprise and all the lousy chiseling from hell to breakfast and think you're going to get a competent, efficient economy for war production.

We've always had bigger and better business. We'll run into this war, the first total war in history -- no other nation has ever fought one -- and this is the first time we've fought one. We cannot organize on the general economy front by permitting the individual farmers, because they are short of help, to slaughter off their dairy cattle. If they are short of spare parts for their equipment, when there is sufficient equipment in the

agricultural areas of the United States to operate the farms, all necessary farming can produce not only agricultural products for our own consumption but also for our allies abroad, plus sufficient production to use as an economy weapon abroad. But it cannot be done if we insist on operating each individual farm by itself as a private enterprise. What we are driving at is let's take a block of tillable land area -- leaving out the great ranch areas -- of 25 miles by 25 miles of individual private enterprise farms, and then we're in trouble with the big farmer and the big dairy farmer who men have left -- farm employees were never high paid, so they naturally have already migrated to the shipyards, the aircraft plants, munition plants, and all other war industries, and to scream about it now is to attempt to close the door after the horse has gotten cut.

Dairy herds are being slaughtered in this state and many other states, and you're witnessing milk shortage in several localities in each state. No attempt is made to operate agriculture as a planned unit, because planning would be bad for business; so, we slaughter off the best dairy herds in many states and increase locally for the moment our supply of second-grade beef. But face the long-term proposition, we're running into greater and greater difficulty. If we, as a nation, were to introduce technological control and total conscription, we could pool the farm equipment in 25 by 25 mile blocks, have sufficient farm equipment to operate all arable land in that area 2-1/2 times, and have five times the total equipment right there with their scrap. All you've got to do is take a pencil and figure it out. You don't have to be a technologist or an engineer. Just have an occasional lucid interval and a pencil.

The same thing applies to our transportation system. The rationing of gas, tires, and oil does not cure transportation and a shortage of essential transportation materials. We're leaving it wide open. Why? Because we're permitting the individual citizen to own the truck and the car, and we're compelling the individual citizen to purchase gas, tires, and oil and spare parts.

Now you know what we Americans are -- we're the smartest lot of "ginks" on earth, and any time that a natural scarcity occurs, or is enforced by political legislation, business speculation, or war emergency, every American that has anything on the ball will

immediately go out tomorrow morning at 7:00 a.m. and do his damndest to bootleg that scarcity. Don't blame the average American -- he's been brought up to it. In the bootleg days of liquor, they only had one thing to bootleg, but now look at what we're going to face: bootlegging in every single field of human consumption -- unrestrained, high wide and handsome! Why, back east, the crooks wouldn't even think of counterfeiting money any more today -- they've got more sense. They're counterfeiting ration books, and when you get it out here, they'll do the same thing out here, because the percentage of smart guys is about the same across the country per thousand of population -- and you've got printing plants out here, too.

It can be handled, but it can only be handled by conscripting all automotive vehicles -- trucks and passenger cars, and reallocating those cars and trucks in uniform defense transportation units, those for industry and those for social population in regional divisions. Then no individual citizen will buy gas, oil, tires, or spare parts -- no individual would be involved in the trade or commerce of supply of transportation, and only until then will you get efficient transportation.

Can it be done? Technocracy contends that it cannot be done under the present rules of the game. There is a way to do it. There is an equality of sacrifice to which every American would gladly agree to, but only when he knows that every other American is put on the same basis. So long as every American feels that it is the devil take the hindmost, why, he's going out to get his first, and rightly so, he is entitled to get his first if he can get it. But remember that when the men enter the armed forces of our government, they surrender their prerogative of private chiseling and the little techniques of competitive private practice, and the United States Government assumes complete economic responsibility for their food, clothing, shelter, transportation, health, and even recreation.

Now, when we face the prospect of mobilizing 64 million human beings, the question that is bothering everybody today: Can it be done voluntarily? On that scale of quantities, no. You cannot achieve the mobilization of that number of millions of human beings by any voluntary process whatsoever. It will have to be done on the basis of compulsory national service, but here comes the nigger in the woodpile: You have your National

Association of Manufacturers, the United States Chamber of Commerce, and others howling very discreetly for the conscription of labor -- not total conscription but conscription of labor. They would like to see labor conscripted in this country so that private enterprise could make continuous beautiful bountiful operations for more and greater profits with conscripted labor, and labor couldn't squawk at all.

Bear in mind that every fascist nation in this war has conscription of labor, but no fascist nation has total conscription, because total conscription and fascism would be impossible. Under total conscription, every person in the nation capable of service would serve on the basis of national service on exactly-the same basis as those in the armed forces; namely, the same rate of pay, the same subsistence for dependents, the same economic guarantees for food, clothing, and shelter. Well, why not? This is everybody's war, and we're all in it, and there is only one way to fight it efficiently: Leave the military fighting to the armed forces, but the home front has to be as efficiently organized as our military forces; and if they are going to conduct an internal internecine strike of fighting for higher wages, higher prices, greater profits, and more spoils, the armed forces will be put to it in some very sorry predicaments. I don't have to convince you of it; you know it.

(Words missing) ... production capacity. We have the same record in aluminum, magnesium, and every other field, but that was consistently denied. We could quote Stettinius for you, but then they moved Stettinius to London. That's what happens when they make a mistake in big business.

Are we going to continue the same haphazard guesswork governed by the fear of certain corporations that they will have overproduction capacity after the war or are we going to put our entire technological equipment, personnel, resources, and agriculture on a scheduled, planned basis of operation so that the armed forces can know definitely what they can get every thirty days from then on?

... Of course, most women today are still buying dresses, hats, and a lot of other things; well, it won't be long, sister, because we'll get you in regulation dress very shortly. Regulation dress for male and female citizens of the United

States will have to be an accomplished fact. You can't go through the energy of continuing to produce the thousands of different models just to have a sales point. My God, what does sales and private profits got to do with producing the goods to win this war?

You haven't gasoline rationing out here yet; you will shortly, and when you do, you'll notice a very peculiar effect. Salesmen -- insurance, real estate, and all others -- can't do very much sales work on four gallons a week; well, not that they're any good in wartime anyway. And why have salesmen if you haven't anything to sell?

On the eastern seaboard, where we've had gasoline rationing for some months, it's very interesting to observe the effects. Second Avenue and 47th Street in New York City, prior to rationing, on a Sunday afternoon, you took your life in your hands attempting to cross that street against the light -- three lanes of traffic moving in each direction at high speed. Now you can walk out there about 3:30 in the afternoon, look to the right of you, and, yes, there's one coming about seven blocks away, and to the left of you, yes, there's one down there about six blocks away. In fact, you can hold a parliamentary discussion on foreign affairs while crossing Second Avenue on Sunday afternoon today. Well, it's had its effect, and it's going to have plenty more. The retail stores are folding -- like the Arabs -- and silently stealing away. They're not advertised in the report of bankruptcies; oh, no, they just folded prior to that. You can see it block-by-block in New York. Of course, here in San Diego, you're enjoying a war boom. You're all getting rich with your snoot in the trough and all four feet included.

Only a few of the Child's Restaurants -- a couple on Broadway -- are open at night anymore. The others close down at night. It's so dark that you can't recognize anybody more than twelve feet away from you, and so the New Yorkers do not go down town at night. There's no window shopping unless you have a flashlight, because you can't see in the shop windows; so, there's no use in running the shop windows anymore.

Advertising, of course, is falling. Why advertise if you haven't anything to sell? The merchants will discover that very shortly in San Diego. Their inventories and their new orders are

falling, ladies and gentlemen, whether you like to believe it or not. Technocracy always knows what's going to hit you next before you do.

A lot of rationing is going to come in. As your rationing comes in step-by-step, the plight of the retail merchant will rise. His fixed charges are, while a great number of goods on his shelves are completely out, and the total that are left are reduced in number. Remember, that American business has been founded on volume turnover. The volume has been cut to pieces, but his fixed charges go on today. Now, of course, if the retail merchant had any brains and real sense, he would advocate total conscription, because in that case the United States Government -- the Treasury Department -- would issue him a Treasury certificate for his equipment, his inventory stock, and take him over, and he wouldn't have any more headaches until after the war.

It's amazing that here we've found ourselves in the midst of the first total war in history simultaneously with that of a world revolution, and that revolution is on just as much here at home as it is any place in the world. It's not the same kind of a world coming out of it. It's a totally different one, but regardless of who earns what in United States, there's only one job that this country has to do first, and that is to organize to win this war here and now as fast as possible.

Of course, Technocracy's record is rather unique. Some years back, before this war, we published all the bases that this continent would have to have in case of war long before we ever traded any destroyers or any lease-lend deals, whereas the Technocrats, with a great deal of amusement at it, watching our Department of State fill in those bases in red on our lithograph maps. The State Department invariably does its best to catch up. We don't mind that, and eventually they will probably get there. Just as when we specified the airbase at Hamilton Inlet, Labrador, but did not specify on the airbase at Newfoundland, although we specified St. Johns as needed. Well, they would have found it out. The terrain and the visibility were not suitable in Newfoundland and are far better at Hamilton Inlet. They can generally tell you anything you want to know beforehand, but if you have to learn it the hard way, don't blame Technocracy.

Just as in 1935, Technocracy protested in literature and in its addresses from public platforms up and down this coast and clean across the country. In 1935, in the spring of that year, did the The Pacific Gas and Electric, the Californians, Inc., the Associated Farmers, or The Bank of America of this state ever contest the shipment of a single pound of scrap to Japan? They did like hell! No, it's good business when we ship 22,734,000 barrels of petroleum from this state in one year to Japan in 1940 -- damn good business. Our business methods have brought us a lot of trouble and to organize our internal economy on the laissez-faire policy of me first and the devil take the hindmost, we'll be headed for a form of near anarchy.

We cannot introduce conscription of labor alone in this country, because that would be the imposition of institutional fascism, the very thing we are fighting against. We cannot subscript the physical effort of the United States to create greater profits and greater prices for private enterprise. You can pass that law, but you cannot guarantee production under that kind of a cockeyed system. You can ask the American, far and wide, and he'll give everything he's got, night and day, if he knows that everybody else is in the same boat and we're doing it on the level for the first time in history.

We can organize our transportation, our agriculture, and our distribution all on the basis of total conscription for the basis of the war and six months thereafter. Distribution in the large cities, that is, the retail stores, in Los Angeles, Chicago, Cleveland, Detroit, and New York ... it's very simple how it can be done. It's a wonder no one has thought of it before. Take an area four blocks wide by four blocks long -- 16 blocks. You simply can skip and consolidate all your delicatessen stores in that 16 blocks into one, groceries, and every other kind into the center section; therefore, citizens in the 16 blocks only have to walk two blocks to their distribution center. The reduction in New York City is a reduction of 28 to 1. You would have equipment, personnel, and space left over, and ladies and gentlemen, we are going to need space and we need it now in a hurry. We have unemployed in many places, and you'll have to move the equipment to the unemployed where there is habitable space, just as we'll have to move personnel from where they are now to new equipment and new installations. You cannot expect the average American, male and female, to be picked up out of their

PUBLIC LECTURE, HOWARD SCOTT  
LOS ANGELES, CA

11-26-42

positions today and moved under private enterprise surrendering their seniority, social security, and having to work at a lower rate. That cannot achieve it.

DECEMBER 6, 1942

IF THE AUDIENCE WILL RISE, WE'LL KINDLY OPEN THIS MEETING WITH THE PLAYING OF THE NATIONAL ANTHEM. (A SOLO TRUMPET PLAYS THE NATIONAL ANTHEM)

There has been a current belief in our nation for over a hundred fifty years that peace was a normal state of human economy. It has been fervently believed in and propounded. Nothing, of course, could be further from the fact or the truth. Since the year 1600 BC, the world has enjoyed less than 350 years of peace, or in over 3,500 years, less than 10 percent of that time has the world been at peace; so, therefore, peace is an abnormal condition of human society, while war is absolutely and perfectly normal, contrary to all the nice preconceptions of successful, nice people.

We of United States, of course, have been more or less fortunate, depending on how you view it, that as a nation we only have had 28 years of warfare in our history. We have had an expanding economy ever since the Revolution, but a greater expansion since the Civil War.

There have been a good many wars fought in human history, but for thousands of years, all the wars were fought with hand weapons and with foot soldiers, the armies coming out of human toil, hand tool economies. They have been fought for a good many reasons, but you could sum them up; namely, God, Greed, and Gold.

This is the first total war in human history, and the first total war could not have been fought unless the technological development had reached the stage that it has.

Julius Caesar advanced his legions over a considerable expanse of territory, but he could not have conceived or have thought either a world war or a total war. Now all of the economies that produced their physical wealth with human toil and hand tools, their armies invaded the territories of the enemy and depended for the maintenance of those armies upon what they were able to acquire by military conquest in enemy territory. But in fighting a technological war, the scalar quantities go beyond anything in military and social history.

In Napoleon's time, one man at home in the national economic structure could support two of the armed forces in the field. The time of the Franco-Prussian War, the ratio changed to 1:1, and by the World War, the ratio had changed again to where it required three and a fraction at home to maintain one in the armed forces; but remember in the World War they were only beginning to use technological equipment. In this first total war of human history, it is a technological war, being fought, it is true, by men as it has always been fought, but with the addition of equipment unknown hitherto in the history of man. The firepower is immeasurably higher than the firepower of the World War. The distances covered are around the globe at higher speeds and greater loads.

Now to conceive of warfare of a human toil, hand tool economy where your armies went out to meet the enemy with hand tools and weapons was one thing and entirely different than what we face today. Now let's view the picture that we have here at home.

Our Selective Service announces total army totals at present of 9,700,000 to be attained in the very near future or in round numbers, 10 million. The mobilization of 10 million men into the armed forces of United States will require a mobilization of 34 million employees in the production of war implements alone, plus 30 million for the production of civilian consumer goods and services, or a total of 64 million mobilized on the home front.

Never before in human history has any nation ever had to mobilize the entire personnel, resources, and equipment of its economy to maintain its armed forces in the field, and never before in human history has any war been fought with the tools of social change. The bows and arrows or the primitive guns were not tools of social change, but when you fight a war -- a worldwide war -- with technological equipment, you are fighting that war with the implements of social change itself, because technology is the greatest revolutionary fact in all human history; and until Americans realize it, they are behind the eight ball.

We as a nation cannot mobilize 64 million human beings by any process of voluntary agreement or cooperation. We might like to think we could, but we immediately run into the conflict of group interest, pecuniary gain, and our national condition.

Remember that since the Civil War, or in the last four generations, we in United States have graduated more morons into millionaires than all the rest of human history has done. Rather charming fact, of course, and we pride ourselves on our individual success. How it's going to come about that this success of the successful, nice people -- the more successful you have been up to now, the dumber you will be from now on out. A lot of you will realize that in another 90 days of rationing. It takes about that long to drive it home.

In spite of our conditioning, we are going to have to face the hard reality of the world we live in, and our conditioning has ill-prepared us for the social transition that we're in; because not only are we engaged in fighting a total war, but we are in the midst of a world revolution simultaneously. We have been loathe to admit that we required any change in our internal methods. We as Americans were the smartest people on earth individually. We could devise more ways of chiseling a sucker than all the rest of the world put together -- and we're proud of it! Well, why not, so long as the suckers were there to be trimmed? And they were there up until yesterday. Now they turn out to be Mexican Hairless and they can't be fleeced anymore.

When you withdraw 10 million able-bodied men, it reduces the purchasing power of civilian life into the armed forces. They are no longer in the competitive practices of private enterprise. When you abolish thousands of articles that hitherto have been instrumentalities in the world of trade, then you begin to affect the entire economic structure. Many of you have probably felt that we could fight this war and lick the Japs or anybody else with our hands tied behind our backs. Well, it's very nice to feel that way, but we'll have to have our hands in front of us and we'll have to be entirely mobilized.

Look over audience after audience, and what do you find? Your females are still wearing all the variegated types of style and fashion. Well, keep it up girls, you won't be wearing it long, because they're going to standardize your clothes for you. Clothes will have to be standardized for civilians. Well, why shouldn't they? The boys in the armed forces have standardized clothes. After all, we can go through one of the modern aircraft plants, where there are thousands of women working, and you find them in a nice outfit of blue rayon slacks and a blue jacket.

Well, the transition is marvelous. The lady in the blue slacks doesn't have to wear one of those foundations or underthings, no brassieres, and no stockings. She's solved that problem. Besides, the slacks are made to fit, you know, in a matter of figure, and for the first time, the male can see what he's getting. [Laughter] Furthermore, the gals like it. Well, don't think that they're going to go back to the superfluous combination the females used to have to wear, because the other is much more efficacious in the, let's say, the feminine campaign. Well, why not?

The male's clothing will also have to be standardized; of course, he always was kind of second rate anyway, because no male that wears a necktie has any integrity anyhow. Oh, stop and think it over. There's no law on the North American Continent that compels any male to wear a necktie. The only reason that a male wears a necktie is for the simple reason that if he went without one, he would lose his social standing. Well, he has to imitate all the rest of the morons -- integrity being the rarest thing in our Price System. Of course, if you only have a few thousands or a few million, you can't afford it.

Well, we're headed into a lot of things. How many people in this audience -- just to have some fun here -- how many of you are in the retail store business? Put up your hands -- let's see. What? There's a few here. Any retail gas station dealers in the audience? You're not going to live long as a gas station operator, and we can expect a mortality list of over 40 percent. Now your vim, vigor, and vitality and your private initiative aren't going to help you very much. You've always depended upon being able to think up something new to chop off the corners a little. That isn't going to do you any good.

We face a distribution problem, a shortage of personnel, and a shortage of equipment. We could have adequate distribution in United States, thinking from the standpoint of the retail store, on a 24-hour basis, but not if we attempt to run every single privately owned store. If we were to pool all the stores in four blocks with all your delicatessen stores in sixteen blocks into one in the center, all your grocery stores into one in the center, butcher, and so on -- in New York, and other large cities, that means a reduction of 28 stores to one in your downtown heavily-stored area. We would have plenty of equipment

and personnel to operate our stores 24 hours a day. We would also have additional space left over, and the nation requires space that is built, heated, and serviced. We haven't time to build an enormous amount of new space. This is one way of acquiring space and at the same time of acquiring efficiency in the distribution of our consumer goods.

Here in Detroit, you live close to a farming area, but remember the farming problem out across the country is also being hit. The large farmer that had a number of tractors and trucks, his employees have gone to the shipyards, munitions plants, or the aircraft plant, leaving him without any personnel to run his tractors and other agricultural equipment. The large dairy farmer is hit in the same way, while on the other hand, the small dairy farmer with a wife and three or four children of teen-age has gone to work in the war industries and left the wife and kids to take care of the reduced animal life down to one cow, and that is happening clean across the country. They're selling off the dairy herd because they haven't sufficient equipment or employed personnel to operate them.

You have no guarantee of the food situation 72 hours hence in this city or in any other city, because our whole national internal situation is unplanned and undesigned. We have always been living on that nice, kind, Christian basis of Christian anarchy -- the devil take the hindmost, and it looks as if we're going to get taken. Oh, it's a serious situation, but remember we Americans have never had any cohesiveness of thinking, because we never were forced into it.

What Technocracy is doing today is to bring it home to you. You're damn well going to be forced into it whether you like it or not or whether Technocracy likes it or not, and we're trying to break it gently so you won't be too uncomfortable when it hits you.

Right now, nationally, we're in the midst of the greatest boom that the country has ever known. We're all getting nigger rich with our snoot and all four feet in the trough at the same time. Well, have a good time at it, boys and girls, as long as it lasts, because it isn't going to last very long. I hate to disappoint you. The total expenditures of this fiscal year will be \$84 billion ending next June 30th. Total taxation,

collections, will not exceed \$21 billion and will probably not be greater than \$20 billion, leaving a total to be borrowed of \$64 billion.

The estimates for next fiscal year already exceed \$110 billion, while the present taxation program could not possibly collect next fiscal year in excess of \$26 billion, leaving an even greater amount to be borrowed, or facing a possible war debt of \$300 billion. Well, remember that old army song, "You're in the army now, you can't get rich, you, you're in the Army now"? Well, you'll be there very shortly.

Now don't think that your taxes are high -- oh, no. Your present taxes that you will pay next April -- March-April -- are only one half per capita of what they pay in Canada. How would you like to have 12 and 13 deductions from your pay envelope or your salary check a week? They do that in Canada. We haven't gotten to that yet here; we will. Very interesting, isn't it?

Remember, Technocracy has never missed. We have that amusing fatality in our mathematical analysis. We like to see it when it hits you, because the populace of the United States, you know, has never been interested in any other idea -- or let's say that they have never been interested in any idea which did not contribute to the astuteness and acumen of chiseling, and now we're going to be compelled as a nation to get off that bandwagon and to organize the nation into a collective, functional mechanism. It's going to be rather tough to take, yes, but let's look at the armed forces. When anyone joins the armed forces, they voluntarily and compulsively surrender the prerogatives of private chiseling and the competitive practices, and the United States Government assumes complete economic responsibility for each and every person in the armed forces.

Now when it comes to mobilizing 64 million human beings in United States for the operation of our internal economy in wartime, it cannot be done on any voluntary basis nor can we control it by any price ceilings or priorities -- APAs or any other kind of As, it will have to be done on a planned allocation of all materials and a Total Conscription of all Men, Machines, Materiel, and Money, with national service from all and profits to none -- an entirely different thing from what you'd expect. But remember, the men in the armed forces do not have the

privilege of profiting out of their operations; neither can they indulge in the nice little tricks of merchandising and trade. They're in there to do a job.

We have to realize whether we wish to have business in this country or victory, because the most important thing we face in the total war is to win it. If we lose this war, the bonds or the securities or that little boom that you're in, you won't have it. You'll be wearing a burlap diaper and have a bowl of rice for breakfast. Mo, you feel very complacent -- a lot of people do. They think they can make war profits, war wages, and war prices and indulge in war rackets and win the war at the same time. Well, we're telling it flatly and frankly: You can't do it, and the war isn't going to be over by Christmas, either. It's going to be a long, tough fight.

You can make up your mind either to organize this country on the most efficient scientific basis ever known or try to muddle through in the anarchic setup of alphabets that you have now with every unit in corporate enterprise and business trying to get theirs; every labor organization trying to get the same thing; every local political unit trying to get the best for themselves. Well, under the present setup, you cannot blame anyone, because so long as the present setup operates, then get all you can get while the getting is good. That's been our motto and our method for years, but we'll have to face the realism and not evade it. We've been evading things for a good many years.

I'd like to ask you as an audience: Do you think that United States, in June, 1941, that if we'd been invaded by 246 divisions, thousands of tanks and planes over a frontier of 2,000 miles, whether we could have put up the fight and exhibited the solidarity that another country has exhibited? You think we could have put up the fight in June, 1941, that the Russians have put up? Hardly. We'll be able to do it, yes. We've just as good fighting ability as any country in the world, but we haven't got down to it.

After all, the Russians have the greatest trained military reserve of any country in the world. They do not need manpower, but they do need guns, tanks, and planes. Well, did we send them the guns, the tanks, and the planes? Hell, no, we sent them Wendell Willkie! That's the way we approach everything.

Here in Detroit, of course, you pride yourselves on being the automotive center of the world and justly so. But being automotive center of the world, remember you are merchandising automobiles to the sucker consumer wherever you could find him to catch him for a down payment. But isn't it astounding that out of the great automotive center of the world has never come a design other than the commercial vehicle? That your trucks are commercial trucks that you sold and merchandised to the consumer? Same gauge, same design, same construction, when the gauge should have been ten feet wide instead of four eight and a half? When your tanks -- same gauge, four eight and a half, should have been ten feet wide? With all the technical brains and production ability of the City of Detroit, did you ever design a vehicle? You did like hell! You sold them the same old commercial vehicles that you sold to the installment buyer. Business was good business, let's be frank about it. No engineer would endorse anything that's been sold on that basis. It's all right to sell to the commercial consumer, but it was entirely wrong and entirely unsuited to function around the world as a part of our military strategy -- but it was good business.

Well, do you think you're going to meet your taxes next March? And when the taxes are doubled for the next fiscal year, are you going to like it? Frankly, individually, you're not, you know you're not; but let Technocracy propound something that, instead of coming out of this war with over \$300 billion of war debt, how many of you would like to come out -- as a nation to come out -- without a dollar of war debt? How many would? Would you or wouldn't you? It can be done and done so simply it's funny, because under Total Conscription, the United States Government would operate every single operation in United States; therefore, there would be no organization other than the United States Government operating anything.

Under Total Conscription, therefore, it would be absurd -- and impossible -- for the United States Government to borrow from itself in order to create a war debt.

Under Total Conscription, every able-bodied male and female between the ages of 18 and 65 not required in the military forces would be conscripted on the same basis in the national service on the same pay basis as the armed forces, on the same basis of

clothing, food, and shelter, and health requirements as the armed forces.

Now, those of you who own property, especially those retailers who are going out anyway, the United States Government takes over your property, would issue you a United States Treasury Certificate, non-transferable and non-negotiable, payable in kind or in money six months after the duration of the war. Well, what nicer could you ask for? You'd be free from all the headaches of taxes, rising fixed charges, and falling income.

Under Total Conscription, there would be a moratorium on all debt, litigation, taxes, union dues, and insurance premiums. Let's take a very simple case. A man out here is foreman in one of your automotive plants and has a \$7,000 house, \$10,000 in insurance policies, \$1,200 in the bank. He dies. His will would be probated in the courts in the usual manner, but the estate would not be disbursed until six months after the duration of the war.

Under Total Conscription, everyone would be buried by the same national funeral service. I don't mean the words, but I mean the equipment -- the same type of pine box; therefore, the family of the deceased would be in the cost of his funeral, because relatives would generally compel the state and the friends to put up the money to have a good funeral for the one who had passed away. So, the heirs would be better off under Total Conscription than they would now, wouldn't they? Certain ironic touches to this, you know.

Now we can go on. Try to visualize that every fascist country in the world has conscription of labor, but no fascist country has Total Conscription. There isn't a single fascist country in the world that has Total Conscription. They all have conscription of labor.

Now, labor, organized and unorganized, is facing a freezing of jobs, location, and wages.

The only thing labor can fight conscription of labor with is Total Conscription. Naturally, you'll have your National Association of Manufacturers, your Chambers of Commerce, and other organizations pushing the conscription of labor.

Conscripted labor in a war program in this country would be beautiful for those who still remained in business, wouldn't it? To have labor conscripted by the Government of United States to make greater profits for private enterprise. Kind of a stinking, smelly mess -- and it would be smelly. It's doubtful you would attain the production, and if the morale of the nation wouldn't go to pieces, because as we have found out across this nation, every American -- at least 99 percent -- is willing to do his bit to win the war, provided he knows that an equality of sacrifice is guaranteed and is a real equality of sacrifice, not this bogus equality of \$25,000 a year net income per individual. \$25,000 a year net income per individual amounts to \$67,000 a year gross per individual. In other words, grandpappy can have \$67,000 and grandmammy \$67,000, and they can have eight children with \$67,000 each and all be married and their wives and husbands \$67,000 a year each. Well, that's swell, isn't it? But the boys in the armed forces are only getting \$50 per.

Why not put everybody on the same basis as the armed forces for the duration of the war? Then you could guarantee that there will be equality of sacrifice for the first time. You won't turn out 30-some thousand new multimillionaires the way we did in the last war, but we'll win the war and be in a condition to win the peace, too. Which is more than we'll be in if we continue this method. Many of you feel that all you have to do is go on the way you're going.

Cold is setting in on this city and you have a very serious housing problem, and you have no organization to meet it. If there's continued cold weather, alternated by dampness, you'll be hit, probably, with flu and pneumonia epidemics in this area, believe it or not; and remember that microorganisms are no respecter of persons. So, don't feel that you're holier-than-thou simply because you're in a little better economic position than someone else.

Under crowded war conditions such as these, you may have very serious situations arise. Here we're drafting our doctors and our nurses, and yet we have no civilian planned organization of health operations. We've even grabbed off obstetricians for the armed forces -- we hope the boys haven't got that way yet -- just to show you how serious it is.

Here's every corporation trying to maintain its sales organization intact and its trademarks and all its marketable items. Now newspapers are going to be smaller and thinner -- mostly thinner. The Canadian Government is taking one million horsepower out of the pulp and paper industry in Canada. It's shutting down a considerable number of pulp and paper plants. They're already doing it on the Pacific Coast. Well, why not? What's the sense of advertising if you haven't got anything to advertise and can't sell what you advertise? Must be some advertising people in the house. Well, it isn't their fault; don't blame them. Those 24 sheet boards, you know, the big spread ads, won't be here very long.

As your retail store situation closes in, you'll have less and less items to sell. Well, there was never any sense in the terrific number of retail stores we had anyway, but then everybody competed with everybody else for the sucker consumer and had a grand time doing it. Of course, you won't be as hard hit here in the Detroit area as they are out in, say, southern California where the escrow Indians built one subdivision after another. They were on their way to the Mississippi, but they didn't get there. They have no transportation system worth anything; here you still have. But if you want to see how gasoline rationing is working go to New York and other cities on the Atlantic Seaboard and the change is tremendous. It's only some months ago, before the rationing set in, at 42nd Street and Second Avenue on a Sunday afternoon -- and that was the main traffic lanes of the Queensborough Bridge going down Long Island -- it was suicide to try to cross that avenue at, say, three in the afternoon. But now you can walk out there with impunity and look up to the right -- well, yes, there's one car up there about seven blocks away and down here there's another one coming about six blocks away. In fact, you can hold a Parliamentary discussion in the middle of Second Avenue and 42nd Street at 3:00 in the afternoon. Well, you think it's funny, that it won't hit here, just wait a while, brother, it'll be here.

A lot of other things are going to come in on you. You have no guarantee of your meat deliveries or your food deliveries or your restaurant service. Don't blame the restaurants and don't blame the stores. They were all in trying to make a living under the old game and it won't work. Now in the New York milkshed, the government is buying all the milk and reselling it to the milk

distributors below the ceiling cost, so that the milk distributors can make a profit below the ceiling, and the sucker consumer pays for it.

The Big Five meat-packers want the government to buy all the meat on the hoof from the farmer and the buyer and the feeder-shipper, paying the Big Five packers to process all the meat at cost-plus, and then sell enough meat back to the Big Five packers so that the Big Five packers can sell at a profit to the meat distributors at a profit at the ceiling price. Isn't that wonderful? Don't you wish you could all be in that business -- the government keeping you there? Yeah, but you're paying for it, each and every American! And you're not feeling it right now, but, oh, brother, wait until next March! And then from then on it's going to hurt more and more.

How do you think you're going to handle it, your national economy? By going down once every four years and putting an "X" on a piece of paper, and throwing some Democrat or Republican out and then having a hell of a good time four years after that? Because that's the way we've done it. You gave very little social thought to what had to be done; you got it off your mind. Well, that's been our conditioning. If we voted for anything, we never voted for anything, we merely voted agin' 'em. Willkie, of course, did have a chance until Dewey got elected Governor of New York. Now Willkie better get over and get a job in the Administration or join the Civil Service list, because Dewey will cut his throat. Dewey did all the hard work for that 1940 Republican nomination, then Wall Street put over the barefoot boy, didn't they? Well, Dewey's never forgotten that.

Well, what do you vote for? Nationwide, we've never voted for any major decision or solved any major problems. We were an expanding economy, in which we could always cover last year's mistakes with this year's expansion. We've always credited that expansion to our own genius and said, "That's what successful private business can do," Well, it's done it. It's finally reached the point to where the old methods won't work. Don't blame Mr. Morgan and Mr. Mellon -- just blame every American that's ever been in business -- all the successful, nice people in our history. They're the ones that have brought us to this sad end. We never could plan anything -- why, it wouldn't be good for business. We never could design anything for national function --

it might rock the boat.

Now we're facing a situation of conscripting all of the manpower, machinery, equipment, and resources, monetary and otherwise, of the nation. Many of you feel that it would be drastic. Well, war is drastic, and we'll have to face that drastic issue. Naturally, certain labor unions feel that they would be in a rather difficult situation. Then a great many of the top flight labor leaders, they've become exactly like high-priced business executives drawing high salaries; so, they're in the same situation as any corporation. Well, the way to handle it is to quick-freeze your labor unions and your corporate structures; simply seal up all the books and leave them there until six months after the war. You don't need any commercial enterprise to fight a war in which the United States Government is your sole operator and your sole customer. Very simple, isn't it?

Under Total Conscription, you'd be better treated than you are now, but you still have that hangover, that conditioning. You feel that you're just a little bit smarter than the guy that lives next door to you.

Let's see what our rationing system leads us into. You remember back in the happy days of bootlegging, when there was only one commodity the bootlegger went for? Now, whenever a scarcity occurs in United States, whether it's an actual scarcity or enforced by business speculation or legislation or wartime emergency, then we Americans, who possess more ingenuity than any other people, we immediately get out of bed -- bright and early -- and proceed to bootleg that scarcity from hell to breakfast right then and there!

Now look at all the things that are going to be bootlegged under the present setup. Why, no counterfeiter today would ever think of counterfeiting money anymore. You know what they're counterfeiting back east for months? Why, ration books! They wouldn't even thank you for counterfeit money -- that's no good -- but ration books -- Ah! And if you don't think it'll be funny, just watch the counterfeit ration books turn up in this area, because in order for the gasoline dealer to get his gas, he has to have coupons to turn in to the oil companies; and the smart boys will come along and suggest how to get more coupons, won't

they? Remember we're four generations of successful, nice people. You'll get it afterwhile.

As long as somebody has the time and the money to play at bootlegging, that's swell, but 98 percent of Americans have not the time or the money, and it's too hazardous. Nevertheless, it could upset the whole applecart. We in United States will have to institute government feeding stations, government nurseries for the infant children of our women war workers. It'll have to be done nationwide; you can't depend on the old individual private nursing. No, they will have to be mobilized on large-scale endeavors. There will have to be government distribution.

What do you want? Do you want the same kind of haphazard anarchy you have now -- getting more ticklish every minute -- or have you got enough coffee hoarded, enough butter? I see those nice, solemn, virtuous faces out there -- they're the ones that have got it. We're always suspicious of that virtuous look, you know. Two things that are white: virtue and arsenic. Well, these are only a few of the problems you're meeting.

The problem of our banks and our finance is a very interesting one. In July, 1932, Technocracy predicted the banks of United States would close on or before the first of April, 1933. They did. And as we pointed out then that national frigidity would cause the closure of all financial institutions and that those institutions would only be reopened by the pouring in of liberal federal treasury liquidity, and then in the ensuing decade would arise the danger of our banks, trusts, and other financial institutions drowning in their own liquidity. Well, they're drowning right now. Of course, the government could borrow from the banks but the banks do not want the government to borrow from the banks, because if the government does borrow from the banks, the banks would be more liquid than they are now. Isn't that a charming situation?

Here's the banker, who, for the first time in history, is almost completely liquid and he doesn't want the government to borrow all his liquid cash, because if the government does, he'll be so liquid that he drowns. So, Technocracy's advice to the bankers is to advocate the nationalization of banks so they can get on the Civil Service Commission and have a job for life. You think we're joking? But it isn't going to be long -- like that

old herpicide sign, you know, in the barber shop -- those three little photographs with the combs -- going, going, gone. Well, they're in the second stage now; they only have the third one coming up.

The amazing situation is that, in order to win this technological war, we have to install more and greater amounts of technological equipment. The boys came back from the last war and found somebody else in their job, but when they come back from this war and go down the street to where their job was, they won't even find the building, because that will have been pulled down for scrap, and the place will have moved. When they go over to the new one, they will find the process that they worked at has disappeared completely and that an 18-year-old girl and a 40-year-old woman will be in slacks pushing buttons. In other words, the job will not be there. Well, what's wrong with that? Nothing at all.

We on this continent -- the greatest continent on earth -- and never again will Americans ever believe that, having been able to spend with easy facility over \$300 billion for war, we can't with the same facility invest \$300 billion for human rehabilitation in this country and this continent, it can be done just as easily, but you have to face the fact that we are in this social transition, and social transition is not particular about who it lets down. If the scale is large enough, you all have to change.

Here's technological equipment coming in as it has never come in in human history before. It may interest you to know that for several thousand years, the capital payoff time has been approximately the same. What is meant by that? Well, the time to pay off a capital investment, amortizable securities, principal and interest has stood at around 60 to 100 years for centuries. The Corrigan Plant of the Republic Iron and Steel, the equipment cost alone was \$16.5 million, but operating at 75 percent of its capacity, it paid off in 36 months -- not 60 years or 100 years 36 months. The new Greenlee equipment, some \$800,000 per unit, turning out the cylinders for your aviation motors, pays off in 10-1/2 weeks. Very interesting, isn't it?

Modern technology is continually producing more physical wealth in greater volume for less unit space, for less energy

cost per unit, and less man-hours per unit, which is continually reducing the capital payoff time, the area liable for taxation in counties, states, and municipalities, undermining your whole fiscal structure of your county and state taxation, undermining your whole purchasing power, and yet providing you with more and more fiscal funds for reinvestment faster than ever. Of course, Karl Marx, you know, tried to make out that the proletariat would become hungry and disgruntled and rise up and overthrow a social system. Well, that isn't what is actually going to happen. Here's where the bank is going to drown, because the modern technology will produce more and more with less and less man-hours.

In order to win this war, we'll have to put in more and more equipment; but so is Australia putting in more equipment; so is Great Britain; so is Russia; so are the enemy countries of Italy, Germany, and Japan. And Germany in the last war came out of that war defeated but never forget that she came out with more kW hours' capacity, more production capacity than when she entered the war. The same thing will happen in this one, and yet you're going to envisage international trade on the basis of Henry Luce of LIFE and FORTUNE? Where we're going out to defeat everybody everywhere all over the world? The answer to that is "nertz"!

It might interest you to know that the bottled milk distributed in one day by the City of Newark, New Jersey, is greater than that distributed by the Kingdom of Italy in one year. United States and Canada have 96 percent of the bathtubs and water closets of the world; doesn't say much for the rest of the world, does it?

We've prided ourselves as a nice, Christian nation of sending missionaries abroad and to put pants on the niggers out in Timbuktu -- and a lot of other kinds of heinous practices like that -- and enjoyed that smug self-satisfaction of sitting at home and saying we had contributed to righting the moral delinquency abroad or the frightful conditions; but right here in our own country, from the sharecropper of the south to the industrial slums of our larger cities, did we ever send missionaries to our own country? Well, it's about time. If it's good enough to export abroad, it's good enough to send to our own country.

It can be done here, but it can't be done on the old wishy-

washy basis of a voluntary go-as-you-please anarchic participation. Frankly, I wish it could, because then I wouldn't have to work, and as a southerner, I don't like work. I think an ideal job for a Virginian should be custodian of the bears in Yellowstone Park, because in wintertime the bears hibernate and in summertime the guests feed them. After all, you never saw any sense in work anyway, did you? You never acquired social prestige out of work -- did you ever hear of anybody doing it? Did you ever hear of a coal miner ever acquiring social prestige? Did you ever hear of a woman in the kitchen ever acquiring social prestige? Hell, no! Not until she got a meal ticket big enough so that she could put a servant in the kitchen and get the hell out of there!

Now if you think work has done anything for you, just take a good look at yourself in the glass when you go home tonight. You'll know the reason why your children don't like you. That's a fact; they can see what it's done to you and they certainly don't want to imitate you. How many children want to imitate their parents? Very, very few, and you don't really want them to either. That's the amazing part; you want your children to be better than you are and to avoid a lot of things that you've done, because you know that it generally takes 40 years to find out that your parents were liars. Then you're too old to start over again, aren't you, darling?

Oh, yes, now we're facing a national situation where we're all going to be thrown in the same boat, where we'll be compelled nationally to be our brothers' keepers, and it's going to hurt like hell, isn't it? The thing we've been preaching for years -- no matter what church you belonged to -- you were all proclaiming that you wanted to be your brother's keeper, didn't you? And now the thing that you have professed is going to come about under Total Conscription and you aren't going to like it. What a nice, kind, Christian people we are! I know, I'm being ironic with you and intentionally. If I could take the pipes out from under the kitchen sink and throw them at you, I would, because I'm not running for political office and I'm not making money out of this; so, therefore, I don't have to pull any act with you.

We Technocrats are an interesting organization. I'd like to recall for your benefit that across this continent on the speaking platform and in our literature of 1934 and 1935, and

every year from then on. Technocracy published the figures and protested orally -- on the air -- the shipment of steel, scrap, oil, lead, zinc, nickel and other materials to Japan and Italy and Germany -- 1935. You may have the phrase coming back to you or may have it repeated to you, but we originated that phrase; "Mrs. American [in 1935], don't squawk when your son is killed by a Pennsylvania coal car, a Ford rearend, or a 6th Avenue El." Did you ever hear of any national business organization protesting it -- the Standard Oil or the Ford Motor -- without going into too many names? Any of our nationally known business organizations ever protest the shipment of scrap steel and oil to Japan? Not a damn one of them. In 1940, we shipped 22,734,000 barrels of petroleum to Japan in one year -- it was good business! Well, we know it today, and we have to realize it, that that day is over.

Now we've been like John the Baptist crying in the wilderness for a good many years. We have been trying to carry a message that this country and this continent have the resources and the manpower and the ability and the ingenuity and the technological equipment -- if scientifically planned -- to defend itself or defeat its enemies and produce the highest standard of living the world has ever known. It's been a long, hard battle, but the march of events is going to force a social liquidation, and you may expect in the next six months the greatest liquidation of the American Middle Class, the American White Collar Class -- if you care to call it that -- that we have ever had in our history. Corresponding, but not as great, liquidation of the professional politician and the rise of the executive administrator, the technologist, scientists, and engineer and the mechanic. Now that is going to mean a terrific shift socially. Remember every man, woman, and child in United States will be involved in it.

If you want to have conscription of labor for the production of more profits for private enterprise and the same old haphazard alphabetical administration of your food and other consuming goods, you can continue as you are; but it can be administered scientifically, it can be distributed equitably, and we can increase our total production of food, war goods, and anything else necessarily required, and we can do it on a scientifically planned basis. We can attain victory in the shortest time possible, but if we continue on our present basis, we're headed for national chaos. Realize it. It's not a very pretty picture.

There isn't a man in Detroit that can guarantee that the school children of this city will be adequately fed 20 days from now -- or any other city. It's not his fault; don't blame him. He can't guarantee it because there is no known planned system of operation, and as your system of private handling breaks down -- it will break down under rationing -- then you've got to put in a functional system nationwide to handle all the physical problems and operations which are required for the maintenance of our economy and for the supplying of our fighting forces abroad.

It is, after all, a complex problem, true, involving many factors, but don't get the idea that it's too complex or too great to be solved by human intelligence. We have the data, the knowledge, and the ability right here in United States. We don't have to call on Europe or Asia to solve America's problems. They can be solved here and now by Americans. All that's necessary is a national cohesion, and Technocracy is asking every American where they're going to stand on this, because you're going to have to declare yourself sooner or later, and the march of events is going to compel you.

Now, I've tried in a sketchy way to give you some of the problems. What I'd like you to do is to write out questions that you have in your mind, because you have many of them. You'll find the question period is probably more interesting than my address. I'll try to answer your questions to the best of my ability. The ushers will pass down and pass out question cards, you write out your questions, and I'll see how good a job I can do of it. Make your questions on any subject. There's nothing too technical and no subject we can't try to handle.

Thank you very much.

---

CLEVELAND ARENA  
"TOTAL WAR"  
HOWARD SCOTT  
December 11, 1942

For the last 150 years, it has been the naive belief of our country that peace was a normal state of human economy. It is true that the United States has enjoyed only 28 years of warfare in its entire history. Let us review the facts for a moment. Since the year 1600 B.C., there has been less than 350 years of peace in this world of ours: in other words, we have been at peace in the last 350 years less than 10% of that long period. France, in the last 900 years, has been at war 313 years; therefore, peace is not the normal state of the human economy. War is normal; peace is abnormal. Yet our colleges and schools have taught our public that peace was a normal state. True, peace is to be desired. We as a nation were ill-prepared psychologically for what we said would happen.

We are the most advanced technological nation on earth, and we as a nation are in the first total war in human history. There have been a good many other wars in history, but 99% of those have been fought with hand weapons and with the mobility of foot soldiers. Julius Caesar would not conceive of a total war in his time, let alone in all human toil-hand tool wars where the armies used only hand weapons.

In Napoleon's time, one man on the home front would maintain two in the armed forces and the battlefield. By the time of the Franco-German War, the ratio changed 1:1, and during the World War, the ratio had gone in the opposite direction and required slightly over three persons at home to maintain one in the armed forces.

We in the United States have been informed by the Selective Service Bureau and Manpower Commission officials that there will be 10 million mobilized in our armed forces. Our technological army today is many times that of the World War, so the problem of supply is of an entirely different order of magnitude than that of 1914 or 1918. Ten million mobilized armed forces of the United States will require 34 million in war production on our home front, plus an additional 30 million for the production of civilian goods and services, or a total of 64 million, plus 10 million in our armed forces, which would be 74 million. No nation in all history has ever attempted such gigantic mobilization as

we will have achieved in order to attain victory. Could we make believe that we could mobilize 64 million by purely voluntary measures? You will ask "Tom Jones" to come in and depend upon his honesty and goodwill. There is nothing wrong with him or the public. The American public wants to serve and win this war in the shortest possible time, but to attempt to mobilize 64 million human beings by any voluntary process is a shortcut to international disaster, for the simple reason that we have been conditioned as a people with probably more processes of chiseling than any other group of human beings on earth. We are the smartest people on the earth individually. Collectively, we are not so damn smart. We are beginning to find that out.

Remember that for the last 20 years, the press, radio, screen, and the public leaders stated that we never needed any plan; that we never required any preparation; that the United States necessitated no knowledge of national design or continental strategy; that all we could do was sell goods to more consumers. Well, we sold more goods to more consumers and look at us.

What lies ahead of you are two general methods of fighting this war. One method you can see is the most gigantic war debt that will ever happen in history by the haphazard collection of priorities and the other rulings to where you don't know whether you get butter today or cheese tomorrow. There is another way much more scientific with sacrifice guaranteed to all and to come out of this war without a dollar of war debt. Do you like to be burdened by war debt? Technocracy doubts whether any American does. A million dollar bond won't stop a tank, and, remember, the boys in the armed forces can't buy bonds the way you do. They are out there at \$50.00 a month. They have surrendered their way of chiseling that has been enjoyed by the most successful people. Right now, here at home, we are in the midst of the greatest business boom in the history of the country.

We are getting "nigger" rich. Get all you can as long as you can, because, brother, it isn't going to be very long. You may not like what we are going to tell you. We don't like it either, but you are headed into more and more rationing, and as rationing increases in the number of items and invades more and more territory, then let Technocracy ask you, how many retail stores do you think are going to supply? How many little businessmen are

you going to supply? Sixty days more of rationing in this area of gasoline alone will knock your gasoline dealers -- also most of your madhouse restaurants. That is all right -- you learn to walk all over again, which won't hurt you, except there is no system or planning to this thing in its entirety.

There are 1,700,000 retail stores in the United States, and Technocracy states that within the next 16 months there will be a mortality list of 40% of that number of retail stores. There will be lesser and higher casualty lists in other fields, because, let us face the facts -- that the United States cannot fight a total technological war and conduct business for profit. Either we have to give up business or give up the war. Of course, most of you feel that you never had better jobs than right now and are in the gravy for the first time in the last ten years. That is not your fault that you got in the gravy, and it wasn't your fault that you weren't in the gravy ten years ago. You are just a victim of the economic system. You can thank your stars you are in a war boom.

In order to feed, clothe, equip, transport, and fight a technological war for 10 million in the armed forces, it will require a mobilization of every piece of machinery, of every resource, and of every able-bodied human being -- male and female -- between the ages of 18 and 65 years of age. If we attempt to do it on the old basis, we'll repeat what happened in the last war when we produced 38,000 millionaires.

This time, the National Association of Manufacturers and the United States Chamber of Commerce and other like organizations are trying to force conscription of labor on the people of the United States. Conscription of labor -- what does that mean? Labor would be frozen both as to occupations and to wages, salary, and income, and this would produce more profit for private enterprise; and Technocracy states that the conscription of labor is the introduction of institutional fascism in this country. The only thing that can fight conscription of labor within the United States is the program of total conscription of men, machines, materiel, and money with national service to all and profits to none.

When anyone joins the armed forces of the United States, he or she surrenders all their practices, and the United States

Government assumes the economic responsibility for their clothing, food, transportation, health, and recreation. Now, if we as a country are compelled to mobilize millions of citizens, then it should be a compulsory national service based on the same basis as the armed forces, paid on the same basis, clothed on the same basis, fed, and with the same health requirements. It would be a guarantee to every citizen of his economic status for the duration of the war and six months thereafter. That would mean that every corporation would be "quick frozen" for the duration and six months thereafter. Every citizen in national service would serve on the same paid basis as that of the armed forces. It would mean a moratorium on all debt and litigation for the duration of the war and six months thereafter. It would mean a moratorium on all taxes, union dues, and insurance policy payments. The United States Government would issue the only purchasing power, and when you pay out that purchasing power, it would be paid back to the Government of the United States. You would not be able to transfer any bonds, real estate, mortgage, stocks, or any items of value, because they would all be frozen for the duration of the war. Of course, your bank accounts would also be quick frozen, because it would not be fair to the one with only \$100 in the bank to allow the man with the million dollars in the bank to run loose, so "quick freeze" all of them. All bank accounts would be frozen for the duration of the war.

All property would be taken by the Government of the United States. Under the program of total conscription, the owner would receive United States Treasury certificates of deposit payable in kind or in money six months after the duration of the war. This is a total conscription of men, machines, materiel, and money. It is the only way that a real equality of sacrifice can be obtained in our war program. True, we would not have any millionaires come out, neither would we have any poor come out, nor would we come out burdened with \$300 billion of war debt.

Right now many of you are wondering how you are going to pay income taxes next March. Oh, yes, it is going to bother you. This fiscal year and the next, June 30th, we will collect approximately \$20 billion dollars in the total tax collection. Next June 30th, the government will spend approximately \$84 billion. It is quite a difference between \$20 billion and \$84 billion. The estimates for the next fiscal year ending June 30, 1944 are now \$110 billion, and the probable tax that you would

collect under this tax program would be between \$25 and \$26 billion -- slightly less than one quarter of the total expenditures. When you think that your taxes are high, you better get over that, because in Canada the taxes per capita are just two times what you will pay this March. There are only 13 deductions in Canada from the paycheck every week -- 7 of them have to be, the other 6 are voluntary -- you know what I mean. Canada has attempted to maintain its standard of living by priorities and price ceilings. They have only approximately 12 million people there, so that their problem is minor compared to ours. Perhaps they are more intelligent in Canada than we are down here. They have less morons over there; we have more here because we have more people here. If they make it work, they have had to introduce subsidies to lower the price of coffee, tea, and other commodities. Realize what is going to happen here.

Remember the old bootleg days when gin was sneaked in here by the back door? Bootleggers went to town, but remember they had only one commodity to bootleg. In order to get the most for the most, there is a scarcity in force, whether by business legislation or by manipulation, and every smart boy gets up early in the morning and goes out to bootleg that scarcity to his neighbors. See the way they are trying to pick them up now for coffee, liquor, and everything else. Several cafe owners here in Cleveland had too much liquor and everything else that they did not declare. They are all over the place. I bet most of you are guilty right now. Well, you are not to be blamed. It is not your fault. When you stop to think how many commodities the public consumes and realize that, when those rationing coupons come out, there's a real scarcity for the first time in the good many years of this country, and the smart boys will all jump to bootleg those scarcities. The bootlegging days are nothing compared to what we are headed for.

Do you know what they are counterfeiting back on the Atlantic Seaboard? Coupons. Just watch the gasoline dealer who will have to take coupons to wholesalers to get tanks filled. Many of you are hoping to God you will find out where to get the stuff. We introduced rationing of gasoline in order to save rubber and to have additional gasoline for shipment abroad and to save our transportation; but the rationing of gasoline will not solve our national transportation problem, because the individual owner of a truck or car has the decision in his hands; therefore,

the individual owner has to compete with what money he has and what friends he knows to find out how to beat the other guy, and that isn't transportation -- that's a racket. There is only one way to do it: conscript all the automotive vehicles from out of the hands of private owners into uniform --national defense transportation units. Then each plant and each area will have sufficient cars and trucks, and they will be driven by uniform national defense transportation drivers. No individual will then have to buy oil, gas, tires, or spare parts. Defense transportation would be responsible for all war workers, civilians, necessary doctors, nurses, police, etc. That is the logical way to do it, but so long as you leave it up to the individual and his pocketbook, then the gyp starts, and for every gyp there is on one block, there are five on the next block. Don't expect human beings to be honest. You know about the human being who lives next door to you. He is no different from you. Stealing never was a crime so long as the majority of human beings could steal, but the majority only objected to stealing when the majority could not steal any longer and were being stolen from -- then it became unethical and illegal. Remember that all of us came from out of that background where our forefathers used to steal, and a lot of us are in that category now where we wish we could.

Here we are headed into a national crisis of transportation, agriculture, distribution of foodstuffs, clothes, etc. There is going to be standardized clothing for men and women -- well, why not? In one of the new war plants, you find thousands of women working in those beautiful blue slacks and jackets. You know they really look like something for the first time. The women in the war jobs who wear the slacks have solved all the problems that are bothering some of you females out there, because the war worker in slacks does not wear stockings -- only socks; does not wear a girdle or foundation garment; and has no use for a brassiere; and is purely a matter of figure, and for the first time a male can see what he is getting -- and the American male has always had an eye for a figure. The American female in war work is better looking and much more shapely than the dame out in the latest style. They are getting conditioned to getting more attention with the standardized uniform than they ever got. They are not going back to a lot of junk and trash they had to wear, and they know it and the males know it, too. Do you think they are going back to the fancy style? That is the interesting part

of it. I see some of you grinning -- you must have seen one. Well, there is going to be standardized clothing, and the women will be better looking in the United States than they ever were and the men will like it. It will cost less and will be more efficient and more effective.

Also, the Government of the United States will have to open 24-hour-a-day nurseries to take care of the babies and the young children of the married women war workers. We haven't sufficient equipment in private hands, and the American mother would not trust her children to private hands anyway. She isn't any too sure about some of the medical professions in private practices. She would like to put it on a national basis, and the American mother is correct. It will have to be put on that basis.

Big farming, with 10 tractors or several hundred cows, had to have a lot of hired hands, but those hired hands have gone long ago into the armed forces or high-priced war jobs. They cannot maintain a dairy farm or operate a large-scale farm. Tractors are standing out there without anybody to drive them and no spare parts for the tractors or for the milking machines. How could it be done? It could be done very simply. It cannot be done the way it is done now because there is not sufficient farm labor or personnel to operate an individual farm or on a private basis. Let us take a 25 x 25 mile block on a farm land -- approximately 625 square miles -- 400,000 acres and approximately 4,000 farms. You can pool all the farm equipment in that 25 x 25 or 625-mile block and only have 12-1/2 miles to go from center to outer lane. You can operate that 400,000 acres as one agricultural unit, pool the farm equipment and personnel and have 2-1/2 times the equipment left over for spare parts and scrap 6 times the equipment necessary for the steel scrap. Why not? You try to continue with this haphazard method and you will run into shortages of staple food. The small farmer that had a wife and 10 to 14 children reduced his animals to one cow and left his wife and kids at home to run the tractor and went into war work.

Your big dairies are being auctioned off because of no help. Don't think that this is only occurring in one place. It is occurring from New York to Wisconsin -- out to California. Our old policy of the devil take the hindmost is fine provided that we are at peace and can afford to waste efficiency, but operating under total war, we cannot afford to let this country go hungry

or fall down on our supplies to the armed forces. We as a people have to make a decision.

In one of the New York milk companies, the government is now buying all the milk from the producer, then is selling it back at a price low enough to permit milk distributors to make a profit under the price ceiling; therefore, the government is in the milk business, but the government is only in the milk business to save the milk business and keep it in private ownership, and the public pays for it. You don't have to be told how dumb you are -- you know it.

Every group -- economic, labor, and social -- are all battling for their two cents. They are more concerned with fighting that conflict than they are in fighting the Axis -- just as business is more concerned on the postwar problem of whether to expand an industry or not to and mostly not to, because if you expand it to the needs and the requirements of war, then it would be too big for postwar business. They are more concerned over what their lousy business is going to be a year or two or five years hence. Let us get it straight. If you don't win this war, you won't have to worry about postwar problems. You will be wearing burlap bags and have a bowl of rice in your lap. Some of you may have a few mortgages or bonds. If you don't win the war, the bonds won't be any good, and you will regret that they are made of such stiff paper, I think some of you have a sense of humor. I did not mean what you meant at all -- I meant Kleenex.

Clothes, shoes, meat, home products, and transportation will be rationed, and there will be standardized clothes and home equipment. We will have it. Are we as a nation prepared for it? And the answer up until now is we are not. Why aren't we? Because what has dominated the United States since the Civil War has been the psychology of successful, nice people. Four generations of successful, nice people -- the curse of the country. You know -- so nice that they stunk pretty. This war is going to cause the greatest social change that this country has ever seen, because you are going to witness in the next two years the greatest liquidation of the American middle class or white collar class that has ever occurred in any country. You are going to witness the liquidation of those successful, nice people. The more successful they were yesterday, the dumber they are going to be tomorrow. Don't blame them individually. Remember, they were

smart people a few years back, but they are not so smart now. We are going to witness further liquidation of the professional politician. We are going to witness the liquidation of unnecessary occupations. Newspapers are going to be smaller and thinner. Why not? The newspapers have not been dealing with the news for quite a long time.

Let me recall a few things for your edification. In 1934 and 1935, Technocracy Inc. protested shipments of scrap steel, petroleum, zinc, copper, lead, and other materials to Japan, Germany, and Italy. Let us ask you -- did the United States Chamber of Commerce, the General Motors Corporation, or the National Association of Manufacturers protest the shipments of anything to Japan, Italy, and Germany in the last 8 years? They did like hell! We have a long record. We advocated the fortification of highways and railroads to Alaska years ago -- long before this war started. We were like John the Baptist trying to warn them. We can take it, but can you? We have been a long time at this, but we haven't been licked. We have laid down the facts as we have found them.

In July, 1932, Technocracy stated that the banks of the United States would close on or before the first of April, 1933. The Attorney-General of the United States at that time thought that we should be indicted for making statements endangering the safety of the public institutions. Technocracy was not indicted, but the banks did close the last of March. Don't jump to conclusions that we are prophets or anything supernatural. All we are are technological engineers with a scientific method of analysis. We are trying to tell you what is ahead of you and how to avoid it and not run into trouble. If you want to fight this war on the basis of individualism or private business and "the devil take the hindmost," you can continue just as you are. You will come out with \$300 billion worth of war debt. You will need more than an aspirin to get over the headache. On the other hand, you can, by organizing public opinion in the United States, install Total Conscription by perfectly constitutional, legal means. All it needs is an Act of Congress executed by the Commander-in-Chief, Franklin D. Roosevelt. It requires no change in the legal system. The U.S. Treasury is at this moment trying to find out how to borrow those \$60-some-odd billions for this fiscal year and those \$80 to \$90 billion for the next year.

Now, there is sufficient cash in the banks, yes, but let me repeat what Technocracy said in July, 1932: the banks of the United States will close on or before the first of April, 1933. The banks today are drowning in their own liquidity. The banks do not want the United States to borrow because if the government would borrow, the banks would be more liquid than ever. Don't sympathize with them. There is only one way out for the bankers and that is to get a job on the Civil Service Commission, and they will be pensioned in their old age.

What Technocracy is trying to do is to get you all a job in the government. Don't you understand? After all, it is your country, and you are entitled to a job with the government. Very simple when you come to think it out, because if you are all in the government, your economic status has to be guaranteed then. If the United States Government operated everything in our entire national program, you imagine the government borrowing from itself just as you could. We may be slightly balmy, but we are not crazy; therefore, the United States Government operates all necessary operations. It does not have to borrow a nickel to fight this war. It operates everything on the same basis of national service as it operates its army, and when the war is finished, it hands you back your property and there you are. You have piled up no war debt and you have lost nothing. It is too simple and too beautiful for a lot of people to see it right away. This can be done. It could be done in quick order and could be done on a national basis, but it can only be done when the American public wakes up.

Let us get down to cases and realize the job facing us, because we have not gone very far in winning this war yet. We have a tremendous job ahead of us. What Technocracy is proposing in its program of total conscription is that every American serve in the national service the same as the armed forces for the duration of the war and six months thereafter.

We Americans will have to be our brothers' keepers for the duration of the war. It is amazing what we actually find. Technocracy finds that as a whole the organizations, plants, and workers and 99% of all Americans will give their time and effort, money, equipments property, or anything else, provided there is an equality of sacrifice guaranteed for everyone, and not the hypocrisy of \$25,000 net a year, because it is downright

hypocrisy -- \$25,000 a year per individual is \$67,000 gross a year per individual. Grandpappy and Grandmammy can both have \$67,000 each a year, and they can have eight children and they can each add \$67,000 a year, plus the husbands and wives, and what the hell kind of an equality is that? What a horrible thing it is that you should limit any individual income! Well, it is horrible, isn't it, to limit the boys in uniform to only \$50 a month, and here we are on the home front still getting away with war prices, wages, and war racketeering. If we insist as a nation that we want our profits first and our pound of flesh, then God help us! We better realize what we are up against, because we are up against one of the toughest combinations the world has ever known, and we are not going to lick the Japs or Germans with our hands tied behind our back. It calls not only for an organized strategy of our armed forces but an organized strategy of technological operation of our entire economy.

If you think that all you have to do as an individual is to make a contribution of buying bonds, that is a sad state of mind. A million dollar bond won't stop a tank, and if we all bought bonds, that would not solve it, although they are a good investment. If you write out a check and hand over a five or twenty spot, you think you have done your bit. Well, the hell you have! We are facing a far more intense situation than can be cured by any dollars. It calls for a planned mobilization of every operation. There is competition between business in war production, business in the consumer goods production, competition between the army on one hand and the navy on the other. Is that the way to run a war? They don't do that out on the front, but we are insisting on doing that at home because all the successful, nice people want to get the most out of it. We brought up our children to be that way. Well, I know it is a different picture than you are accustomed to. Technocracy is not running for office and does not make money, and it is not a racket; so we can afford to tell you. If you don't like it, it is not our fault.

In the last war, we put in so much technology and machinery that we came out with 38,000 new millionaires and a depression in 1920. Then we pulled ourselves out by loaning billions abroad and installment buying at home, and we were in the days of three chickens in every pot and two cars in every garage. You remember those good old days? They are gone, but we can have a greater

America than any business corporation ever dreamed of or invented by the National Association of Manufacturers, but it can't be done by private chiseling and "the devil take the hindmost." It can only be done on the basis of an entirely planned technological economy, because never again, after we have spent \$300 billion in war, will you be able to convince an American that we cannot spend the similar \$300 billion for rehabilitation of this country in peacetime. If we can do it this easily for war, we can do it just as easily to create the greatest standard of living in the greatest country on earth.

We are in this war, and how long is the war going to last? Until we win it. We haven't gone very far in winning it yet. Some thousands of miles away on another front, there are 243 German fascist divisions with the greatest collection of tanks and guns and planes that any army ever had, and on that same front in 1914, there were only 179 divisions and only 8,500 Germans. The Russian front has put out one of the greatest battles history has ever seen. It wasn't Russian nobility that brought the German fascists to a stop. It was the Russian organization, Russian guns and tanks and firepower. Russia has the greatest reserve of trained manpower on earth. She needs guns, tanks, planes, and shells. Did we send them to her? No, we sent her Wendell Wilkie! No wonder the American correspondents in Moscow say that this will be the coldest winter that the Americans have ever known in Russia.

Every corporation and manufacturer and engine maker will get a war contract to make more motor vehicles. Every corporation had to get a chassis, rear end transmission, and engine. The same way on our tanks and planes. It was good business but is damn poor war. Realize that we could have entered this war with only two engines in our fighting aircraft, only one engine in our tanks, and four in our entire transport, but count up the engines and see what they amount to. It is those successful, nice people we have. Let us hope that we have the guts to change it before 10 million boys come back and go looking for those successful, nice people. Mark my words, that is what they will do if they don't get equipment, and I wouldn't be in the shoes of one of those successful, nice people for anything in the world. Their days are numbered.

There are a thousand different categories that I could

discuss with you on this war program and conditions abroad, but I would like to make you do a little work. I would like you to ask questions. There are question forms, and I would like you to write out your questions and have the ushers bring them up. You will find you will get more out of this question period, because you can express yourself without giving yourself away. I will do the best I can to answer your questions factually and faithfully. I thank you.

---

#### QUESTION PERIOD

Let us give a few facts on European fascism. Japan has around six million farms and the average sizes are two- and three-tenths acres per farm. There are 3,400,000 farms in Germany -- smaller than 5 acres. There are similar percentages in France, Italy, and Spain in the European fascist governments. The agricultural land cannot be mortgaged, transferred, or sold. They are to be given to the oldest son, thereby freezing 60% of the population of those countries to the operation of the few acres by human toil and hand tools.

The average size in United States is 158-acre farms, which were decreasing in size until the introduction of technological agricultural equipment. From then on farms grew in size, and they will continue to grow. There is no such thing as total conscription in any fascist country, but there is conscription of labor in every fascist country. Total conscription would put every human being in every country on the same basis. One never heard of fascism putting the population on the same basis yet and you never will.

The introduction of the conscription of labor means the introduction of fascism right here and now while we are fighting fascism abroad.

SOMEONE ASKS IF TOTAL CONSCRIPTION APPLIED TO CONGRESS.

Why not -- they are Americans, too, aren't they?

SOME PEOPLE WANT TO KNOW WHAT WILL HAPPEN TO THE MORTGAGES.

Your mortgages will be frozen for the duration of the war and six months thereafter. If you try to live without mortgages, don't worry; the government under total conscription gives you a monthly income the same as in the army. If you are trying to pay out the mortgage, don't worry; you won't have to pay it off. Very simple.

SOMEONE WANTS TO KNOW ABOUT LIQUOR AND IF TECHNOCRACY IS A DRY MOVEMENT.

Hell, no! We are not that. Technocracy proposed to close the bars but not to abolish liquor. Closing bars or nightclubs specifically stated as a war emergency to prevent civilian and army disputes and a lot of trouble. You will have liquor rationed in this state very shortly, and, of course, some of you have a stock in already.

THERE ARE SEVERAL QUESTIONS HERE ON THE MORALE OF LIFE AND VENEREAL DISEASES.

The venereal disease rate, as Technocracy stated several years ago, has risen, and, unfortunately, it will continue to rise, because there is no control of the situation. If you have army camps in this country, the army camps have to have fences built around them to keep the girls from getting in. You able-bodied men that still look pretty good, don't laugh when there are 10 million able-bodied men in the armed forces. You are not going to be safe, brother. Of course, we endeavor to be frank and honest. We think that when our sons and daughters go out with somebody else's daughter, they go to play pinochle. We call Mexico a barbarian country and uncivilized, but Mexico's jails have visiting day every week for the wives, sweethearts, or boyfriends, or husbands, providing they have a medical certificate. Mexico has a highly intelligent attitude.

The army has a lot of space. It could have a visiting day. You can stop this nonsense very easily. It isn't the professional prostitute that is causing the trouble, especially in those counties where, under law, they are forbidding them to be in the army camps and shove them off into the next county. What is causing the trouble nationally is the amateurs, especially the 14-, 15-, and 16-year olds. All you have to do is look at any audience and you know that incompatibility is in the majority.

So, we really have to recondition you to solve certain problems, because you still think it is pinochle.

THERE ARE SEVERAL QUESTIONS HERE ON THE FLYING WING.

Technocracy, of course, had designs of bombers, flying planes, tanks, and guns long before we got into the war. Technocracy's Flying Wing is a non-fuselage, propeller driven, 330-foot wingspread, bomb load of 50 tons, range 12,500 miles, ceiling 40,000 feet -- made out of magnesium and 33-sheet plastic. We haven't gotten ruthless yet, but when you go in for a flying wing with one hundred 1,000-pound bombs on each wing instead of five and a much greater range, you really can go in for total war. You go over to eliminate the civilian population -- you don't bother about finding the militia. You lay one bomb every 200-foot square, and you never have to go back again. Once over the job is done. Kind of tough. We have the technology here to build such planes.

SOMEONE WANTS TO KNOW IF THE CHURCH WILL REMAIN OPEN IN TOTAL CONSCRIPTION.

Why not -- the minister and priest will be totally conscripted, too. He will be maintained just the same as those in the army; so, for the first time, he won't have to worry about the mortgage on the outside of the church or the collection plate on the inside. He will be able to preach as he sees fit for the first time in history.

SOMEONE IS TRYING TO GET FUNNY -- ASKING ME WHY I SHOULD NOT BE THE NEXT PRESIDENT OF THE UNITED STATES.

No, I am not looking for any political job. Let us get this straight. I have my job picked, and I don't want any of you people trying to kibitz on it. I am a Virginian and I don't like work. When I look at you, I see what it has done to you. The job I want is to be custodian of the bears in Yellowstone National Park, because in the wintertime they hibernate, and in the summertime, the guests feed them. I don't want any political office. I won't take one.

SOMEONE WANTS TO KNOW ALL KINDS OF FUNNY THINGS ABOUT NEGOTIATED PEACE AND GUADACANAL, BURMA, TUNISIA, AND AFRICA.

We are going around the world here. It may be interesting just to give you a slight comment on some of these. The situation in North Africa is not a second front.

If the United Nations, Great Britain, and the United States take Tunisia and all those places, then we will lay down the preliminaries for a second front, but not until then. There are still 500 miles of territory that has to be taken and more. The European fascists now have cut the Mediterranean Ocean in two, and for the first time, they really dominate the Mediterranean.

THERE ARE SEVERAL QUESTIONS REGARDING THE INSIDE INFORMATION ABOUT THE DARLAN SITUATION.

In that case, I refer you to our State Department. They are the ones that prevented the automobile from going to Barcelona, Spain, because somebody might attach a machine gun on the roof and make a war vehicle. So, if you want to know anything on the Darlan situation, write to them. They ought to be able to give the inside information. That is as close as I can come to calling the State Department names.

SOMEONE WANTS TO KNOW IF YOU HAD TOTAL CONSCRIPTION IF IT WOULDN'T DESTROY INCENTIVE.

Incentive is sufficient inducement for a chiseler to trim a sucker. Initiative, on the other hand, is a capacity of a healthy human metabolism to convert the environment into health, pleasure, and recreation. You can be defective in a wheelchair and not have initiative and have a hell of a lot of incentive. You can have initiative in certain conditions, but if you haven't any prostate, gentlemen, you will have no initiative.

SOMEONE WANTS TO KNOW WHY A CERTAIN NUMBER OF OUR MEMBERS IN TECHNOCRACY WEAR GRAY.

We will tell you. Technocracy has never had an endowment or subsidies. The early Christians wore white, but since they abandoned the uniform dress, you can't tell a Christian from a Democrat. Not having the economic training schools, the only way to do it was to put Technocrats in some distinctive dress which made their neighbors and friends pick on them. Their neighbors

and friends did pick on them, with the result that the more they picked on them, the better Technocrats they became. We did it intentionally, and today we have Technocracy Inc. and a nonprofit, nonsectarian, nonpolitical membership, organized under the laws of the State of New York. We have the largest fleet of sound cars in the world right here offered free -- service cars and equipment for Civil Defense, police and fire departments. You have seen some of them functioning here, in Detroit and Los Angeles and across the country.

I would like to ask the audience here this evening -- how many of you are in favor of total conscription? Now I would like to find out how many are opposed to it. Not more than 15 that I can see. So the majority has it. I guess you rank individuals will have to go along with the majority. How many are willing to do something about it? Come down here and let us get you into the movement. It is the only thing we can do. We are not a political party. If you are sincere and want to fight for total conscription, come down and sign an application. It is only 42 cents a month. Nobody makes any money. They are all voluntary services. All I can do is ask you. I can't do it alone.

Come on, we might as well do it. You'll never do it sitting down. Only citizens of the United States are eligible to join Technocracy. If you are an alien, Asiatic, or politician, don't come up. Only citizens of the United States. All I can do is once again ask you to come up or get the hell home, because you are no good sitting out there. There is no color line in this organization. The negro is more intelligent than most white men, because he knows there is no sense in work.

MEMBERSHIP MEETING  
Section 15, R.D. 8141  
December 13, 1942

HOWARD SCOTT

As your Director-in-Chief, I'd like to report that the membership in the month of September, 1942 reached an all-time high, contrary to your expectations. Despite the induction into the armed forces and shifting civilian occupations, we are moving up. We are the only organization in this country that is trained and disciplined and can put on a show from coast-to-coast. The Republicans can't do it -- they have to employ outside help -- even have to get their applause from the outside. I wonder if you realize in the convention held here a few years ago that there were 3,600 paid clappers. They paid 3,600 to come here to applaud their convention. Now in New York, the visiting maestro can have paid clappers at the opera, theater, or at conventions. The Republicans and Democrats had to do it. This is an election year and the total votes were less than 26 million. The public is not interested in voting; it is not interested in what the political parties were dishing out to them; but it is interested in what we are handing them.

Many of you may be slightly upset by the strategy of Technocracy, because every time you think it is headed for either trouble or to be frozen, it shifts on you. Well, remember that one of the stipulations, one of the clauses, in our program of total conscription was the closing of saloons and private bars. Now why was it that way? Well, I'll tell you. It is an example of national psychology. Technocracy isn't interested in prohibition. The United States Army has a problem on its hands, and we know that as the total number in the armed forces grow and high wages and salaries of the civilian population rise, the get-rich-quick psychology of the average saloon, cafe, or barroom proprietor will sell liquor to anyone if he can still sit or stand at the bar. The trouble invariably is between civilians and uniformed men. Curfews are being enforced on barrooms right now by the army because civilians (not all civilians, but there is a percentage of them) will pull out a roll in front of a soldier -- well, sucker, at \$50 a month, take a look at this! Well, the sailor or soldier, if he can still see, takes a swing at him. Then if the civilians outnumber the uniformed men, the civilians will throw the uniformed man out into the gutter. Well, what happens? He picks himself up, goes back to the base or ship, and his buddies

ask, "Well, who hung the mouse on you?" That is the kind of setup there is. He'll say in such and such bar at so and so. Right away a bunch of uniformed men get together; well, let's go call on them. Then the fun starts. Now, the saloonkeepers -- and there are saloonkeepers with sense, the majority are just the same as everybody -- grab all they can. That is what starts all the trouble, even when they know beforehand. And yet, when we stated it, so what was the reaction on the public when they read that. It was an interesting situation.

If you were ever in the suburbs, where they have high hedges or fences around each backyard, here's what happens. Somebody is out there working on a Saturday afternoon or Sunday, putting in a garden or a few flowers, doing a little work, and suddenly over the backyard fence sails a rubber boot or dead cat. He takes a look at it -- who in hell flung that over here? Well, he grabs ahold of it. Does he fling it back? No, he flings it in the other direction. Very shortly, it is going down the whole block. That is national psychology. So, CHQ wrote that in there in that particular way, because that boot is stuffed with dynamite, so that each one would kick it down the line through some pet peeve of his, and they have. Remember, we have to make the public want what we want them to do. There is a little bit of feminine psychology in that. She doesn't directly attack. The female is expert at this -- she induces seduction; of course, the males don't know anything about this. But that is in practically everything we do.

I don't want any of you downhearted because you think the meeting at the Arena was a failure. You did a job in this territory -- realize that. And don't think because you did a lot of advertising, you didn't get 12,000 people. After all, meetings are an excuse to advertise. This is an entirely different attitude. Remember that this organization has placed total conscription in business places, American Railway Express stations, plants; placed banners across the streets; posted placards and distributed a terrific number of leaflets all over the country. Nobody can say any longer that he hasn't heard of total conscription; in fact, it has become so funny that heads of labor unions in Detroit asked, "Mr. Scott, the CIO can take Technocracy in its stride. It wouldn't have any trouble with labor that Technocracy was O.K. The CIO is in favor of conscripting banks, industries, railroads, and money, but you

can't labor unions."

I asked the labor leaders if they thought they could go across the country and conscript everything and leave labor unions. One leader thought that possibly that could be done. Others said no, it can't be done. By the way, a few days ago the labor leaders said that labor in Detroit would not be frozen nor would it be frozen in the country -- that labor would not permit it, and if the government attempted anything like that, labor would strike. Technocracy said it would be frozen the week before the first of the year, and, furthermore, when labor is frozen, it won't strike. It happened two days after your Chief left there. The comments in Detroit are very interesting. The labor leaders are worried.

The CIO is bothered as well as the AFL in Detroit. In the last four months, they can't get a meeting with all their members as big as Technocracy can. They simply will not turn out to a meeting, and with labor frozen to wages and jobs, naturally, of course, labor members ask, why pay dues? You can no longer get any wage increases or strike for working conditions -- you will have to drop that; therefore, labor union membership will be compelled to fight for entirely different things than a labor union has had for a long time. They'll have to strike for coffee, transportation, milk, health, and general overall social supervision, which is out of the union's category. Here conditions are forcing the members of labor unions to go along the lines Technocracy has for the last twenty years, although they won't admit it. They are now forced to do it by their government. Isn't it ironic? It is beautiful when you think of it.

Well, we are in an ideal position strategically. Many of you are uncertain on the program of total conscription. A few get over it, because we have carried the program from Panama to Alaska, from the Atlantic to the Pacific, and we can put our fingers to our nose at anybody. Begin to realize how really amusing it is. Here's your manufacturers screaming how patriotic they are, and then we raise the ante on them. Nobody can accuse us of being antiwar or antipatriotic. We are the most one hundred percent patriotic organization in the country. We are fighting the war on a one hundred percent basis -- not a ten percent basis -- so that we haven't anything to worry about on our position. We will have to meet some shifts in our personnel -- some going into the armed forces, leaving for other organizations -- yes, that

will entail consolidation. You have done a job here in Section 15, and you will consolidate other Sections in Cleveland.

Out in California, they are going to take over the biggest, most beautiful motor distributing rooms in Los Angeles, only they are going on a 24-hour shift basis. They will have 10 to 20 sleeping in the place each shift. Of course, when they go out there, they really go. They may trip over themselves getting started. Why not? Now, I'll tell you what they are doing. Many bought a lot of jalopies with licenses -- understand? And just sufficient tires from where they were to the gas station -- understand? Just so that they have a car. Most of them are no damn good, but entitle the owner to an "A" card. Now you get it. Well, also on ration cards. A lot of men and women, married couples, both of whom are working, eating in cafeterias and restaurants and not maintaining any really home cooking establishments -- so they do not use the full amount of their coffee or sugar or other ration allowance. In that case, they turn in the unused ration tickets to the Section, and the Section serves coffee to the swing shift and to interested plant workers. Nice idea. They ask the plant workers to throw a dime in the pot. They are quite willing to do that. They have a reading room set up with current literature and magazines. They have someplace to go at midnight. So, we are going to have a lot of friends. They bring in the servicemen, too. Well, we can do tricks like that. We are all going to function on a 24-hour basis soon. The war will be on that basis pretty soon.

There is something interesting I want to get into to show you what happens when you build \$22 billion worth of new plants. Step up the consumption of energy to levels never dreamed of. Doesn't make any difference whether you like it or not -- whether Washington does or not. The laws of energy determinants are as inexorable as the laws of gravity. When these things happen, then others automatically follow. I'll just draw a few little pictures up here. I want to draw the agricultural setup I spoke of in the Arena. Take a 25-mile square -- a row mile in each direction that is the legal row -- 625 square miles, 400,000 acres, 4,000 farms, all in that area. We can pool all of the equipment, livestock, feed, and personnel in that area and sufficient trucks to handle all the equipment in 12-1/2 miles in any direction to move the equipment all around. Now we require additional space across the country, because we cannot, under wartime emergency, spare the

materials to permit any amount of rebuilding. We can, by efficiency, acquire the space by doing away with the unnecessary occupation of space and buildings.

That is only one of the number of cases where the same method could be applied, so that animals can be moved into large farms, feed could be moved, and the personnel. As far as the actual land area, the equipment and personnel can be taken by truck to any point in that 625 miles in a few minutes. The marginal farms, that is, the little petty size with poor land, you can leave, and develop the best land to the utmost. Now we can raise more food in this way than we can by individual farms -- more food, and have spare parts and scrap left over. The farm personnel will not work as hard running the farms this way in wartime as their individual farms. The farmer won't like to believe the engineers can show them how to do it. We don't want anybody that knows anything about it, I seem to be making a paradoxical statement. If he knew all the minutiae that an individual farmer has to know, he wouldn't be able to plan the operation on this basis. So, the less you know about the individual running of a farm, the more you know about operating this way.

The engineer doesn't know anything about tool operation, but we can operate it better than the farmer. This is the only cure for individual farming. It is not higher parity prices or better farm transportation. It is better to move the farmer the hell off the land. As long as he is left on the farm, he is the most reactionary individual there is. He can't be helped by leaving him there. You can't help the poor white trash or the negro down south by leaving him there. You have to get him the hell off that land. Now, your fascist would want to keep him there and have his hundred acres, his twenty cows, cotton, and his milk, and take all the cream and surplus away from him, or his cows or his milk, but we are going to take him the hell off the land. He is no good if he is left there. The emergency of this war is going to compel the pooling of farm equipment and farm personnel. Our government is going to do it for us. We have a wonderful government, ladies and gentlemen; it has nothing to do with the elected representatives or the Republicans or Democrats; in fact, the holy rollers could do the same. They might roll into it.

Every one of our cities 25,000 or over -- even smaller ones

but the larger ones especially -- have had a Roman Holiday for the last 70 years, especially the last 20 years. Over a million retail stores in the United States. The sucker consumer was the great game. There never was any closed season on the suckers -- 24 hours a day. Well, we have to have space and efficiency, and efficient distribution, so let's take a distribution area. Take any large city: Chicago, New York, Cleveland, or Los Angeles, all have a high percentage of stores per capita. (Another rectangle drawn on the board marked off in squares of equal size) an area four blocks square with a total of 16 blocks -- now, then, you take all the delicatessen stores in the 16 blocks -- and there is quite a lot of them downtown -- all the butcher stores, and you consolidate all in the center, move the equipment, personnel, and have one butcher store, one grocery store, and one delicatessen, or other unit of distribution moved into the center. Then you only have two blocks to walk from any point in the square to the center of the block for any citizen. It reduces the truck stops. In New York, Brooklyn, Chicago, or Los Angeles, you reduce it 28:1. There would only be one truck a day in a purely residential block. That would mean a consolidation of motor vehicles, consolidation of your retail stores. One truck would deliver the milk, the bread, the pastries, ice cream, butter, cheese, or the morning paper. Just one truck to travel that one block. Now there are some 10 to 14 trucks travelling that block. Go on out here in Cleveland and count the stores, etc., the number of stores in one block. You will find that we are being very conservative. This would give additional space that modern equipment, lighting, and heating will require. They are now going out of business anyway so that they might just as well be handled efficiently instead of resulting in confusion and the debacle as the result of this.

Because our national business is founded on volume turnover, and when we eliminate thousands of items off the shelves and restrict the items that are left and ration the remainder, three stores out of five will eventually go out of business. They have been maintained long enough. This way of doing it we get efficiency. We will have sufficient personnel in 16 blocks, and distribution will be maintained in your center 24 hours a day, and they only have to work 6 hours a shift and work less than now and get better distribution. They are doing that today. The unit would be open 24 hours a day with adequate equipment. As it is now, they are going to fold up. Fold their tents and silently steal away. That gives you a little picture of it. Of course,

there are other fields where this applies. I am only giving you certain highlights.

Now we will go a little deeper into this on a general basis. The basic unit of political administration of the government is the county -- the basic unit is the county -- and the fundamental income tax of assessed value is the county or municipal area in the county. When we were a primitive agrarian economy, such conditions we have now could not arise. If we remained such -- 80% on land -- we couldn't draw these pictures that we are drawing today; but the basis of our fiscal income is the tax of assessed value of property in operation in the political structure of the county, or within the county, or municipality, or the state.

Let's take a quarter in a city that had regional planning in the last 60 years and represent that area by a rectangle -- that is the area of that municipality. Now, forty years ago, it was a property in which there were stores, etc., an industrial operating area. Taxation was built up on the assessment of the possessed value. Now certain things are happening to that structure. When you put in more extraneous energy in that area, manufacturing toys, shoes, gadgets, or whatever you are doing, if you are transferring from hand tools and using energy from oil, coal, gas, etc., let's see what happens. (Another rectangle drawn on the board)

Let's assume that this area -- the area subject to assessment of possessed value -- a number of years back, you could assess the whole area. But now there are blighted areas in the municipality -- concentrated populations -- and technology comes along and reduces the technical equipment. Rising consumption of energy -- rising from nothing -- in that area. Now a very peculiar thing happens. Remember a few of them, that is, the energy input increase in volume and time. The output capacity is increased; the man-hours per unit decreases, and the amount of energy consumed per unit decreases as the total items per unit of time increases. At the same time that that happens, it does a very peculiar thing; it reduces the unit of assessed value area per unit produced; it continues to shrink the area, because you produce more and more on a smaller and smaller area or less cubic feet of space.

The smaller plants can produce several times what the old-fashioned plant did, so that instead of regional planned industrial area expanding hugely, the area shrinks on them. Now, besides that, it reduces the capital payoff time. Something Karl Marx never knew or economists never envisioned. For thousands of years, the time necessary to pay off the interest and principal on a large amortized investment was usually bonded issues with a hundred years to pay. Well, it took that length of time to pay off. The introduction of energy and technology has reduced it toward zero, and reducing the man-hours toward zero and the energy consumed per unit produced tends to go down, etc. While the unemployed tends to rise and unused area tends to rise, or increase, the production will rise and your available capital rises.

Now, with your extraneous energy production in any area, manufacturing written to half of the amount of many times the original, some peculiar things happen. The industrial area begins to shrink to a smaller rectangle. It doesn't grow, it decreases, because you are producing a huge amount on less and less plant space. So, thereafter, in 10-year periods, it would decline in this manner. (Diagram on board showing the shrinking of the original area) This decline occurs at a high rate of speed and undermines the whole county structure and political setup. This occurs in several different ways. You have a powerhouse that was built 30 years ago, an old building down in an industrial quarter -- no improvement in there; but the technologist can put in 50 kW units and have space left over. Can you move up the taxes to 3 times for that land? No. The building hasn't been altered. You don't jump your taxes.

Well, that is giving one side of the picture. As in the case of the Eastman Kodak company, they used to have a six-run process on their films, using seven buildings; now the new process is high speed and in only one building. They gave their other six buildings to the City of Rochester. Do you see it now? They were being magnanimous. The people of Rochester are just dumb. They didn't realize that what the Eastman Company was doing was being beneficent and getting rid of taxable property. Now that happens all down the line. True, we are getting expansion on war industries, but they will introduce processes that have been on the shelf for a long time.

Now let's see what happens on the other side of the picture corresponding to the increase in energy per area. There is an acceleration in the rate-time in capital payoff. Well, I'll give you a few figures to show you what happens. Take \$100 million invested a century ago or 50 years ago or 30 years ago, it would be on the bond issue on a 100-year basis. One hundred million on that basis we can only invest once in a hundred years; and that was true for over 7,000 years. In 1360 BC, they had rent and amortization and leases, and these are practically the legal code of today. It reads the same -- 6% and 7%. Don't think you progressed very far on that deal. So the one hundred million on the old basis could only be invested once in a century. Right down here in Cleveland, the Republic Steel equipment costs \$8,500,000. That is not the property -- that is the equipment cost -- 42,000 horsepower motor speed, over 2,400 feet per hour of 96-inch steel sheets. Only has to be operated between 75% and 80% of capacity, and it pays off the capital investment in 36 months. So now, instead of hand tool and hand toil rate of capital payoff, you pay off in three years. We could reinvest at that rate 33 times in a century. Now, what is the name of your continuous equipment making radial cylinders for aviation? Greeley equipment. That cost \$800,000. It wouldn't make any difference if the cost were \$8 million or \$80 million, the Greeley equipment pays off in 10-1/2 weeks. Are you beginning to see the picture? Approximately 5 times in a year or 500 hundred times in a century.

We now have capital in the United States that has been invested in this modern technology, but we are only interested in the total of credit available. It will ruin the cockeyed system, because you would have no place to invest it. Remember, technology will reduce that 10-1/2 weeks to where you wouldn't have one week's operation, and it pays for itself. Well, you can't run banks or fiscal systems on any such basis as that. Now, your hand tool and hand toil economy was a relatively sound and simple thing that required 100 years to pay off your capital investment. You were assured your interest and return and the amortization, and in a hundred years you got your principal back. But here you put your money in the Greeley equipment, and in 10-1/2 weeks you've got the headache all over again. Where are you going to put it? And when you start investing that way, soon you will get all the old equipment out and put in new equipment, and it will pay off in less than the Greeley equipment.

You see what a dilemma your financial system is in? Yet Technocracy predicted this years ago. The war is shoving the energy curve up, reducing the taxable area. Do you see cities and counties trying to get rich on taxable income? You don't notice it, do you? There are going to be difficulties -- there will be more and more difficulties, and your banks are drowning in their own liquidity at the increase in new equipment. The new equipment will have to be faster, more energy consumed per unit of time; in other words, our system has about as much chance of surviving as a celluloid dog chasing an asbestos cat in hell. Seriously, the more production requires less man-hours, requires smaller space and less taxable area, and pays off the capital investment in faster time. Of course, these are things very few people ever have time or data to dig into, but you can't beat it. Any banker will tell you the same thing. They are trying to shift the taxes over to exchange value, that is, the sales tax. They are not getting it from assessed value; that is shrinking.

For instance, the millionaires with 20, 30, or 40-room houses, do they want to hang on to them? They will give them to you. For instance, Mrs. Montgomery Flagg rented her house a couple of months ago. It has its own private beach, sunken solarium, library, a collection of phonograph records, complete with glassware, linen, and everything else -- four master bedrooms -- at \$100 a month, complete. Well, why not? It is two miles from the railroad. Americans have forgotten how to walk. It is forty miles out of New York, and you can't get there on an "A" card, and it is too far from the station to travel every day. One hundred dollars for the works. She doesn't even ask you to pay the insurance. She also wants to get rid of the stigma of the name of the place. You haven't heard about the battle with the sanitation department. It is about a 600-acre estate. Well, that is the type of thing that is happening.

If the government borrows from the banks, the banks will be more liquid than ever. At the First National of San Diego, when I was there, the president turned down one of the biggest accounts in California. He said, "No, we don't want it. We are loaded up now. We want some to take our money out." They are all in that position. Yet you can look back, and you had banks in this country that were ready to fold up. Some of you remember that other side of the picture. That is happening all over the

country. And it is going to continue to happen, and as we increase power-generating capacity and build more plants, it will shift the emphasis to other areas, a shift in population, and, of course, shift the increase in the plant capacity, and your taxes go to the devil.

Do you want to see a ghost city? Go to Spokane, Washington, or Fresno, California. There are no war industries there. Several-story buildings are boarded up. Stores empty, block after block, and you see old men and women sitting around and looking as if the enemy has just moved out a few hours previous in that area and waiting for the other enemy to move in from the opposite direction. Every able-bodied man or woman that could swing a shovel or pick has moved out to get a job in a war industry. Well, it's sad. The restaurant owner doesn't know whether he will be in business another week, and he will tell you he hopes he is not. He can't take any more of it. It isn't his fault, remember.

The sugar beet farmer and grape farmer and orchardist were stuck with beets by the million, grapes by the million, etc. The army was taken out to help -- kids out of high school, but it was sporadic -- no organization. That is what is happening in these United States of ours. Remember, we can look back at our records. We put it up there years ago. We said it would happen in 1942. We are in a beautiful position. We can look down at anybody on this continent in our inimitable fashion and say, "Well, sap, you might have been nice, successful people, yes, but look at you now."

# # #

#### TRANSCRIPTION BASED ON QUESTIONS ASKED

Many of you wonder why in our program of total conscription we specified the same pay basis as that of the United States Army. Lots of you think it is -- the same pay basis as the private. No, it is not that. The average citizen knows what the men receive from private to general, so that is no shock to him. If you tried to explain it to him that all should get the same, you would have to fight this conditioning. Under total conscription, the United States pays all the civilians money, and

why? Because the citizen wouldn't want to be without some money in his pocket. Now there would be no banks or safe deposit boxes. Everything being rationed, you could still have a roll of one dollars in your pocket. All bills and denominations larger than one dollar would be called, and it would be illegal to have in our possession denominations larger than one dollar. When you pay out, you would pay out these one dollar bills. A general gets \$700 a month. Did you ever try to carry 700 one dollar bills in your pocket? You didn't realize how humorous it is. You wouldn't realize it if you were not members of Technocracy. They saw it and the answer was this: "We've been calling the wrong man in this country a son-of-a-bitch." Remember, you can't deposit this money in banks or in safety deposit boxes. And you would spend it with the United States Government. The government will only give it to you so that your conditioning would not be too upset. You will feel quite successful with one dollar bills in your pocket. Remember, with one dollar bills you can't buy any property, you can't buy items of value, because that will all be rationed to you. And you can only pay fancy prices. So recreation and luxuries can be had by means to take strips of paper money away from you. You won't be able to buy anything anyway. You won't have to explain that to the general public of the United States. What it really is is the education of the sap in practically no time. You are wondering with a pocketful of paper what in hell is the sense of doing it this way. Never let it be said Technocracy hasn't a sense of humor.

QUESTION: Give us the detail of the liquidation of the white collar group.

Technology is going to liquidate the white collar workers or the middle class. The government of the United States is going to do that. It is doing that right now. Technocracy isn't going to do it. It tells the government what to do, then the government goes and does it for us. If you will notice, when Technocracy proposes something, the United States Army invariably follows suit. Very interesting to watch. They never miss. They may take a while getting aboard. Technocracy proposed having the government close all foreign literature. That is in the total conscription program. There is a statement there banishing all foreign broadcasts in foreign language for domestic consumption, or publishing newspapers in a foreign language. What we ship abroad is another matter. Printing newspapers here or broadcast in a

foreign tongue -- there would be only one language. Current news on scientific material that can be transmitted over the world has nothing to do with that. It is a question of everyday existence. We are here whether we are German, Poles, or Hungarian. Let's speak the one language. It happens to be the language of the majority.

QUESTION: Was Technocracy instrumental in taking Father Coughlin off the air?

We didn't. The United States Government did it, but the mistake of the Catholic Hierarchy was that they didn't take him off before they were forced off.

QUESTION: What effect would having a pocketful of folding money have on gambling?

Well, you can gamble if you want to, but what can you do with it? You begin to get the idea? You can get a whole taxicab full. Then you have more than the government paid you. Well, then you would lose it all.

Don't worry about the deal with General Eisenhower and Darlan. That deal was made by Robert D. Murphy, the charge d'affaires, Leahy, and counselor representatives, the State Department, and General Eisenhower. Don't accuse the army of making the deal with Darlan. When the army got there, it was a fait accompli. Entirely a different situation, but I don't think you have to worry about that.

QUESTION: Is Technocracy in favor of giving all of Europe to Russia?

Frankly, we don't give a damn what they do with it. Of course, as far as Asia is concerned, you have 16 million in Burma; you have 43 million on the Island of Java. And as to the present situation, if Japan is permitted 10 years to control Asia, it is doubtful whether the white man will ever go to Asia. Right now, of course, a lot of people are hollering about the British in India. Well, the biggest mistake the British made was that they entered with the Christian spirit. That is the big mistake. They should be executed for that. When they entered India, there were 110 million Indians -- now there are 370

million. The Dutch were the worst -- they multiplied the population of the Island of Java four times. The Americans were on the road to better the Dutch.

Now, the mistake that was made in India was the introduction of hygiene and engineering, increasing food production and decreasing the death rate. These factors doubled the population. But the Americans, French, and Dutch were all equally guilty. Ghandi wants the Indian to go back to 2-1/4 acres of land and to operate it by hand tool methods. I sat with 40 leaders, cross-legged on the floor, and, frankly, they are not worth a damn. I happen to know a great deal about the steel plant in India. I have a very good friend in India -- he is the same height and build I am. I am probably more responsible for the steel plant in India than any other man in the world. It was built right here in Cleveland.

The Indian is in a peculiar mess. Now, he still wants to hope India -- with over 10 million cows -- wants all the higher birth rate, and yet he wants to get rid of the British. Just like the Irish. They want to get rid of the British, too. But let me hand you a few facts. The Island, in the last 70 years, was the greatest exporter of capital per capita than any other country in the world. I mean the Irishman in Ireland. The British are guilty, too, but the Irish in Ireland were worse than the British ever were. The export of capital per capita made by the Irish was the greatest of any country in the world. It is tough to take.

Now, the British made the mistake which the Japanese are throwing out, such as faucets and sanitation, and why? Because the Japanese are not cursed with the nice Christian people. They know that China and that area around there levels itself off every twenty years by disease and famine. The Japanese have the problem that the white man created for himself and for the Asiatic in that area by being so damned good by creating more Indians, more Chinese, and more Burmese and Javanese, and so on. Java can't support herself, has had to import many things, so they sent missionaries over to sell them and real estate and most of them didn't know what the hell it was all about. Those are factual problems.

Remember the famine in China a few years ago? Technocracy was the only organization in the United States that sent a

protest to the American Red Cross in Washington, that there was no sense in sending food to the famine area in China, as they had no means of transporting it from the river to the famine area. It was 125 miles from the river. To send any food that was transported by human animal would require all that food that he could carry just to travel that distance. Well, the Red Cross sent the flour, food, etc., and it was put on the open market in Shanghai. Well, why not? They knew it couldn't be done -- it couldn't be sent to the famine area. They were sensible. We were the dumb ones. Now remember that the white man cannot live in equatorial Asia. According to the Geneva Conference, an agreement was made to feed each other's prisoners the same food as their own armies. The Japanese prisoners will be our men. If they are kept a year, there will be no prisoners. They will die of dysentery, etc.

QUESTION: How is the Army taking total conscription?

The United States Army is better fed than most citizens in the country. Don't forget you get men out of all kinds of situations in the United States. You are taking people out of the south and giving them a decent diet for the first time since they were born, and you put them in the armed forces, straighten them up, and they are putting on weight. They don't have to worry about clothes, food, or taxes. No trouble there.

The Russian strategy is over 800 years old. In spite of all the German works on strategy, they couldn't conceive -- and they never had the courage or the territory to generate -- such conceptions. The Russians defeated the Teutons, Poles, Finns, and Tartars. Charles XII of Sweden and Napoleon -- they licked the Russians until the last time. Charles of Sweden got out with himself and a few of his general staff. Napoleon crossed the Don about September 12. His official communiqué said the day was mild (on his famous retreat of the Grand Army of France). The engineers stood in the water and held up planks for Napoleon to cross. All those wonderful pictures showing the Grand Army being frozen to death and dying in the snow is pure nonsense. The casualties of his army were 30% -- the best veterans of Europe. The Russians died, too.

What happened to the Russians in the last war -- with a rifle for every eighth man -- they had to wait for a man to die

to get a rifle. Remember, their casualties were greater than the combined casualties of the British and Germans (from 1914 to 1917). It was the advance into Russia that stopped the Germans. Russia attempted in a 96% agrarian economy to mobilize 12 million men. There was a breakdown not because of Bolshevism -- they were against it -- that didn't have a damned thing to do with it. They attempted to mobilize 12 million men in a 96% agrarian economy, and the roof caved in and the cellar blew up. Don't forget we are attempting to mobilize 74 million human beings, and if you think you are going back to where you were -- the hell we are!

It may interest you to know that there is a gray cloth manufactured in Great Britain with Technocracy woven in the selvage and shipped across to Canada; in fact, some of it is coming to Seattle. They are bringing it in with Scotch whiskey. So now it is properly aged. One of the ironies of the war. In a mining town in Canada, there are 27 more gray suits in October than in April. Funny people, those Canadians. They have taken it on the chin a great deal longer than you have here. They know what it means.

We are shipping food and equipment to Russia but not the food and equipment that she needs. According to Russian communications, she is not satisfied with our tanks. They are gasoline-driven tanks, and she has just cause for complaint. On the Stalingrad front, compared with the Verdun battle, the greatest mass attack of the First World War, there were 10 divisions at one time and that was without tanks and dive bombers, purely artillery and machine gun fire. In the greatest single attack on the Stalingrad front, there were 30 divisions headed by 1,200 tanks and 1,500 dive bombers. Now on this front, Russia is fighting 243 divisions of the German fascist army. In the First World War there were only 179 divisions -- 79 German divisions and 121 total divisions. The Germans in this war were stopped by superior firepower, not by courage, and when armies of that size are stopped, they are stopped because there is firepower and organization and strategy and discipline. The Russians always narrowed down the defense in depth and continuing the frontal attack. Germans were first on a 2,000-mile front, then narrowed to a 700-mile front. All the Russians need is the guns. Of course, that is what is worrying some people -- if you gave Russia the equipment, she might go right through and the British want to get there before the Russians.

QUESTION: Why was Earl Browder left free?

Well, Earl Browder was sentenced on one of those technicalities. He was the leader of the Communist Party. Naturally, the government made a trade, and the communists are not above trading. After all, Tim Buck, the communist leader in Canada can appear in Canada today with Premier Hepburn, but Howard Scott cannot cross the line. When we do cross the line, it will be different.

The Russians are the only ones that defeated the Japanese in the last 1,500 years. Russia defeated 142,000 Japanese, plus the Japanese field staff and 3,600 dead, but all you got was a couple of lines in the back of your newspapers. When the Russians won, that was a skirmish. There were 300,000 Japanese engaged in that war -- the Japanese Fourth Army, or more men engaged than there are Japanese fighting Americans and Dutch in any part of Asia. The Japanese don't want to attack Siberia. They don't want to fight in 40 or so below zero. Of course, the dirty Russians don't mind it.

QUESTION: Why don't we have air bases in Russia?

We'll have them the moment we are allies of Russia. We are not allies now. We are only exporting to the U.S.S.R. When we are allies of the U.S.S.R., we can have air bases -- the moment we land anti-aircraft, sufficient heavy artillery, and 500,000 men. We can have air bases in Siberia, and we are not prepared. The Japanese are between us and the Russians.

ONE LAST QUESTION: What are the Technocrats to do in this area?

The Technocrats are to go out and get more members and consolidate your organization. Events are laying it in our lap and we haven't been wrong about this yet, and any organization that keeps on, maintains its solidarity of purpose, its strategy, and conforms to the parallelism of events -- it's all aces.

HOWARD SCOTT  
LOS ANGELES  
LATE 1942

The United States has been a very fortunate nation. It has only had 28 years of military warfare in its history. Compared to France -- France in the last 400 years has been fighting 313. So, it is quite natural that in this expanding economy of ours in the last 167 years, we have built up the concept that peace is a normal condition of human society. We preached it in our scholastic institutions and from our pulpits and the political gas-bags also enunciated it to you so many times that you really have believed it. Gas has a facility of doing things like that. Nothing is further from the fact. Since the year 1600 BC, or in 3,500 years of human history, there have been less than 330 years of peace in this world of ours. So peace is an abnormal condition of human society and war is perfectly normal. Oh, you don't like it, huh? You will.

Of course, the last time that we had any serious conflicts within our own structure was the war between the states, otherwise known as the Civil War. Since that time, other people who have never faced any issue except the adventure of the Spanish-American and the participation in a world war. In the World War, we were not the dominant figure. In this first Total War of human history, we, the United States of America, occupy the chief position of being the arsenal of the United Nations. Now, in spite of our misconceptions and our false ideals, we are going to be forced -- not by Technocracy or by the Republicans, but be forced by the march of events into an interesting social transition.

It is true every war in human history, except within the last 100 years, has been fought with hand tool weapons by armies from human toil and hand tool economies. They depended for the maintenance of their armed forces on what they could acquire from enemy territory. Their firepower rate was so small that it really didn't matter. In Napoleon's time, one man at home could maintain two in the Napoleonic Army. By the time of the Franco-Prussian War, the ratio had reached 1:1. In the World War, approximately 3-1/2 were required on the home front to maintain one in the armed forces.

In this Total War, due to the fact that a Total War is also a technological one and the firepower rate is several times that

HOWARD SCOTT  
LOS ANGELES

LATE 1942

of the World War, we will require a higher proportion of human beings mobilized on our home front to maintain our armed forces. But many of you have the idea that all you have to do is buy War Savings Stamps or Bonds and then sit back on your posteriors and feel that you've done your patriotic duty; Well, you are really not to be blamed for that, because you were brought up and conditioned in probably the swellest bit of chiseling economy the world has ever known, where the dollar sign has been recognized as a sign of success. Naturally, we've been the most successful nation in human history. We have created more multimillionaires out of morons than all the rest of the human race.

Technocracy, for the past decade and more, has been like John the Baptist crying in the wilderness, trying to bring the people of this country and of this continent a message; and if you will look back, you will remember that we said in the year 1942 you were going to get it whether you liked it or not. Well, it's here. A lot of you felt that, "Oh, no, you didn't want to be regimented, you didn't want to have any planning, you didn't want to have any design." You all wanted to be free, bright, and

to choose your own clothes and wear whatever you damn well pleased. Well, all one has to do is to look at you to know how successful you've been at it. The chisellers of the garment trade sold you the fashions and look at your female. Why, if you let her out with any money and she comes back, you don't know her.

Now the women are being drawn into the war plants, and they have to wear slacks -- nice blue rayon, for instance. And the interesting thing about it is the smartly fitted rayon slacks are much more conducive to a matter of figures, let us say, than all the clothes of fashion ever were. You can see the figure quite distinctly. Furthermore, the girls working on the job realize it, and they have them fitted a little more accurately.

There are other things, of course, that that regulation dress of female employment are also conducive to. The lady doesn't have to wear stockings; she can wear bobby socks. She doesn't have to wear any of those horrible things known as foundations -- that would interfere with that fitting, wouldn't it? So, for the first time, the American female, not by her own intention -- oh, no, not at all -- but by the force majeure of the march of events in organizing this country for war, she is forced into a position where she is much more attractive than she

HOWARD SCOTT  
LOS ANGELES

LATE 1942

ever was. And having discovered a whole lot of new curves that she never knew she had before, she's not going to go back to those things that her mother used to wear. Well, why not?

This is a technological war, and in order to win this total war, we will be compelled to install more and more technological equipment across this country and of this continent and up and down it. And the faster we win it, the faster we'll have to put in technological equipment to achieve that victory. Well, but it's going to cause all kinds of upsets. You know in your community -- the thousands that are here tonight -- you live in quite a few communities, and next door to you or on the next block, there exists everywhere in each community those nice, successful people -- you know the kind. They have a little bit more property than you have, made a little bit more money than you have, and naturally they're an authority in the community in which they live; and now it's going to come out that they're going to be the curse of the continent. In other words, the worst curse we have is that successful, nice person, because the more successful they were yesterday, the dumber they're going to be from now on out; but they're not to blame for it, not a bit.

There are approximately 1,700,000 retail stores in United States, and Technocracy predicts the mortality list will be 40 percent of that number in the next sixteen months. Well, why not? You don't have to have all these retail boys when you have rationing, when you haven't the total number of articles to sell. Just as you do not need the advertising nationwide or newspapers or billboards or over the air when you can't sell what they're advertising -- when you haven't got it to sell.

Well, newspapers are going to be smaller and thinner. The Canadian Government is withdrawing 960,000 horsepower from the paper industry of Canada. They're already shutting down paper plants in United States, and such big paper plants in Canada as the Ontario Pulp & Paper, the chief supplier of the Chicago Tribune and the New York News, is going to be closed. You have a few papers out here, too, that will have a little perfume. Chicago and New York hasn't got them all, you know. And those probably will be reduced in size, too.

We have a farming situation -- it's nationwide. The big farmer with five to ten calves or the big dairy farmer with 150

HOWARD SCOTT  
LOS ANGELES

LATE 1942

or 300 or 1,000 milkers had to depend on employees to maintain and operate those farms. The farm wages were nothing in comparison to what could be obtained in the shipyard, the aircraft plant, or the munition plant or the tank plant. Well, they've left. The small farmer, who had the two young children -- a boy of 12, say -- well, he reduces his maintenance on the farm, his cows to one, and leaves the one cow, the children and the wife to take care of that and goes out to a war plant, too. That is happening clean across United States.

The number of auctions in dairy farms has risen. You find them in Wisconsin. The third greatest dairy farm in the State of Nebraska, the other day, was sold at public auction. Why, because the man wanted to quit? No, because he couldn't maintain it. You're going to be hit right here in California with it -- right next week; and you'll remember what we're saying tonight next week. Because you're going to find difficulty in milk, butter, and especially beef, and some other meats. Your mutton quota will be the best, approximately 95 percent of last month, but beef, that's out. Your pork approximately 35 percent.

Well, the only way you could get any intelligence into the average American's head, collectively speaking you know, is to slap him with something. Technocracy has always told you that your government is going to do it for you; so, it is going to put you people on the spot to where it's going to compel you to. Going to have gas rationing, coffee rationing, all kinds of rationing. All the war has to do is to go on another year, and there will be standardized clothes for all the males and females. Isn't that going to be lovely? Why, for the first time, you're all going to look like Americans. Well, why not? The boys in the armed forces have to; and why shouldn't the rest of us?

We're short of material, short of manpower, and the only efficient way to do it is standardize it, and you can have better looking clothes than you have now -- wearing tonight; because there isn't one in 100,000 that ever goes in for style; 99.9 percent of you go in for fashion because the lady next door bought it or the man at the next desk bought it. We're the greatest bunch of imitators in the world, and we can't afford to let somebody else be too much different. We have to all look alike, but just a little bit different; and, yet, that's on its way and coming. Don't feel badly about it if the suit you have on

HOWARD SCOTT  
LOS ANGELES

LATE 1942

tonight or the dress is the only one you have; be thankful, because then you won't feel hurt about losing so much.

Now, when you all get in regulation dress, you won't have that holier-than-thou feeling regarding your fellowmen, will you? You'll be able to practice that Christianity you've professed so long. Oh, I know that many of you feel that I'm being perfectly nasty after rubbing it into you. Well, I'm only telling you what's coming to you, because the conditions are going to rub it into you.

You haven't had gas rationing out here. In the East, we've had it for some time. It might interest you to know what happens after you've had gas rationing for 3 or 4 months. Well, let's take, for instance, an interesting cross-section, the corner of 42nd Street and Second Avenue, New York City, on a Sunday afternoon. There are two lanes of traffic in either direction, and prior to gas rationing to attempt to cross that against the light would be suicide. They just whoosh past there. Everybody who has a car is bound for the Island over the Queensborough Bridge or bound north. Well, now you can walk out there about 2:30 or 3:00 in the afternoon and glance north, and, yes, there's one about seven blocks up there, and you glance in the opposite direction, there's one about six blocks from you. In fact, you can hold a parliamentary discussion in the middle of Second Avenue.

New York has a real dimout -- not what you have in Los Angeles -- comparable to what you have in Long Beach. The result is very interesting. People used to go downtown at night to do window shopping in New York. Now there is no light lit up in any window in New York after sundown. If you want to see in any store window, you have to have a flashlight. The result is that people do not go downtown in the evening. Besides, four gallons a week won't take you very far.

The wealthy people who have homes 8, 10, and 12 miles from the railroad tracks don't want those homes any more. They'll almost give them to you. Fact is, we know of a few cases where they have paid people to take the place off their hands. Well, the widow of a nationwide illustrator had a magnificent home out near Mamaroneck -- five master bedrooms, solarium, completely furnished, dishes, linens, everything, private beach -- but it's

HOWARD SCOTT  
LOS ANGELES

LATE 1942

a couple of miles from the railroad. She rented it for \$100, completely furnished, everything -- dishes, library, everything in the house. Now you see what's beginning to happen.

Of course, now, if you're in California -- the home of the escrow Indian, you built one subdivision after another -- or one wigwam, I should say, after another, and you spread out from hell to breakfast, didn't you? Well, it's going to be funnier out here. Back East, and out here, of course, occasionally criminals attempted to counterfeit the United States currency. No more. They're not interested in counterfeiting money any more. What the hell good would that do? They're all engaged trying to counterfeit ration books; and there has been a considerable number of arrests of attempted counterfeiting running up into several million dollars each. We Americans are the smartest people on earth individually, and if any scarcity occurs, either actual or enforced by business speculation or political legislation, we Americans get up early the next morning and immediately jump into bootlegging that scarcity. Now, in the bootleg days, they only had one commodity to bootleg, but let's look ahead a minute. With 100 to 200 major essential items of human consumption we've placed on the ration list, bootlegging is going to be the major pastime. I know, you laugh at it, but you're going to be hit by it and hit where it hurts. Who is going to pay for it? John Q. Public -- you are, all of us.

In the New York milkshed today, the United States Government purchases all the milk from the farms and then sells the milk to the milk distributors at a loss so the milk distributors can make a profit distributing it at the retail milk ceiling. Well, suckers, how do you like it?

The Big Five packers are making a similar proposition, that the United States Government purchase all the meat on the hoof from the farmer, the buyer, and the feeder-shipper, and then pay the Big Five packers cost-plus to process the meat, and then sell sufficient meat back to the Big Five packers so the Big Five packers can sell at a profit to the retail distributor outlets. In other words, the Big Five packers, all the shippers, and all the meat industry want to stay in business at a profit on your money. Now do you think you're going to get equitable meat distribution under such a cockeyed system as that? You're not and you know it; but your conditioning is such that deep down inside

HOWARD SCOTT  
LOS ANGELES

LATE 1942

you say, "Oh, well, I know a few angles. I'll get mine." You're smarter than the next guy, aren't you? You'll get up an hour earlier in the morning. Well, you better stay awake all night in this case, because it isn't going to be there to bootleg, brother. You've forgotten that.

This war has already produced vast changes. People have poured in here to this city in thousands, but do not forget they have poured into other cities in vast numbers. Two hundred fifty thousand white southerners have moved into the City of Detroit. Out here you have the advantage of climate and your trailer colonies. Yes, one can live out here in a trailer colony; but the trailer colonies that are spread out around the City of Detroit -- remember, it gets cold there, and they have thousands of women and children in those trailers. Technocracy predicts that if this winter is wet and cold, there will be an epidemic of pneumonia and flu in those Great Lakes war centers. Another example of our total anarchic, unplanned operation of our war effort.

In Mobile, Alabama, 95,000 people have moved there on top of 36,000. There are whole sections in Mobile that have only one water tap for 50 people. Well, maybe they don't have to wash in Mobile.

All these items could be repeated from New Britain, Connecticut, clean across the United States.

We're in the midst of the biggest boom that we've ever known. We're getting "nigger rich". We've got our snoot and all four feet in the trough at the same time. You know it, and you're enjoying it. Nobody blames you. Don't misunderstand it. Technocracy is merely pointing out that you cannot go on with it very much longer. Now, why can't you? Because if we have to reach the figure of 10 million in our forces, it will require the mobilization of 34 million industrial productive personnel in our war production, plus 30 million in civilian consumer goods and services. That's a total of 64 million. We have never reached that figure in any peacetime year of operation. It means that we will have to draft millions of women into national service. We will have to abolish so-called businesses, and the businesses are being abolished. You can watch the small, stores and restaurants closing up. After you have had rationing here for 60 days, just look your situation over and remember tonight, will you, because

HOWARD SCOTT  
LOS ANGELES

LATE 1942

you can count them on your fingers. You can get a little game going with yourself: go down the same block once a week and see how many more fingers you can add.

All the successful, nice people -- look where they're going to be because that's what they are. They were the smart, smart boys of the country, weren't they? And through no fault of theirs, they're now going to be liquidated, and you're probably going to hear more screaming than has ever occurred in the history of our country, because the nice white collar class is going to have its -- I was going to say something, but I won't. They're going to lose their white shirts.

Now one transition after another is going to occur. Farming cannot be cured by the draft or special law. You can have deferments for the farmers, but that doesn't stop it. The personnel is already gone. Let's take an area in any one of our larger farming states of 25 miles by 25 miles, or 400,000 acres. There's a road in each direction every mile. There's approximately 4,000 farms of national average size in that area. Four thousand-plus sets of buildings, 4,000 houses, and 4,000 sets of farming machinery. If we attempt to operate farming on individual enterprise, individual farms, we neither have enough farm labor nor do we have enough farm equipment because of our failure to produce spare parts. But on the other hand, if we operate agriculture by pooling the equipment in a 25-mile by 25-mile block, we will have sufficient personnel and over six times the necessary equipment. Think it over. We can have 2-1/2 times the total operating equipment in operation and scrap the remainder.

The same thing occurs in our national transportation problem. The rationing of gasoline is no solution, because what our problem is nationwide is transportation. Ninety-five percent of America moves on wheels, and rationing of gas is not going to provide that transportation. It is still going to leave it wide open for the individual owner of an automobile after trying to get his gas, tires, oil, and spare parts as best he may. Well, if he has more money than his next door neighbor, he's going to offer it. Why, you can't expect the girl to go around for money anymore, but she may go around for a ration book. We might just as well face the facts. Rationing will not cure our national automotive transportation; on the other hand, if we conscripted

HOWARD SCOTT  
LOS ANGELES

LATE 1942

all the automotive vehicles -- busses, trucks, and private passenger -- and reassigned those to industrial plants and to areas to make a defense transportation squadron, it would take the individual matter out of the hands of the individual; and no individual would have to compete with any other for gas, oil, tires, or spare parts. It would then be part of the defense transportation of the United States Government, and the United States Government would have to provide you, as war work necessary citizens, with fair transportation. That is the only way to achieve it equitably. This way you're all encouraging every one of you to commit crimes and misdemeanors, and you're going to commit them on every possible chance that you can; because if you think that you can find some gas or something else faster than your brother over there, you'll do it. Well, realize what it means.

The same thing occurs in public feeding. The restaurants of United States under private operation today are totally incapable of handling the feeding of the public of United States under a ration program, because, remember they are operating for a price and a profit. There is sufficient restaurant equipment in every major city to run national feeding establishments 24 hours a day, but not if you attempt to maintain all the greasy spoons you have in Los Angeles or in any other city.

We haven't got enough cooks now -- good ones -- to feed the public or the United States Army. We're still trying to kid ourselves that you can run a private restaurant and make money and adequately feed the public under a complete ration program. What's the steakhouse going to do for customers when there are no more steaks? Do you know what Donnagals, the famous steak restaurant in New York, does on meatless Tuesdays? It closes completely. And it won't be long before it closes all the days in the week. You're going to have the same things happen here.

Our milk, our butter, eggs, meat, food in bulk in the production in the agricultural end and in the retail handling of it are in jeopardy. It's in jeopardy because you -- meaning each and every American -- haven't bothered as long as you have been able to get yours. You've never paid any attention to the problem of how your own country operated -- not once. But once in four years, you went down and put a cross on a piece of paper, went into the nearest bar and got a drink and said, "Well, you did

HOWARD SCOTT  
LOS ANGELES

LATE 1942

your duty". Then when you came home, you told your wife how proud you were to have participated, and she, knowing how dumb you were, patted you on the back and said, "Yes, darling".

In the last national election, there wasn't any issue between them, and yet you went out and voted. You didn't know what the hell else to do with yourself. Well, in this Congressional election, you were just too busy to get there, and you didn't give a hang; and the vote that did roll up was a mere protest vote -- not that it was Republican. There aren't that many Republicans in the country. Americans, of course, when they move anything politically, they never do it because they're for anything but always because they're "agin" the one that's in. You know that. You want to cast a vote because you don't like it, you're "agin" it. But for anything? No. You never had to be for anything in your lifetime. Technocracy warned you you're going to be compelled to be for something in the next two years. Not because Technocracy is going to compel you -- you're going to be compelled by the march of events.

You pull 10 million males into the armed forces. They're going to leave the competitive practices of private chiseling and surrender all those nice prerogatives and don a uniform at \$50 a month and up. Well, "You're in the Army now, you can't get rich ...." You're going to be in the army soon, the Army of National Service. So, don't you join that hymn. We'll have to put everybody on the same basis.

In the last war, we manufactured 30,000 new millionaires. In this one, we're headed to make some billionaires. Now, the taxes that you're going to have to pay pretty soon -- some of you feel are pretty steep. But they're not steep at all. They're only half per capita what you would pay in Canada in a similar situation which you are now. You still have no forceful deductions from your pay and salary checks. In Canada, there are 13 deductions every week from their paychecks. Oh, yes, how would you like to be receiving \$58.30 a week in Canada for 52 hours' work at \$1,125 an hour and have \$13.09 deducted? You never see that -- and then pay an income tax on the total amount.

What did we tell you? That if you're in the army, you didn't get rich? And we've been enjoying this boom, that gravy trough we're in now. Well, lick that gravy up, brother, just as long as

HOWARD SCOTT  
LOS ANGELES

LATE 1942

you can, because that gravy train is going to be a dry boat before long.

This fiscal year, ending next June 30th, the taxation will be between \$20 and \$21 billion total taxes collected. The total expenditures will be \$84 billion. Oh, well, but wait a minute. We've got another year coming. The present tax program for next year cannot collect greater than \$26 billion total taxes, probably only \$25 billion. But the estimated expenditure already down on the books is \$108 billion. Within a few days, they're going to float that \$9 billion new victory loan. That's the biggest single flotation ever made. But 9 billions is only a drop in the bucket. We're headed for greater and greater amounts.

The banks of the country are drowning in their own liquidity. Back in 1933, they were freezing to death in their own frigidity; now they're drowning. The Treasury Department could borrow from the banks, but the banks of United States don't want the government to borrow from the banks, because if the government borrowed from the banks, the banks would be more liquid than ever. Isn't that ironic? An amazing dilemma of our country, with, more gold, more silver, and more money than any other country in human history, to find that there is plenty of money, where banks are drowning in it, and yet our government shouldn't borrow from the banks because the banks would lose their "onions". Ask your banker, he'll tell you.

Your bankers are in such a liquid position that they're shortly going to indulge in a campaign for nationalization of their institutions, so they can get on the Civil Service payroll. Why not? And when you've gone through the anarchy of this cockeyed private enterprise handling of food rationing for about 60 days, you'll realize that in the armed forces, at least, you'll get well fed in there. And you'll probably get there some way by hook or by crook.

It's a dirty trick that fate is playing on us. Here's all these successful, nice people turn out to be no damn good. Correct? In other words, all the rats but you, the genius turns out to be the height of moronic mediocrity. Now realize what we're headed for. Two years more of war beyond this fiscal year, and our debt will exceed \$300 billion. Three hundred billion dollars and you're going to pay it off? Ask some of those

HOWARD SCOTT  
LOS ANGELES

LATE 1942

successful, nice people that you know. Ask them what they're going to do about it, because they're the ones that got us into this.

On the other hand, we face a technical problem of mobilizing 64 million human beings to operate our war economy. Now to ask any individual to participate in having his job changed or to move from a geographical location to another geographical location, probably surrender his seniority rights, to ask him to do that on a voluntary basis, it can't be done; and he's perfectly correct in resenting it. There's only one way it can be done: That is the Total Conscription of all Manpower, Machinery, Money, and Materiel. Well, the United States Government can conscript us the same as conscription for the armed forces. The United States Government will assume economic responsibility for each and every citizen for the duration of the war and six months thereafter.

Remember that when you enter the armed forces, the United States Government assumes economic responsibility for your food, your clothing, your shelter, your health, recreation, and transportation. Now realizing we cannot interject 64 million human beings on a voluntary basis, it will have to be done on a compulsory basis of national service; therefore, each individual citizen would have to have the government assume economic responsibility for his and her subsistence the same as it has assumed for everyone in the armed forces of United States. Well, true, your income -- what would it be? Your income would be on exactly the same basis as the United States Army. What -- you say I can't make any more than a general in the United States Army? Well, let's see how it would work.

A Total Conscription is passed by Congress in an enabling act and signed by the President and Commander-in-Chief. All your bank accounts would be frozen. Why? Well, it wouldn't be fair for a man to have a million dollars in the bank and you only have a hundred, when he could use the million to chisel in the market and you could only use the hundred. So, we'll freeze all bank accounts for the duration of the war and six months thereafter. Every citizen in the United States would only have the same economic income as the United States Armed Forces, and no other economic income. Your safe deposit boxes would also be frozen. So, the only income you would have would be your monthly check

HOWARD SCOTT  
LOS ANGELES

LATE 1942

from the government. All life insurance policies and premiums would be frozen. All taxes, union dues, all debts would be frozen and all litigation. That would be kind of tough on the lawyers, wouldn't it? Well, of course, somebody says right here, "How about Mrs. so-and-so? She derives her livelihood from those ten mortgages she has." Well, the mortgages would be frozen and she would receive her check; if unable to participate in any other service, ill health or age, she would receive her check and her ration card the same as anyone else.

There would be no rent, of course. That would all be frozen. Now you see, there would be no pecuniary dealings of any kind whatsoever, would there? And all bills larger than one dollar would be called in. You'll see the reason for this in a moment. The only denomination of money that you could receive for the duration of the war and six months thereafter would be one dollar bills. Remember, you can't open an account in a bank. You are beginning to get an idea where this is going to, aren't you?

Now it's done with the same money. We're not proposing to alter the Constitution, the legal and civil system or the fiscal system one iota. It is an organization for an all-out war effort. Now remember that the store owner or the plant owner or the farm or the owner of any land, equipment or materiel, whose property was taken over by the United States Government under Total Conscription would receive a United States Treasury Certificate of Deposit payable in money or in kind six months after the war.

Well, look, the average retail store owner -- the sap would be better off, wouldn't he? He wouldn't have any rising fixed charges, he wouldn't have any headaches, and he will have a job with something to eat -- guaranteed security for the duration. So, these smart, successful people, you see, weren't smart at all. They didn't figure this out. But we're going to take them in in spite of it.

Now assume, for instance, to give you a case; A man is a foreman over here and occupies an \$8,000 house, has \$1,200 in the bank and \$15,000 of life insurance, and he passes away. His will would be probated in the usual manner by the court, but his estate would not be distributed. It would be held by the court for distribution six months after the termination of the war. He would be buried as everyone would be buried by the Funeral

HOWARD SCOTT  
LOS ANGELES

LATE 1942

Service of National Service; namely, a plain pine box. Well, his family would be in the funeral, wouldn't it? But the state would be richer than it was if you permitted the jackass to operate as he does now, because he couldn't pay his \$500 or \$1,000 or \$1,500 dollars for a funeral -- just a plain pine funeral box. Well, now don't get upset ethically or think esthetically it would hurt your feelings, because there's going to be a good many boys buried in a pine box, realize it. And for heaven's sake, why should we manufacture satin-lined caskets just to make your relatives and friends feel better when they look at you cold?

Our railroads are still running as separate corporate enterprise. Remember, our railroads are demanding their pound of flesh. They're demanding their quota of trainloads of war material, regardless of the fact that the war material may have to travel 1,500 more miles to the same port than it took by shorter railroad distance; but then the other railroads wouldn't get their quotas if you shipped the nearest route. All railroad equipment will have to be pooled. We cannot operate the railroad transportation of United States if we increase our production considerably above what it is now, except as a national transportation and not as a privately-owned railroad corporation.

We can go on down the list.

Here's the steel companies of United States, that only a few years back -- about 15 years -- the United States Steel Corporation stated that the steel industry had sufficient capacity, that it wouldn't need to have any new construction. The steel industry in 15 years were only 40 million tons wrong. Another one of those successful, nice people. Magnesium and aluminum were the same.

I wonder how many of you remember Technocracy back in 1934 and '35? Quite a few of you. Well, this organization up and down this continent on its platform and in its literature protested the shipment of scrap steel, of nickel, lead, zinc, copper, and petroleum to Japan, Germany, and Italy -- in 1934, 1935, and every year since. We have given the figures; for instance, in 1940, we shipped 22,734,000 barrels of petroleum from these United States to Japan, and most of it from this State of California. Technocracy would like to ask you Californians, did the Californians Inc. or The Associated Farmers of California or

HOWARD SCOTT  
LOS ANGELES

LATE 1942

the United States Chambers of Commerce of California, The Southern Pacific Railroad or The Standard Oil of California or The Bank of America or of any other corporation in California -- did any damn one of them ever protest the shipment of steel, oil, and other materials? There's not a single one ever went on record! Why? Because it was all good business. And don't forget, you may hear the phrases that we have used. One of those phrases was, "Mrs. America, don't squawk when your son is killed with a Pennsylvania coal car, a Ford rearend or a 6th Avenue El." Kind of hard to take right now, isn't it? But don't forget, we said it seven years ago and we're still saying it today.

We could have stopped it, just as this organization pleaded for the fortification of the Aleutians and our islands in the Pacific. We pleaded for highways and railroads to Alaska. True, the United States Engineer Corps followed our Alaska No. 1 route laid out by Technocracy as far as the Liard. They didn't follow the other route laid out and recommended by the Alaskan Commission or the United States-Canada Commission -- they followed Technocracy's. Why? Because the United States Army Engineer Corps told them, and they knew we had the goods.

Remember, we pointed out many times that if we had had the fortitude -- or to put it in plain terms, the guts, to have given the WPA the engineering direction and the technological equipment, they could have built highways to Alaska, railroads, and an interoceanic canal long ago. They would have been finished before now. But no, we couldn't do it, because we couldn't permit an efficient organization of our unemployed because it would interfere with private business.

-28-

You have no adequate transportation system in the City of Los Angeles, because business is so interested in selling you individual installment plan jalopies. You have two gauges of street railway, the PG&E standard and the other .... They can't even run their cars on the other's tracks. We're almost as bad as the Australians that have five railroad gauges in five states. We couldn't change all of that before, could we? No. You know what everybody said, "Oh, let's don't bother with it now. We don't have to." Well, that's coining back on us today like the 6th Avenue El and the Pennsylvania coal car. All these things are

HOWARD SCOTT  
LOS ANGELES

LATE 1942

getting in because we're not organized efficiently. We're organized for the anarchic chaos of private chiseling, but it's a hell of a way to organize to conduct and fight a total war. Realize it. A totally different thing.

We can have efficient war production but not on the basis that we're going to permit individual corporate enterprise to operate each war contract as a profitable enterprise. Here's civilian operations all competing with each other in civilian consumer goods production and services. Here's the war production competing with each other and the total war production competing with the total civilian goods production, and the Army and the Navy competing with each other and the entire thing competing all around.

What the hell kind of a country do we want to have? Do we want to win the war or do we want to make millionaires? Well, let's put it frankly: If 246 division equipped with thousands of tanks and planes had invaded these United States of ours in June, 1941, on a 2,000 mile front, do you think we could have put up the fight that has been put up on another front thousands of miles away? Remember, that's 5 to 6 million men.

Why were the Russians able to put up the fight they did? Why do they have that solidarity? Well, let's be frank about it -- because they had no fifth column in Russia, and they had no fifth column in Russia because they have no businessmen in Russia. A little different angle, isn't it? The Russians knew that. No, don't blame the individual businessman. That's not what we mean at all. There are 243 to 246 German Fascist divisions on the Russian front -- 179 total German divisions compared to only 85 German division in the World War -- compared to the total divisions in the World War of 121. In other words, there are over twice the number of divisions on the Russian front in this war than they had in the World War.

Well, let's realize it -- that the Russians have the greatest reserve of military trained manpower in the world, that all the Russians want and all they need is more tanks, more guns, more planes, and more shells. Did we send them more tanks, more planes, and more shells? No, we did not. We sent them Wendell Willkie!

HOWARD SCOTT  
LOS ANGELES

LATE 1942

Well, Wendell Willkie as a Republican, his days are about over; because Dewey, you know, in 1940 did all the spade work for the Republican nomination, and then Wall Street came in with the barefoot boy of Wall Street and Dewey got side-tripped. Now Dewey has been elected Governor of the State of New York and Wendell Willkie had better get himself a job in the present administration before Dewey cuts his throat. That's only natural, you know, that Republicans should feel that way about each other.

Well, these are serious times, and we're trying to make you realize without being too pessimistic or without saying too many nasty things to you. The Russians have done a marvelous job. We on the other side of the United Nations have to be the big supplier of manpower and technological equipment. We can mobilize this country internally so that our boys in the armed forces have the finest equipment and the greatest collection of equipment the world has ever seen. But remember we're still trying to sell equipment for war purposes that merely is commercial equipment. That's all it is -- with a coat of paint on it. Every engineer knows it. We build a bomber that carries 2-1/2 tons of bombs, or five 1,000-pound bombs. We naturally have to go in for precision bombing because we have so few bombs in the planes. If you had a flying wing built out of 33 sheets of plastic plywood -- and God knows we've got any amount of materials for plywood. We don't have to rob any essential war industry for that. We could turn out flying wings with four molds per line, and it would only take 3-1/2 minutes to produce a 330-foot flying wing. No rivets in it, you know, and none of you girls would be buckers-up to those rivets, either or doing it would be a little job of spot welding. A completely molded job with a range of 12,500 miles, a ceiling of 30 to 40 thousand feet, and speed of 300 miles and over; in other words, the United States could reach every battlefield of the world from this continent with those flying wing bombers.

On the other hand, take the bomb racks and the armament out of them, and they could become giant cargo ships. United States can build them in quantity production. Other countries, of course, could design them, too, but no other country in the world has the technology and the equipment to produce them in quantity. If they were built in Japan or Germany, they would be a Swiss watch, hand-tooled job, but here we can turn them out in volume. The trouble though is that with any such thing as the flying wing is that you need only one bomber plant in United States -- just

HOWARD SCOTT  
LOS ANGELES

LATE 1942

one plant to build bombers, and you wouldn't have very many employees in it. Very strange. Naturally, of course, there's going to be difficulties placed in the road of building any such efficient long-range bomber.

We could go on and give you tank designs, fighter designs, truck designs, and any other kind of designs. In fact, when you want to know where better designs are, come to Technocracy. We've had them for years. Our tank design, instead of being a 4-foot, 8-1/2 inch gauge is a 10-foot gauge, and the treads are double and outside of that; so the total width of our tank design is 16 feet. Six wheels to a side and double belt. How fast is it? Seventy miles per hour on a highway, 55 miles per hour on broken ground, and they would still be a lower profile and, lower center of gravity than anything that's called a tank today, with a 30-inch clearance underneath. Any of you engineers know what I'm talking about out there? It's not out of a hat or the outside of a book.

You have to choose whether you want efficient organization, efficient equipment, or whether you want to continue as you are. Now, we'd like to ask you: How would you like to win this war and have no war debt? Well, it can be done. Under Total Conscription, the United States Government would be the only organization operating anything; therefore, if it was only one organization operating the entire country, it would be stupidity, would it not, for the United States Government to borrow from itself? You aren't that dumb, are you?

Under Total Conscription, there would be no war debt. We would come out of the war war debt free instead of coming out with over \$300 billion of war debt. Now, we can do it, but it can only be done if the public opinion of the United States is mobilized on an organized basis to present it; but if you're going to indulge in posterioritis and wait for the next rush and cry of victory, then you will probably have an institutional fascism slapped on top of you. Nothing that the National Association of Manufacturers or the United States Chamber of Commerce would like better.

How many men in this house -- and women -- belong to a labor union? Let me see. Any kind of a labor organization. Well, that's quite a number. What they're trying to shove on you is

HOWARD SCOTT  
LOS ANGELES

LATE 1942

conscription of labor. Conscription of labor is fascist. Every fascist country has conscription of labor; but there isn't a fascist country in the world that has Total Conscription or would dare have it. Why? Because every human being would have the same treatment and that would be no good. You couldn't have fascism and treat everybody the same, could you?

Now there are those in our midst, who, I am told, would like to impose a fascist structure on us in the war. Total Conscription is not fascist. It's one for all and all for one on the same basis as the armed forces, while under a fascism, you would be conscripted for labor only. Wouldn't it be nice for private enterprise to have the Government of United States conscript all of you who wrote the thousand labors, so that private enterprise could get its labor at frozen costs and make greater and greater profits when you -- you saps -- couldn't quit. Well, that's what you're headed for unless you have something else to organize national public opinion.

Technocracy is not opposed to labor unions. It has thousands of members who belong to practically every labor union in the country, but, nevertheless, we are forced to admit today that the higher labor union official -- not the local official but the national -- with their high salaries, have gotten themselves into the same position as the corporate executive, with the same privileges and the same feelings. Naturally, the labor union national officials wouldn't like Total Conscription any more than the executives of the United States Steel or the Standard Oil, because there they would serve, too, on the same basis as the armed forces. But if you permit your leaders of labor in United States to acquiesce in the conscription of labor, get this straight -- they're selling you down the river!

At the end of the last war our boys came home and found somebody else in their jobs, but when they return home from this war, it's going to be different, because when they walk down the street to where their job used to be, the job "ain't gonna be there no mo'." They will have torn the building down for scrap metal and the organization that used to be there has moved someplace else; and when he goes over to that someplace else, the job he used to have doesn't exist at all anymore. It'll be a new process, and there will be an 18-year-old girl and a 42-year-old woman pushing buttons running it. Well, why not?

HOWARD SCOTT  
LOS ANGELES

LATE 1942

Realize that we are in the first Total War in human history and in the midst of a world revolution simultaneously, and that we have to install more technological equipment in order to win the war. The more equipment we install, the more we're headed for a new kind of world. This war is teaching us something nationally that never again will anybody ever be able to tell the public of United States that if we can spend \$300 billion in war for the production of materials and technological equipment for destruction, we can't spend \$300 billion just as easy for the rehabilitation of our own country. It can be done and it will be done, but it cannot be done if every one of us wants to go our own way. It can only be done as an organized expression of public opinion. Technocracy is carrying on meetings all over this country, trying to bring home to you the problems you're facing. There will have to be national organizations to take care of the young children of the women war workers. That will have to be on a national basis, the same as national feeding will have to be organized -- not by private industry but by our government. There are many things that will have to be organized on a national basis, but have never hitherto been organized except as an individual racket.

We're facing a social transition on our pathway to victory -- realize that; and we're not going back to anybody's yesterday -- Herbert Hoover and Al Smith included. We're going on. And if the equipment installed in the last war brought about the conditions up until 1929, then we would like to ask you what the vast amount of equipment installed during this one is going to bring tomorrow's peace. And those of you who feel magnanimous and want to go out and be nice and kind to everybody around the world, remember, a good many of you contributed missionaries in far-off lands, now didn't you? You thought you were being noble in making nice Christian brothers of heathens. You swelled up with pride when you put your little donation on the plate. Well, we sent missionaries abroad and look where it landed us.

Out in the Far East, where the Japanese would occupy the territory, they haven't any illusions about the rest of the world. They're a hard-boiled nation, trained and conditioned for generations of spartan existence, with a national idea. No matter how much we despise the Japanese, don't let's underrate them. The Japanese won't cave in psychologically like the Germans. They'll

HOWARD SCOTT  
LOS ANGELES

LATE 1942

fight to the last hole.

Well, this war isn't won yet -- not by a long shot -- in spite of the fact that we have had rather pleasing news the last few days, but the advance in North Africa is not a second front. If the forces of the United Nations succeed in capturing Bizerta, Tunis, and Tripoli -- the entire North African Coast -- the United Nations will have laid down the preliminaries for a second front.

Kindly bear in mind that the Fascist forces -- military forces in Africa -- up until our North African invasion, were only four German divisions and eleven Italian, or less than 4 percent of the total Fascist forces in Europe. So, don't stick out your chest when you're only licked 4 percent so far. Now, from El Agheila to Bizerta is over 600 miles. They still hold that territory. It's quite probable that with the forces we're putting in and granted no great error, we may succeed in taking it; but if the German Fascists throw in enough troops, it can be made costly. So, don't get the idea that the war is going to be won by Christmas, because there's a long and hard fight ahead of us, and it will require a competent technological mobilization of every American on the home front to fight it. We can't do it by thinking that if we put our dollars in, that's all we need to do. Bonds are necessary, yes, under the present fiscal setup, but you can't stop a 50-ton tank with a million-dollar bond. It requires a national mobilization for national service on the same basis as the armed forces.

I'm going to get you to think up some questions, to see what you've got on your mind. The question period is always the most interesting, because then I get a chance to go to work on you, I'll leave you for a few moments and if you'll write out your questions, I shall do my best to try to answer them for you.

Thank you.

---

.... but then there are a few that appear to be humorous; for instance, there is one question here which wants to know:

HOWARD SCOTT  
LOS ANGELES

LATE 1942

WHAT WOULD HAPPEN TO THE CONGRESSMEN UNDER TOTAL  
CONSCRIPTION?

Well, they are Americans, too, aren't they? Why should we  
leave them out for the duration of the war and six months  
thereafter?

THERE ARE SEVERAL QUESTIONS HERE: SEEMINGLY, THERE'S A  
MISTAKEN IDEA THAT YOU WOULD HAVE TO ALTER THE CONSTITUTION  
TO HAVE TOTAL CONSCRIPTION.

You have to do nothing of the kind. Total Conscription goes  
in without altering the Constitution, the judiciary, or the  
fiscal system or the legal system -- exactly as you are now. You  
do not have to alter the Constitution or any other of our  
institutions; merely alter your behavior and performance.

THERE ARE A NUMBER OF YOU, UNFORTUNATLEY, WHO WANT TO KNOW  
MILITARY INFORMATION AS TO THE NUMBER OF DIVISIONS IN  
AUSTRALIA AND AFRICA, ETC.

I'm sorry, but that is military information and is not  
disclosable by Technocracy.

THERE ARE SEVERAL ATTEMPTING TO COMPARE OUR NATIONAL  
SITUATION WITH THAT OF GREAT BRITAIN, THAT THERE'S NO TOTAL  
CONSCRIPTION IN GREAT BRITAIN, AND WHY SHOULD WE HAVE IT  
HERE.

Well, Great Britain's problem is a totally different problem  
from ours. Their industrial rate of flow is of minor importance  
compared to this nation, and do not attempt to compare Great  
Britain and United States on the basis of population comparison,  
because that is stupid. There's no relationship today in their  
industrial and technological situations and ours. Whereas their  
distances are small and their population density great and their  
output per capita low and their consumption of kW hours low, ours  
are correspondingly high.

THERE ARE ALSO A NUMBER HERE -- SOMEBODY IS TRYING TO BE  
FUNNY -- THERE ARE SEVERAL WHO WANT TO KNOW IF TECHNOCRACY  
WANTS TO FEED THE WORLD.

HOWARD SCOTT  
LOS ANGELES

LATE 1942

I'd say they're taking a backhanded slap at some of the statements that have been made in the public press. Well, Technocracy's contention is that we had better organize our war economy to give adequate distribution to every American here and solve our own problems of winning the war before we get cockeyed with illusions about what we'll do after.

THERE ARE ALSO A NUMBER OF QUESTIONS HERE THAT WANT TO INQUIRE AS TO THE VALIDITY AND VALUE OF CERTAIN BONDS AND SECURITIES.

Well, without leaving the questions out, that would identify them; so that five or six of them won't feel individually hurt, permit the Director-in-chief of Technocracy to say that if we do not win this war, those bonds won't be any good, that every American -- if we're defeated -- will have a burlap diaper on and have a bowl of rice. So, for heaven's sakes, quit worrying about what your bonds are going to be worth after the war. If we don't win, you probably would have liked to have that bond of yours in finer tissue.

THERE ARE SEVERAL QUESTIONS HERE COMPLAINING ABOUT THE MORALITY OF WARTIME CONDITIONS AND THE INCREASE OF VENEREAL DISEASES, AND SEVERAL HAVE MENTIONED PROSTITUTION.

Technocracy warned you long ago to expect an increase in the rate of venereal disease. Naturally, we as Americans have always refused to face realism. When a boy and girl go out together, we assume they play pinochle. We've had a good many army camps that have had to increase the guard at night -- not to keep the soldiers in but to keep the girls out, and if the number of healthy males taken into the armed forces go beyond 10 million, then permit me to say that the likely looking male that stays home for any reason, God help him!

We are supposed to be a civilized country and we look at Mexico as somewhat barbaric. Yet, realize that down in Mexico in their prisons, when they put a man in jail, if he is disease-free, he is permitted to be visited by his wife or sweetheart. That's highly civilized in comparison to our dumb, stupid procedure. They recognize that men are males and women are females, and we'd better recognize it too. We have a problem all across this country, and it is not a problem of the professional

HOWARD SCOTT  
LOS ANGELES

LATE 1942

prostitute. The professional prostitute is a minor problem. The nationwide problem that we face is a lot of incompetent amateurs who don't know what in hell they're doing, and there's no organizational setup to protect them or to show them what to do. Then, in the face of that, does your minister or your priest ever discuss the realities of life with you? No, he never will. Why? Because he always tolerates the status woe, doesn't he? He derives his economic sustenance from it; therefore, all women are pure and all men are something else, and you have no disease problem.

The Mayor and the Civilian Defense Administrator and the Chief of Police of one of the largest cities on the Great Lakes came to see me not long ago and said, "Mr. Scott, the problem has become so serious that we think the only way to handle it is to round up every prostitute in the State of Ohio and throw them behind a barbed wire stockade." Did you ever hear anything more stupid and funny than that? Pathetic! Now, if you want to increase the situation, all you have to do to multiply all the ails and ills of it is to make it scarcer. Come on, admit it. And that's exactly what it would do. I asked that mayor if he had a daughter and the others if they had daughters. Certainly, and if he had, he'd better face it, that the amateurs would be in business if they did that.

I know, it's hard stuff to take, but you can find it in every area where there's an army camp. What do you expect the boys to do? What do you expect the girls to do? You know you still won't admit it, and you haven't any authorities in this city or any other city that are willing to admit how tough the problem really is; because all the nice, good people wouldn't want it talked about, would they? The nice, successful people.

Well, there's one way to do it: Why not have the army do what the Mexican Government does in the prisons? They could invite their wives and sweethearts in, couldn't they? At least, you would know who had been there. Oh, it can be handled, but it cannot be handled so long as you leave the medical profession a cross between private enterprise and a chiseling art where there is no compulsory account of our diseases. They're not compelled to at all. But under national service of Total Conscription, you could eliminate it in quick order.

HOWARD SCOTT  
LOS ANGELES

LATE 1942

NOW THERE ARE A LOT OF QUESTIONS HERE WANTING TO KNOW ABOUT THE LENGTH OF THE WAR, HOW LONG THE WAR IS GOING TO LAST, WHEN WILL IT BE OVER.

Well, thanks very much for the compliment, but Howard Scott is not God. Understand that quite clearly.

AND THERE ARE OTHERS WHO WANT TO KNOW, COULDN'T IT BE WON IN THE NEXT SIX MONTHS?

Well, if the Russians go through in the next 20 days, it may put a different tone on the picture, but it still won't win the war in the next few months.

NOW THERE ARE SEVERAL QUESTIONS THAT WANT TO KNOW WHAT KIND OF A JOB I WANT.

Evidently some of them have gathered the idea that Howard Scott would run Total Conscription. After you have talked to as many human beings on this continent as I have, you'd like to talk to four-legged animals thereafter; and it's a fact: Did you ever hear of a mule ever dying from overeating or killing himself from overwork -- working overtime? No, the mule's intelligent. The only one that's dumb enough to do that is the jackass who owns him.

THERE ARE ALSO SEVERAL HERE WANTING TO KNOW WHY HOWARD SCOTT SHOULDN'T BE THE NEXT PRESIDENT OF THE UNITED STATES.

Well, I don't want to be. I don't want any political job.

THERE ARE ALSO THREE QUESTIONS THAT WANT TO KNOW HOW MUCH I'M MAKING OUT OF THIS.

Since you asked for it, you can have it. Howard Scott has no bank account, owns no property, has no bonds, securities, real estate, or anything that might be called valuable property or realizable assets. All he has is his clothes, and he works on about the same basis as the armed forces.

Incidentally, while we're at it, Technocracy is the only organization that practices what it preaches. The Director-in-Chief of Technocracy doesn't get any more than the parcel

HOWARD SCOTT  
LOS ANGELES

LATE 1942

wrapper, the stenographer, or any other full time employee. Try that on your organization, I'm not telling you this to appear virtuous. We recognize only too well that two things are white: virtue and arsenic; they're both poison. I couldn't help that one -- you were so serious.

THERE ARE ALSO OTHERS HERE WHO WANT TO KNOW HOW GERMANY IS FINANCING THE WAR.

Germany has the richest boom in dividends that's ever been known in German history. The Fascist German organization permitted German business to do a very interesting thing. They passed a law limiting all dividends to 7 percent, but then they permitted all corporations to water their stock so that the dividends actually earned would come down to 7 percent. Isn't that marvelous? It's just like that \$25,000 a year proposed limitation -- \$25,000 a year net in this country. Well, \$25,000 a year net per person is \$67,000 a year gross. How about having grandmamma and grandpapa each with \$67,000 a year? That's \$134,000, isn't it, for the two? Well, you can have four sons and four daughters and they're all married. That's sixteen, and they can all have \$67,000 a year each, gross. You can add it up. Think there's any hardship or equality of sacrifice in that kind of nonsense? And yet that's what they're kidding you with. You should limit the income to \$25,000 net per person. How about figuring some groups right here on the Pacific Coast? \$700,000 a year .... why he couldn't serve for the same as a United States general, now could he? That would be poverty and malnutrition, wouldn't it?

THERE ARE A LOT OF OTHER THINGS THEY WANT TO KNOW HERE. I CAN'T ANSWER ALL OF THEM. I'VE GIVEN YOU GENERALLY MOST OF THE CATEGORIES, AND I'LL TRY TO GIVE YOU A FEW OF THE SPECIAL ONES. THERE ARE SEVERAL HERE THAT WANT TO KNOW WHAT WOULD HAPPEN TO CHURCHES, WHAT BASIS THEY WOULD BE PUT ON.

You could still contribute on the collection plate to your respective ecclesiastical institution under Total Conscription. The churches would be unaltered. You could also contribute to other things if you wanted to. Of course, it would be kind of difficult spending your money, because most things would be rationed -- except there are a few things that will never be rationed, of course -- at least we hope. Seems to be a certain

HOWARD SCOTT  
LOS ANGELES

LATE 1942

amount of abdominal reaction -- humor, I should call it.

WELL, YOU'RE ALL VERY MUCH INTERESTED. YOU CAN SEE FROM THESE QUESTIONS THEY WANT TO KNOW ABOUT COFFEE AND BUTTER AND MILK AND CHEESE AND VARIOUS FOODS. WILL THEY BE RATIONED AND HOW SOON? THEY ALSO WANT TO KNOW ABOUT WILL THEIR HOUSES -- THERE ARE SEVERAL HERE THAT HAVE HOUSES THAT HAVE A CERTAIN NUMBER OF ROOMS, AND WILL THEY BE FORCED TO MOVE FROM THEIR HOUSE OR WILL THEY BE FORCED TO TAKE IN BOARDERS, THAT IS, ROOMERS?

If the situation becomes tight enough and you have large well-to-do homes close to war work, and you happen to be a leading socialite, I know that it might embarrass you to have a lot of war worker roomers. Don't forget the army is taking over hotels in various cities across the country -- not so many here as yet, but there will be more here; but Chicago, Miami, Atlantic City, New York, Des Moines, and other places, they're taking them over one by one. What we are up against is a lack of space.

THERE'S QUITE A NUMBER OF QUESTIONS ON DISTRIBUTION AND RETAIL STORES.

Let's take any plot plan, real estate plot plans, of any large city like Los Angeles, Chicago, Cleveland, New York, St. Louis, and look at your store sections. Remember, in your real estate plot plan, you can get the depth of the lot and the type of building. Figure a shopping area four blocks by four blocks or sixteen total blocks. There's only one way to handle it: consolidate all the delicatessen stores in the sixteen blocks into the center. Same way with the grocery, butcher, and other stores; therefore, the inventory stock and fixtures, along with the personnel, would provide a 24-hour store of that kind, a 24-hour operation with adequate personnel and fixtures, and there would only be two blocks for any citizen in the sixteen blocks to walk. See how simple it is? That would account for a 28:1 reduction in the City of New York. There are 26,000 grocery stores, over 9,000 butcher stores, and over 69,000 establishments handling food in the City of New York alone.

[END OF RECORDING]

MEMBERSHIP MEETING  
YWCA, AKRON, OHIO  
HOWARD SCOTT  
OCTOBER 10, 1943

Well, a lot of water has gone under the dam, and Technocrats have something to be proud of. We can look back with a record that no other organization in this country can look back to. Our strategy has been a strategy that is unique -- endemic to this continent. When you look over the record of the Democratic Party or the Communist Party or any other organization in this country in the last ten years, it has been one of compromise and expediency. That is something that can never be said of Technocracy. We have made mistakes of minor omissions, but the organization has never made a major mistake of commission. Some of you may have been baffled in times past and may be slightly bewildered today, in that Technocracy doesn't seem to do exactly what you would like to have it do; but don't forget that it isn't doing what any individual member or officer wants it to do. It plans its moves ahead of time, and here it is the only American social movement in the history of this continent and likely to be the only ever to do this.

In Canada, McKenzie King -- the Honorable McKenzie King, I should say -- Premier of Canada, is a political dead pigeon north of the boundary line. Technocracy predicted that would be his end, and it is only a question of time when he will be politically buried, if not actually. Technocracy will come back to Canada, but it won't come back the way the other organizations came back by political compromise and expediency. We have been offered that, but we are on record of being the only organization to turn it down flat. It has been an honor to occupy that position we have. The Communist Party in Canada came back as the Labor Progressive Party of Canada in open support of the Liberal Party, McKenzie King, and the conduct of the war, and in approval of business at a fair profit. Why, they are more pantywaist than the conservatives: in other words, a supposedly radical organization has become more liberal than the McKenzie King Party ever thought of being.

The same thing is happening here. In Canada, you will find the Hansard, official organ of the House of Commons. The leaders were released on individual agreement with the Minister of Justice of Canada to support the Liberal Party, the existing administration, and the war effort and general business. Incidentally, there is no such record here in the United States

10-10-43

of the Communist Party making such a deal, but events suggest Browder and several others were released on the same agreement. The Minister of Justice of Canada, through a firm of attorneys, made a motion for Technocracy to come back. We are not accepting the offer. King's days are numbered; in other words, when Technocracy comes back in Canada, it will come back clean and not under a double-crossing agreement.

We have the honor of being the only organization that was declared illegal for the duration of the war in Canada, because we advocated consolidation of the North American Continent into one organized unit -- because we advocated Total Conscription in Canada. We introduced the program June 1 and 2 at the Yorktown Saskatchewan, conference. We were declared illegal on the 22nd of June, just twenty days afterward, at the request of French political Quebec. That is admitted in the Hansard, and last year the Canadian Parliamentary Commission were unanimous in their vote to lift the ban on Technocracy; but conservative French Quebec brought pressure to bear to have the record completely tabled and not brought up for approval. You will also find that in the Canadian Hansard. We have no regret about that.

In other provinces of Canada, some 38 percent of effective manpower, military effectives, between 18 and 35, enlisted for military service -- in Quebec, only 8 percent: so, Quebec will have a debt to pay when the war is over. There will probably be civil war, because sentries in Montreal are not using blank cartridges. These things are not reported in our press.

So here is the situation in which we were one of the major factors by which our course of action will be proved correct. We stood our ground and refused to compromise; and here in the United States, many of you, of course, will remember that Technocracy predicted that the productive equipment could not run continuous full load for more than two years. Those of you in the industry of this area know what is happening at the present moment. We are producing more goods than we can find space to store them. We are already shutting down plants. We have shut down six tank plants and eight arsenals. We are shutting down night shifts and Sunday work. Why? Because the technological productivity of the United States is increasing at 8 percent per annum. No other area in the world's history has ever reached such a state of acceleration. It won't happen in Germany in thirty

10-10-43

years, but it is happening here.

Now we are in the middle of the biggest business boom in the world, and business would like to keep that boom going. So would a good many of the war jobholders. The average war jobholder is shoving money into his pockets with both hands at the same time. You know that is correct -- but look out! In a few months away, you will be in trouble -- in trouble with your taxes. You will after the first of the year. Whether it will pay to work is questionable. We have also pointed out there was no sense in work. It is shortly going to be brought home to them.

In Canada, it has reached that point. In the coal mines and shipyards in Canada, you can only work a few hours overtime. If you do, you get less than your actual work pay. With the additional taxes, you get less for working more. It now is one of those Alice-in-Wonderland problems. Hard to understand, but here the technological acceleration is on. Technology is going to present the United States with a fait accompli internally, and we will know in a few weeks. If Russia gets to Gomel and Kiev and goes through, Russia will present a fait accompli to us abroad. So, we will be faced with two -- one abroad and one at home. Both are significant and both are important. If the one abroad comes to be, then we will eat Crimean crow with Russian dressing and Tartar sauce, and we will damn well like it. Here, internally, the technological fait accompli will be presented regardless if the other one is or not.

Now we have the greatest business boom from the standpoint of big business, and leaders, popular celebrities, and outstanding political figures of the United States would like to have the business boom continue. We wouldn't like to end the war too suddenly. We'd like victories at not too fast a pace -- at a pace just fast enough so that the business boom will continue two years. The technological productivity of the United States will not permit such a course of events. The only way we can guarantee approximate full load operations in this country is to persuade the Germans from manufacturing anything at all and let us supply them in toto.

Now, if you will remember in A-21, where we made that remark about Rudolph Hess -- that was around the first of July 1941 -- it was written some weeks ago to over a month prior to that.

10-10-43

Anthony Eden has made a slight explanation of Hess' visit. Part of it is correct; of course, nine-tenths of what he admitted is incorrect. The real story, of course, may never be told; but those of you who have time, dig up your history. Look up the Anglo-French Partition Pact of December 1917 and what the moves were on the part of Fascist Germany in sending Hess to Britain to open negotiations for the rejuvenation of the Anglo-French Partition Agreement of 1917: That Germany would be satisfied with everything west of the Urals, all the business free enterprise of the western democracies would be retained intact, and business to operate on the same old basis and at the same old stand. The unfortunate part about that is that the German G-2, British G-2, and the United States G-2 were alike fooled. We are so smart: we just cut our own throat! Remember that there were a United States Military Attaché and press correspondents with the German Army advancing into Poland in 1939.

You can find the reports published in this country in military journals. I am not disclosing any military secret. When it rolled into Poland, there were photographs. They were sent over here, and the comment was that the Russians didn't have any real uniforms and equipment. It was old and dilapidated. They brought photographs into CHQ and laid them on the desk. We looked at them and grinned. Several men in there asked what was funny. We pointed out that the Russians must have taken over all the antiquated equipment from the military museums. The trucks were 1917. Our press and every other miseducator of public opinion in the United States have never wanted too many facts presented to the public. Russia realized that: so, the Soviets dressed up the pictures the way we were taught to believe them to be, much to our discomfiture at the moment.

If you will remember -- I think it was September 27 while speaking in Cleveland, I said Stalingrad wouldn't fall. Lots of people can't understand our information, but don't worry about that: the United States Government can't understand it either. There are people in Washington accusing us of having a pipeline that goes right down through and comes out in Moscow and Chungking, and when we want information, we just turn the spigot and run off a pailful. That is as stupid as any fairy tale, because we don't know any Russians. We are not interested in the political side of it. What we have done was done by scientific deduction.

10-10-43

We tried to tell people the kind of Russian artillery that was used in Finland in 1939. The Russians used 244-mm. cannon of the same type -- hydraulic breach closing, maintaining a constant temperature control. Those were the guns that smashed the Mannerheim Line to pieces. You do not crack fortifications at 40 degrees below zero by old equipment; and yet we have been fed this confounded nonsense and baloney at home and abroad. Of course, the hope of American business -- both Wall Street and Washington, Ottawa and London -- was that the Germans and Russians would fight each other to the last pint of blood, and then the western democracies would step in and be "big shots" on the European playground.

Well, it just didn't happen, and six months ago, Russia stopped taking our tanks; so, we have to shut down our tank plants. The Russians don't want any more of them. They call them the "tin torches", and they are fairly justified in applying that name, especially the Chrysler engine in one tank. You don't have to be hit by a bullet. All you have to have is the high octane gas line catch fire. The Russians brought their own tank production up. The Russians built artillery and steel plants -- continuous steel plants. Their plant expansion is continuing. It doesn't matter what their political policy is, whether Communism or Holy Rollers: but the introduction of technology in an area has no relation to Karl Marx whatsoever. It is the technology of the USSR that has made it the power it is and a threat to the other countries of Europe.

Now their technology is of only minor importance in total scope compared to the operations here. They have slight direction. We are operating for business, for the greatest aggregation of capital profit the world has ever known, and for the greatest aggregation of credit reserve the world has ever known. We have billions in corporation reserve today -- greatest credit reserve the world has ever known. At the same time, the savings banks are increasing the total rate to \$20 billion a year. The vice president of your largest bank here was riding in the train with us coming up from New York. We began discussing the banking institutions in the United States. He agreed that we are correct. He asked what the country is going to do. Probably change over to something else. We told him to go out and play golf and keep the hell out of the road. Try to realize the

situation.

In 1939 in the United States, there were between eight and nine million unemployed. The producing capacity was far in excess of purchasable capacity. We were able to produce far more than we could consume. Here and under two years of war -- a little less than two years -- there has been pumped into our plants \$25 billion. The machinery is fast; processes are faster. The plants are modern: so, we have increased the productive capacity 100 percent. If we were overcapitalized in 1939 with the available purchasing power, how much more so now if the war ends this June or a year from next June? Now, with the money all of us have in the bank, the only thing you can do is invest in government bonds, because there is not the expansion of private creation of debt to absorb the annual increase of \$20 billion additional cash a year.

To state it mildly, the United States will come out of the war with \$100 billion cash uninvested, not in government hands but in private hands -- in the banks -- owned by the people of the United States: in other words, you are all going to be more-or-less wealthy, and you want to know what the hell to do with it. Private enterprise cannot create sufficient expansion of the capital industries of the United States in order to absorb that \$100 billion. It's got too much on its hands now. It doesn't want any expansion. Besides that, they are stagnant now with overproduction of machinery and technological equipment in the United States, and there is \$1 billion of new plant machinery uninstalled -- surplus equipment that is as yet not installed in any plant. Are we going to give it away? To whom? To the Africans in Timbuktu? It couldn't run if we did. Besides, we have already exported a terrific volume of equipment.

Try to get this picture. We, as a nation, promulgated a doctrine of freeing the world from want. That has been our propaganda, that is, a revolution -- internationalism -- proposed for the entire world, never for our own country. We have exported this propaganda without ever having the intent of implementing it. At the same time, we have exported processes, equipment, and machinery of all kinds. We have exported the technological equipment -- the tools of social change and social revolution. We have shipped them all around the world, but we have not had the courage to admit it.

10-10-43

The technological equipment shipped around the world was the tools of social revolution. They were shipped in the name of sloppy humanitarianism freeing the world from want: and yet our actions in Europe didn't have anything to do with it either. In the sloppy humanitarianism of freeing the world from want, or the actual fact of exporting the tools of social change, our policy has been a denial of both of those previous categories. It has been one of reaction. We want Fascism in Italy without Mussolini. Fascism in France without Petain, and in Germany without Hitler. That is what it boils down to.

Right now the German Fascist Party and German businessmen are trying to make deals through Portugal and Spain with Britain and United States -- remember, the German Nationalist Party and businessmen; but on the other hand, the German people and army want to make a deal with Russia. You can place your bets. Our policy has been one of conservative sentimentality. From the last war to today, we have refused to realize that.

We are going to send in the next two weeks, that is, from CHQ we are going to send nice big Calla lilies -- long-stemmed ones in each box -- all wrapped in tissue paper; one to Hansen Baldwin, military critic, Major Fielding Elliot, and a lot more, with a nice little note, "In Memoriam." Hansen Baldwin, the intellectual (if he is still writing the naval picture of the Southwest Pacific), intelligent observer on everything, but his conditioned reflexes got him down and he just couldn't see the facts; neither could the others.

Well, don't forget Harriman, one of those hard-working men, who worked his way up from them. His father only left him \$70 million to start with. With \$70 million to start with, you wouldn't have to do anything at all. The \$70 million will increase all by itself, and you don't have to be intelligent at all; of course, he was involved in the magnesium concession in 1923 in Russia. It doesn't smell good now. The Russians have long-nosed memories.

You can't expect very much of Stettinius, the Undersecretary of State. You see, they are operating on the theory that, when we approach a foreign country, if the man we send out first doesn't make a sale, his approach has been wrong: so, change the man, use

10-10-43

a different approach, and if we get there at the right time, we can make the right kind of a deal; but the only trouble with that is, there isn't going to be anything to sell.

Many of you read the papers and magazines, and yet it isn't the fault of the public of the United States that they haven't the information. We have been misinformed daily. Day in and day out for the last twenty years, it has not been permitted to know -- confused the issues -- and it isn't the fault of the individual American citizen, male and female, because the facts are not made available. What is made available is the utmost in confusion; so, here we are in the next few months facing a fait accompli in Europe and a fait accompli -- a technological one -- in the United States.

Now many of you here voted once, but remember in 1940, the Republicans of the United States were in full approval of the foreign policy of the Democratic Administration 100 percent. The only thing the Republicans differed on with the Democrats was in the internal operations of the United States. They were even in support of the New Deal, but they thought the Republicans ought to run it, administer the deal because they could do it better. That is all the difference. But let's see what is coming up.

The foreign policy is going to be a most discredited thing. The Wilsonians' Fourteen Points was an international debacle. Well, the coming debacle is going to make the Wilson debacle look like a storm in a teacup, but that was while still receiving plaudits from abroad when he was discredited at home; but this will be discredited everywhere, here and abroad. It is hard for us to take that.

Most of you in your community, people around you, like to think that President Roosevelt's New Deal is something radical. It never was. It was only a liberal streamlining of the old racket. It was sold as a New Deal with fancy wrapping. It was no different in mechanics; the same thing in Canada. Now, of course, the tendency is all to the right, more and more, and both parties see where it is going to land them. We have to face that issue politically in 1944, but it will come up before the election date. You will realize that if you will remember the points I mentioned within the next 15 days.

10-10-43

If the Russians take Kiev, travelling at 15 to 20 miles a day, and if they go northwest from Vitebsk, it won't be worth talking about. If they reach the Bug River and Pskov, they will go on.

Now, if you look back at the last war, you will remember that, in the Armistice of November 1918, the Germans retreated with all its armies and equipment in good order and marched into Berlin with banners flying; but it is a long way back for the German Army from where they are to Berlin. I would like to review a bit of history.

Some hundreds of years back, the Teutons, the most powerful fighting force in Europe, massed a fighting force on the Baltic and invaded Russia. They defeated Russia in a number of battles. They were massed on a lake. They all got out on that lake together, and the ice gave way. The Teutonic Knights never came back to the Baltics again.

Poland swept eastward and for three years pushed onward and occupied the City of Moscow and went down to the Kremlin, but when the Russians turned around and shoved them back, Poland and Inshalu (?) never came back. They were never a fighting force in Europe again.

Charles of Sweden invaded Russia; with that Swedish Army, he defeated the Russians, too. Finally, Charles XII and a few of his staff remained, but Sweden never became a first-class fighting force again.

Napoleon travelled that same road with 480,000 of the Grand Army, the finest fighting force in Europe in 1812, and in September he took Moscow: but Napoleon was defeated, and the Grand Army was never a first-class fighting power again.

So we have to watch what happens here, because in the last war, the Germans retreated with their officers and their non-commissioned officers intact, with all of their equipment still on German soil; but the armed power of today is larger than it was in November 1918, and that army may never get back. In that case, let me ask you: What would be the only fighting force in Europe? Now the armies of Great Britain, which includes Canada and Australia and numbers about three million; in other words,

10-10-43

Britain barely supplies two million -- that is not the armed might of a first-class power. You have to do ten million or better in Europe to be considered a first-class power.

Now the United States, according to the Selective Service reports, will have seven million. Germany still has between eight and ten million, but Russia has over twelve million in the armed forces in western Russia, exclusive of the Turkistan and Siberian armies. The Associated Press and Times Magazine reporter came in to see me two weeks ago, and one of the questions asked was, "Mr. Scott, where will the United States be at the peace table if the Russians win?" I said, "The answer will be simple: We'll be under it."

Now, in this matter, no American individual is blamed. This is a matter of statesmanship and leadership. Remember our outstanding national figures of all parties alike, of all complexions and all shades, were all mistaken. Remember that voice that said over the radio in August 1941 that "Leningrad would fall in September, that grass would grow in the streets of Leningrad." A national figure, and you can go down the line. They can't reprint what they said two years ago. Well, it blinded them by refusal to recognize the reality of an entirely different kind of world. With the energy of the Russian area technological operations and Russian constitution and continental ism, if Russia is victorious, the only way we in the United States can maintain our place in the sun as a prime power is to appose military continental ism on this continent: otherwise, we retrogress as a first-class power. That is very difficult for people to take.

But let's run over a few things. No large oil pools have been discovered lately. Oil production is going down in relation to consumption, which is going up. Lead the same way. Remember, the resources are going around the world. We have the equipment, but they cannot stand that rate of mining for any great length of time. We have known the oil situation for some years, but remember Technocracy's strategy as an organization has been for others to bring it out: otherwise, we would be accused of defeatism. But when other people bring them out, you can't accuse them, or Harold Ickes, of defeatism. He just gets "Ickier and Ickier."

10-10-43

As a man, Harold is all right. Like Vice Presidents Wallace and Garner, his integrity is not to be questioned, but politically he is naive. He should have an advisor: and, of course, Jesse Jones really caught him in a bad situation and big business wanted him. Jesse Jones is the most powerful individual in the national setup. He has billions at his disposal in the RFC. Wouldn't you love to have that job, where you have billions and you don't have to account to anybody? Leo Crawley got into Standard Gas and Electric. Jesse Jones made an RFC loan to Standard Gas. The boys scratch each others' backs, you know.

Now all of this dirt is relatively unimportant. Technocracy doesn't care who steals from whom. It is only the overall general picture, and what we are trying to get the membership to realize is that there is going to be some fast action in the coming few months ahead: and yet you have enough tonight to push the organization in your community. After all, there is nothing to be afraid of. You are all going to die only once. You can't go back to being Democrats or Republicans and not think of Technocracy at all. You don't want to go that far down. You will see the day that the organization is going to be more and more respected as an organization. Now big money and little money comes in, and the big money tells you that they are going to threaten (?) all their investments and are going to Brazil. There will be new taxes. The one with ten to twenty thousand, he can't live on that. The best he can do is liquidate and go to Brazil.

Taxes are not going to decrease, and the reason for that is not what most people think. We are not paying for the war out of taxes. It would be a great deal more if you ever attempted to pay for the war costs from taxes. They are to drain off the consuming power. That is what the game is; because you must remember that the man who works for a living is not entitled to have any reserve. If you are dumb enough to work, then you suffer the consequences. If you have \$30 million, it is just and meet for somebody else to protect your 30 million dollars' worth. In 1929, they took it away from you; now they are going to do it again.

You can go out and buy anything today if you have enough money. Now you can go into a popular restaurant in New York and get a little kind of invisible piece of butter. There is no meat on Tuesdays or Fridays, and the rest of the days there is little choice of meat; but you can go into a better class restaurant and

10-10-43

you get a nice big thick piece of butter, steak if you want it, or anything else you want. They have no menus. You ask for what you want, and they charge you; so, therefore, no price ceilings. You get anything you want if you pay for it.

The trouble with Leon Henderson is he was trying to be honest in a Price System, and that is bad. He still would be head of the QPA; the setup was to set up a nominal price-fixing bureau in each region -- set up a black market with priorities. That was the intent of the OPA; force things out here and yet to give the public the idea we are trying to do something for you poor saps. You don't want the prices fixed; you want them to stretch. Remember, I told you about the gas coupons. Is everybody getting enough gas coupons? You can get legitimate ones and illegitimate ones. There is an ironic touch here. What are we going to do with the automobiles when you can't get parts? That is approaching very fast.

In our largest cities, they just leave the car where it breaks down. What is the use? You can't get any parts for it. Let the Department of Sanitation come and get it. Well, California is in a worse position than any part of the country. These things are going to drive in, and we are trying to get you to maintain a solidarity and interest and realize that you have a fighting organization, that you have a cohesion, and you have a strategy. We have never put any of you on the spot yet. We would, if we could get you arrested simultaneously and collectively; but we have never compromised or gotten ourselves into any tool position where we had to back out. Yet here we are facing a national situation of increasing critical tension and an international one.

Now for a few minutes, I would like you to ask questions. You can get a lot of answers. I don't want to do all the work, I think you should do some. There are a lot of questions on your mind, whether on national or international affairs.

\* \* \* \*

Q. Are you getting all the steaks you want?

A. I wish I could say that I did, but it requires a greater income than mine. I am not a corporation executive.

Hamburgers are my speed and I'm glad to get those.

- Q. What about the extreme manpower shortage? We hear it over the radio every day, begging people to go to work, to get a war job. What is the reason?
- A. A million have left jobs, gone out on farms and gotten exemption from the draft. Well, it is very nice, but the farms are unorganized. Of course, you have the Grange, Farm Bureau, and Farm Union, and they objected to being organized on a national basis, just as the coal industry objected to being organized for efficient production. Install long wall coal mining with automatic machinery, no explosives -- eliminate that and you would eliminate 3,000 coal mines in the United States and over 300,000 miners; but the United Coal Miners wouldn't like it. Neither would the coal mine operators; neither would the railroads. Some railroads are simply coal haulers. They would be bankrupt.

So the coal operators are quite willing to give the United Mine Workers two dollars a day additional, provided the OPA increases the price of coal to the consumer. But then the QPA and the War Labor Board coerced the United Miners for political reasons. There is a definite shortage in some fields and a surplus in other fields, but we are not trying to organize it. We don't want definite planning. We want conscription of labor for greater profit for private enterprise. The unions are beginning to wake up. We are driving the point home. Labor unions have passed resolutions on total conscription. The CIO, Railroad Brotherhoods, and others realize it is the only weapon with which they can fight conscription of labor.

Go out, and your gas stations and your stores are filled with cars. The negroes have moved into the Japanese districts. There are more negroes than there were Japanese in a room. This is in America. Now they want a voluntary system of labor, and in the aircraft plants on the Pacific, in the last six months they have employed, medically tested and put through the training course, 150,714 employees, for a net gain at the end of 12,000. That is what you call American efficiency when it is operated by business. Those are the facts: 105,714 employed and gained only 12,000.

Q. Is there a movement afoot in Australia to operate farms of 500 acres each?

A. It means for the United States to supply the equipment. You want to sell them Jeeps to run it with. A diesel tractor cuts a hundred furrows just as well as one, and, in fact, it is much more efficient, Australia hasn't the arable farming land. Out of three million acres in Australia, on less than 300 square miles sufficient water falls, that is, land that is arable for machine cultivation. So Australia will remain the smallest continent on earth. We are not going to have the population in Australia unless you can change the rainfall.

Q. What about our war with Japan?

A. In our present campaign and present strategy, we have advanced one mile a day since the war began. We are still 3,500 miles from Tokyo, and if we continue with the same rate of speed, it will take ten years. Now Japan has been politically very astute. Japan instituted a Burmese Government, Siamese Government, an Indochine Government, and a new Philippine Government. The Burmese Government has already declared war on the United States and Great Britain. The Javanese will follow.

The British brought into Burma Hindus, minor businessmen, lenders, and petty officials. Well, they were so grasping the Burmese developed a hatred for them, and the Japanese came in and chased them out. The Burmese slaughtered all the Hindus that didn't get out. The Japanese brought with them the Asia-for-Asiatics idea. They pulled a smart one. They wiped out all signs of a white man's business and white man's institutions and instituted a Burmese Government from the little petty traders to police officials and everything else, based on the Dutch law.

So here is a Burmese setup with police and an armed force, and in another year, if they are not defeated in that time, they have had a couple of years with a Burmese Government with Japanese advisors. The same game is played in Sumatra, Thailand, Java, Borneo, and the Philippines; therefore, it

10-10-43

becomes an interesting proposition. Are we getting Burma for the Burmese, Java for the Javanese, or for the Dutch, and are we going to the Philippines for the Philippines or the United States? It becomes rather embarrassing.

Of course, China is in a very sad state internally. Chiang Kai-Shek and Sun Yen, who are representatives of the merchants and the speculators, don't want to invest in the plant expansion in China. They want to invest in profitable enterprise. You have your greatest inflation in the world today in Chungking, the occupied part of China. Prices are terrific in everything. They are in a poor situation. Whether we rescue them in time, that is, Chiang Kai-Shek, the money lenders and landlords; that is what it means. Whether we do that or not depends on if we keep the Burma Road open; but if it takes us beyond this rainy season, it may be too late. Of course, we could attack Japan or change our strategy.

What strategy should be used against Japan depends on whether we win the war in Europe. Why, the war in the Pacific would be easy. If Russia wins the war in Europe, we have that to consider. We will have contributed very little -- comparatively little. Russia has been fighting some 200 divisions. There are only three German divisions in Italy. Just how we propose to do it, that is a question you can speculate on in a good many ways, but it doesn't get us anywhere. An interesting puzzle game as to who is going to outguess the other.

Q. Is there anyone who wants to build a Flying Wing?

A. The losses over in Europe are increasing. The tempo has increased in intensity. The Germans have imitated the Russian plane construction and gunfire type. If the number of tons dropped from one bomber goes to 14, four out of seven planes will be lost. That is what will force the building of a Flying Wing.

Q. What is the Russian-Japanese situation?

A. The Japanese have a big armed force out there, but Japan isn't going to attack Russia. You knew they got badly licked

in 1938. The Quanto Army of some thousands of tanks, planes, and hundreds of thousands of men got defeated at the Chang River. Eighteen thousand dead admitted by the Japanese. Some thousands and thousands of Japanese prisoners, including the Japanese Quanton Field Staff. In other words, the Russians have killed more Japanese in the Chang River episode of a year and a half ago than we have in two years of war. Let's be honest. It may come as a shock to some. Incidentally, they took more prisoners and destroyed more tanks and planes.

There will be an attempt at regimentation here. The Austin-Wadsworth bill is to conscript labor. Won't it be beautiful? All labor in the United States to be conscripted to make more profit for private enterprise. That is contrary to total conscription, which is not contrary to the Constitution of the United States. No Fascist country in the world has total conscription, but every one has conscription of labor. Hope you get the difference. Kindly do not confuse dictatorship and fascism. They are not necessarily the same at all. Stalin is a dictator but not a fascist. Dictatorship and fascism are totally different things.

Q. How does the food situation look to you?

A. Well, if you have enough money, you can get enough food, but the prices are going to be higher and higher on the black market and not only food but coal and oil.

Q. What about Great Britain selling lend-lease material and putting their labels on it?

A. Well, of course, that is business competition. It is always legitimate, you know, to cut your competitors, providing nobody sees you doing it. Realize stealing is human. It was always indulged in so long as the majority could steal. It became illegal and immoral when the majority in any country could no longer steal and objected to be stolen from. As for the British labeling American lend-lease, why, that is current business. That is only smart business. It is nothing to get excited about.

Winston Churchill, one of the most Tory of Tories, came over

here to institute a new endeavor in American taxation. Staged a political ploy, the last one in Quebec, to uphold the dying political prestige of that dead pigeon out there, McKenzie King. It didn't work.

Q. What about the housing situation?

A. You can't take time out of this war to build housing. There never was adequate housing. The only housing ever done was on a speculative basis to sell it to you in the hopes you will pay so much down and so much every month, then take it away from you.

Spellman was sent over to Italy to make a deal. The deal apparently was for the Vatican, in return for the Papal States, to force the abdication of Mussolini, and the House of Savoy would be retained: but there was a double-cross all the way around, because the Vatican and the House of Savoy sells out Mussolini's Party and sells out the Italian Army. The navy is staffed by the nobility, and the army is not so good -- just common folks: and, of course, when the navy does come over to us, it doesn't have any ammunition. It is not going to get into action. Smart people, these Italians. We will have to feed the Italians. There isn't anything produced in Italy south of the Po. There isn't anything worth talking about south of the Po.

We'll have to send all kinds of foods, oil, and around a million tons of coals and as to the deal, it turned out to be the "Spellmanization" of the "Hesscapade." If the Russians advance from the east over the Dnieper River, they will insist on an armistice and will hold Roma until the Russians get there. In that case, the Pope would sing soprano.

Q. Monseigneur Sheen in Akron said the Russian-German war was a phony.

A. Naturally, he would take that attitude, but you will notice it wasn't up until Stalingrad. Very interesting. You see, the Vatican is like any other institution; of course, his Holiness used to be the Vicar of Christ and spoke directly to God, but he can't anymore because God only speaks

Russian.

Our State Department has been a very reactionary institution. Men like Clement Dunn and Averill Harriman, and, of course, Hull himself is ruled by a White Russian and naturally anti-Soviet, Clement Dunn is married to the daughter of a top-flight member of Belgian nobility, a leading fascist of Belgium. We have a dossier on them all. We have a longer memory about the Russians than the Russians over there.

During the war in Spain, Clement Dunn and Harriman objected to the export of a Chevrolet car to the Loyalists in Spain on the grounds that they would be exporting a machine of war. They have been pro-Fascist right down the line, pro-Retain. -Laval and -Giraud, and anti-French Committee of Liberation. Washington would not agree to having de Gaulle come to Washington, but Giraud did come to Washington. So, you can see our State Department has been pro-Fascist.

Q. What is going to be done if they put the screws on to us?

A. We might publish some material that they wouldn't want published.

Q. What do you mean by the "fait accompli"?

A. You are going to have plenty of money, and you won't have much to buy for it. You are going to have increasing efficiency in plants and cancellations of war contracts. It has already started. You are not working the night shift. Not working Sundays in a lot of places. Why, you are going to be bankers, a lot of you. Hours will be cut and your taxes will be increased. The whole game is for the government to build equipment, the government to pay the corporations to operate it, run training schools, and then, when it is operating at a profit, to turn it over to private enterprise. During the period of losses, the Government of the United States has it; when it is in the gravy, it gives it back. We are all paying the gravy for private enterprise, every damn one of us -- only our grandchildren are going to be paying through the nose.

Q. What is the status of the CVC?

A. How would you expect me to know that? They are carrying on up there. They have their speakers and radio programs. I wouldn't worry about it.

Q. What is the slant on the Spanish situation?

A. We have the names of all those who gave Franco help. Franco's Spanish Fascism is the Falangists. There is no such thing as a nice Fascist, as a social operation, as a system. Nazism in Germany, Fascism in Italy, Hungary, and Portugal are the same, only under different names. Franco is edging over and wants to be on the right side. Naturally he is fighting for God, but he didn't tell whose God he was fighting for. Every war has been fought for God, you know that. God, Greed, and Gold -- every damn war in history. It all depends on whose God he is talking about.

Franko's God is a little bit different, because there are still five hundred thousand political prisoners from the last war, and they have to take their God by compulsion or they don't eat: and the women and kids have to do the same thing. Fascism is a tripartite; spiritual oligarchy, economic oligarchy, and political oligarchy.

Q. How near is Total Conscription?

A. That is hard to say. If they will only have conscription of labor -- I mean of the public -- it deserves conscription of labor. You don't see them fighting for anything anywhere, do you? They have to go to the movies; they go to baseball games and then the bars. Haven't a thought in the world, except what is going to be the entertainment for next Saturday night. Now realize, today out in the Southwest Pacific, the highest percentage of psycho cases from our armed forces are in the Marines, the crack troops of our army, physically fit, and what does it do to them? Their conditioning here at home is to blame. We Americans have the highest and greatest number of escapist commercial mechanisms: movies, corner cafes, dime-a-dance, baseball games, football games, and all of those that the public can go to, not in which they participate, but as onlookers.

A paid commercialized profit-making escapism, where Americans can escape from reality, and when they go overseas, a thousand miles from home in Africa or someplace else, they can't talk to their fellow officers or to their men. All they can talk about is cards or the last time the horses ran. When they come out, they get to talking to themselves. The psychos are the highest rate next to malaria. They are back here now, and you can't tell them from you or all the rest of us. And that is what does it. They have nothing to hang on to or in which they all participate.

Q. What about Russia?

A. If Russia goes farther, there will only be one power in Europe with, any fighting machine.

The only conditions in which Russia would accept surrender would be the surrender of the Fascist Party in Germany and a free revolutionary Germany. Our approach in Italy and North Africa was to make a deal with the Fascist leaders with the name, and Russia wouldn't stand for that in Germany. The Fascist Party and the businessmen of Germany would like a negotiated peace. The German people and the German Army want to make a deal with Russia. So, you'd better bet on the army and the people.

Some weeks back, a very wealthy Republican publisher asked me to run for president on the basis that the country was going from bad to worse; and if I wouldn't run for president, I could be a deputy president, I wasn't interested. He was quite upset, upbraiding me on the grounds that I was avoiding the social responsibility. He is worth a terrific amount of money, head of corporations, headed a chain of radio stations and magazines, and wanted us to accept the responsibility.

Well, you have a social movement across this country. We have, of course, in our tactics, tried to get members into regulation dress so as to make the individual fight in this individual community. If we could have opened a training school, we could train members to fight: but we had to put

10-10-43

the individual in a position where his community picked on him. We did it with malice aforethought; but if you all in Akron had painted cars with decals, you could do it. It would be effective. Right in the downtown section of Los Angeles, with painted cars and regulation dress, they distributed approximately 70,000 leaflets in one day in an organized manner. There are over two hundred billboards of large size carrying Total Conscription. Every bus and trolley has two placards. Same thing in Portland, Oregon, and San Francisco. You can do it here. You might just as well while you are here, because it isn't good where you are worrying about the security of your children, try to realize that.

No American is individually secure nor can you purchase security in the face of what is coming. The only security an individual can invest in is collective security, and hedge against that collective security, you are not going to get it; in other words, we as a people are building a social movement in which we are travelling toward a collective security. We can get it. Each one has to become active and forget about chiseling a security. If you don't, it is going to be hell to pay. I don't think this organization has ever tried to make exorbitant demands. Each and every one of us can do something. It is not so much the money; it is the example you set in your community. You have a simple time. Howard Scott can't travel on a railway train in America without being known. Go into a restaurant, they know you; the police -- everybody knows you. You can't get away. I am too big and tall. In my next life, I am going to be born just average height and just beautiful.

Go to work in your areas and develop some esprit de corps. You have permitted personal jealousies and God knows what to come up. You fight between yourselves. For heaven's sake, if you felt that you want to be sadistic, take a crack at a Republican or Democrat or Communists and don't pick on yourselves. Let's go and kill the other guy for a change.

There is plenty of work to do. Go to your church, lodge or fraternal organization and raise hell, and you can only get thrown out. You have to realize the curse of the United States is four generations of nice, successful people, and

10-10-43

they are not going to smell very nice shortly, because what have they done for their country? They put it in the position it is in -- a state of anarchy, and we must win a war. The question of food is on everybody's mind and housing, and do you think there is any way out under the existing setup? If you think the Democratic or Republican Parties or the Communist Party can give you the answer, go to it. We haven't seen it. We are trying to get everyone to take action in their community. Invite them in and give them a cup of coffee and go to work on them.

The American Legion was used as a political leverage to high-pressure Congress for votes and bonuses and locally in their community for other things; and here they are proposing to get them all in the Legion, veterans of this war and others. The boys of the last war are older -- their numbers are declining every year, and their only hope of continuing is to get those in the present war to join in. But those in the present war outnumber several times those of the last war, and we haven't the industrial expansion; after they come back, they might have ideas, and the ideas are going to be altered by circumstances, and, if they can, they will form a political organization of their own.

Can you tell me what you can do to get some action in this area?

Suppose you tell us.

No, I think you ought to tell me first. Then we will see what we can do about it. What is holding you back? You have enough here to organize the State of Ohio. I am trying to get a bedrock discussion going here. If you staff an office, prorate and ration your time. You have to build up a fighting front here. It can be done. You can schedule out your operations. Start a war with a bank president. Where is your sense of humor? There are so-called child organizations. Invite the heads in and have them tell you all about it, and then raise hell with them. You know more about it than they do. With the set of tools you have, you can carve anybody down to your size. They won't even put up a decent resistance. Build up a library. Schedule your work out on the bulletin board. You have the ability but how to

10-10-43

release that initiative? I'll be here for a week: we can talk it over. We want to get some action, and action is going to be necessary in the next year. The amazing thing in Technocracy is this: in spite of thousands in the armed forces, the membership has not fallen. Amazing record. We have a responsibility, and that responsibility is all over this country.

The communists accuse us of being fascists, and the fascists accuse us of being communists. I have been called the American Lenin. You can take your choice. It is amazing, peculiar. How many of you have received orders or dictation with my signature? A very rare thing. They bring all sorts of charges against you. Just like some of the newspapers asked: "Where do you get all this money?" "You didn't buy this equipment with hay." We bought it at 15 and 10 percent off. Had a truck bring it from the dock.

After all, we have people in the export business. They wanted to know where Technocracy gets all of its money; and we say we will be very glad to authorize the release of our annual report from the United States Government to them, that is, in the New York Times. We'll authorize the Attorney-General of the United States. It would take five full pages in the New York Times. We object to being printed in little print. Remember, this is the only social movement in the history of the United States. It is an incorporated, nonprofit, nonsectarian, membership organization, and it has to make an annual report.

Remember, the government can check any organization through the clearing house, just as they can check the individual if you have a bank account. If there was anything out of the way, we would have been nailed to the cross long ago. They have had us up in court twice, but they don't have us anymore. Remember that they have tried everything they can possibly think of. Slapped a judgment on me personally. Had a warrant presented to me in the Hollywood Bowl. It is a battle. They can fake stuff, yes, skullduggery galore. We have had to contend with it.

We have had people in this organization in order to disrupt it. We had a Director of a large Section in spite of the

10-10-43

fact that the membership was warned not to make him Director. It took several months to track him down. He had a prison record, served several years in the state penitentiary. He had his fingerprints changed so that it was difficult to trace his criminal record. He was on the payroll at the request of certain organizations which we will leave unnamed. He was clever: he was put there for a purpose. You will have it happen again. We have had it happen at CHQ. We fired them out. It wasn't money they wanted. It was only to disrupt the organization, and they were willing to pay well for it.

About my being a Joe Stalin, that is a current remark. "A Technate would be all right if it wasn't for that son-of-a-bitch, Howard Scott." If Technocracy ever comes on this continent, you will hear people say Scott was a Hitler and Stalin all rolled into one. You will hear people say. "Why, we can deal with Communists but you can't deal with those Technocrats."

They offered a compromising position to all other organizations, and they jumped at it. The same offer was made to us, and it was turned down flat. You can see what an enviable position we are in; no big money, no strings tied to us.

We are in a position to go to town, clean across the country. The question is if we are correct in our analysis, internationally, and if the strategy of our organization is correct to the historic parallelism of events, we have a job on our hands. It will be laid in our laps, whether we like it or not. They are tailing us that we have to take it, and I am not talking about ordinary people.

I know my Americans, just as Sam Houston knew his Americans. He knew his army would desert unless he prevented it. I have been at this 25 years. I don't own a dollar's worth of profit, no security, no personal property except my clothes, no life insurance, and no bank account. I am not asking for sympathy; I am giving you the cold facts. We are in this to fight. I have fought when there was nothing. We have an organization to fight with today. We have a membership that is finding out how to fight. They all want to advocate a

10-10-43

modified total conscription. We would have plenty of backing right now in the United States, provided you make a fake appeal and sell it out. You can get one organization that has \$23 billion represented. They will back you.

They offered five \$500,000 checks -- bank checks. We turned them down. "You will regret this," Forty-seven people present, outside of four Technocrats; all were arrested sooner or later. Representative of the best there is. What did they want? An agreement, backed by \$23 billion, with the guarantee they would be left in perpetuity. They wanted to subsidize you; that was the real hay.

Do you remember the late General of the United States Marines, General Smedley D. Butler, came out a few years ago -- the charges he made? Well, he only named a few of the same crowd. We had all he had and more. That is the kind of thing you have to buck. Well, you are into something like that; you are in a war and it is a fight. I have spoken in one of the highest, most exclusive clubs in this country, and I was inveigled into drinking water and landed in the hospital with gastric hemorrhages.

These are the hard things where you get it slapped to you. They have tried all the dirty actions they could think of. They have tried it in various places. We have no illusions about it. Yes, we are hard. You have to be hard, and you have to face realism in an organization of this type. You are not the Republican Party that you can drop it and join something else. You have to fight for your principles and for your concepts as a Technocrat or you are going down. That is a different attitude than you are accustomed to getting. I am not singling out any individual. I am talking of our membership as a whole.

Howard Scott does not want any political office. It is up to the people of the United States by national referendum to alter their whole economic channelization. It is up to the people to put in their own administrators; but Howard Scott doesn't want any job. I have my job picked out for me, and I mean it. I have spoken in hundreds of cities on this continent, spoken in 81 different localities in Canada alone. When you speak in as many places as I have -- I would

10-10-43

like to retire and talk to four-legged animals for a while. I have no ambitions -- very difficult for many to understand that. They have nothing that Howard Scott wants.

You have to have that attitude; otherwise, you would have a price, and they would raise it until they got high enough. There have been any number of people developed the idea -- maybe it is this or maybe that, and they can't trade with it. That is what frightens them. In other words, to give them the deck and let them deal it, and still they can't win.

You won't have to do any reeducation. You just stop and look back at the literature and magazines of ten or twelve years ago and look at it now, and you will see every article today on the social situation earmarked with our nomenclature, our phraseology. We have done this, and was it composed of big shots? No, just average Americans. We don't score in the Price System America or have corporate executives. We have a few, yes. Technocracy is a membership organization. It is composed of every type of citizen. We have done this by mass pressure. It takes a long time. Look at it yourselves, how long it took you to get going. You didn't start overnight. You had all sorts of ideas. You probably joined because Howard Scott was such an awful character and something had to be done about it, and look where you have wound up. Well, here we are. Your Director has known about the fait accompli for 25 years.

I was six feet when I was fifteen. I never had any childhood the way a lot of children have. I just grew up, like Topsy. Running a construction job when I was 15. Now you get infected with this. It is a disease you can't check. You will never get over it. You go out and try to quit it and see what happens. There have been disappointments, yes. I have known the day, some years ago, where all we had was a little room -- one slept on the mattress on the floor, the other the springs: and yet I had to turn out to speak to an audience.

I would like to have a home, too. I would like to have a wife, but you can't do it. I am not asking for sympathy. I'm merely telling you this so you will realize that it wasn't

done by emotionalism. We realized the hazards; we made our decision. As individuals, you can jump around and make a lot of mistakes, but you have to be correct on a national scale. Even if there weren't any Technocrats -- remember, I was one before any of you, and I would still be one if there weren't any of you. That is fair enough.

Q. Tell us about the Hotel Pierre address in 1933.

A. It was at \$20 a plate. Forty billion dollars of invested capital represented there. From Thomas Watson clean down to the United States Steel, Standard Oil -- they were all there. Something very significant was said then, that, within the next decade, we would witness that the merchants of debt -- capitalists, democrats, and communists -- would be found down in the mud of the last ditch, fighting together in defense of this system of disadvantage. It has turned out that way. They never like it when you upset their values.

We have done a terrific job, but it is no time to sit down on it. Keep on shaving. Clear across this country we are on record. There is no other organization that has a constructive war programs. Little gestures, yes. We are the only ones that went down the line on it. It has had its effects. It takes quite a while to permeate, but they know this color. Even the generals in Washington salute this color. They know that we stand for certain things. You won't find the army fighting it. We have the navy wearing gray now, and the United States Air Corps will have about two million of them. Now there is a significance to this gray. You know the United States Army of Washington's time wore gray, the Continental Army wore gray -- they wore it in 1812 and 1847; so there is a historical background. We are just being nasty in bringing it out. The army is going to make it for us now.

MEMBERSHIP MEETING  
PUBLIC AUDITORIUM, SOUTH HALL A  
CLEVELAND, OHIO  
10-17-43

Well, I think you will all roll over pretty soon. You will. A lot of you probably wondered at our strategy at times and so has the rest of the continent, but if you look back twenty years to the last war and picture what happened then to all kinds of organizations and their strategy of the last war and compare the strategy of every other organization with this one, the odds are all ours.

In the last-war, Eugene V. Debs went to jail -- Stokes, Berger. They arrested all kinds of IWW by the thousands. They seized the equipment and household goods of the Amish Sect and sold it on the streets and sidewalks. Well, here is an organization having gone through this war. We have stood our ground, never compromised, and never pulled our punches. On June 21, 1940, we were declared illegal in Canada, because on June 2nd, we introduced our program of Total Conscription. French Canadian Quebec brought pressure to bear because we were growing too fast. The present elected government of the Honorable Mackenzie King and its Liberal party in 1940 had promised no conscription to the French political class for the Dominion of Canada. There still is no conscription in Canada for overseas duty, only for home service.

Communists and other groups compromised, and while the Communists and others in this country compromised with the Status Woe, with politics and business, Technocracy never once entertained any suggestions, although they were offered; and Friday afternoon at 2:18 p.m., the Prime Minister of Canada unconditionally surrendered. The ban has been lifted unconditionally, with all property, monies, and equipment restored to pre-ban status, with interest.

The Communists, Fascists, and other political organizations are still banned in Canada. So look out for your so-called Commie friends -- they are going to froth at the mouth and call you names from here on out. We alone, of all the banned organizations in Canada, never made any approach to the Canadian Government to ever have it withdrawn. Our only protest in 1940 against the action of the ban was that it was illegal and unconstitutional, and having made that protest, the Canadian Government moved

through its Department of Justice in an attempt to set up legal cases in each Province and create a legal precedent. There were six or more cases in each Province. Technocracy won the cases after taking them to appeal. So, instead of the courts creating a precedent, Technocracy created the precedent.

We have a peculiar strategy -- we never play cards with anybody else's deck. We give them all the cards, and when they come to deal them, all they have is deuces. I remember some years ago in Mexico when a big dice game was going on, where the line was on the floor for the dice; the dice were thrown down the room and bounced above the line and came back behind the line on the floor. There were thousands and thousands of pesos (dollars) up, and a tinhorn gambler rolled out a set of dice on the floor and they came back. There wasn't a spot on them. He grabbed them up and asked, "Who in hell put those in my hand?" In spite of 8,000 pesos on the table, he didn't stay there very long. What happened to him, I don't know; he left for parts unknown.

But we played a game that has been on the top side of the table. It's been tough, unrelenting, and uncompromising. A lot haven't liked it, but, nevertheless, we are as clean as a hound's tooth -- never took anything from anybody. The Canadians will not try to ban us again on that kind of stupid grounds. Instead of our losing, we are the gainers, because there are meetings in Canada tonight and maybe they won't let me sleep. Long distance telephone calls are coming in. In one Province, 41 reported in by wire yesterday. Of course, in the big mining camps like Trail and up in the copper centers, they are digging up their pins.

Here we are going on. We are going to be accused and called a lot more things right now, because certain so-called radical press in this country will froth at the mouth. The Communist Party can't exist in Canada. It is called the Progressive Labor Party. It only exists because the Communist Party leaders were released by personal agreement with the Canadian Minister of Justice. You will find it quoted and acknowledged by the Minister of Justice in the "Hansard" official organ of the House of Commons. The Canadian Government released from concentration camps, jails, and from so-called hiding, the Communists and others on personal agreement, in which the leaders agreed to support the Liberal Party of Canada -- King -- and support the government's so-called Liberal Party, the war effort, business,

and the conduct of the war effort. The Progressive Labor Party leader, ex-Communist leader Tim Buck, is now out speaking openly for business operations at a fair profit, at least 4% profit. What does it sound like? The Communists are sloppily more liberal than the Liberal Party ever was. And more-or-less, it's happened here. Browder was released from jail. We haven't had any admission from the Administration in Washington that there was an agreement. No doubt there was some kind of agreement. There is a similar pattern.

Now here we are; we've got to roll over. Thousands of new members overnight, and it is a headache, because British Columbia has grabbed all the charters, MAs on the Pacific Coast clean down to Portland, Oregon, overnight. There are not enough supplies out there. Well, it will be, felt clean across here pretty soon.

Now try to understand that this move in Canada today was not the result of Big Business. Big Business in Canada doesn't like us there or here. While the press of Canada had to carry it, just as the radio carried it, it was announced as coming from the Premier instead of from the Department of Justice, just as an announcement from Roosevelt would have to be carried by the press and radio here.

Now the press blew up the fact there was a number of organizations -- Finnish, Ukrainian, and others -- from which the ban was lifted, and way down at the bottom of the column that the ban was also lifted from Technocracy Inc. Now the Ukrainian organization existed where there were foreign Ukrainian groups -- so also the Finnish. In Canada, Technocracy is widespread, with 208 offices -- we are mentioned away down here as an organization that didn't have very much support in Canada -- just a couple of lines. In other words, Big Business doesn't want to advertise it.

It is an amazing thing -- somebody came to Canada from the United States, because Prime Minister King would not have made it, unless there was some agreement in Washington, somewhere, somehow. I wouldn't know who it was. It definitely wasn't the State Department and it wasn't the Treasury Department. There is only one I could mention that might at all be interested, and that would be G2 in the General Intelligence. They might look at it this way: there is only one man on this side of the line that can go across the line into Canada. The Republicans can't send

Willkie into Canada. He can't speak over there. He spoke over there once, very vehemently, climbed on the table top and fell off the table into the microphone. Well, you can do those things down here, but those Canadians are too serious for that. "What was the matter with the sap that he fell off the table?"

We can't send Wallace. Dewey won't be any good. The Democrats and Republicans here are not radical enough for Canada. The situation in Canada is tense. The Liberal Party in the Province of Ontario went down to a landslide defeat in all biennial elections. Across Canada the Liberal Administration has been defeated in the biannual elections. The Canadian press and Big Business is worried. They are having bold-faced editorials in financial papers advocating Liberal Parties combined into a single free enterprise in order to save Canada from this nationwide revolutionary spirit that is sweeping Canada. Well, this so-called revolutionary spirit that is sweeping Canada that they are talking about is a balanced load operation of Canada and the continent. We never heard those words before, did we?

Of course, the CCF -- the Commonwealth Federation, is getting the votes, because they will vote for anything that is a protest under existing conditions, but the CCF isn't radical enough. The powers that be in Canada aren't radical enough. The CCF has one policy in one Province and another policy in another, and another one in another Province. They'll have any kind of policy in any Province if they thought they could go to town. They are sloppy liberals with a dash of socialism and cooperatives and everything else thrown in. They propose to nationalize the railroads, nationalize power production and distribution, and the retail would be done by local cooperatives, but the big companies would not be nationalized.

Well, you see we have them going far beyond that, and here they are letting us Technocrats in, and, up in Canada, most Americans don't know that Technocracy is a far more revolutionary organization -- so much more so, its social program is more revolutionary than Communism is so far to the right it is bourgeois up there, and they have no hesitation in telling you either.

So here is a political m lange up there in which the old order is going down and which, for some unknown reason, some

interested group, nationwide in Canada, wants us back in, and the pressure has been great enough to upset the pressure of the French Quebec, the sole support of the Prime Minister of Canada; and that is some pressure if you know your Canada. Of course, we are the only organization that can guarantee the French Canadian the same abundance and the same opportunity and operation in Canada nationwide as a Canadian, not as a French Canadian. But if the French Canadian persists in his political sabotage, there will be a declaration of war on the Province of Quebec when the war is over. We are not kidding. In other words, get in or get out; if you are to get out, you are going to fight. That is how Canada feels about it. Very few realize that, but that is the position that we would take, and we would have the support of approximately 10 million Canadians in that attitude of having 2-1/2 million agree, or else. So we are not going to get back in Canada on a compromising attitude or having to say "please"!

There were over 600 residences raided between three and five in the morning in Canada -- not only once but several times -- as a policy of intimidation by the political Gestapo of Canada in the last three years. Well, their Gestapo policies didn't work, and tonight the wires in Canada are singing and they are on their way. Probably 11,000 miners in Flimlam have consumed all the beer and liquor in Flimlam, but that doesn't stop them from asking you which side you are on -- you had better know or you had better leave town. They have stuck it out. It's the same way in the Kimberley mines -- they have never wavered. They contrived to get the news out and to get funds out; they never stopped, and yet they were raided, bothered, and intimidated. The intimidations didn't work. Can you imagine the excitement!

Well, I am a bit tired out, so don't mind me. That is the thing we are facing here. We are facing a situation internally that Technocracy has continually pointed out. It was that when the technological equipment was installed due to the impetus of war or business boom, it would be impossible to operate the technological equipment of the United States at continuous use full load for two years without running into an impasse. We compared situations in Europe. They could operate at full load for thirty years and it wouldn't come to an impasse. Some of you may recall those statements. That situation has arrived. There are cancellations of war contracts.

The terrific volume of production is piling up, and in many places they don't know where to put it, in spite of the fact that many -- but not all -- of the war industries have their payroll so padded that you've got to move the employees out of the way to get the work done. At cost plus 10%, our war industries and corporations in war contracts excel on actual material contract -- have padded their payroll to the limit. The greater the payroll padding, the greater the gross pay down, and the greater the depreciation and reserve and the greater the profit. Of course, profits are greater than ever before in history, and the corporation reserve is around \$28 billion. Just what the devil are they going to do with it?

Now, in 1938, the United States had a producing capacity far in excess of its consuming capacity; namely, of purchasing power to consume, and there were between 7 and 8 million unemployed then. Since then, we put in some \$25 billion of new plants. We have increased the productive capacity of the United States almost 100%. The technological productivity of the United States is increasing at the rate of 8% per annum over the last ten years in spite of the depression. Well, here it is moved up, and regardless of the inefficiency and interference -- and that is terrific -- productivity is increasing, and you are going to feel it in Cleveland, Ohio. You may have felt it, because they are going to cut overtime hours, and Jack & Heintz will come to a more normal working week. Well, it won't be long. Are you working Saturdays? No, nor Sundays. We get our reports, too, you know. Six tank plants have shut down. The Russians have not taken any more in the last six months. They call our tanks "tin torches." Besides, they are building enough of their own. All are diesel driven. Their tanks are wider, lower, with heavier firepower, and, of course, they do not catch on fire. The Russians want foodstuffs, trucks, machine tools, and technological equipment from now on. Funny people, those Russians.

Eight of our arsenals have shut down. The operating load for the textile industries next year, as far as war contracts are concerned, will be only 50% of what it was this year; and, as the operating load of textiles was 97% war orders, the textile industry is now worried with all the beautiful excess capacity.

Well, we have a method of making gun barrels, the rotary gun barrels. Well, of course, they are making gun barrels like that,

down to where they make gun barrels so fast they haven't sufficient machines to make the breeches to supply the output. The barrels are piled up end-to-end for half a mile, rows and rows of them. We have a plant out here that produced a billion this year -- well, it produced its second billion in about a third of the time that it produced its first billion.

Now, you can go down the line. We have introduced various processes in technological equipment that have stepped up production. If anyone thinks that the acceleration of the last war was terrific, you had better move over, "honey chile," this is going out into the blue. In fact, it is stepping up so fast they don't know what to do with it.

Besides the \$25 billion worth of new plant installed, there is one billion that isn't in any plant -- surplus production of the equipment. Industry is standing ready. Now, that is in excess of all the equipment that is shipped abroad. We have shipped equipment abroad that we have never shipped before, and the world has a different looking face today. In the last war and up until the start of this, Australia was primarily an agricultural and mineral raw producer. Today, Australia passed out of that class forever. Australia has the largest machine tool producing plant outside of the United States. It used to import its machine tools from Germany and Great Britain. Australia will never import any more machine tools. It will now export machine tools if there is anybody that needs machine tools. Australia is producing optical glass, binoculars, range finders, and spectacles. Australian ships are up to 16,000 tons, warships up to cruisers of 10,000 tons, all guns up to 8-inch guns; producing all of its own tanks and own planes, both fighter and bomber planes. Makes its own aviation engines complete and is putting in an aluminum plant; increasing its steel production alloy. Australia's development of the textile industry is of sufficient capacity to clothe Australians, and it has developed a shoe industry to where she will shoe all of Australia and send 9 million pairs to the British Army. Australia is in the meat canning and quick freezing industry; mutton, beef, and lanolin from wool. It has a chemical industry developed; canning pineapple and other foods. It is even exporting bottled wine. Well, is there going to be any great market for foreign trade in Australia? The answer is no.

But the same thing is happening in South Africa and in

India. India is producing boats, guns, and trucks, ammunition. India is the greatest producer of army blankets, tents, tarpaulins, and burlap bags. Well, there are machines going into India, so the Indian is turning over, but the Japanese are doing the same thing in their sphere.

The machines are American -- Great Britain's are American. The production of Great Britain is several times the British ever knew before. In Canada, in the north, there has been a relative increase in the productivity of Canada, and little down here, because we have put in equipment and plants in Canada and we have jumped out into the blue. Canada has an arms industry, chemical plants, all kinds of things which it never was in before. Canada produces range finders. Well, why not?

What you sense here is not the American Century of the common man as proposed by Henry Luce of FORTUNE MAGAZINE and Vice-President Wallace. It isn't that kind of century at all. And those of you who accidentally heard Sumner Wells yesterday -- he stressed the prime imperativeness of a world organization which we had to belong to and lend our support to a world organization to police the world to maintain peace. That is the kind of confusion that is perpetrated on our Americans today, because there are two kinds of a world today: one, the world that produces the human toil and hand tools, the other the destiny of an economy which is entirely different and antithetical -- an economy that produces physical wealth through the degradation of energy -- there being nothing in common with those two economies. Neither can you have any stable world conditions based on a national economy of human toil and hand tools. It has not the same morals and methods and aspirations as the economy producing its physical wealth with extraneous energy. It is a totally different thing.

We are being drugged with a slavin morality of Christian humanitarianism. We'd like to hope the world is stable long enough to have more business, better business, and at a bigger profit for a longer time, and that is innate idiocy. That is the kind of confusion perpetrated across this country. The British Government issued the latest census on India. It shows a population of almost 400 million. What is more important, it shows the population of India has increased 50 million the last ten years -- a country increasing at the rate of 50 million every

ten years! Now, the resources of India are greater than other countries in Asia, but they are not great enough to turn over the energy per capita basis of the North American Continent for more than a few months, no matter how much you like to believe to the contrary.

China has 350 million population. China has not the resources and the sentimental hypocrisy projected that we can raise the livelihood of China to that of the United States are really social anarchists, because he contributes to this damnable confusion. They are kidding the average American brought up with this sloppy nonsense -- to put the Chinese on a high idealistic state when he himself at home in the United States lives like a pig so somebody can be an angel hereafter.

You know your own City of Cleveland -- Akron, Detroit, and Chicago -- it is the same way. A few large buildings, industrial plants, nice beautiful lawns behind the trees. Those who work think they are something if they have a house, though no breeder of thoroughbred pigs would keep his pigs in it. He wouldn't, as pigs are kept in up-to-date piggeries under modern scientific equipment. He wants his pigs bred right, fed right, so on down the line until they become "poke chops." And yet we are full of that sentimental nonsense -- let's help the Persians or the Chinese, Javanese, or the Burmese, or somebody else on God's green earth except our own country. It is amazing what has happened in the last 80 years. When he reached an income of \$10,000 a year, he moved out into the suburbs and immediately acquired myopia -- couldn't see beyond a quarter of a mile and the rest of the houses in the same community, couldn't see those, never knew they existed -- they became superior beings. The female goes out and insists on John dressing up and getting approved and making a smell like all the other rats.

The steel industry of the United States has 32,000 less employed than it did a year ago, although it is producing more steel than it did a year ago. Every single industry has installed equipment with contracts great enough so that the employment has gone up and production has gone up toward the sky. Lo and behold! From coast to coast, it is jamming up in North America and 72 other places on the globe. What is the trouble? We are in the greatest business boom in the history of the world, and a good many people who are in business and those who are in war jobs,

why, they have never been better off in their lives. They would rather see the war continued. They are in the gravy with all four feet at the same time, and, well, "it's too bad their John had to get drafted." Outside of that, it is just "jake." You can hear many saying, "This is a break. If only it will continue for a little longer, we'll be sitting pretty." Well, that is what is said. Out on the Pacific Coast, the war worker is jamming money in both pockets with both hands, and they can only work with their feet. Don't blame the populace -- it is not their fault. The fault is of the system.

Well, what are the prospects for keeping the machinery rolling? It is not very good. Our foreign policy of the United States, Great Britain, and Canada has been to militarily win the war fast enough to use up supplies but not fast enough to win the war right away. That would be poor business. In other words, we only want to win the war fast enough so that it won't put a kink in our war contracts, not fast enough to prevent the Russians and Germans from bleeding each other white down to the last pint of blood. That is our great hope. And if we had been able to achieve it, we would have been able to step in when the last German faced the last Russian, and we would have been the Big Cheese in the European war. The only trouble with that is our judgment, our discernment was all hindsight, because we were sadly outplayed. We were all wet as far as the Russians were concerned. Remember back in 1939 when the Russian army moved into Poland? The American press, war correspondents were with the German army from the opposite direction; the military, naval, and air observers were there, too. The papers were filled with photographs of how poorly the Russians were dressed -- they had no uniforms, didn't have any equipment, and "Oh, the poor Russians."

They came into CHQ, slammed down a lot of photographs. Here were long lines of old equipment. They asked, "Mr. Scott, what do you think of it? Look at the antique equipments" Well, I told them they were old Putlow trucks which hadn't been manufactured in over 20 years. They had dragged out all the old uniforms and the trucks out of the museums and everything else and so fooled the British G2, the United States G2, and the United States press and big business sent it promptly across the country, so that when the Finnish War came on, what happened? Why, the Finns are a wonderful little nation -- it paid its interest on its war debt. Why, they were gobbling up the Russians. The Finns captured more

Russians than the total population of Finland, the Russians didn't have any uniforms or equipment, and they were frozen to death by the thousands. That is the impression that was given to everybody, and yet nobody seems to understand what has happened there.

The great fortifications designed and constructed by the builders of the Maginot Line after the Skoda Line, with all the improvements, and the Russians blew it to pieces at 47° to 52° below zero. Now, what did they use to blow it to pieces? In January of 1940, we were called crazy and up until this year by every department in Washington, because we laid down the Russians' strategy. We said the Russians had a 300-mm. gun, hydraulic breach closing, automatic loading, the largest, longest range, mobile field gun in the world or at any time. Now, as to the Russian anti-aircraft guns, the Germans didn't get through at Moscow but did get through to London. The mainstay of their anti-aircraft were 12,000 150-mm. long barrel guns, with a muzzle velocity of 2800 feet a second. That means a ceiling bursting at 44,000 feet, surrounding the whole city with these guns. They could then knock them down like dead pigeons. This doesn't mean they are anywhere up to where we are technologically -- that they don't make mistakes. Russia did, but they had sufficient latitude and elasticity in strategic command to utilize social advance of what it had when they found they were in error, which is rather difficult to say of our country.

It is amusing, in part, what Russian designs came from over here and we haven't got to yet. But, on the other hand, three of our best plane designers came from Russia. It merely proves that the Russians have the ability to design things themselves, but they also recognized what we had over here, took it and developed it. So here is a situation developing. We'll know very shortly if Russia will cross the Dneiper, Terns, Orshia, and Gommel. They are going to shove the German front line back several hundreds of miles and they won't make peace, but they might rest and consolidate for a while.

There are only five divisions in Italy. Remember, the Russians have never fought below 200 of the enemy division; so, we are in a kind of dilemma as to what to do. We are rolling over here at a continuous full load to maintain the greatest business boom in history and how to continue to win the war militarily

over there fairly fast enough, but not fast enough. Fast enough is too fast, so Technocracy has a suggestion. The only way to continue the business boom of the United States for another two years is to persuade Germany and Japan to stop using any manufactured goods of their own and permit us to supply them. I know it startles you. We'd have good business then.

Now there is another side to this picture. Labor in the United States has been enjoying overtime pay and overtime hours, that is, they work 70 hours actual work and 109 payroll hours. But as this productivity mounts up, the hours down here are actually coming back to 40 and 48 hours a week. In the meantime what is happening on the social side? The cost of living has gone up. Food and taxes are going up. Of course, next year's taxes are just lovely, just wonderful. What you don't get you pay the most for -- you know what I mean. Here is the present prospect: that with higher and higher taxes, the hours will be reduced and overtime will be cut out. Now, let me ask you, if your overtime is reduced to the total work week that you worked in 1937, would it affect your income? If you were cut back to the 1938 level, how many would have less income? Now, the rest of you here, your income has been no different than it was in 1938. Kind of tough if you work in the educational field, or the government, or some railroads, or United States Steel. A vice president of a bank was telling me that he had two sons, that one had graduated; the other one was going in for literature and had taken his MA, that now he is working in a war plant. After he had been a year or two at his profession, he made more in a war plant than he had at his so-called profession, and after working in the war plant he came to the conclusion that the workers were getting too much money. Of course, not all people in the United States have had their incomes raised due to this war. There is a percentage who actually get less now than they did in 1939, and there is a percentage that are getting the same, but their living standards have been reduced. Now, if you wipe out the overtime hours and overtime pay with this increased cost of living, look out for the installments on that mink coat and 24-record playing phonograph and fur-lined toilet, because all will be hit. Now the taxes are not up to that of Canada, but they may shortly be.

In Great Britain, it makes no difference whether you own a farm of 30 acres or one million acres -- you will only get \$3,000 a year, and if you have an ancestral old home farm over there

with 67 rooms, they will only let you have three rooms and fill the rest of it up. The British is not the same "no mo." The "bloody" place has gone to hell. Britain is in a peculiar state. They are mining iron ore of less than 23% Fe content per ton of ore. That means it takes 5 tons of ore to make a ton of steel, and approximately the same amount of coal. Well, there is no tin there, no copper, and the coal seams are thinning out, and they are digging deeper. War production has forced them to take out the less accessible coal; so they will be worse off potentially, and it doesn't matter about their stocks or bonds; and 35 million British are due for export, whether they will export on the hoof or canned for the cannibal market, but export you will have to. I know it is rather hard, but you can't ask God to replace the coal on the British Isles. There was a time not so very long ago when the Pope, the Vicar of Christ, could talk to God; now he can't, because God only understands Russian.

Politically abroad, we have not been so smart. Our policy abroad, outside of waging a military warfare is one, the other the economic side. The political side is very interesting. The matter of propaganda today on a worldwide consumption basis promulgating an international doctrine of a worldwide revolution, freeing the world from want, but we never had any intention of implementing it to the slightest degree -- what Barnum called sucker bait. At the same time that we threw out the sucker bait on a worldwide basis, we exported the very tools of social revolution -- the technological equipment we have shipped abroad by the boatload, tools so grandiose that they will blow up any social economy that gets enough of it. We had no intention of ever being cognizant of the social revolution when we exported it to the world or responsible for what would happen. It was merely for the immediate expediency of economic, political, and military, and we didn't want any future obligations for it. So here we are kidding the world and ourselves.

Your friends are all fed up with the drippy drool of the "four freedoms" for everybody except the Americans. Homo Sapiens Americanus -- mostly sap. Our actual intentions when we exported the propaganda of sloppy humanitarianism and exported the tools of social revolution are of far greater concept. The humanitarian bunk that we have proposed to do was to change the facade of fascism in Italy, to have fascism without Mussolini, maintain the House of Savoy and Badoglio and change the fascist structure up

and down Italy. We wanted fascism in Spain but without Franco; fascism in France but without Petain and Laval. They were bad boys, just like the girl that got caught -- she wasn't smart, so you can't speak to her anymore.

That is what we really wanted to do. We drove a bargain with the fascist generals in North Africa, and the only reason that Darlan came into the picture was that he heard what the rest of the gang were doing, so he rushed in to muscle in on the payoff; so we shoved more gold over and \$16 million went down on one of the boats -- one of our transports.

Well, before we invaded North Africa, a lot of peculiar little things went on. Now we had a Robert Murphy over there. The British had McMillen over there -- McMillen of the McMillen Publishing Company. Murphy graduated from Marquette University -- that labels him -- he was a lawyer. Well, the boys in France somehow or other knew that North Africa was going to be invaded by the Americans and the British Navy and knew some weeks previous as to the invasion; and, as France stood, somebody on our side of the picture approached somebody on the other side of the picture -- and never mind who on the other side -- the Bank of Paris and the Bank of Cologne in Germany somehow or other got a deal agreed whereby you could transfer francs from France to North Africa in the days prior to our invasion and there would be an agreed exchange basis -- as it existed, 100 francs to \$50. In other words, go out in the open market and double them right away. You understand? You got 100% on your money right away, with the result that the Bank of Cologne, Germany, international bankers settlement, and the representative of the Bank of Paris arranged through somebody that represented us -- I wouldn't know who -- the transfer of funds. The amazing thing -- over in North Africa there are \$62 million (American) that belong to the Commentate of Forse. The Commentate of Forse happens to be a joint stock ownership in the Herman Goering Bank. Clever people, these Frenchmen. Morgenthau doesn't like it. He is scared of it. There are a lot of funny things like that. So, politically, in that sense we want to keep the old gang in.

Now, Giraud was recognized by the Vatican, the conservative interests in Great Britain and the United States, and the extremely conservatives got him to Africa. Well, Russia recognized De Gaulle. You can see how complicated it becomes.

Well, now, we put in a military government proposition, and we called it the AMGOT -- The Allied Military Government of Occupied Territory. The only trouble with that is that in Turkey it refers to what the horse drops. It became the laugh of the Mediterranean. Now it is only AMT. Well, the AMT, the head of the Allied Military Government of Sicily, is Lord Reynolds of the British House of Rocque. Well, he is a partner of Morgan-Brenfell of London. Begins to get interesting, doesn't it? Morgan-Brenfell of London loaned Mussolini \$100 million, of which \$60 million is still, outstanding. Is Lord Reynolds supervising the election there or what the hell is he there for?

We are following the same game here. We put a Stettinius in the State Department. Averill Harriman, that hard-working boy, worked himself up from the bottom -- never had any help -- inherited \$70 million. He had to work under that terrific handicap. He increased the principal to almost double. Stettinius, of the Morgan Partnership, was head of the U.S. Steel Corporation and the brother-in-law of Avon Tripp of the American Airways. Stettinius in the State Department and Avon Tripp in the American Airways -- they wouldn't want possible mutuality of interests, would they? Freedom of the air, for instance. Now, we send Averill Harriman over to Russia. The Russians know Harriman. They remember all he was mixed up in in time back. So here is Big Business this side of the water doing exactly the same thing that Big Business is doing in Britain. Now you remember that we were the first to bring out about Rudolph Hess being shot down in the British Isles? Of course, we sent Archbishop Spellman over to Italy and tried a Spellmanization of the Hesscapade.

So, here we are with no clear -- cut objective in our foreign policy and not knowing what the hell we are going to do with the accelerated mechanism at home. In 1940, the Republicans were in full agreement with the Democrats on the foreign policy of the United States but disagreed on who should run the internal operations of the New Deal. They concurred with the New Deal, provided the Republicans would run it. Well, the New Deal was nothing more than a liberal streamlining of a lot of old conservative hooey. All the intellectual liberals jumped in to hurrah that we are going to get social reformation. The hell you are! You are getting goose served up to you.

Now the Democrats are going so far to the right they are spraining their ankles and are in the same boat with the Republicans. You go back to the Wood row Wilson Fourteen Points -- they ended up as one of the damndest debacles in history. He was discredited at home while still being applauded abroad. If we keep this nonsense up face-to-face with the fait accompli presented abroad and face-to-face with the fait accompli presented here in the United States, if Russia crashes through the Dnieper Line -- and there will be a collapse of the German front in Russia -- and moves back -- if it doesn't right away -- it will be a holding operation. The time is put off, the event is not. So, if the Russians are victorious on the eastern front, Russia will present the Western Democracies with a fait accompli of military achievement, and we here in the United States, with all the stupid blundering and four-flushing, will be compelled to eat Crimean dead crow with Russian dressing. Consistently, for twenty years, we refused to recognize the integrity of Russia or become aware of the world we lived in as a realistic world. We insisted in talking in terms of international high finance and all the skullduggery and hypocrisy that goes with it.

We send over Averill Harriman and Stettinius, based on the assumption that if you fail to sell the man with one kind of sales talk, try another with a different approach. The only trouble with that is, when dealing abroad, that there may be nothing to sell. Remember, if you lose a poker game tonight, the wife may squawk a little, but still your standing in the community would be the same that you had; because there will be another poker game tomorrow, or next week, and your prestige will not be lowered -- you will not lose face. Well, you just came out on the short end of that game. You can lose at a horse race and still bet on another the next day, because the horses will run again. You can do the same thing on the stock market, and you won't be a renegade in your community by having a force-out sale. But, get into the international events, the horses only run once and the cards are dealt only once. Kerensky never came back.

Here we are, educating the public of the United States in more and more confusion. You ask any soldier in the army or sailor in the navy what they are fighting for, outside of saying they are fighting the Germans or Japs or Italians, well, they didn't quite know. There never has been any propaganda, collectively. Each individual has a different individual answer.

We have no national cohesiveness, no national objectives in what we are doing. We hope to God we'll win the war -- not when we'll win, so that it will not be too upsetting if we win. If we won too fast, the peace, why, it is going to be worse than the war -- more dangerous. Well, it can be, because in the last war, there were only a few that had to come back. We only had two million abroad in the last war, and our industrial equipment wasn't turning over at the huge productive rate, supplying goods, implements of all kinds, to all the Allies. They had the equipment. We had to arm our troops with foreign equipment; we never got enough supplies to our troops. But today, we are geared to a huge output, and these men returning are told they are going to get their jobs back and that the Democrats are going to solve it. Like hell they will! Or the Republicans? Like hell they will, either. You know that.

Canada today is giving an indication of the trends. Canada is going to the left with a vengeance. What is labor doing today? More and more labor unions are passing resolutions and giving attention to Total Conscription. Now the COMMUNIST DAILY WORKER sent a reporter to interview me the other day, and the Communists of the United States and the DAILY WORKER are worried about it. This is their statement: That we are making inroads in American labor, and what worries the Communist Party is that Technocracy may possibly -- and might probably -- assume the militant leadership of the labor in the United States; furthermore, that Technocracy advocated all-out aid to Soviet Russia because it was the prime power adjacent to this continent and because we have consistently held to the position that the Russians might even think more radically than the Communists. Not that we are interested. We don't care whether the Communists endorse us or the Socialist Party or the Republicans or the Democrats or the CCF, or the liberals. We would rather they didn't. We play for that, realize that. We have deliberately encouraged it.

Those of you who have been in the organization a long time or remember discussing it with me eight or ten years ago, that we would get the United States Government to do things for us. Well, we are, aren't we? The Navy is getting into gray. When the new Air Corps of the United States is formed a separate part of the United States Armed Forces, there will be over two million of them in gray. Now, if you read the United States Navy specifications, it states that after considerable research, they

have approved this gray because it had the least visibility. I don't mind their stealing our ideas, but I do mind their throwing it in our teeth.

There are several things to discuss. One is get over the idea that any American, no matter how hard he works, no matter how much he steals, no matter how much he finagles, no American can purchase security today on an individual basis. No matter how much money you make, your money cannot purchase security. It may inflate your ego, but do not fall into the error that your economic gain can obtain social security for you in the next few years to come, because the social security of any American from now on out is dependent on the collective security of the other 135 million Americans.

Well, the other fault that we have around here is we think we can go to church or in our own minds what passes for obedience of the faith, or you might say it this way, that if we were all Christians, we wouldn't need Technocracy. Well, that is a lot of nonsense, because Christianity, voodooism, or Shintoism, that is a spiritual thing, and no spiritual knowledge can contain any designs for operation of a Continental Area. If you all became 100% Christians tonight, it wouldn't alter the standard of living 1/10 of 1 percent. But here is where the rub comes in: Those who profess sincere Christianity claim they want to be their brother's keepers. The amazing thing is that you can't be that brother's keeper or lead a Christian's existence unless there is a production of abundance and the planned operation of your entire area. Only until then can there be physical existence to where you are capable of even acting what your spiritual religion professes; otherwise, you are living a fake proposition, an abstract that you cannot practice no matter how sincere. The ministers of religious faiths promulgate confusion everyday by saying, well, you will have to suffer and do penance and come to Jesus, come to them.

That is all very well, but it is downright sabotage of the world they are living in, an apostate of their spiritual belief which they profess, because you can take their own religious works and look it up. What are they trying to do? Trying to condone and collaborate this Status Woe. It is their economic sustenance, and they don't want the status changed in the slightest degree. Well, that is pretty tough. I dined with two

Bishops of the Episcopalian faith in New York, and they were asking me what I thought of their plan for social reformation in the Episcopalian Church to educate the Episcopalian worshipers to the changing social order -- not all faiths, but only the Episcopalians. When I pointed out that it might take one hundred years for achievement and that the world they lived in wouldn't exist any more, and their spiritual reformation would be entirely out of tune of the world they lived in, they hoped it wasn't so. We drank very old and excellent port wine. The Evangelical Church of the United States have excellent wine. Of course, the Evangelical parishioners never get a taste of that. When it was pointed out to the two Bishops that, unless they had a program of social action for this continent -- regardless of their particular faith, they thought that was a bit drastic. They would have to become positive and not negative, and you know that is really too much to ask of a Bishop. Of course, Christ said, "Take up thy bed and walk," But they wouldn't want to do that, and they couldn't have their old port. You have to face this. I'm not picking on the Episcopalians -- they are all the same, condoning the slums, malnutrition, juvenile crime, and every other damn thing from coast to coast and very little will be proposed. There will be no positive program, because they derive their very economic livelihood from this Price System. If they did anything about it, then the big corporations and financial institutions would say, "Now look here, George," and he would roll over and decide they would rather have their port wine and the beefsteak. And yet he is supposed to worship somebody. They are even accused of being social leaders. So, it boils down to the fact of this reality: an apostate of their charge, when it is nothing but downright hypocrisy.

The religious leaders, the political leaders, public and social leaders talk on the public and social problems. A Sumner Welles smiles, a Mackenzie King and Churchill attack it in terms of abstract nonsense -- the resource energy per capita, food per capita for the Chinese, or the Javanese, or other islands, and we here are face-to-face with realities. You are not going to cure those realities by either spiritual or economic or social escapism. You have to stand and face them. And the problems are no longer on a small order of magnitude to be voted for another generation and hope to God that you can pass them on to your children. The order of magnitude is increasing. Here we are in for the greatest social change in the history of the world, and

the average American is totally unprepared for it. He thinks it will be cured by parcel post or Farley or that a political machine exists only in Chicago.

In Canada, the voting in the national election dropped from 34.1% to 19.2%. What that is indicative of is that the Canadian has less and less use for voting for any political machine, and it is falling here. Can't get the turnout. Remember sometime back, they were having a big meeting on Technocracy in Vancouver. There the Liberal Party and the Conservative Party and the CCF were on the air everyday pleading with the citizens of the City of Vancouver to vote for their respective parties, and Technocracy went on the air: "Sucker, get two dollars for it, if you vote!" And the vote in the City of Vancouver dropped to the lowest on record, and the press of Vancouver accused Technocracy. Well, for once they were correct, but we could only do that provided that the Canadian citizen found out that voting was no good. In other words, we did not make that condition -- that condition was made by the political-economic operations of Canada. Technocracy merely analyzed and pointed it out.

Well, you have enough people here tonight to organize the State of Ohio. Some of you may feel you are working longer hours. Well, those of you who tried seeing how much you can make by working overtime are getting kind of played out, aren't you? Your wife asks you, what's the matter? No pep. Wife gives vitamins, but that doesn't work. Might work all right on children and on 18- and 21-year-olds, but over 35, no. Time to slow down. You are only fooling yourselves. If you could only save \$2,000 in the last couple of years, it isn't any security -- that would only last for a few months. \$250,000 -- that is worth committing murder for, but a couple of thousands? And you work your head off. What are you going to do with it?

Now, about Jack & Heintz. Building houses out there, miles from nowhere, no transportation out there; property is going to increase. Well, if these were normal times, we might have been able to get material to build real houses, but I doubt if they are something more than pretty. That is a war construction job and the lumber wasn't seasoned. But we have to build it this way so that the greatest amount of suckers will buy the greatest amount of equipment. We are producing equipment that is tops in the world. Producing equipment -- what for? Are we going to

produce for more profit -- private enterprise to run it? Because if you produce it on the basis of the internal consumption of the last 15 years -- accelerated even in normal times, we will have 34 million unemployed. The WPA will be bigger than those working, and when the WPA gets that big, you will join it. You can't stand that condition very long. We will run into a cataclysmic revolutionary chaos.

Nobody proposes to do anything except Technocracy. All that is proposed is social old age payments -- unemployment payments. You have to have planned design of abundance, not schemes to entice the sucker for more profit. It is like the game the traveling salesman tries on the girl, you know, tries all forms of persuasion and she didn't say yes. I am trying to draw a little picture so that all of you will go to work on this in this organization. I suppose many of you went in for victory gardens. If you did, you ought to have your head examined. What did you get? A few bushels of vegetables, but it didn't solve the agrobiology of this country. All it did was to inflate a cheap ego: "Oh, look what I did." You put in carrots or something else, and then, well, we will have enough to carry us over, and it doesn't make any difference about the other fellow.

We could have produced any amount of agricultural production if we had used an engineering design. Oh, no, mustn't do that! Instead, we persuaded the individual sucker to make a noble example of himself as the utmost in futility. How many victory gardens do you think there are in the United States or the total production? Very little in total production, but, no, that was the thing to do -- and they hang people for murder; they ought to reward you for it. We drive the kids to go out and make a showing, and the kids get into the little piggybanks and steal some money and bribe other kids to do it. Fine example! We are kidding ourselves. A slew of ash cans, only somebody put on chiffon -- we don't want to look at them. That is the kind of nonsense we have grown up to.

With some 11 million in our armed forces, remember that the highest casualty is malaria, next highest is psychosis, and what do you think hits the psychosis the hardest? The best trained, highest standard in the Armed Forces -- the United States Marines. They came out of Guadalcanal, and they are going to come back, too, and the malaria boys are coming back, and others can

get malaria; and, of course, the psychosis -- we won't be able to tell them apart. What is the main cause of the psychosis? Not shell shock. The cause is in this country, of course, in these United States. We have more commercialized escapism to which the citizens with sufficient cash can go to and not to participate, but to sit as on-lookers, and in which the realism of the life around him disappears; and when he can see something so interesting, the realism fades out of sight, becomes all interested in this commercialized escapism. There is the baseball fan, the race track fan, and so on, other kinds of fans. When he finds himself 6,000 miles from here on some frozen tundra or down in the jungle, in the dark Indian jungle or Burmese jungle, it is dark and he cannot see to read. He tries to talk about the Brooklyn Dodgers and that only goes so far. Each fan, in turn, tries to talk, and there isn't one who has any cohesive intelligent idea regarding his country or his life that is common to all of them, with the result that the officers can't talk to the men and the men can't talk to each other, so they come back talking to themselves.

All right, who is to blame? It is the existence that we go through today. Go out in your better homes today. They can't hold a serious talk or discussion on events for more than a minute-and-a-half. Why not? Because somebody might know something about it. Can you walk in a barroom of the better type, the modern cafe, and talk? The radio is on full blast, enough to knock your ears off. You ask why it is that way. Why, because the customers wouldn't like it turned off. The customers wouldn't be able to talk. The point is, if the radio wasn't turned on, somebody might hear them say something. That is the state that we are in.

We are totally unprepared for what is coming. Not that individuals haven't courage. There is no national cohesiveness. Here is Technocracy. There isn't another organization with a proposal regarding the war or anything else. The American Legion -- what does it have? The United States Chamber of Commerce? Name any organization who has had anything in the last ten years, but ours is viewed as too revolutionary; and yet, somehow or other, this organization is growing without political prestige. There isn't any economic prestige that you can acquire, and the damned thing keeps growing. Well, if you are not prepared for what this organization really is ....

Make no bones about it -- you are in a deadly and military warfare, because they will cut your throat, metaphorically, and actually if conditions get tough. You have to realize that. You have wondered at times that I have been unnecessarily tough, I have had to be. As your Director-in-chief, I have had to always present an uncompromising attitude, and here we are only a little ways away. We are asking you to get off the dime and make the Sections the center of social activities. It doesn't make any difference what church you belong to, or what lodge, develop in your own community and get over the personal idea that, well, you don't want to associate with him or her. There is a job to be done. After we are done, we will find out whether we like it or not, and our likes or dislikes will not be worth a damn. If you have a question on your minds, don't be timid about it. You are not a public audience, and I am not going to throw any chairs at you.

---

"UNDER COVER" is only an expose of minor names. When we start, we will name names.

HAVE YOU ANY IDEA OF THE AMOUNT OF RESOURCES WE PUT INTO THIS WAR?

Well, it is not a great percentage of our resources. The interesting thing, the rate of discovery of petroleum is going down, that is, in the United States, not on the continent.

ASSUMING THAT TECHNOLOGY COMES INTO ITS OWN, WILL WE HAVE WARS AND CONDITIONS AS PREVAIL UNDER THE PRICE SYSTEM?

There won't if you have a technological consolidation of this continent. From a realistic proposition, there isn't a power on the globe could fight you. All this nonsense that we are going to persuade Europe to be nice -- it never worked. In the last 3,500 years, there has been less than 64 years of peace. After 3,100 years of warfare, war is a normal condition of human society as we know it in social history, and peace is an entirely abnormal condition. Now, as much as the individual may wish and desire and hope for a peaceful world and so long as you have private enterprise, and so long as the anarchy of competition of

nations and party politics with unrestricted birth rate, without energy to maintain the birth rates, you are going to have war -- no matter what kind of world court or international world organization or world nonsense or the four freedoms. What we should have is a fifth freedom -- freedom from the bastards of private enterprise.

ISN'T PRIVATE ENTERPRISE SUPPOSED, ACCORDING TO LAW, ONLY TO BE ALLOWED SO MUCH PROFIT, ACCORDING TO GOVERNMENT CONTRACTS?

Profit and private enterprise is part and parcel of the Price System, and if private enterprise didn't make a cent, it would be just as damnable; and, furthermore, if you collectivize ownership of the mechanics of operation, it would be as damnable. Is that clear to all of you? If you changed the name of all Ford cars tonight, it wouldn't change the mechanism of the Ford cars one iota.

Technocracy's background springs from one Willard Gibbs of Yale University, the greatest single thinking mind, the father of organic chemistry and thermodynamics and energy transfer relationships.

HOWARD SCOTT  
DETROIT, MICHIGAN  
November 21, 1943

Dedicating the Opening of the New Section

United States and Canada are technically at war, but the people are at peace -- profiting out of the war effort. For years, Technocracy has contended that you could not run the technological equipment of this continent -- principally U.S. and Canada -- wide open for two years. [Later in the question period, the Chief said Warner & Swasey, no doubt, would close down shortly.] We have not run full load, wide open for two years, and now productivity has caught up with the war, and the war is not big enough. We have had the greatest business boom in history. Approximately 60% of the people are in on the boom -- 40% are not, the fixed income group, such as civil service, state, city employees, etc. The war is not big enough and business does not know what to do about it and cannot continue the boom. One way to continue would be to persuade the Germans and Japs to buy their material from us.

In 1940, we shipped Japan 22,734,000 barrels of petroleum. Technocracy, from 1934 on, protested every year and gave figures every year of shipments of petroleum, steel scrap, etc., to Italy, Germany, and Japan. It was good business from 1934 on -- good business.

Using the same phrase now, in 1934, Technocracy said, "Mrs. America, do not squawk when your son is killed with a Pennsylvania coal car, a Ford rear end, or a 6th Avenue El." Technocracy had no assistance from any other organized group or body. General Motors did not protest and continued to ship trucks to Franco in Spain. Chrysler did the same, as well as Standard Oil Company. The Standard Oil Company of California shipped one of the greatest shipments of oil to Japan and built large tank barns in Japan. When our forces in the Southwest Pacific capture an island today and find any supplies of Japan that have not been destroyed, they discover original octane in the original containers of Standard Oil Company.

In 1939-1940, 300 portable modern well drilling outfits were ordered and shipped to Japan by the American Oil Well Machinery Co. Oil wells in North Borneo are shallow and can be used directly in the tropics.

In the U.S., a large engineering company had a contract with the industrial groups of Japan to supervise and consult on all industrial installations in Japan, Manchuria, Korea, and Japan's possessions for the next 20 years. This is known to the U.S. G-2 and was discovered quite some time ago. In other words, we shipped American equipment around the world prior to this war, but during the war and from 1937 on, we reequipped Great Britain with the modern machines, underground modern storage plants, etc., so that Great Britain today has modern equipment with producing capacity several times greater than 1938.

We love to see new machinery go in, but the press, pulpit, radio, and screen have continuously over the last decade misinformed the people as to the actual facts and conditions. They have done their best to create confusion in the minds of all the people of North America. The press of U.S. and Canada are the most reliable sources of misinformation.

The Russian-Finnish War -- 99% of the dispatches came from Helsinki to the effect that the Finns had captured great numbers of Russians (greater even than the population of Finland itself). The dispatches related how the Russians had neither shoes, clothes, or military equipment. The Mannerheim fortifications were built after the Maginot Line and by the same engineers. The Mannerheim Line was blown to pieces at 52° below zero by the Russians; therefore, the Russians must have had plenty of equipment. The press had shown photographs to CHQ which had been sent out from Helsinki, showing the capture and destruction of Russian equipment, tanks, etc. CHQ asked the question, "Since when has Russia been manufacturing French and British tanks?" When Russia marched into Poland, American military attaches were with the German Army in 1939; American war correspondents were with the German Army; American cameramen were with the German Army. Russia had dug up all its old machinery from war museums, dug up old uniforms enough to outfit men to meet the German Army. Russia wanted to show us exactly what we wanted to believe. Russia fooled the German G-2, British G-2, and the U.S. G-2 -- three national departments of intelligence. The press is doing the same thing now. Remember when the Germans were thrown back at Moscow, Leningrad, and Stalingrad? What did you get? You got two-timing eulogies about the splendid people who turned back the German Army at Moscow, Leningrad, and Stalingrad. Spirit or

courage does not turn back thousands of tanks, guns, etc. It was done with equipment better organized and better than the German Army. It was Russian artillery that stopped them at Moscow, Leningrad, and Stalingrad. That equipment was great enough to stop the best war machine in the world outside of the Russian Army; therefore, the Russian equipment must have been better.

The largest producing blast furnace in the world is in Russia -- capacity 1,875 tons. They have constructed four such furnaces in 126 days.

8,375,000 square miles has made Russia, together with sufficient sense to realize that their area technology has already formed the course regardless of Marxian or Engel theories, the greatest potential technate in the world, etc.

Our political administration has enough sense to admit that our action in U.S. and Canada is taking us noplance, and they are scared to death of our technology. We have more trained people in the U.S. and Canada, more machinery, and a greater capacity by many, many times, but we are disorganized. Business is worried because of cancellation of contracts, and productivity has caught up with the war and business cannot stop it. In 1939, U.S. had between 7 million and 8 million unemployed. Since that time, we have built some \$26 billion in brand new plants. Canada, on the other hand, with a smaller population, has had a greater proportion relative expansion of industrial equipment than the U.S. Canada has become an industrial nation with productive capacity in many hundreds of lines far beyond the normal consumption of Canada. Canada is the greatest aluminum producer in the world. The U.S. has plants they do not know what to do with. In fact, we have one or two plants that you cannot build anywhere else in the entire world. For instance, electric light bulbs on the new Corning process are produced at the rate of 1,100 per minute. How many plants do you suppose the world will require? You could not have two such plants on this continent. You could have only one more in the rest of the world.

Pennsylvania is making milk cans, but it can only run 3-1/2 months to meet the consumption in the U.S. If it runs an additional six weeks, it can supply the world. This is irony with a vengeance. This is just the beginning.

CHQ has pieces of continuous mold casting, made of real alloy metal, which opens the way in making airplane engines and automotive engines without any other machinery except a slight bit of honing. Six licenses have already been issued on this process. It is also applicable to glass. We can make gun barrels by forging them. The Salt Lake Arsenal is closing down. This arsenal made more small army ammunition than the whole U.S. produced in the last war. St. Louis is firing 10,000 in its arsenal. This is the 8th arsenal to be closed down.

Storehouses are filling up. We do not have enough warehouses in the country.

Here in the U.S. and Canada, if we had had total conscription at the start of the war, there would have been no taxes, no bonds, no black market, and no jams in distribution. The object, of course, of the Price System body in the U.S. and Canada is not a fair and equitable distribution. The object is to install machinery (not metal machinery but legal and organizable machinery) for the maintenance and production of scarcity -- artificially enforced scarcity, so that if we do get too much here, we can enforce scarcity which automatically creates black markets. Counterfeiting is a big business today in coupons and ration through it. No design for tomorrow. We are exporting the tools of tomorrow with the ideals and mental concepts of yesterday. We are hearing the same kind of nonsense from radio, press, pulpit, etc. Cordull Hull's talk is typical. Remember that a crook at least has self-interest as his objective, while the sincere damn fool never had any objective, so that he does not know what self-interest is. Trouble has been caused by sincere damn fools. It is far easier to deal with a crook -- he knows where he is going. The honest person hasn't the slightest knowledge.

We voted in the same kind of thing that we voted out. The Republican Party has never had a planned design from before Abe Lincoln -- neither has the Democratic Party. They never had any concept as to how to operate the U.S. or Canada.

There is the same rigamarole in the U.S. every four years and every five years in Canada, all because of the lethargy of the average American citizen. We in this organization frighten people with the magnitude and concepts and the scope of our

design. The Chief had dinner with one of the executive heads of the Associated Press, who admitted that both the Republican and Democratic Parties have no design -- only Technocracy has the design, and United Press knows it.

Here we are in 1943 -- the area technology of Russia, expressed through the Red Army, is moving westward. It does not have to move very much farther now. How far the Russians will go depends upon the contract we agree to. The U.S. and Great Britain have to go to Moscow -- Cordell Hull and Eden. Well, the Russians told them to get off the pot or else. We admit that we named the date for the opening of an offensive. If it is next June and the Russians start rolling, they will have reached the Danube on the Black Sea. Then it will be up to the western democracies to deliver on that contract. The Russians will stop to consolidate their gains and stall until they know whether or not it will be made. Nobody can blame them for it. There were only 55,000 German troops in Sicily and only 5 or 6 divisions in Italy up until a few weeks ago. Russia has been fighting 240 divisions for 2-1/2 years. An amazing difference.

In a newspaper interview, Scott was asked what was Technocracy's position on the second front. If the U.S. is not interested in national honor, the question of a second front is irrelevant. We promised a second front twice. It is not whether Russia is entitled to it or anything else. It is whether or not our promises are worth a damn. If Russia goes through to the Bug River in Poland and the war in Europe quits within a few months after that, let us see what it would mean. A new Czechoslovakia will not become part of Russia; neither will other states bordering on Russia. Russia would have to be responsible for them. The new treaty which Benes has signed is that there will be nationalization of transportation in Czechoslovakia, nationalization of education, nationalization of production -- all operated on the same standards as the U.S.S.R. Czechoslovakia would become a republic. There would be no free enterprise in Czechoslovakia; there would be no free enterprise east of the Rhine. Where is this world of free enterprise that we are going to have? Spain, France, and Italy do not mean very much -- they are deficit nations. With the exception of France, the area east of the Rhine would enter the Russian orbit -- so would Turkey. It would not necessarily mean that they will become communistic -- just in between. They could deal with the nations beyond and with

Russia. Russia would not be responsible for them. There would be no free enterprise. This would leave the U.S. and Canada and two little islands off the Coast of Europe with free enterprise.

Remember that 42% of foreign investments in U.S. are in Canada. Germany is second with foreign investments in the U.S. If free Germany goes the other way, we will have Canada and two small islands. South America has a surplus of the same things of which we have a surplus. A promising future, because promise though it is, despite our imbecility, the damn thing is coming to an end.

A year ago, according to the U.S. Division of Ordnance and Supply, it took 4,400 employees to produce 1 million shells. Today the same 1 million shells are produced with 1,800 men in 42% of the time.

The total killed in two years of war is less than one year's death total by automobile alone -- four years' death total on highways in modern times is greater than all the wars fought by the U.S. in its entire history. The total accident death rate of all kinds is greater than the total death rate of U.S. and Great Britain by military action, so that war is relatively safe. An amazing condition for a nation that has more saloons than schools and spends a billion dollars more a year for alcohol than education -- a nice Christian nation.

Saps are working overtime 72 to 85 hours a week -- even those 45 years of age. They are trying to work their way to financial success. To think you could ever get there by working! Nobody but a damn fool ever tried it. You never heard of a coal miner acquiring social prestige. No citizen on this continent -- red, white, or black -- can work his way to individual security. There is no individual security. You can accumulate a little money but what good will it do?

Business in U.S. and demand deposits of banks are \$30,700,000,000 -- 70% of total demand deposits are business. They have increased \$19 billion in the last year and will be over \$70 billion by the end of the fiscal year (next year) in all deposits in cash. We've got money -- everybody has money.

Every barroom is jammed; every nightclub is jammed. They've

built special rooms in defense plants to play dice and provided heaters to keep the players warm. Amusing. Then you wonder why the second highest casualty of the army is psychoneurosis. The first is malaria, the second psychoneurosis -- coming back talking to themselves. Is it only shock? No. Where did it come from? Right out of back home. America has more escapisms than all the rest of the world -- dog races, cafes, baseball, movies, etc. The soldiers have nothing in common to talk about. Noncommissioned officers cannot talk to officers and vice versa. Marines came back from Guadalcanal goofy.

Russia has a very low percentage of psychos. Is it because the Russians are more intelligent? No. Russian officers, commissioned or noncommissioned, talk with their men, discuss tactics of the next maneuver, etc. The Russian knows what he is fighting for -- he is fighting fascism. Americans do not know what they are fighting for.

Communism is bourgeois. You can still deal with the Communist Party, but you cannot deal with Technocracy, because there is nothing which the Price System has on this continent which Technocracy wants. There is not an element of any political party that Technocracy would accept or tolerate. It is more revolutionary than anything else.

The way the war is going, there is going to be serious trouble. Russia will present a fait accompli soon and almost simultaneously technology will present a fait accompli on this continent. Don't get the idea that with the crack-up you will be all right if you say you know Howard Scott -- you will be worse off. We, all of us, have a capacity to action. Cut out the diversion which absorbs time in non-essential activity. Technocracy is not inevitable on this continent. The last four years has been an epoch of planned confusion to recognized chaos. Your money in the bank will be no good, insurance policies, stocks, bonds, etc. will be no good. They will be burned up in the first couple of hours. It is with that realization that you will have to quit this apathetic attitude. Three generations of nice people have been the curse of America. That is nothing to be proud of.

HOWARD SCOTT LECTURE  
CARTER HOTEL, CLEVELAND, OHIO  
FEBRUARY 4, 1945

Of course, the only trouble with all of you is that 99 percent of your blood is in your stomach, and it may detract from your functioning.

Yes, twelve years ago was the first occasion in Cleveland that I spoke, and we have more here this evening than at the combined Cleveland City Club and Cleveland Engineers Club. Rather interesting to observe for a decade for an organization that is supposed to be dead. Remember that you are not here in the flesh; you are only here in spirit.

Twelve years ago, in July, 1932, this organization presented an analysis before the Progressive Educational Conference in Pennsylvania. In July, 1932, we stated that the banks of the United States would close on or before the first of April, 1933, due to national frigidity and compelling closure, and that national frigidity would only be unfrozen by the United States Federal Treasury. From then on, the danger to our financial system in this country would not come from frigidity but from the banks drowning in their own liquidity. The Attorney-General of the United States at that time wanted to know if there was any reason why we should not be indicted for making statements endangering the safety of public institutions. We stated that we would be delighted to be indicted, and that as, when, and if we were indicted, it would give us great pleasure to open up the Hybernian Bank of New Orleans. I will refrain from mentioning those institutions here in Cleveland and Detroit, Of course, you don't remember them, do you? Peculiar thing about it was that nobody wanted to indict.

We have gone a long way since then. Technocracy in 1932 was a research organization, but today we are spread over this continent from coast-to-coast and from the Republic of Colombia to the Arctic Circle, from Hawaii to Newfoundland and Labrador. There are members of this organization north of the 65th parallel in Canada -- all voluntary. The farthest south on the map of the Technate is in Medellin, Republic of Colombia. The farthest north is in Norman Wells and Fairbanks.

There must be something about this peculiar Technocracy that, without any angels or without any endowments or public

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

subsidies, it has been able to go distances as great as it has in the time it has. Look back on the history of any other organization and you will find it either has undercover friends and undercover funds, or both. We have neither. We have never compromised and we never will. Some of you might have gotten a little timid at times because your Director-in-Chief was too tough for your friends. You remember what the next door neighbor said, "Well, Technocracy may be all right if it wasn't for that S-of-a-B Howard Scott."

Many of you were worried before the war that a war would delay social change. Time and time again we sent out figures, data, and analyses showing that social change would accelerate, and the greater the area covered by the war, the more social change. Well, you won't have to wait very long. Here in the United States we have been very comfortable. As a government, officially we are at war; as a people, a nation, we really aren't at war. We have our snout and all four feet in the greatest gravy train of prosperity the world has ever known. It has been wonderful. We have had more money and more consumer goods in spite of terrific production for war.

Look back to 1932 and 1933, when there were only \$4 billion in deposits in our banks and only slightly over \$7 billion currency in circulation; but today, the first of January of this year, there were \$127 billion on deposit and \$25 billion currency in circulation. Four billions are in large bills which do not run back and forth in the banks. Wonderful achievement, isn't it? Of course, what Technocracy should advocate is to make snouts wider and the trough deeper, so that we can indulge in our biologic inheritance.

Don't forget that Technocrats have fallen by the wayside just as every other American. Actually, a lot of Technocrats -- and other Americans -- thought they were going to get rich, they could retire and obtain security with one year's more work with overtime, indulge in a little more chiseling, and they could buy an estate in paradise. Well, but then, of course, they failed to realize that this system was never designed for suckers; basic principles are set up for the chiselers. The OPA was set up with the principal purpose not of controlling a level price -- because when prices are level no one makes money, but it was created so as to control an ever-upward spiral. If you have money, all you

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

had to do was buy in; and no matter how high the prices went, you made money.

Overtime has been cut out. It will descend and take more and more away from you -- a very simple process of extraction. So, the citizen thought he was going to cash in by working, proving once again our statement that "Nobody but a damn fool ever tries to get rich under this system by working."

I wonder if you realize just how far the world has moved. Technological productivity of five years ago was one thing; today, it has stepped out into the blue. We have an internal situation and an external situation due to the war around the world. Internally, this war was a godsend. It saved the banks, the Democratic Administration, Wall Street, and everybody else, but it also brings a peculiar situation. As Technocracy pointed out to you, the United States could not operate at a continuous full load longer than two years without running into an impasse. We have never achieved that. Even under the pressure of war, 56 percent of the total production of the United States has been going to war production -- a very nice item. Our consumer goods have not been drastically reduced except in a few items, and they have increased in many items. Never in the history of any country of the world have so many mink coats been sold, so many diamonds, jewelry, and I won't go into a lot of personal items. Last year, there were \$1,320,000,000 paid into parimutuel machines. In race tracks, we topped the world. Every country is trying to imitate the United States, and all have made lousy failures of it.

Well, how many of you working in business organizations, plants, civil service, and government jobs -- or for yourself -- are worrying what the next one hundred days are going to do to your war contracts, your business or profession, or even if you have a trade? Well, we won't be hard on you. Technocracy, you know, has never operated on the theory of European organizations. We knew, only too well, the day would come that a more powerful and efficient weapon would be playing for Technocracy than any educational process that man has ever made. Modern technology is catching up to everybody. Only a few years ago people believed you would always have to have migratory workers. We did up until this year. From now on out, goodbye the migratory worker; he is out of the sugarbeet world.

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

Henry Wallace has a gross business of \$2.5 million on his hybrid corn. Hybrid corn will not reproduce; neither will a cross between Sea Island and Egyptian cotton. With special germination, redesign of the agricultural biotype, particular elevation, growing conditions, and climate, it can be done. Both Sea Island and Egyptian cotton will reproduce and corn will do the same. Those of you who are worrying about Henry Agard Wallace and his hybrids, don't worry. He will join Jesse "James" Jones.

Remember the glassblowers? Those of you with a little grey in your hair will remember. The same with wrought iron workers. You can look back and where are they today? There are no cigarmakers any more; no wrought iron workers; no glassblowers. The oldtime glassblowers, like Leon Henderson's father in New Jersey, worked on piecework twelve hours a day with two assistants. They could blow 800 glasses a day with forced labor. The modern Corning machine hasn't any glassblowers, but the only thing is with that terrific production, you couldn't build very many in the world. You would require only four of them. Yes, a lot of you will say, "That is perfectly correct. I know that, but now in my field, nothing is going to touch that due to the peculiar conditions in my field. We have a strong union or a merchants association or a production association." Well, just tell us about it and we will tell you how long you will live and we will bet you lose.

We in the United States have been witnessing in the past sixty years a conspiracy of minorities against the majority. Everybody from hell to breakfast that could chisel proceeded to do so to the immediate advantage of their particular bloc and to the long-range disadvantage of the entire citizenry of the United States. You know it -- whether it was a language bloc or economic, the effect was the same. Take the coal industry. You are a little worried about it right now. Don't blame Lewis and don't call names. He is no better or worse than the workers or the coal corporations or the labor corporations; so long as you have the one, you will have the other. Corporate enterprise, whether labor or capital, there is no difference. Just like our armed forces. Our armed forces are a reflection of the condition of our national citizenry. Don't expect the armed forces to be better or worse than the average conditions of the nation.

There are over 300 bituminous mines in the United States,

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

and we are shipping a considerable amount of the bituminous coal to Europe -- Italy chiefly. Great Britain cannot supply the coal. You here are a little bit short on coal, aren't you? You are not going to open Monday, are you? You have a campaign on, but do you notice any organization in the United States that has a long-range proposal to abolish 6 percent of the coal mines and 66 percent of the coal miners? No, the miners wanted to hang onto the coal mining, the railroads to haul it, and the coal corporations to sell it. Everybody was in on their skin game. Yes, you can mine coal at 5,000 tons per day without coal miners and without explosives, and the first place that it is put in, God help the rest of them. Unfortunately, it is going to take pressure to do it.

The same in steel. You still have around here the old-fashioned junk -- blast furnaces and open hearths -- and you are still piddling with the batch basis making steel, and you pride yourselves that if it comes out all right, it is pretty good steel. Remember the battle to get into the continuous strip mill? Did the United States Steel Corporation use it? United States Steel has never made a single contribution to the technology of ferrometallurgy in its entire history. Neither has General Motors. They are admirable business corporate enterprises in merchandising steel or automobiles. Let's face the facts. There is a new process in steel coming up. The first consists in processing under a controlled atmosphere. You won't need any blast furnaces or soaking pits. You won't bother with a refractory. Well, why not? Is there any sense in a human being mining coal underground? We are still clinging to the same old stupid conditions and mental concepts that existed in 1646. We are still talking about the glorification of honest work and the sweat of your brow. If you are honest and work, you will be rewarded with pie in the sky, won't you?

I know it is going to hurt, and I intend to hurt. I am not a nice person when I am up here working. This is my job, my tools, and you are my material. But I won't carve you to pieces. This new process in steel production, of course, will make the tensile strength greater, and it is way beyond anything made at the present time.

Your speaker, in 1921, was consulting engineer to one of the largest corporations, analyzing the hematite resources on the

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

Mesabi Range, and the conclusion in that report was that the hematite would decline and the silica content would increase as a function of depth; and the concentration of silica, if mining continued, would arrive at such a point of economic depression, the Mesabi would no longer be the primary hematite source of the United States by 1950. The University of Wisconsin's report last year alters my report somewhat and says 1947. Kindly realize, ladies and gentlemen, that this is the last major, the last war, that the United States will fight with the hematite of the Mesabi Range.

We are face-to-face with a similar situation in zinc, copper, and lead. Don't blame any individual. Don't hang it on Morgan, Ford, Rockefeller, or Mellon. They are not to blame. They are only part of the entire picture of the United States. Every single American can take his share of the stupidity. Well, you all wanted to make money, all wanted to get rich quick. We got there, and now look at us.

There is a gigantic ore deposit on the Labrador that happens to be a very complex magnetite deposit, and, thank heavens, it is not directly smeltable in blast furnaces. Isn't that lovely? It is a beautiful, natural alloy of nickel, cadmium, and iron. You are going to come to a new process in steelmaking. Now, we don't want to hit anybody. We are just going to slip it into you with a blackjack.

I hope that all of you read the National Association of Manufacturers' report on postwar employment. If you haven't, you should get a copy of that interesting document, along with the American Federation of Labor's like report. The AFL goes all out for what you would normally expect of the NAM. Here the AFL goes ultra-ultra in defense of this cockeyed system, and the National Association of Manufacturers candidly admits it is the last time down. The NAM states that private enterprise in this land of the free and the home of the brave cannot assume responsibility for more than a maximum of 22 million jobs and then only if the Government of the United States sees to it that their businesses prosper. Thirty-eight million jobs will have to be supplied outside the realm of private free enterprise -- armed forces, government employees, and the municipal workers. Nine million in public works. That means 3 million more in highways, 2 million in housing. Now the Bureau of Reclamation issued its report last

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

week on its postwar budget of \$3.6 billion, but it also attached to that its analysis of the expenditure of the \$3 billion provided in the total number of jobs with that amount of money; but, sad to relate, the Bureau only estimates that there will be 400,000. When we take the NAM figures of 9 million in public works, that means the Bureau would have to budget for the year immediately following the war and for each year thereafter \$70 billion for the Bureau of Reclamation.

No doubt some of you voted in the last election. I don't know what the hell for. You must still feel the old hangover that you can't quite get rid of. You cast your ballot and you felt that you helped to decide the fate of your nation. It is pretty hard to get over these hangovers. It takes you 40 years to find your parents were liars, and then you are too old to start over again. All we can say is, brother, you will have to be born again.

Now we are face-to-face with an amazing situation. Henry Agard Wallace wants to save capitalism and free enterprise and provide 60 million jobs. Jesse James Jones wants to save capitalism and private enterprise and provide not quite 60 million jobs. It should not be over 50 million jobs. Both want, of course, to spend public funds. Only Jesse Jones is a little more discreet than Henry would be, but both would save you from something. You all run into that. Like the woman that sometime in your life wanted to save you. You got saved and look what a hell of a mess you got into. No intelligent woman wanted to be saved in her life; she might have kidded the male into it. But here we have prominent men of that type -- same naiveté. They think the world is the same as it was 30 years ago, that you can save something, that you can provide 60 million jobs. We do not mean WPA, but a decent job, an annual income, millions in purchasing power; but with the output of American technology, you cannot do it under this system -- free enterprise or non-free enterprise or any other kind.

Stop and realize that. You are going to have everything and more of the same. What a pity! It is pathetic. Suppose you operate wide open with government spending. The more you pump into it, the faster it will catch up to you. All of this, of course, is the propaganda of your associations, political parties, etc. to create confusion in the minds of our citizens.

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

You are going to have 60 million jobs; everything is going to go the way it is now. Nothing is going to be changed. Everybody is going to be nice and comfortable. If you belong to the deserving, you can have a mink coat, too. But it can't be that way. It is going to be tough.

Of course, others come along and say foreign trade. Increase our foreign trade and that will keep 4 million at jobs. Or will it? We are going to industrialize China. Henry Luce, the Department of Commerce, and the United States Chamber of Commerce, and every business promoter, has access to this publicity of the press. I wonder if you realize the conditions of the rest of the world?

In Japan, there are 6 million farms, and the average size of a farm of the 6 million are 4 million of 2.3 acres; there are 2 million farms in Japan of 1/4 acre in size. In China, there are more farms than there are in Japan, but the average size is less than in Japan.

China has been in difficulty for centuries. Not having the chemical industry, converting energy for fertilizer was a difficult proposition. The Chinese who could erect a Chick Sale Emporium on the road -- and those who could provide shade for the temporary residents of those Chick Sale Emporiums -- got the biggest roadside trade. Oh, yes, they go around with their buckets and have been doing it for centuries, and now we come along and we are going to civilize the Chinese. We are going to make them into consumers, aren't we? See to it that they have bathtubs, water, and all those things. Actually, the Chinese are going to hate us, because what we are going to do is provide fur-lined "terlits" and take their agricultural fertilizer away from them. That is a laugh. Where do you think they are going to get many of the things we are going to provide for them?

China only consumed 0.2% horsepower per capita per day before this war. We here last year were consuming 18 horsepower per day per capita. That is a long way from 0.2%. The Chinese had a mobility before the war of 4 miles per capita per year, while the United States, before the black market and those counterfeit coupons, had a mobility of 4,000 miles per capita per year. And we are going to sell the Chinese radios, refrigerators, and intimate conveniences. You would have to rebuild an area larger

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

than the United States in order to do it.

Australia used to be the greatest exporter of raw materials in the world -- wool, mutton, beef, and wheat. Today Australia is a manufacturing economy, manufacturing a surplus over and above what Australia consumes. Australia builds cruisers of 20,000 tons, naval guns, planes, fighters and bombers, her own engines, optical goods, produces lenses and range finders, many ammunitions of all types, and excellent machine tools. She has developed her industries to where she exports to Great Britain. Are we going to put shoes on the Australians? They have a manufacturing surplus.

Well, South Africa is doing the same thing, and so is India. India, of course, is the second greatest cotton producer, jute producer, and shellac producer. India produced and shipped abroad 2 billion burlap bags, is the world's greatest producer of tarpaulins, tents, and army blankets, believe it or not. India is producing equipment. Steel production is going up.

Canada's production has jumped right into the blue, Canada had only 480,000 industrially employed 6 or 7 years ago. Our total production and our personnel increased only 18%. Very interesting, isn't it? Facts, you know, are stubborn things, and Technocracy doesn't make these facts. They are made by the march of events and physical conditions on this continent. All Technocracy does is to analyze them and present them to you unvarnished and uncovered, without political hooey. You may not like them but there they are. Canada moved into a position where the Canadian Government has to find jobs for over 2.6 million Canadians when the war ends. On the basis of population, if we have a similar situation, we will have 34 million citizens in the United States unemployed. We can no longer go-back to WPA. You can't ask the majority of the employable adults to go on WPA. Then you will have to hurry up and see to it that they get automobiles, radios, refrigerators, mink coats, and champagne, and if you did, the other 22 million won't work. Isn't it marvelous? But we would be driven to this.

Remember when this organization came out with high frequency cooking? Of course, it wouldn't be served by the old-fashioned system. It would not be served by human toil. With high frequency cooking methods, it would eliminate all the cooks, chefs, and bus

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

boys. All you do is dial the number on the menu and your food would come out to you. No sense in persons, year after year, doing the same things over and over again. Why engage human beings in repetitious jobs like that? Like mining coal, for instance, or digging up sugar beets. I don't mean to hurt your feelings, but things are headed in those directions.

Maybe you think that you still have some little private edge on the 196 million people on this continent, that you have a little superior ability, that you have managed pretty well to keep ahead of the cowcatcher, that you have an insurance policy, and that if worse comes to worse, you will be buried and that all the problems are solved for you; but how about the rest of the 196 million that still have to go on living?

Is there any labor organization or is there any financial or corporative organization or religious organization in the United States that has any solution in accordance with our technology of our time? If there is, let's bring it out. If you can beat Technocracy, we will agree to it. We don't like it any better than anybody else. In case some of you think you are going to get some kind of particular plum out of this, disabuse your minds of it. I won't like it either. I have told you the job I want and I still mean it. You may think you can vote somebody in in the old-fashioned way -- a liberal Democrat this time or rehabilitate the Republicans the next.

Ever stop to think that the basis of our political system is a function of accounting and taxes dependent on possessed values? Now, as you increase the output and decrease the man-hours and employment so that the production moves up fast but the taxable area declines, producing more and more with less space and less human beings, the blighted areas increase; so, you cannot look forward to county income tax, because it is declining rapidly, very rapidly. Now, when Technocracy came out with this, Wall Street blamed us for it. Some people in Wall Street, we are told, are Democrats and would capitalize on the obsolescence in order to achieve political domination. We said the time would come when you would have to evacuate the banks on the Hudson as they would no longer be tenable and move onto the federal bank on the Potomac, a Kerensky on the Potomac, I believe we called it. Of course, Kerensky had one thing in his favor -- he had someplace else to migrate, but here it is a long, cold swim to the next

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

continent. Kerensky is here living in retirement.

Well, if you think you are going to cure a county income with a state tax income, you won't be able to; for instance, in a powerhouse of 30 years ago, there were 50,000 kW generators. They are now out and in their stead have been put 165,000 kW units in less space than the 50,000 kW units occupied, and you have considerable space left over. Do you jump the tax rate on that three and a fraction times? No, the building is thirty years old. See how it works?

Another thing that is bothering the banks and financial corporations is what Technocracy knows as the capital payoff time. For thousands of years, while we produced our physical wealth with human toil and hand tools, it took a long time for amortization of any capital obligation. It could not be paid off in less than a hundred years. So our bonds were good for a long time at that slow rate of increment. What has happened? The capital payoff, where it once took a hundred years, is now faster. The Corrigan Plant right over here -- you all know it if you live in Cleveland -- if it operated at 75% of capacity, it would pay off in 36 months.

Well, let's go back a moment. Where you had a million invested on the old basis, you only reinvested it once in a century, but now that has been pulled down to where you have to invest it  $33\frac{1}{3}$  times in a century. Look at the Greenley equipment that is slapping out Pratt and Whitney engines every 40 seconds, and the cost was \$1 million, and, gentlemen, believe it or not, it pays off in  $10\frac{1}{2}$  weeks or 500 times a century! So, these people who have all that beautiful liquid cash are in a predicament. If they invest their money, they have it back in a short time, and it is the last time down.

The only way that you can keep this system alive is to declare war on an area on this globe whose armies will not die in battle and will not surrender or capitulate -- the 60 million square miles of the Pacific Ocean, and you can have full employment, full exploitation of our resources and it won't be long. Do you think you could have it for five years? So you want prosperity? Well, you better start rooting.

All very well, you will say. Great corporations won't take

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

these advances. Well, ladies and gentlemen, there are other places where they would like to mine 5,000 tons of coal per man per day without a coal miner. Maybe there are others who would like to do that. How long is it going to take we Americans to realize that? We have had a lot of political refugees, but they never carried away any ideology. We had a confederate war, and after the war between the states, confederates went to Brazil, but they never carried with them any political ideology. But we have had more technological refugees leave this country than any like area in history. Did they get any recognition here? The Wright brothers did not get recognition. People brought up with them said, "Isn't it too bad about those nice Wright brothers monkeying with that contraption when they should be working hard and having a home?" Did they get recognition? Did Rowland? No, Howland had to go to Romania and Russia, the Wright brothers to France and Britain.

When the American Army, in the Spanish-American War, using single shot Springfield rifles, started up the San Juan Hill, the Spanish Army were using a 7-mm. clip magazine machine gun. Technocracy has a long list of Americans who died in poverty or achieved some reputation only if they went abroad, but if they lived here, they got practically nothing but starvation. If they went abroad, they might have gotten some recognition. We have the greatest record of technological refugees that left these shores, and recognition came not from their own country but from abroad. Billy Mitchell. Homer Lea, Homer Lea worked out the whole invasion of the Hawaiian Islands in 1911. That was the man that Dr. David Jordan of Leland Stanford said was a "dirty little hunchback." The Japanese printed 90,000 copies of his book. The "dirty little hunchback" lived to become Marshal of the Armies of China. He was invited by the King of England to review British troops and to review the German Armies, and he didn't graduate from West Point. We have a long record of such men. John Paul Jones -- one of our first Naval Admirals -- do you know what port he founded? Not here, but he founded the naval base of Sevastopol in the Crimea. You can go on, pages and pages of this.

We in our complacency think, well, we individuals will get by and come the next election we can vote for the same old things, but this time within a short period it is going to catch up to us. You can't run a Technocrat for a political office. We don't want it. We want to see our country united not as

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

minorities but only as Americans. We can't operate with the greatest array of technological equipment with political controls but by a technological control that will produce and distribute an abundance for everyone.

We are not pro-Russian. We respect Russia, but we are not sympathetic. A policy for the U.S.S.R. -- a directional for Russia -- is one thing; a policy for North America is another. We don't have to imitate the Soviets or any other place on earth when we have the resources, area, and the technology on this continent, for heaven's sakes. Let's use it!

The tanks that are rolling in Russia and into Germany have 122-mm. guns in their turrets. From this tank we can make an interesting analogy. The tank that we designed before the war started was three meter gauge, one meter tread, 120-mm. gun, rubber lining, diesel powered, completely hydraulic, similar to the Electrolux heating-cooling system. There is a peculiar similarity isn't there? Peculiarly enough, Dave Christie went over to Russia. Dave Christie died of starvation in the United States last year.

I am presenting this for a reason. The advance of technology is up to decisions not amenable to solution by any opinions that anybody possesses in this country. We have no right to decide any matter by opinion that can be determined as a matter of science. This is today, and guesswork won't do it any more. It has to be done scientifically and not by opinion, and two hundred million opinions are not worth a damn, any more than the opinion of one. Opinions do not design anything, and if we try it, it won't run and it would fall down.

Well, the army is coming back trained in more mechanical equipment than any army that has been trained in history. They are not coming back with the idea they want to return to what they left behind. Letters are pouring in from all over the world, from every fighting front, and they don't want to return to anything they left. They were the graduates of the depression and they don't have a great deal to return to, do they? We had better think up what we are going to do when all these men and women come back who don't like what they saw when they left.

QUESTION PERIOD FOLLOWS

There are always people who get personal. Somebody wants to know what my salary was for 1944. Well, it was \$162.00 refund from withholding tax, that is, withdrawal pay. I get \$24.00 net a week. It went up a little a week ago, and that makes how much for the year? I am getting rich out of it. I think it is \$162.00 refund under this year's tax. Never be able to keep a blonde on that! I am looking for one with a long chassis to keep me.

Your engineering magazines on the construction equipment have carried on a campaign for over a year that we should not bring back the diesel tractors, carryalls, etc. that we sent abroad. If we bring them to the United States, the construction equipment industry will be idle for twenty-five years; so, naturally, you can understand the desire that we should leave the equipment in Europe. The European Continent couldn't use it anyway, but then it would be damn good business to provide new equipment. Every American has been primed with extra lush cash into a stinking bourgeois attitude, bribed into a comfortable sense of security, and it is so comfortable, isn't it? But those buried in graves overseas are your sons, your brothers, your fathers, and they never got to that nice bourgeois condition.

WILL THE WAR BONDS BE GOOD?

Well, what is the matter with them? They are the only thing you can invest in. Private enterprise does not create debt fast enough. If you had Total Conscription, we wouldn't have to sell war bonds. We wouldn't have black markets. But that would be too simple, wouldn't it? You would rather roll everything up in red tape and to gyp than to do it on the level. Well, no use worrying about anything like your bonds. Your bonds will be good so long as bonds will be good.

THERE IS A SLEW HERE WANTING TO KNOW HOW LONG THE WAR IS GOING TO LAST.

Manila fell to MacArthur, and no great destruction is reported. Of course, our forces are advancing on the western front, and you read in the papers that they are finding the pillboxes "to let", the vacancies in the gun compartments with

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

the fire data left there. Those that left did not take their material with them. The Russians, of course, moved up, but don't get into a hurry. They have to chew off the left flank first, and then the German right flank will have to be chopped to pieces. You want the exact date so you can hedge. Just as Wall Street asked what Technocracy is going to do in the postwar. Hell, that is in the postwar! It is what are you going to do now? Don't ask me to give you an exact date when the war is going to end. It isn't a question of the capture of Berlin. The Russians will bypass that. They are headed toward Hamburg, and the Germans will probably hole up in Copenhagen. The big three are supposed to be meeting somewhere.

HERE ARE A NUMBER OF QUESTIONS ON THE CONGRESSIONAL "WORK OR FIGHT" BILL.

Well, they will try to put that over, but they are trying to hold it up to see if the Russians get to Kiel and that will delay it. You have to give the Russians time to put fuel in the tanks. The other day on the western front an officer asked whether reinforcements had arrived, and the commanding officer said they had, but the difficulty was they refused to move until they received borscht and Russian vodka.

The present manpower bill, of course, or national service bill, is aimed at conscription of labor, which Technocracy has been telling labor is the game that has been tried to be put over for years. We published two weeks ago the third full page ad in the WASHINGTON POST as a matter of record, calling the attention of the nation, just reminding them that we introduced the Total Conscription Program on the first of June, 1940, in Canada and the first of July in the United States. We don't like the spitballs blown back at us years later in a muddled form and in a distorted version. Of course, they would love to fine you about \$10,000 with ten years in jail, and, brother, could they slip it to you! You are married? Three children? Isn't that ducky? You will just work over there and you will have to sell your home. You can't keep up the payments? Well, but then, you want to be patriotic, don't you? You don't want to be fined \$10,000, do you? A lot of men aren't making that much, but then they don't want to go to jail, you see. But it is just a conscription of labor.

I HAVE A NUMBER OF QUESTIONS HERE ON SEWELL AVERY AND

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

MONTGOMERY WARD.

As if it made any difference at all. Sewell Avery is a very prosperous old gentleman and, of course, you have that prototype in the labor world. James Petrilio of the Musicians Union is one, but what difference does it make? It is only a lot of fuss and feathers. Since when are American dollars superior to American lives? In other words, we can conscript American lives but not American dollars, American property, and machines. We have the right to conscript every citizen. Everybody is constitutionally liable to conscription in defense of their country, but our machines, our property, and material, they are much too superior, aren't they? Think it over. And if you have received one of those telegrams from the War Department, you will understand what I am talking about. But you can't get paid for that.

SOMEBODY HERE WANTS TO KNOW IF THE NURSES ARE GOING TO BE CONSCRIPTED.

I hope none of you is so stupid as to think you can get nurses by voluntary means. I am not deprecating the patriotism of anybody, but you can't expect them to go. It is easier to get mink coats. Don't make the mistake of the mind of Mae West. If you do, be sure you have the proper technique. Many of the nurses we have are married, have obligations, and you can't expect those on in years to take up war duties. There is a number in training, but those are not coming out for some time. We always forget those when the war ends. I won't recall some of the stuff of the last war.

The GI Bill of Rights. Clearly understand when you are proposing 12 to 13 million jobs to the armed forces who return -- economic rewards -- the number is too great, unless you put every American on the same basis. I am not deprecating the valor of the man in uniform, but the scalar quantities are too great. You have to handle 130 million people, not just 14 million. The men who served are entitled to something, but so is everybody else entitled to it.

You have enough people in this room this evening to organize the State of Ohio and two or more adjacent states without half trying. I know what you are up to. When Howard Scott comes around, you turn up, and when Howard Scott leaves, you disappear.

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

You know that. Well, Howard Scott has not asked for any hero worship; he has never asked for it. I have no illusions about you or any other human and especially the Homo Sapiens Americanus. What does it take to get you into action -- dynamite? Or do you have to learn it the hard way by being plunged into economic chaos? Or do you think if you get interested in a housing project here housing a few hundred individuals, you are doing a good deed? Good heavens!

You are not going to save this situation by personal charity or by any single nice reform organization that we have in this country. You think you can cure this by little homeopathic doses of liberalism and that nice moral feeling that you have held for years?

I am not deprecating anyone. How much time has every man in this room outside of their jobs to make a living? Check up on it and you see where you spend your leisure time and at what. Do you think that by having a Membership Card and wearing a gray suit that that is as far as you have to go? Don't think that Technocracy is going to convert all the people in the United States. No, we are not going to coerce anybody. This is not Europe; this is America. Your technology is going to bring it home to you. I am asking you what you do with your leisure time? How do you spend it? Far be it from me to ask anybody to overwork themselves even for this organization, but if you have health and vitality and spare time, there is a job here for you. We are all going to be in the same boat regardless of our creed, religion, or color. Well, face it.

Now, Europe has every political alternative. Countries in Europe have everything from monarchies, limited and actual, elective and dictatorial, and fascist and communist setups. The amazing thing is that the United States and Canada on the North American Continent have no alternative. Either you redesign the continent to produce and distribute an abundance to every North American, and if you refuse to change or meet the technological advances, there is nothing but economic chaos. We do not have the political alternatives of Europe. I want you to realize that. And don't take the attitude that Howard Scott will do it for you. You have to make up your own minds. You have a lot of Americans whose brains are brand new -- they have never been used. You can do it if you want to. Remember, twelve years ago on December 6th, there

HOWARD SCOTT, CARTER  
HOTEL, CLEVELAND

2-4-45

weren't any Technocrats in Cleveland, but this organization could repeat this same thing in many cities and in many states and countries on this North American Continent. If you have gone this far, if you have that faith, and how far you have gone, realize the distance you have traveled. Look back to the date you hit this organization. True, you may have lost some friends but you found they never amounted to very much anyway. They only wanted to impose on your time and your liquor and food.

We in this organization would rather be recognized by our enemies than be damned by our friends. This is 1945, a year of outstanding crises in our history. We can't go back to 1929 or even 1939. We have to go on. That huge installed horsepower of the United States and Canada can only go in one direction, and if you think you can do it by being comfortable and electing Democrats or Republicans, Technocracy wishes you well; but if you hit fifty stories down, for heaven's sakes, don't come crying to us.

Now, Technocracy is not trying for any political position whatsoever. We are not going to do this or that. We have no assumption of power theory. This is not a case of political parties taking over. This is a case of 150 million people north of the Rio Grande being forced into the leadership of this continent whether they like it or not, and Technocracy is not going to do it but those 150 million. This is a slightly different aspect. We have never asked Technocrats to break up meetings or interfere with anything or interfere with anybody or commit an illegal act or entertain an illegal thought. And yet this audience could be repeated from coast-to-coast and in the far north. In some places, the buildings aren't big enough, and yet we have no angels, no endowments, no funds. Howard Scott has only done the same as you have done. It is up to you whether you want to move in this area or whether you want to fold your hands. CHQ cannot compel you to do a single thing that you don't want to.

\* \* \* \* \*

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
CLEVELAND, OHIO  
FEBRUARY 5, 1945

Imagine the state of confusion we have across this continent today. You know Cleveland, you know Detroit, you know a good many cities, all of you here. Don't you think we Americans could stand a hell of a lot of rehabilitation? I'm not deprecating the situation in Europe one iota, not trying to be unkind or unbearable, but travel through Detroit, Chicago, Cleveland, Buffalo, Toledo, St. Louis -- any city you mention -- take an airplane picture of the city and what do you see? Thousands and thousands of little chimneys all belching forth smoke, all with their own heaters and furnaces and their little ash pile. And if the snow gets deep enough, the aerial photographs will show the garbage out on the snow piles.

We're the greatest country on earth, aren't we? We have a terrific amount of junk coast-to-coast. It's unsanitary, unhealthy, a fire hazard, a crime hazard, and yet our leaders, political, business, clerical, and public, are all refusing to admit that we in United States and on this continent have any problem at all and that the problem is some 6,000 miles away. Now this is done for a purpose, done to increase and spread more confusion here. It's always so lovely to contribute money or to join an organization to put pants on the negroes in Central Africa -- they don't need the pants there, it's kind of warm; but then one always feels so magnanimous about supplying pants to people that don't want pants. The women will understand that.

Many people imagine that New York City, the largest city on this continent and the second largest city in the world, that every home in New York City has a bathtub and a water closet. There are thousands of homes and apartments in New York City proper that have neither a water closet, a bathtub, nor a wash basin. There are thousands more that only have running water to a number; and yet our press and our pulpit and our screen and our radio are continually dumping deluges of saccharine sentimentality about how wonderful it is for us to rehabilitate some other portion of the globe. For heaven's sakes, let's have the cold, hard-boiled reality to face the America we live in! We can stand rehabilitation here, we can build housing and cities, and when we've cleaned up our own home and our own backyard, then we Americans can afford to be generous and magnanimous to the

rest of the world. But, for heaven's sakes, don't let us try to put the rest of the world in order when we haven't got the guts to put our own house in order.

Hanson Baldwin in this morning's TIMES is out with a criticism of American equipment in our army. Get a copy of it.

[PARTS OF THE TAPE FROM HERE ON ARE INAUDIBLE, ACCOUNTING FOR THE GAPS IN THE TYPING]

.... and those of you who work in plants that build that equipment .... a Sherman tank firing 24 hits on a Royal Tiger and the Royal Tiger turns around .... See, we've been called screwballs, haven't we? .... but a peculiar thing about that, our chickens are going to come home to roost, but they're all going to be eagles. You don't seem to realize it.

I never thought I would live to see the day when National City Bank of New York's bulletin and the Monthly Bulletin of Clayton Powell, the greatest cotton company on earth -- Clayton is down in the State Department -- both issues are taken up with a special report on the effect of mechanized planting, growing, thinning, weeding -- what is called chopping down there -- and picking; and the International Harvester Company's new plant, a \$16 million plant -- at Memphis, Tennessee, is complete and will shortly be running the two-row cotton pickers off the end of the line.

The south faces a problem of having to compete with wood pulp in the cellulose market. Now cotton, at \$27 and \$29 a bale cost, cannot compete with wood pulp for cellulose; but completely mechanized cotton sells for \$5.00 to \$5.24 a bale, and, honeychile, none of those people out there will be needed any mo' to pick cotton, and they're gonna be movin' up the road with their banjos headin' for someplace. And the rest of United States had better wake up, for there will be 2-1/2 million to close to 4 million, given a year and a half the output of that plant, in two years they will be heading someplace in United States. You know what a slight effect the migration has had here in Cleveland and in Detroit. Suppose you got another quarter of a million in Detroit, 400,000 mo' in Chicago?

You can plant the cotton and weed it -- a flame weeder --

and the Dixie cotton chopper can pick it with a two-row cotton picker, and a two-row cotton picker will do somewhere around 30,000 pounds of cotton a working day. Who was it said they wanted to work?

Well, more and more of this is happening. Your machine tool industry .... MACHINERY MAGAZINE, MACHINE DESIGN, January issue of POWER PLANT -- a McGraw-Hill publication -- they have an editorial that the only thing for the future of the United States is to design machinery that consumes more kW hours, more automatic and faster, and it's the job of the electrical industry to help out the machine industry to see that they have better machines and the electrical energy is used more efficiently and more of it is used as salvation for the power industry; but, of course, all of this will not cause any unemployment.

Now the Grey Company, Greenlee, and other companies like that, and some in Rockford, Illinois, are coming out with nice advertisements of machines that take the work in and position it, the machine does the placement of the work, and then it travels through the various positions and comes out complete. It is automatic pushbutton control, and they specify that one female operator can take the place of 112 separate machine operators -- men -- now in use on the same process.

Do you realize that the machine tool industry of United States has turned out the greatest volume of machine tools and equipment in the last six years that the world has ever seen, but in order to live just a little bit longer, that machine tool industry must design machinery for the sales of tomorrow that can operate so automatic at such high production that it can amortize out the existing machinery and pay off the cost of the installation of the new within six months after installation? Otherwise you do not live, because you have enough machine tools on hand to run for 25 to 30 years. The only way the machine tool industry can operate for a few years more is to gather up all of the improvements so that any two-by-four .... the damn things even stop if the female falls asleep. It stops -- can't make mistakes. Well, why not? Where do we go?

Every Section of Technocracy has quite a large percentage of men overseas -- men and women. They're coming back pretty soon. It's going to be frightening, isn't it? The ones that we have

seen at CHQ that have come back aren't going to be satisfied with the way Technocracy is operating or the way the country is operating or with the way any damn thing operates. A Canadian Major came in the office the other day -- four and a fraction years overseas service, two wound stripes, had risen from the ranks, been a Farad of Technocracy -- one of the youngest Majors, as tall as I am -- and I asked him, the Major, what he was planning to do. ".... and having risen from the ranks to that of a Staff Major on the warfront and having overseas duty, and due to my experience of fighting on several fronts and organizing the various units, I have acquired the knowledge and experience, Sir, that would you grant me the commission that I would like to apply for, may I be permitted to organize the returning Canadians for Technocracy."

We have letters coming into CHQ from men in both the U.S. Forces and the Canadian Forces on the front applying for jobs at CHQ. They're married, some of them, they're not interested in going back to any peacetime pursuit of success. All they ask for is coffee, something to eat, a place to sleep and a chance to fight this time for something they know what they're fighting for, and they want to change, the way they put it. .... How do you like that? That includes men, privates, noncoms, and officers, not limited to .... Very interesting.

I don't know if anyone heard a Canadian broadcast today, but General McNaughton, Retired, is running for bielection of .... and if he was defeated in today's bielection, the Honorable Mackenzie King, Prime Minister of Canada, swears by all that's holy that he'll have a general election; of course, McNaughton and Prime Minister Mackenzie King are responsible for the AWOLs -- they're now deserters. Do you notice that they're not making desperate attempts to arrest them? When it gets into the number of thousands that exist in Canada today, you find them not .... because they'd have to turn the war prisoners out and put the Canadians in. There isn't any other space large enough. The situation is so ticklish that it's doubtful that even the war prisoners would stand for it.

No, we're in a mess abroad and we're in a mess here. There are no Japs in the Philippines worth talking about. Technocracy didn't expect there to be any. They're all on the mainland of Asia, that is, the effective ones. There might be a few little

squads, and, of course, they're consolidating their lines, but if Russia moves through in the next few weeks, she may turn thumbs down on Bataan, and if she does, remember she'll have .... Kuril Islands, the lower half of Sakhalin, the elimination of that strategic .... area of Northern Manchuko, running lights over the Chinese east from Harpieng to Darien and the possession of Darien as an international free port under Russian control. Russia may -- very interesting -- Iran .... autonomy from the north half of Iran. Iran may secede -- may want to become a Soviet Republic.

The Dardanelles are going to be internationalized for the first time in a century one way or another, either by Russia having possession of the north side of the .... the Dardanelles, or, of course, they could build a canal clean around it, which is shorter than the Dardanelles, through the territory of the Balkan Federation. The new Balkan Federation would be Yugoslavia, Bulgaria, Albania, and the better part of Greece.

If you realize what the situation in Europe is that Finland, Estonia, Latvia, Lithuania, Poland, Yugoslavia, Czechoslovakia, Hungary, Bulgaria, and Romania all will be tied in economically with the U.S.S.R. The U.S.S.R. in moving west accumulates a fighting army with each new ally. As we move east, we accumulated more headaches, didn't we? And we didn't put in conscription in Italy, France, Belgium, or Holland, or North Africa; so, therefore, we do not acquire additional armies or additional allies. Dale Carnegie, you know, "How to Make Friends." Well, our foreign policy should be an imitation of Dale Carnegie, "How to make Enemies and Keep Them."

Of course, the Russian boundary line in Europe will come from Koenigsburg west and proceed south, west of the double-track railway from Koenigsburg to the Alsace, the Alsace to the Bug River, the Bug River down to the Carpathians, and from there down to ....

In every war in history in the last 800 years, there's always been an armed power even in a defeated Europe. Remember the last war? The German Army retreated with battle flags and .... the general staff even down to the Unterofficiers. Is there an Italian Army today? A million and more of those are gone. The old Romanian Army -- it's gone. France has no army. The Hungarian is gone, and the German Army has been chewed to pieces.

GAP IN TAPE. So what does it mean? It means for the first time in 800 to 900 years that there will only be one armed force in Europe. Ponder what that means, because it's one of the most significant things in 800 years of history, and we're going to sell radios, chewing gum, Kleenex? I won't go into a lot of other things. We're going to sell those in a free market over there? We're going to tell the largest armed force in the world to move over?

Churchill is washed up the moment the war in Europe ends -- washed up politically, as washed up as Mackenzie King in Canada. Not deprecating the so-called war record -- no offense; but Churchill is a Tory Conservative, the same Tory Conservative Government of Britain that operated under Baldwin and operated under Chamberlain -- the same Tory Conservative Government that under Chamberlain sold Czechoslovakia and Europe down the river for "Peace in our Time." And what a lousy peace! All the nice conferences -- Bretonwood, the Dumb Oaks, you know.

Now, the Atlantic Charter was one of the dirtiest attempts at international sabotage that two nations have ever been guilty of. They lay claim to it. Germany invaded Russia on June 22, 1941, correct? The Atlantic Charter -- in quotes -- was the result of the publicity that came out, the result of a conference of Franklin Delano Roosevelt and Winston Churchill on board a warship on the high seas off the coast of Newfoundland on August 14, 1941. That was a conference between the head of a nation at war, Winston Churchill, Prime Minister of Great Britain, and Franklin D. Roosevelt, President of the United States, of a nation not at war. It was not signed, there was no formal agreement. The OWI made up copies and they framed the copy in the Smithsonian Institution, and when that reporter from Tennessee got after it to track it down, he came back to photograph it in the Smithsonian and it had disappeared. There were only a thousand copies taken off, but it never was signed, and President Roosevelt later had to admit there were no signatures, there was no formal agreement, no copies, and there was only a number of memorandums -- not even on one piece of paper -- just a number of pieces of paper.

Now it was a beautifully framed attempt that Great Britain and the United States -- one a belligerent, the other a nonbelligerent -- would both refrain from acquiring any

additional territories. That's the essence of it. In other words, they were both in favor of freedoms: freedom of this, freedom of that, etc., and the right of the small nations to determine their own government and their own future. Well, when anybody starts talking like that, there's always a bad odor that gets in the air, because you know that somebody is up to something.

Now the reason the Atlantic Charter was framed up was that they fully expected Russia to go down to defeat. The extent of the German Army would only take a few weeks -- 6 to 8 weeks -- to chase the Russians back of the Urals; but if, by accident, something did happen to alter that, then this would give them a dealing arrangement to turn the heat on anybody that came into the marketplace for the deal. Now only one trouble about that was this: that Estonia, Latvia, and Lithuania and Bessarabia and Poland to the Bug River had already been incorporated into the Soviet Union in 1939, so that the boundaries of the U.S.S.R. when she was invaded, she didn't .... It was crooked but it wasn't crooked enough. They should have made the agreement retroactive back beyond 1939. Then they might have been able to use it as a club. The Atlantic Charter, if it really had been drawn as a formal document and printed on paper of finer tissue, would have been of some use, but as an agreement between nations -- two nations that have no right under international law or any other code of the sea to agree, one of them a belligerent nation, the other a nonbelligerent nation, to the disposition of territory over which one of them wasn't even involved and the other one couldn't be involved if it wanted to.

Then, of course, you grab all the nations that come into Washington, found the United Nations Agreement on a spurious document, don't you? The Atlantic Charter was a misrepresentation and fraud. The United Nations was the abortion that came out of the conception of fraud and misrepresentation. And look at the way our country has been deluged with the Atlantic Charter, the United Nations, brotherly love, lend-lease, give and forget; one could go on down the line.

And we propose to industrialize China? We're supposed to rehabilitate Europe? We propose to do everything for everybody everywhere in the world except on our own continent. Now, remember, it's our own fault. We Americans from coast to coast went out solemnly and voted for the bastards. I think that's

about as polite a term as you can really call it.

Of course, I could keep this up for hours, but they kept me up to around 7:00 this morning. What I would like to ask you to do is -- I know, we're all conditioned, up against the same thing, but the trouble with us all across the country is that those of us who joined Technocracy -- well, just pay the dues, get a membership card, have this grey cloth and get a suit -- but not all of us, but a good portion, still like to go out to the Kiwanians and the Lions and the Rotaries and the Civic Improvement and the Proportional League and the Community Chest or the charity; in other words, there's so darn many slumgullion setups that are still taking up the time of Technocrats. Stop and think. What do you spend your leisure time on outside of sleeping? True, you have to put in a certain time to make a living under this system we're operating under; but outside of that and sleep, what do you spend your time at? You've still got that hangover that maybe you can get rich by working or maybe you can get on by being nice to the moron next door.

You've tried it enough times. You know you can't hope. The Greeks used to say that "hope" was the most vicious of all human vices. Now if you just list the type of things you waste your time on. I don't mean that you have to be a slave to the organization, but if you only put down several hours a week each, that is, scheduled, for so many months of that time, you'd have something in the matter of service that the organization could depend on. Of course, if you have to get tight every Friday night, you can skip it. If you have to go to a ladies aid, I think most of you have gotten over that. The only aid a woman wants is that kind of aid -- not unless she's trying to escape from reality so bad that she's in that condition, she's no good to herself or to this organization.

Well, it can be done. You can move it. It isn't that we have to have any big names or that we have to have any important people or that we have to have anybody elected. You wouldn't have thought anything of your Director-in-Chief if I had gone around this continent fawning and scraping and kissing all the posteriors of the Standard Oil or the General Motors, would you? You wouldn't have tolerated it for a moment. Stop and think whether you might be doing a little bit of .... I'm not trying to be unkind -- just asking you to check.

You go out and make your Section a part of your social life and get over this idea that you have to like the individual even in Technocracy. The engineer on the job doesn't give a hang whether the man over here likes the one on the other end of the machine or not if he can get the machine to run. You still have your intimate life, but this becomes a part of it, and it is quite a serious endeavor at the same time. But if you're going to seek your great relaxation outside of the organization and your great avenue for expression outside of the organization, well, then there's no reason for your being here. Why do it?

The READER'S DIGEST came to see me the other day and they said, "Mr. Scott, fourteen years ago the press and the public in this country kicked Technocracy around. We have had men out across United States and up in Canada checking on the organization, and we have found that Technocracy is firmly established, with offices, equipment, and that the press will never be able to kick that dog around anymore. And we have reached the conclusion that if in the United States and Canada there is a serious economic debacle after this war that Technocracy will soar to the moon, and we would like to ask whether you would agree to a series of articles in the READER'S DIGEST and a biographical sketch about you." I had to tell them, "I'm awfully sorry," "But we have over 7 million and a foreign circulation over 9 million. Wouldn't that be a tremendous advantage to the organization?" "Sir, you have all of that circulation, you could present the problem of this continent and its analysis and bring Technocracy in in its proper place and leave Howard Scott out." "That may be so, but the other day Stalin had a birthday in Russia, and no one in Russia on the air or in the press mentioned it." And I said, "Sir, that's enough. I cannot conduct my ...."

Now, I'd like to know what you think. Got any questions on your mind?

---

(POSSIBLE QUESTION) WHEN WILL CERTAIN MAPS BE AVAILABLE?

They'll be along sometime .... Don't get in a hurry for it. What he's speaking of is maps that are about 12" by 20" made up

in 17 sections. They are United States Government maps in eight colors -- USGS Survey, Continental Hydrology and Continental Power and so on. So you'll have an exhibit and you'll have the most accurate maps, the maps used by the United States Intelligence. There's a larger one of 92 sections, double scale. One is scaled one to a million; the other one to a half -- 500,000, metric. But that would require a wall space about 21 feet high by about forty-some feet long. It's only the larger Sections like this that have the wall space here. The smaller ones will use the smaller scale.

INAUDIBLE QUESTION.

I have never been in Europe. I've been up and down this hemisphere.

INAUDIBLE QUESTION.

A lot of people have believed a lot of things. That's what you get for believing in things. No, they've printed all kinds of legends about me. They've printed that I was graduated Uppsala -- that's in Sweden -- Schlottenburg. The University of Berlin, the University of Milan, the Sorbonne -- that's Paris -- Oxford, and Cambridge. Why, yes, we've had people come in and say they went to school with me at MIT or Cal Tech and the University of Minnesota. Yes, they graduated in the same graduating class. They even tell you that they got their doctorate degree and they had one when I got mine, which I haven't got.

Now you realize there have been thousands of these stories. This stuff started way back in 1919 and 1920, and the first of it was when John Reed -- Jack Reed -- who now lies buried inside the Kremlin Wall and whose ex-wife married Bill Bullock and the father of her child. John Reed and whole slews of people came over to see all these blueprints and charts and maps, and John Reed went over and rushed into the Liberator office with Max Eastman and a lot of others there, and he pointed out that no human being could have that many charts, maps, and data and know that much unless he was head of that government's intelligence. So, therefore, he developed the wild story that Howard Scott was Chief of the Foreign Section of the Hillenstrasse and had come over to the United States to work for the United States Secret Service -- there was no FBI then. So Jim Rogers, the famous Irish

revolutionary and labor leader, met me one afternoon over on 5th Avenue and accused me of being an agent provocateur -- a dirty one, and I asked him to recall his long experience with the British and Irish Police in the revolution and labor battles if he was called the same thing. He never ran across any agent provocateurs. They were all of a size that you couldn't tell one from another. So, that's interesting. "So they tell me that you're working for the British Government." With that you heard the finest lot of blasphemy that ever an Irishman could turn out, and once it subsided, I said, "Well, Tim, I'll tell you what I'll do. I'll take the German money I've got in my righthand pocket and the United States money I have in my lefthand, and we'll combine it with that British money that you have and we'll go in and buy a drink -- a sense of humor.

Now you may think that this is funny, but it went the rounds. W. Field Malone and Delia Stevens, W. Field Malone, the famous lawyer .... for New York and played the part of Churchill in the movies in "Mission to Moscow," invited me up to their house over the weekend in Groton and then wrote that they regretted they had to cancel the invitation. It was a year and a half later before I found out what all the trouble was. They cancelled the invitation because they had believed Jack Reed. Now wait until you see the similarity. That was 1920 and twenty-two years later my name wasn't Howard Scott. It was Boris Bederovsky, and I was chief of the foreign section of the GPU and had three million dollars in the Chase National Bank and was sent over to the U.S. by the Soviet Government to undermine American institutions. This time it had changed over to the other, you see, but the same story exactly.

The only trouble with printing that story was that it involved a government in existence -- not like the previous story involving .... They submitted it to Washington and Washington said nix. It would cause an international incident. Case National Bank suggested only we hadn't submitted it. Besides, we better pull that type down publicly -- forget it. But we got a matte copy of it before they did. We have it for our rogues' gallery.

Now don't forget I was a "dope fiend, a two-bottle-a-day drunkard for 30-some years." You'll find more legends. Who created them? "They" did. Did you take the trouble to examine them? The day would come when they went on creating legends, but

they couldn't take it back; and they finally told so damn many of them that there wouldn't be any more left to tell. Might bother a lot of people but it hasn't bothered me.

But you know that was also done with malice aforethought by one Howard Scott, too.

INAUDIBLE AUDIENCE COMMENT.

He knew the day was coming when they'd have to pull their own tread rope. Remember what Aaron Burr said when he was charged with being the father of a young girl's baby when he was 82 years of age? Don't you remember that famous answer? He said, "Gentlemen, it is an honor. I could not dispute a lady's word at my age." Well, come on, we can get a lot of fun out of it,

[A LONG, BARELY AUDIBLE QUESTION CONCERNING THE NEED FOR ACQUIRING A LARGE MEMBERSHIP, EVEN IF SOME OF THEM BARELY FUNCTION.]

Yes, I don't think you quite understood me. There are any number of cases where they can function, whether it's age or health or such and such position; but at least they're not starving to death. You can throw something into the pot and say, "Well, this substitutes for me. I can't .... I'm so fixed." There it is.

[BARELY AUDIBLE REPLY AND CONTINUATION OF THE SAME QUESTION.]

Well, what I was talking about was the ones that do not do that, but the ones who man the machinery that creates that turnover. I think you understand what I mean. In other words, you man the machinery within the organization, and if you take them through like that and keep up with mass production of taking them through, well, all right, you'll get a certain percentage of them.

BUT ALL THOSE THAT ARE TURNING THROUGH -- YOU ARE BOUND TO GATHER A CERTAIN AMOUNT OF PEOPLE WHO WILL TAKE THE INFORMATION AND SPREAD IT.

Oh, yes, you know yourself, don't you? Remember 14 years ago or more? You couldn't see the vocabulary, the terminology in

magazines. Why, they have it in the encyclopedias and dictionaries. The words are becoming commonplace.

AN INAUBIBLE QUESTION ABOUT PROGRESS IN CANADA.

Well, that depends what you mean by progress. Remember they were out of existence for three years, three months, three weeks, and three days.

ARE CANADIANS MORE RECEPTIVE TO TECHNOCRACY?

They're more intelligent than we are. The reason for that is there are less morons in Canada because there are less people in Canada.

[A LONG, BARELY AUDIBLE QUESTION ABOUT THE POSSIBLE ESTABLISHMENT OF VARIOUS GRADES OF MEMBERSHIP.]

Well, yes, we've thought of all of those things long ago, but when you join an army, you can't half join an army, and you will notice that whenever CHQ sends out a temporary acknowledgment for a charter, it says something at the bottom: "You are welcomed as members of the technological army." You can't very well draw up class lines. The ones that do it have to carry all the ones of lesser degree with them. It's the only way you can do it. You start building up life memberships and sustaining memberships and full memberships and associate memberships and junior memberships and probationary -- hell, it's too damn much trouble! Not that there isn't something to it. I mean what you thought you had back of it is another thing. Who else? Now, don't you go and hold out on me.

[ANOTHER BARELY AUDIBLE QUESTION ABOUT A POSSIBLE PERIODIC NEWSLETTER FROM CHQ TO EACH MEMBER]

Well, when the war is over and a number of men come back, we'll issue regular publications from CHQ, but we would rather make mistakes of omission than one serious mistake of commission. Don't forget we're the only organization on this continent that is not a business enterprise, not a political party, and not a fund raiser. It survived the greatest depression and the greatest war in history. How many organizations were abolished by the United States Government? There's millions of them. We're the

only one that came through. We're the only organization in Canada that had over 600 Technocrats .... search warrants. We beat them in the courts and we beat them in the House of Commons. You have to realize the strategy that we're using. Kindly get this concept: Technocracy as a social organization is more revolutionary in concept and direction than all of the previous social revolutions -- so revolutionary that we would be so far right of the Communists as to be bourgeois.

Now we've had to operate under a good many circumstances. We're at war; yet, there has never been -- a few little local things -- true, we're declared illegal in Canada, but they had to take it back and they can't do it again. We could have put all the Technocrats in Canada in June, 1940, in jail, and CHQ would have loved to have done it provided it was done without any illegal maneuvering or instrumentality on the part of any individual member; that is, if we could have maneuvered the Canadian Government to have arrested the entirety, don't think for one single moment that your Director-in-Chief would not have maneuvered. But as it was, what happened, we had to .... Today it's a movement in Canada. They know what it is. They've gone to it. Don't give up hope; you'll get a chance yet. But you'll notice we never pulled any fool maneuvers, did we, and never will. We have never asked any member anyplace to commit an illegal act. We always got our enemies to do it for us. Sooner or later, we get Washington or Ottawa to do it.

A great many of you never thought that the day would come when conscription would be the greatest political issue of Canada and a very burning issue in Washington. Now do you realize that it could be even more important in the near future? If we have to land 2-1/2 million troops in China -- take your pick -- and we have an economic depression here at home, unemployment, do you think you could maintain an army morale in Asia with 3 million Americans with their brothers, relatives, fathers, and so on unemployed? And the Army would be the first to know it. You have what's-his-name down here in Akron -- Knight -- that owns those papers, all out to conscript the labor. Labor has been so damned dumb for the last six years -- of course, I'm speaking of official labor, the AFL, Brotherhood, CIO -- they've all played right along down the groove. They took them on a trip on a cruiser, wined and dined them. Why, the labor leader thought he'd arrived! I'm speaking of one right here in Cleveland. Oh, yes, he

went down to Roosevelt on the cruiser, then was flown back and his wife, and he told me .... I asked him how much he thought that trip would advance the Brotherhood of Railroad Trainmen nationally. Don't forget, we know. Technocracy has its list; the Russians have theirs.

INAUDIBLE QUESTION.

Don't forget any time that the armed forces of a nation are only the reflection of the national condition of that nation. May I ask you a question? Do you know what I'm asking you? Then don't blame the armed forces for being different.

Come one. There's a lot of fun in this if you'll let me.

INAUDIBLE QUESTION.

Total Conscription? No, not if you've got good lettering on the back of your shirt. You can try it.

A QUESTION OF CONTINENTAL HYDROLOGY

Well, now, what is it about it you would like to know, because it covers a terrific area. I don't know where you want me to start in. [REPLY] Now wait a minute. That's what I want, I want a specific thing. Now where is it you want to know about? [A FURTHER REPLY] Come up the Columbia by a series of dams, you raise the Grand Coulee to its proper height, which is -- its present height is 1,310 -- put it up to 1,430 or above -- anything above that -- that backs the water up the Spokane River right to Spokane. You can use the Spokane River or you can use the Pend Oreille on Lake Pend Oreille. Or you can go up the Spokane River into Coeur d'Alene Lake and into Pend Oreille, and then up the South Clark -- do you know that river? [INAUDIBLE REPLY] Well, that's the disadvantage. You have to have large-scale maps. The South Clark runs in Montana northwest into Pend Oreille and Helena, Montana. Just north of Helena, Montana, there's a high contour there over 5,000 feet and narrows down -- the dam would be there on the Missouri River and you back the water up for miles and it flows from there to Helena. There's only about 8 miles where you cut through the ridge from that Missouri dam to the South Clark Fork. That what you want to know? Now, if you're specific about asking me where it is, I'd tell

you; but don't ask me to start in and do it for the whole works.

A QUESTION ON MINING.

What methods? It's what's known as the continuous long wall system. A machine that moves like that, moves continuously, opens your long wall up for miles. That makes the undercut -- that's the first machine, travels right ahead. The next one comes along and has a huge boring head -- that's number four -- and moves in like that and bores a whole flock of holes in the coal face all at the same time and backs up and does that all the way down the coal face. The next one is like a big ell of armor plate and it has compressed air and a special hose that will stand 5,000 pounds pressure, and the hose goes in the hole like that and the compressed air is suddenly released. It comes back against the big armorplate shield and the shield pulls up and the coal loaders load it on a conveyor belt. The speed of your machine is 4 miles per hour.

INAUDIBLE QUESTION.

Not in color. [INAUDIBLE REPLY] Now wait until I finish this. Now you don't use timber. You use a combination strut-shield with a giant balloon tire top and bottom with a hydraulic leg on it, and as you move where you mine the coal out, you inflate these -- the one on the top and the one on the bottom -- and here's your coal face over here running along this way, and here's the other face with this waterproof and other type of shield with the tires on the top and bottom that run lengthwise. When you inflate those, it accounts for the irregularities of the floor and the roof, and then you hydraulically close the clamp down and that moves this way as you take the coal out. [REPLY] Oh, a good number, because if you could do that, about four feet high. I thought you were going to be stuck on that one.

The Alzetas Coalfield in Green River, Utah, and Colorado, the most extensive coal deposit in the world -- that coal comes out there 60 to 80 feet thick and runs this way for miles and runs longitudinally -- horizontally -- that way for miles, and it dips slightly toward the outside like this. [INAUDIBLE QUESTION] That's high volatile bituminous. No engineer wants to do anything with anthracite. [QUESTION ON GREEN RIVER] You have it above

Green River and above the Green River Bridge of the Union Pacific Railroad. [COMMENT] Yes, you'd have to move the Town of Green River and the Union Pacific Station and the bridge. [ANOTHER COMMENT] That is a pretty tough proposition where you've mined out one seam of marketable coal and let 6 or 7 cave in.

[SEVERAL MINUTES OF INAUDIBLE QUESTIONS AND ANSWERS]

Remember the days of Jim Fiske? Who was the Deacon? You know what they used to do on the Erie Railroad? The gambling was so raw on Erie that they used to have gangsters steal the stock from each other. It was a good buy. The only trouble was that there wasn't enough stock to steal -- the legitimate stock -- so they counterfeited the entire Erie stock and they had gangsters steal the counterfeit stock from each other; and that war got so tough that they retired one bunch of gangsters and one , and they went over to Jersey City and built a regular little fort to prevent the other bunch in New York from stealing the counterfeit stock.

My father was in the midst of all of that. He once was a partner of "Bet-a-Million" Gates. Shades of American Steel & Wire and the Texas Oil. How many of you have ever traveled over the Michigan Central from Detroit to St. Thomas to ? Well, my father built that section by a firm from Windsor to St. Thomas and also built the Welland Grand Bruce. This was all before my time. The Welland Grand Bruce is now the one sound division of the Canadian Pacific Railroad. One of the engineers on the Welland Grand Bruce was named Donald Bruce, and the railroad ran through a farm owned by a Scotsman named MacKenzie, and they employed the old man to be stable boss and chief hostler. They employed the son, named William MacKenzie, to be the assistant stable boss and Donald Ross -- I said Donald Bruce -- Donald Ross married one of old man MacKenzie's daughters while working for the firm of Goddard & Gates. And then Donald Ross moved west to become Chief Engineer of the Canadian Pacific Railroad. His brother-in-law, Bill MacKenzie, went out there and met a contractor by the name of Bill Mann, and they joined up to do contract work on the same division that Ross was Chief Engineer of, and the firm was named MacKenzie & Mann.

You old-timers ought to remember this. Then they blew down so damn much rock -- more than the contract called for -- that

they were able to find that railroad up in Manitoba. Can anybody tell me the name of that railroad, the first railroad they ever bought? The Manitoba Central or something like that -- I've forgotten. Donald Rosswenton to become President of that Canadian steel company in Sidney and was it his son or grandson, Commander Ross, who owns Man-O'-War? And William MacKenzie became Sir William MacKenzie of the Canadian Northern Railroad. I once had the pleasure of meeting him in a consulting capacity. He was at the end of a long directors' table and he looked up and said, "You look very familiar. Have I ever met you before?" I said no .... well, that's quite a coincidence. That's too far back for my time. Your father's farm was on the Welland Canal Bruce. "Yes, but how in hell did you know that?" Well, is it interesting?

INAUDIBLE QUESTION

I wouldn't venture any opinion on it. They're liable to do anything. In other words, to finish up the Alaskan Highway would take considerable more work. Why should they do it -- spend all the money -- so the little fellow can get in there? No. What do you think the chiseler is, dumb? Not when it comes to doing a lot of the other suckers. He's smart. The only thing is that popular demand may be such that they may have to do something with it as a national white elephant. That's the only thing that would force it.

QUESTION ON OIL RESERVES

The oil reserves of the continent are all right, but the oil reserves of the United States are running down. The consumption of oil is far greater than our rate of discovery, and, of course, we've dumped oil all over the globe for a price. [AUDIENCE COMMENT] synthetic oil? They have synthetic rubber, too. Nature has been prolific on this continent, but we've allowed our businessmen to loot it from beginning to end. It takes of all synthetic rubber -- they make others. Still, it takes the high end of the to produce it. To strike a 100,000-barrel well a day, the tax is nothing.

INAUDIBLE QUESTION

Well, at least they've to a fuselage ship. Not very big anyway -- only a 141-foot wingspread. You could put two of

those on the back of our flying wing and still have a little left over to spare.

INAUDIBLE QUESTION

Oh, yes, it can be done, but it's still high cost. We could run all the automobiles on this continent but it would take a lot of corn and you couldn't do it by individual farms. Have to get in another type of agriculture.

INAUDIBLE QUESTION

Pitchblend? The greatest radium deposit is up there -- far greater than Austria -- just off the Great Bitter Lake. The greatest silver deposit in the world is up there -- 2,000 ounces of silver to the ton. The greatest copper deposit is on coronation Gulf -- 46 percent Cu bornite. Can anyone tell me when that copper at Coronation Gulf was discovered? It was discovered in 1771 and the original specimens lie in the South Kensington Museum in London. How do you like it? INAUDIBLE REPLY Not in use. You want to go up there and grab yourself a hunk of copper and come back, no one will stop you. QUESTION No, we haven't a lot of tin. We have tin in various places but no tin as rich and comparable as that of Malaya, but we do have tin on this continent in many places but no single deposit that is comparable as the alluvial deposit of Malaya. We have some which may develop to be as comparable to that of the Bolivian porphory.

A QUESTION ON THE CONTINENTAL WATERWAYS

Oh, some of them, yes, would be seasonal, but the Great Lakes, for instance, would be year-round operation. REPLY Oh, well, now you might get down to such low temperatures crossing the Rockies for instance, in one or two places, that you suspend for a while; but the Coast Guard, with very small power compared to the marine tractor -- the marine tractor design of Technocracy has five 12,000-horsepower units, four in use and one standby. That's a little power, isn't it? Those marine trailers have two 1500-horsepower motor driven propellers, 3,000 per hull -- that's 12 -- and that's 36,000 horsepower, isn't it? Well, there's 12,000 left over.

Now, we could have icebreakers that travel about 5 miles per

hour through 8 feet of ice. The trouble with putting ships through ice is, if they're individual ships, the ice comes back in between the individual ships, doesn't it? And the icebreaker has to turn around and rush to each lame duck separately; but with the marine train, they're hooked in tandem -- two together -- six long and two wide. They're twin screw and twin rudder all controlled from the front end. You can put the marine tractor in the front or the middle or the rear -- all 250,000 tons with 20 men that don't do that much. The cost is less than 1/11 cent per ton mile. The units, the marine trailers, are 200 meters long and 18 meters wide and 6.25 meters draft. There are twelve of them in a train. Now you get your pencil out and figure out what your total square surface of deck is and then figure how many kids you can carry on one of those trains with movable deckhouses. Remember, your freight is going to be moved anyway. It doesn't cost you anything to put the kids on it, and the cost is borne by ton mileage of freight, isn't it? So for the first time in history, you can move the youth of the nation in millions -- not in hundreds, millions -- 25-30 million kids. By the time they're 18 years of age, they will have been in 8 to 10 places on this continent from the Arctic to the Pacific, to the Gulf, Caribbean, and Atlantic. We can do it now. Begin to see what the concept involves? And the youth have been at school and functioning and under different climates with an elevation above sea level, different mining, different agriculture, for at least 10 places, so that by the time they're 18, they will know what to specialize in. You won't have to tell them.

They'll tell their dad, it used to be your time, but look, this is our time, and they'll know it, AUDIENCE REPLY Use your gas turbine in the North, the Arctic, where it's efficient, but don't use it down south. Your  $T_1$ - $T_2$  variation is not great enough. In thermodynamics, the temperature of your air,  $T_1$ , your incoming air,  $T_2$ , it's that differential; so, you've got a greater differential in the Arctic, haven't you? Therefore, your gas turbine becomes more efficient in the Arctic and less efficient in the tropics. You can use it -- any kind of fuel -- in the Arctic, but we can use other machines in the tropics.

INAUDIBLE QUESTION

What do you mean by bankrupt? You all have money? You may not have ration points, but you all have money. No, you see these

things don't mean anything. \$300 billion debt -- what does it mean? I've told you time and time again that you can run the debt of United States to astronomical figures because it's a creation of credit. The only thing about it on this continent is when you start engaging in such huge amplification, you alter the technological equipment and facilities of the country. Germany had monetary inflation. She wasn't altering anything. She merely changed the tags -- the inventory tags, the price tags. All they did was just put a new one on. Germany could have continued its monetary inflation to where it had a thousand zeros after the main figure, and it still wouldn't have altered the internal mechanics of Germany one iota. But as we shove our debt skyward, we have to put in newer machinery, don't we?

INAUDIBLE QUESTION

Well, they didn't have so much only for a short period of time. Their children today are all Canadian -- most of their children today are those radical revolutionaries that are fighting Mackenzie King. In other words, those loyalist concepts that their forefathers moved in there with, they buried them with their ancestors. They did have a slight effect up until probably about 1860, but in the last 50 years, no, they've disappeared.

INAUDIBLE QUESTION

No, but then we can make machinery so fast that -- war production so fast -- that it wouldn't last. We'd catch up to the requirements of the Asian campaign and then what do we do? How long has United States operated at full load? We have yet to operate two years at full load, haven't we? How many plants do you know of today that are operating 24 hours a day every day in the year -- how many? Anybody working here tonight in one of them? No? Why, I thought we were at war, ladies and gentlemen. You see what I mean? We're going to have a junk pile in North Africa, a junk pile, that's scrap 30 miles long.

INAUDIBLE QUESTION

Well, don't you know what they're doing? They're running all the bad women and all the best games and all the black markets. We've got everything under control (Free enterprise) -- certainly. The inviolate right of every American.

WILL TOTAL CONSCRIPTION BE A MAJOR ISSUE IN THE NATIONAL ELECTIONS OF CANADA?

It will be. No matter what political party it is west of Quebec. They go to their constituents. They'll have to go to them on the basis not of partial conscription but of total conscription. It's like some returned officers the other night when I was having dinner with some men from Wall Street, one of the Wall Street men said, "Mr. Scott, don't you think it's a little late for total conscription?" "Well, what do you mean by 'late'?" "Well, we should have put it in back in 1941 in December when Pearl Harbor -- but now don't you think it's a little late?" Well, suppose we have the other side of the tale. Three officers with several years overseas, having been in the campaign, wounded, said, "It isn't a question of being late. I'm going to tell it exactly the way it sets." The man had three wound stripes, a Purple Heart, the Congressional Medal, and said, "But if you take it from me ....

TAPE BECAME COMPLETELY IMPOSSIBLE TO TRANSCRIBE BECAUSE OF INTERMITTENT OMISSIONS

A QUESTION ABOUT THE RATE OF GROWTH OF TECHNOCRACY

Its fastest growth is when there has been economic pressure on, but that it has continued to grow during the lush period of the war has been one of the astounding things. In fact, it's been contrary to our expectations. We were fully prepared for a serious drop, but instead of that, and, incidentally, I may inform you, since June of last year -- she was moving up like this all through the war -- but she's turned up like that. Now what's that indicative of? It's indicative of awareness across this country and Canada.

How many of you have sons, brothers, or relatives at the front in the armed forces? Thank you. Now do you see what I mean? There will be those who won't come back, but there will be those who do come back and they'll be in the majority. Did you ever stop to think that this organization, Technocracy, has thousands of members in the armed forces of Canada and United States of all ranks? I mean that word all ranks. As a soldier, he was a Farad -- you know what that means. You see we have Sections across this

country that have as high as 37 percent in the armed forces. You don't know of any commercial organization that has that figure -- 37 percent of some of our Sections are in the armed forces. They haven't forgotten, you know. Literature goes out from CHQ to every point in the world occupied by Canadian and U.S. forces. Money orders come back, passing through British and U.S. censorship -- never any trouble.

QUESTION ON ANY TROUBLE SENDING LITERATURE TO THE ARMED FORCES

Mrs. Bolton? Oh, well, that might explain it; but so far as we know, there has been one or two minor cases where something came up but a telegram to the proper authorities cleared it. Why couldn't they get Technocracy literature in Crile Hospital -- wasn't that the question? And the remark was passed that it was probably due to Mrs. Bolton. I'm not up on the local femininity. She's a member of what? [CONGRESSWOMAN, 22ND DISTRICT] Of course, Bolton was worth a lot of money, wasn't he? Where did they live over here? [INAUDIBLE REPLY] That's the one I met.

INAUDIBLE QUESTION

Well, you'll know very soon. The Senate is holding hearings today, tomorrow, this week. The House passed it. They'll put it across if they can -- \$10,000 fine and 10 years in jail. Frankly, I hope they do. Certainly. The labor organizations of this country have been so damned dumb in the last five years. We've told them time and time again what was going on. "No, oh, no, that's not what we received." "Too tough. We didn't have anything like that." "We'd never think of that before."

INAUDIBLE QUESTION

No, no women at all -- that's only the registered nurses. [COMMENT] Women 18 to 45, and then they bring the pressure on all the others. They've done it to females already on your draftboard. As soon as Burns issued that directive, they started right in. I don't know whether you know it, but they've already jammed through about 20-some thousand that refused to change their jobs and they set up a camp in Illinois where you're put in uniform and given a short basic training, and then sent out to the factory. I'm not kidding you. I'm only repeating a press

report on it. So, if you don't like the job they tell you to go to, why, they put you in uniform and send you out to that place in Illinois. This place in Illinois is only for that purpose -- solely for that -- and it's set up by the little .... Well, how do you like it?

It's a sad fact to relate that we Americans .... the only way we get knowledge is when we get kicked so hard on the lower extremities that it drives it up close to the ears. We have more schools and more general education than any nation in the world, and yet we refuse to be mentally defined. There's more mental indecision in United States than any country in the world and more psychos GAP IN TAPE Do you realize that I've spoken in 81 places in Canada, let alone this country? Yes, we have an organization, but in comparison to the job to be done, no. If we had a few million or something, we wouldn't have this condition.

INAUDIBLE QUESTION

That's correct. Their fright of it is that conscription of labor installed is only one answer and that labor would go for it as soon as it's forced.

INAUDIBLE QUESTION

He wants to know how many have seen the ads of the NAM and read past the title. You've got quite a slew of them. They were in all the big newspapers.

Well, come on. Have one more before you get your coffee.

INAUDIBLE

Well, yes, after a fashion but they only want modifying amendments to it; in other words, if your labor union membership is maintained, it's all right. Don't worry about its being repealed. The question is, what are you going to do? If it's going to take measures that stern to stir this country up, well, let's have it. You see, we have the idea that's widespread across United States that we can have social change and everybody will have creampuffs and mink coats. Everybody is going to be nice to each other. You're going to do this like the fights in the movies when they throw the pies at each other -- going to be a Hal Roach

comedy. I'm afraid it's going to be -- if the tendencies are as bitter as in the last five years -- there's going to be death. You see, Russia has no fifth columnists because Russia has no businessmen. We're unstable, we've no decision, no direction. Black markets, more rackets, more debt -- anybody bother about it? As long as churches were making theirs out of bingo, they were for more bingo, weren't they? Everybody tolerates everything else. All they want is more of the same and yet they're scared to death.

Why, you Technocrats, you've got to realize, you know, that there are people in United States who think that Howard Scott, and, incidentally, every other Technocrat but me in particular, only because he symbolizes the movement as a whole, is worse than Stalin, Genghis Khan, everybody rolled into one. And their attitude is this: that even with Hitler or Stalin they could make a deal but not with Scott.

INAUDIBLE QUESTION

No, I wouldn't advise that because you'd also have to indict every American, and you can't indict a nation. I mean, all of us -- here we've been carrying on trying to show that the participation of the citizens of United States, what? Once in four years. Do you have other dinner parties and where there's no liquor, no entertainment or no floor show. We're the only organization that does that clean across this continent. In a social crisis, all your institutions of yesterday, all your ancien régimes, go down. Bear in mind, no leaders of an ancien régime ever assumed leadership in the midst .... Human history has a way of washing them out with a finality of no return. But for us to indict anyone in the government or financial leadership for direct responsibility for the deaths of those in the war, no. A huge mistake, but the war is only one of them, only one. Just like the attitude of those who go out and make a great hullabaloo about doing something for the negroes. We're not deprecating the negroes when we say this, but you can't do anything more for the negro unless you do it for all Americans, black, white, or any other color. When we're on it, let's cover the whole range. The same thing applies to the Presbyterian, the Baptist, or the Roman Catholic or the Hebrew who do their individual devotion in their faith and that they can achieve it through Roman Catholic action or Baptist or Presbyterian action

or the Hebrew Synagogue. They may achieve a personal satisfaction, but to advocate that any particular belief or that any particular group of citizens in United States or that the veterans should be given economic preference so that the veterans should be favored, it can't be done. You can't save the veterans and you can't elevate the veteran and you can't elevate the Catholic or the Protestant or the Jew or the negro or anything else unless you do them as Americans and not for the Protestant, the Catholic, Jew, veteran, or anything.

.... anyone to be naive enough to believe that the political maneuvering and economic coercion of any particular group. What it amounts to is a conspiracy of the minority against the majority of this continent, and you cannot achieve anything but anarchy so long as you propose to facilitate a furtherance of the conspiracy of more and better minorities. It can only be done by combining as Americans and not on the partisan divisions of economic division, religious worship, or occupation or color.

A LONG INAUDIBLE COMMENT FROM THE AUDIENCE

Well, those Technocrats who are members of unions can go to work in your union, but as far as advocating nationally that the labor union doesn't make contracts so long as you have the existing system and they have to function as the merchandising of man-hours. You see, Technocracy cannot operate as an organization to educate the majority. What's going to compel the majority and what's going to educate them is not the schools or Technocracy. It's going to be the force majeure of events. [AUDIENCE COMMENT] Well, that can be presented by individual members in the union until you get a certain nucleus. Technocracy has no desire of destroying the union under this system, not a bit. You make my point clear? They'll carry on anyway, because as long as you have corporate enterprise, you'll have enterprise, corporate or uncorporate, in your labor field.

INAUDIBLE QUESTION

No, the leadership is fascist in under .  
AUDIENCE REPLY Well, the Bloc Populaire and the Union Nationale are a fascist setup. They would like to separate Quebec from Canada and United States and form a corporate state, Quebec; but you can't do that. We fought one war in United States to

validate. There's no provision for leaving it after you enter, correct?

INAUDIBLE QUESTION

Six thousand? Oh, heck, you can do better than that. But I don't want you to start anything like that until after Europe goes down. I tried to tell you that I was running under wraps, and if your Director-in-Chief is running under wraps, we have reasons. We'll take the wraps off.

INAUDIBLE QUESTION

I regret that I have to answer that question. Lincoln always gets me into trouble in Illinois. There are women from out in the audience who grab me by the lapel on the coat, you know, and look up to my face and say, "You're insubordinate." I'm not trying to claim indemnity, don't misunderstand me.

INAUDIBLE QUESTION

Oh, have you seen that WASHINGTON POST ad that we put in two weeks ago yesterday? It's posted. It's on the bulletin board now. AUDIENCE REPLY Well, there will be one in the General Mailing. Of course, the WASHINGTON POST doesn't sell any advertising space for General Motors or Standard Oil, United States Steel or any other corporation in the United States. They cut that all out because of the favors . WASHINGTON POST is quite curious why Eugene Martin, publisher of the WASHINGTON POST, planted that space opposite the editorial page in a Sunday issue. The reason why he did it is that the WASHINGTON POST prints a limited Sunday paper edition that goes into the Library of United States. Remember, we always play for the record.

.... The present manpower bill, of course, or national service bill, is just a cheap conscription of labor, which Technocracy has been telling labor that it is part of a game that's been trying to put over for years. We've published two weeks ago today on two-thirds of a page in the WASHINGTON POST as a matter of record calling it to the attention of the nation, just a reminder that we introduced the Total Conscription Program on the first of June in 1940 in Canada and the first of July in United States. We don't like to have our spitballs thrown back at

2-5-45

us years later in a muddled form and distorted. They would love to have a \$10,000 fine and 10 years in jail, and then, brother, could they slip it to you. Oh, you're married and have three children and you own your own home? Oh, how ducky. You'll just work over there. Well, you'll have to sell your home? Oh, you can't keep your apartment? Well, you want to be patriotic, don't you? You don't want to be fined \$10,000. For a lot of men, that's an unfair amount. It would be cheaper to pay the \$10,000. There would be many of them in the end go to jail, you see. That doesn't apply to everybody. They're not making that much. But that's the guise that they're getting away with, and each local draft board could .... Just think, there would be a Republican there on the draft board -- what they would do to you Democrats! Even Mayor Burke wouldn't have a chance, would he?

[REMAINDER OF TAPE IS INAUDIBLE]

\* \* \* \*

HOWARD SCOTT  
VANCOUVER FORUM  
JULY 2, 1947

On the first of June, 1940, Technocracy introduced its program of Total Conscription of men, machines, materiel, and money, with national service from all and profits to none, in Canada at the Western Conference of Municipalities in Yorkton, Saskatchewan, and on the 20th day of June, 1940, we were declared illegal by an order in Council. Prior to the election that preceded that in Canada -- the preelection caucus of the Liberal Party, the Honorable Mackenzie King had promised Quebec that conscription would not be introduced. We were a casualty of that promise.

In World War I, Quebec didn't want to fight because the Republic of France was a godless country. In World War II, Quebec still didn't want to fight because the Republic of France had gone fascist under Petain and Vichy. Well, if Canada and United States had introduced Total Conscription, there would have been no national debt. There would have been no war debt. Every male and female would have served their country on exactly the same basis, whether in the armed forces or at home. Every piece of property, machinery, equipment, and materiel would have been put in national service on the basis of National Service to All and Profits to None. Maybe, of course, many of you wouldn't have liked it. You thought you were going to get rich out of the war. In fact, a lot of people in United States and Canada regret that the war ended. They were never having such a good time and enjoying such fine returns as when the boys were overseas in the foxholes. They were making the money.

The armed forces of United States and Canada were out fighting the armed forces of fascism around the world; yet, the people of United States and Canada were not at war with fascism. They had their snout and all four feet in the greatest gravy trough of prosperity the world has ever seen. The only thing they regretted was that they didn't have two snouts and eight feet.

Now the war is over, that is, the military war. The economic war is on. United States and Canada did not liquidate the fundamental causes underlying the depression of 1929 through 1937. They're not only with us but with us magnified. We are the supposed victors in World War II and now what do we find? The only way we can get relief is to go abroad. You here, of course,

ship your meat and a good many other things. The United States does the same thing.

Our foreign policy -- so-called -- has been a reflection of our internal operations. Our internal operations have always been dominated by those -- let's call them politely -- chiselers: the businessman, the private enterprise of this continent. They always louse up everything if they have a hand in it. Bigger and better profits for them, while you, the taxpayers of Canada and United States, pay for it. You know you love to be trimmed.

There are only two classes of people on this continent. We differ from those in Europe. In Europe, the European peasant considers himself wealthy by the size of his manure pile outside his front door. He knows from long historical background that if anyone attempts to move that manure pile, home will never smell the same. He resents any attempt to operate the area. It's always been human toil and hand tools, so there is class resentment from the grand bourgeoisie down to the peasant.

But here on this continent, there are only two classes: chiselers and suckers. The sucker here on this continent never resents the chiseler; in fact, when he is trimmed, what is the first thing he does? He rushes back to the plant, office, or home to drag his relatives or friends down to the same place to have the satisfaction of watching them get trimmed the same way he did. Suckers here on this continent don't hate the chiseler; they envy him. Because why? Because they want to emulate him. Every sucker on this continent wants to graduate into being a chiseler. We know you. Why does he want to do that? Because a chiseler is he who gets the most for the least.

The native habitant of this continent was the Indian. The Indian had more sense than these white men. He knew there was no sense in work, and he never tried it. Did you ever hear of a mule ever killing himself from working overtime or dying from overeating? No, you never did. The mule is intelligent. It's only the human jackass who owns him that does that trick.

Well, here we are on this continent facing a unique situation. In 1929, when the great financial collapse occurred, the British mercantile imperialism was a going concern around the globe. So was the Netherlands empire and the French. Today those

are gone and they're not coming back.

Great Britain, in the last three centuries, had a wealth of iron ore, coal, tin, copper, and sturdy oak. Today she is mining iron ore of 23 percent Fe, and her coal is deeper and deeper down and farther out to sea. Her coal mines, their average depth is over 1,300 feet. She's only operating on 0.7 ton per man per day production. The seams are dipping and getting thinner. In some places, the coal extracted has just about reached the limit, because it takes practically all that is mined to keep the mine dry. In other words, Great Britain went out and squandered her national resources around the world on the harpies of world trade. She got them. Flags -- the trade followed the flag outward bound until the sun never set on it. Today the trade is following the flag homeward bound.

The British, with all their fortitude, it's not their fault. The fault of the ruling class and the nobility of the British Isle -- they were the trustees of the national inheritance and they squandered it regardless of the general welfare and the common good of the British people for their own benefit around the world. Britain couldn't be worse off if someone had executed their nobility 200 years ago. She'd have been better off.

United States and Canada have their economic nobility, too. You only have to look around this Province to see the way you gutted valley after valley of the finest timber. What? To build homes for Canadians? It's the same thing in United States. Ninety-two percent of the working adults in USA receive less than \$5,000 a year, yet most of the homes constructed last year and this are from \$9,990 to \$18,000, necessitating a carrying charge of \$78 a month to \$104 a month. Why, in order to buy one of those houses, you have to earn \$125 a week. There are only 6 percent of the people of United States earn that much money. The ordinary GI and the ordinary populace can't afford to buy the houses that private enterprise builds for them. True, there's a land of the free and the home of the brave.

We mobilized in United States over 14 million in the armed forces. We organized the greatest productive effort in history, and we dumped it all around the globe. We spent \$300 billion on the war; and, yet, the same people who had that capacity to give -- capacity to work -- can't organize to build houses for their

own people, for their own returned veterans.

You know it. All you have to do is look around you. Your cost of living has been shoved up in the air -- not as high, probably, as some other places across the continent. In New York, hamburger is 85 cents a pound. Well, when it gets to 85 cents a pound, there's very few people buy hamburger. They go in for canned dog meat. One packing firm in Kansas is packing 25 million one-pound cans of horsemeat right now. Of course, it's only supposed to be sold to those unfortunate negro Americans and to foreign populations.

It's a pretty sad commentary that in the greatest continent in the world, the lower economic levels have to be further depressed instead of rescued. If we could mobilize them for war, why can't we mobilize them to produce security and a decent living for every human being? Why can't we spend as much money for peace? If we can spend \$300 billion in United States for war, we can with equal facility spend \$300 billion to redo this continent so a human being can live a decent life. You know it; it can be done. But what do you do? You go out and vote for the same old stinks you've always voted for. You love to be fooled, don't you?

One of the greatest hoaxes ever pulled in the history of the world was pulled on August 14, 1941, when the head of a belligerent nation met the head of a neutral nation on a ship of war three and a fraction miles or more off the coast of Newfoundland. The press of United States and Canada, religious, political, business, and civic leaders, all alike, proclaimed the great Atlantic Charter. Everyone proclaimed their faith in that great document, whether they were political opponents, business rivals, or ecclesiastical comrades-in-arms. Up until a Tennessee newspaperman photographed that illuminated copy of the Atlantic Charter in the Smithsonian Institution, everything went lovely. The United States Treasury printed millions of copies of the Atlantic Charter -- nice beautiful illuminated documents with the signatures of Franklin D. Roosevelt and Winston Churchill on the bottom. When that reporter went over to the State Department to photograph the original, they had to send him to the White House, and Franklin D. Roosevelt admitted that not only was there never a document, there never was a written line, not a scrap of paper, and there had never been a signature. Isn't it lovely? Sucker,

you believed it, don't kid me! This audience or any other audience fell for it, and if you want to get some curious correspondence, write the United States Treasury Department in Washington and ask if you can have one of those millions of copies that have been printed and see the answer you get. Now they're even afraid to give them away.

Of course, many of you Canadians are wondering who is going to succeed Mackenzie King as leader of the defunct Liberal party, just as many people across the line are wondering who is going to be elected President in 1948, as if it made the slightest bit of difference under this political-economic structure who is elected into any political office.

Human beings have always had rights. You've got the right to a decent living, a right to a comfortable home, a right to opportunity, a right to happiness and enjoyment. Everyone has it, but just try to get it, brother, without the purchasing power. Just try to go to a bank or a financial institution and say you have a right to a home. You know what will happen to you. You'll get a bum's rush out of there. That gentleman has a sense of humor. He's probably been kicked out of a good institution. Well, that's what's happening.

In United States, of course, the great war president, Franklin D. Roosevelt, well, he's gone to Jesus, and Harry S. Truman has gone Republican. Canada and United States enjoy a particular position amongst the nations in history, in that these two countries have graduated more low-grade morons into multimillionaires than all the rest of the world has done in history. That, brothers, is an achievement -- at your expense.

Now do you think that in United States or in Canada the substitution of one political office-holder under this system for another is going to alter the fundamental mechanics of the system of producing and distributing a regulated scarcity? No, not the slightest, regardless of what party gets in. They all want to get into office, you will notice, under the existing system. Canada and United States are going reactionary, because corporate business in United States today has over \$70 billion cash. That's apart from the plants and equipment and other assets. The public has \$130 billion on deposit. Seventy-eight percent of that amount is held by less than 27 percent of the depositors. That doesn't

leave very much for 73 percent of the depositors. Most of you aren't fortunate enough to be in that 27 percent class. So what happens?

The Taft-Hartley Labor bill is only another indication of the drift that is occurring both in Canada and United States. The Taft-Hartley Labor Bill is identical in intent and wording to the same legislation introduced by Hitler in the Reichstag. It's fascism and you know it and every person knows it.

The first move on the part of Hitler and Mussolini, partners in crime since 1919, when one started in Bavaria and the other in Italy, was to crush your labor organizations or any organization that had an idea that differed from them. Well, the move is on. How many people in this audience hold a union card? Will you kindly hold up your hands. Well, that's a goodly number. May I inform all of you who hold a union card that you're suspect right now. Well, you might just as well be hung for a sheep as a lamb. Why don't you get a card in a real revolutionary organization? If you're going to be hung, get hung for something. That doesn't say we're opposed to unions, we're not; but you have to build a mass organization across this continent -- not a split-up collection of heterogeneous little organizations. It has to be a mass organization, continentwide, with the same structure of organization. This country and this continent can produce and distribute abundance to everyone -- not the little penny-ante chiseling nonsense you're getting. You're content with so little, aren't you? When you could get so much -- without half trying.

Well, after World War I, at that time, do you remember that Winston Churchill was one of those charming Englishmen who was responsible for General Poole and 20,000 British Army .... in March, 1918, they were taken overland by the Kelano electric railroad across Sweden to Northern Finland. At the same time, when General Poole and the 20,000 British were operating in North Finland, .... at Hango in South Finland. The Germans under General Rudiger Von Der Goltz and the British under General Poole were operating under the same general staff for the overthrow of the Finnish-Soviet Republic, while Finland and French and Americans were fighting on the western front. Dear Winnie!

Well, then Estonia, Latvia, Lithuania, Bessarabia, Kars, and Ardahan were separated, and the U.S.S.R. was invaded from 14

different directions by 8 countries. .... were erected into a Cordon Sanitaire by the joint conspiracy and agreement of Great Britain, France, Italy, the Vatican, the United States, and Japan. The erection of the Cordon Sanitaire was the geographical barrier that enabled the seeds of fascism to be planted in Western Europe and to insure its good healthy growth. This country and United States, in its business organizations, shipped scrap steel, pulp, timber, copper, etc. to Germany, Italy, and Japan. Canadian and American business derived a profitable -- highly profitable .... In 1933 and 1934, the present speaker stated, as you may have heard, "Mrs. America, don't squawk when your son is killed with a Pennsylvania coal car, a Ford rearend or the 6th Avenue El, because when they come back to you, they won't be Japanese bouquets," In 1940, United States shipped 22 million barrels of petroleum products to Japan. The Texas Oil was shipping oil to Spain and Italy and getting paid for its products by tankers built in Germany. Several of those tankers ran the British naval blockade after the war was on, and finally that stink got so bad that when Cap Reiber, who was the Chairman of the Board of Texas Oil, had Dr. Westermach, Hitler's Legatsonrach, housed up in Westchester in one of their houses and supplied with two of the company's cars, that was too raw. They fired Cap Reiber, Chairman of the Board of Texas Oil. Bob Hague of the Standard Oil is dead now, but as he said, he was making so damn much money out of shipping oil to Germany and Spain and Italy, that he couldn't quit.

Well, you know it. You stop to think -- business got wealthy financing fascism, and then it got more wealthy out of the war to fight fascism. And now what does it want to do? It wants to have another war to save its soul. You know that.

The process that Roosevelt -- and incidentally Mackenzie King followed -- in the national operation of both countries, was the process of capitalizing an ever greater national calamity, of compromising into an ever greater compromise. Roosevelt ran out of calamities great enough in United States, so he had to get into the world's greatest calamity to stall it all off. Well, we're reaching that situation now -- the same thing all over again. Business would love to have a nice, beautiful war right now.

The Taft-Hartley Bill is only the beginning. You'll have

more of the same type of fascist legislation. Of course, we of Technocracy have a cure for that. For those types of people who propose legislation like that, we call it the water cure. We think people like Taft and Hartley should have a high colonic of sufficient hydrostatic head so it knocks their ears off. Sorry I couldn't state it in franker terms.

Every corporation that has any big reserves is ordering more technological equipment. They're putting in more equipment in order to reduce the higher unit labor cost. You take the British coal mines of 0.7 to 1 ton per man per day, well, here's the monthly average of Consolidated Coal Mine No. 30, the 28th in West Virginia, it only ships 70 tons per man per day, fourteen times the United States rate and 100 times that of the British national rate. Well, coal mine equipment companies are working three eight-hour shifts a day, and don't forget that we have a lot of scientists, technologists, and engineers in Technocracy who are helping to do it. We just love to design equipment that produces more faster with less man-hours.

New looms will be out soon in which the shuttle will be gone forever. No vibration -- merely pull them in on your office or your home floor. Quiet in operation. There are two types, the rotary and the flatbed. The rotary will just weave six feet in diameter, twenty feet wide when you open it up. We love to put people out of work.

Technocracy's process for mining coal is a continuous long wall not using any explosives, that will mine from 500 to 1,000 tons per man per day. We don't like to see people mining coal. Did you ever hear of anybody getting rich down in the coal mines? Wasn't until he got out of the coal mine either by convincing the damn fools to elect him to public office or by getting somebody else to work for him. The same way, did you ever hear of a woman slaving in the kitchen over a hot stove acquiring national fame? No, you never did. Wasn't until that meal ticket of a husband of hers got-somebody else to do the stove and got her out of there.

What kind of a continent do you want? The same old fiscal system, the same old political system where you go down and drop a ballot in the box and elect the same old thing into political office? Your contract of citizenship in Canada and United States legally entitles you to the rights, but there is no guarantee of

your status economically. Your standard of living isn't guaranteed. This is the greatest continent on earth, and we can provide everyone with a standard of livelihood 20 times the average today -- but would we let you work 12 hours a day? Or 10 hours a day? Or 8 hours a day? Why, no, we just wouldn't let you work more than 4 hours a day, 4 days a week, and 20 years of your life. Those of you approaching retirement, what good are you if you have to wait until 60 to retire? You're a worn-out wreck. Certainly they can afford to let you retire at that age; you're no good to yourself or anybody else.

If you put in 20 years of decent service in this country in this continent, you're entitled to retirement. We can afford it. We're not China. We're not India that increases its population at 5 million a year, a 50-million increase every 10 years. At least we're getting a little sensible that way.

Now you don't raise your son or daughter to be saloon keepers, do you? If one of them does kind of get into the business, you don't speak about it. You don't raise your son and daughter to be a politician. That's considered outside the pale. If one of them does occur in the family, you whisper about it -- you don't say it openly. And yet, what are you doing? You're kidding yourselves that you as individuals can express your resentment or your objection, and once every four years or so, you go down and make a mark on a ballot and well, you'll put in a new tenant. Oh, you've been doing that for a few centuries. Look what's it done to you. If you don't think it's done something to you, look at yourself in the glass when you go home tonight. Nothing to be proud of.

Do you think a human being that has worn himself down with fatigue and worry and economic insecurity in 20 years is something proud to look at? You're no different, but, yet, you're still apathetic. You won't move unless something pushes you. Therefore, I guess you'll have to learn the hard way.

Now, remember, if we get another economic depression, there won't be the British mercantile imperialism to hold us up around the world or the French or the Dutch. United States and Canada will be out on the end of a limb all on their own. On the other hand, Russia and the Russian orbit will be grinning at us.

Russia has expanded during this war. She's got about all the territory she needs -- 8,200,000 square miles in the area of the U.S.S.R. and an additional 2,000,000 square miles. How much did United States and Canada get? A couple little flyspecks in the Pacific. Russia doesn't need any more territory, and the press that hollers about stopping Russian expansion, why, it's silly, it's stupid. Why holler for you to stop something that they've already succeeded in? We talk about peace. There are only two areas on the globe that have the resource potentiality or the manpower to have peace. All the other countries don't matter.

If this continent and the U.S.S.R. decide on a defensive and offensive alliance, the rest of the world couldn't make war if it wanted to. Don't misunderstand me. We are not advocating Communism. Technocracy considers that Communism is sufficiently radical and revolutionary for the Old World. In Europe, they still have alternatives politically and economically. Here on this continent, Communism is so damn far to the right that it's bourgeois.

Let's have a social movement that is North American, for heaven's sake. We don't have to copy it from anyplace on the globe. We have 3,000 miles of boundary line here that is supposed to be peaceful, and yet if you attempt to cross it, you're involved in a gorgeous mess of red tape.

Canada is going broke trying to vie with U.S. dollars to the south. Technocracy is urging and has always advocated that the currency of Canada and United States be put on a parity basis, and their standard of living on a parity basis.

Britain today is not the Great Britain of 30 years ago, or 50, or 100. On August 15th, they move out of India. Burma will be next -- Sudan and Malaya. There won't be very much left.

You will be compelled -- if the people of this country and United States wish to remain a major power in the world situation, Canada and United States will be compelled to consolidate this continent. Russia, the U.S.S.R., is a contiguous continentalism by historical accident, but we, the people of this continent, must create an equal to or greater than contiguous continentalism by intent and design. We're not European, even in spite of the fact that your forefathers came from there.

END OF RECORDING

American animals, you, know, have large heads, large forequarters, and small hindquarters. The European animals have small heads and forequarters and large hindquarters. The American bison, bear, moose, cow are different, although some of the species .... the European animal puts its large posterior area into the storm and goes with the storm. The American animal puts his head into the storm and goes against it.

Now, if you're worried about the behavior of your friends or rivals, kindly examine them as to whether they have a European posterior or hangover.

Technocracy has built an organization from Medellin, Colombia, from north of the Arctic Circle in Canada, across from Vancouver Island to Sydney, Nova Scotia. We've done it with little people. We have no angels, no endowments, and no subsidies. We're not affiliated with anything else on earth. We're nonsectarian, nonpolitical, and nonprofit. What we have done we have done because the average North American has gone to work for us. If you think the few cars and the few equipment you have seen today .... if some of you are bothered or perturbed about it -- I wonder how you're going to feel when fifty times that number rolls in.

Remember that the cars are individually owned by people like yourselves. They come out here on a trip like this on their own expense, taking their own vacation time. Nobody pays them. We're the only organization in the history of this continent like it and we're damn proud of it.

We do not run political candidates. Any citizen of Canada or United States is eligible to join Technocracy Inc., provided he is not elected to political office. Why? We're very frank about it. After all, all political parties, whether in Canada or United States or anyplace else on this continent, smell alike to Technocracy. Why distinguish between stinks in this power age?

Now if you're dumb enough to advocate a political party, Technocracy doesn't want you, because you're no good to us, and

you're no good to yourselves or your country either. I know, I didn't come here to make you like me. We don't appeal to you. We may hit you with a pipe from under the kitchen sink, and if I had one here, I would.

Quite worrying about other people. After all, you have enough people here tonight if you had enough competent leadership to do anything in this part of the world -- you've got the capacity, you've got the technology, and you've got the knowledge. The only thing you lack is the will to pick that posterior of yours up off the street. Oh, you know it.

Well -- your railroad company cars here or the depression sets in. Remember when you were on relief here, and .... well, I have a bone to pick with you citizens of Vancouver. The last time I was here, there was a nice, big, new hotel unoccupied, and I suggested that if .... the vote .... the money of the Canadian people, and if you're looking for a place to live, take it over. What's the matter with you? Have you got an inferiority complex and want to live in a dump?

Well, it is ironic, isn't it? When you could have had the best and you deliberately chose to get the worst; and now, of course, some of the press are grooming the Honorable Jerry McGreer to take the place of the Honorable Mackenzie King. You ought to feel delighted. Well, he introduced me on the platform the first time I spoke in Vancouver. I always have kind memories of him, but it shows you didn't learn anything. You just elected him mayor again, didn't you? People are that way.

What we'd like to know is how you feel about the area you live in -- its economic structure and where you can . You have cards there, and I would like you to write your questions on those cards, and I'll do the best I can to answer them for you. Thank you.

After all, this is one of the most interesting periods. It gives you a chance to get back at me. You know, a great many of you have been indoctrinated by the press -- the press of United States and Canada being the most reliable source of misinformation extant; and all kinds of peculiar concoctions have appeared trying to make out that the Technocrats are slightly crazy. Well, we don't deny it. In fact, we rather revel in it,

because a crazy person is a human being exactly like the rest of us, only more so.

Now, we're not running for political office. Get that out of your head. You cannot elect Howard Scott or any other Technocrat to political office, and Technocracy isn't going to take over anything. We're an educational/research organization, and we're trying to show you what can be done.

Here you have a river out there ever since you came out west. The same holds down in Washington and Oregon, the Columbia. You could, by diverting the surface water of the Peace and the Athabasca into the North Saskatchewan, and from there by damming the Saskatchewan, you could fill up the famous Qu'Appelle Valley. You know, the Qu'Appelle Valley is large enough to take the shipping fleets of the world .... This is the only continent in the world, ladies and gentlemen, where the rivers and the mountains all run north and south. That's why somebody has had a good job .... No other continent has it. But do you do anything about the Fraser? No, you do the same as they did in the State of Washington.

Technocracy was the only organization that protested the building of the Grand Coulee Dam -- the water elevation 1,288 feet, the road elevation at 1,310 feet. Oh, yes, it backed up the water to on the Canadian boundary. Our specifications call for water elevations of 1,428 feet, roadway at 1,450 feet. At 1,420 feet, it would have backed up the water north of the Canadian-Pacific Railway bridge at Revelstoke. You wouldn't have required 630,000 horsepower to pump up the water on the plateau by gravity, and you would have generated another one million kW besides that. Was there any group of citizens in the Province of British Columbia or the State of Washington that took any action? No, there wasn't.

If you proposed NVA(?) in the United States today, the Bureau of would provide just 51,000 farms of 90 acres additional today from St. Louis on the Mississippi to . Isn't that a puny, cockeyed little achievement for this continent when we could have had a 22-foot waterway from the Gulf via to the Pacific, the same as you could have had here.

Your present power transmission system of 3-phase AC is only good

HOWARD SCOTT  
VANCOUVER FORUM

7-2-47

for a couple hundred miles. Technocracy's million-volt DC transmission system is good for 3,000 miles, with only 10 percent line loss in 3,000 miles of transmission. You could deliver power from Fairbanks, Alaska on the Yukon to Los Angeles and from Labrador to New Mexico.

How in God's name do you think you're going to develop a continent with the little penny ante, picayune propositions proposed by private business and all the cheap chisellers who line up for their own benefit and not for the general good and the common welfare?

MEMBERSHIP MEETING  
WITH  
HOWARD SCOTT  
SEATTLE, WASHINGTON  
JULY 4, 1947

Thirteen years ago in February of that year, I left New York City with a one-way ticket to Cleveland and a \$10 bill. We arrived in Cleveland, and the night of the meeting, a blizzard hit. We went from there to Detroit, spoke at the University of Michigan. I arrived at Ann Arbor, Michigan, with thirty cents. I got \$35 for speaking at the University of Michigan. I arrived in Chicago, spoke in seven different places, and we managed to get our railway tickets; we hadn't gotten them yet. The rest of the tour party had our pullman clean across the continent. We spoke at Bloomington, Illinois, Springfield, St. Louis, Kansas City, and got to Omaha and were on the air in all the places. We spoke at big meetings.

Kindly remember that we didn't even know who was putting on the meetings. We had to take a meeting put on by anybody in order to get across the continent. In Omaha, we were down to a bottle of milk and one sandwich in the Continental Hotel -- that's the best hotel. The telephone rang and a man introduced himself over the phone, having heard the broadcast on his car radio coming down the state, and invited us to dinner. We said we'd be delighted. [Laughter] He came up to the room and explained his interest, and we quietly told him we were rather hungry -- did he have enough money? Oh, yes, he had enough money; and we told him the circumstances. He didn't realize it was so. He took us out and fed us the three best steaks in Omaha.

Well, we got into Denver. The blizzard had been following us all the way across the continent and we thought we had escaped the blizzard. Ben Briscoe bought 500 tickets .... and Jim [Benchler] of .... a big dinner at the Denver Club. I had only two suits of clothes. I should say I only had one; the other one was rather transparent. And I did have a heavy suit of underwear, but the heavy suit of underwear -- when we arrived at Denver, the sun was nice, bright, and shiny, the blizzard had followed us clean across the continent -- so we decided we had escaped the blizzard, and we threw away the underwear. We packed the Broadway Theater in Denver to the roof and out of that great meeting we got \$2.00. Somebody made a lot of money; we didn't. And the blizzard hit in the morning six inches deep.

We managed to get up this coast and into Canada. We got back to New York with \$2.80, mostly Canadian. Well, next year we went farther and further. Gives you some idea of what the beginnings were in trying to carry this across the continent. Today it's quite different. In the early days, there was one person here, another person there, up and down this continent. The first time I arrived in Edmonton, it was 35 below zero. One lone Technocrat, coming down the platform, and every step he made you could hear a squeak. It does squeak at 35 below zero.

It was the same way in many other places. In Trail, British Columbia, there was just one man there, too, once upon a time, and he happens to be here this evening. Walter, I'd like you to stand up -- Walter Stahl, the first Technocrat in Trail, British Columbia. [Applause] He saw it move from one until it would fill the biggest theater and the overflow in the Knights of Pythias down the street. Well, he also went through the ban.

We have another one up there who lives in another town -- another one who has stuck it out. Oren, I'd like you to stand up. [applause] Oren McGraw from Kimberly. That's where they have a few mines up there. I'm talking of the ones underground that they mine ore from, not misconceptions.

Today this little organization of ours -- there's a map of the Technate, framed, hanging down on the wall of one of the finest modern buildings in Medellin, Colombia; another one in the Havana Electric in Cuba. We're out at the tip end of Nova Scotia. Even the bluenoses want to belong to it. Well, I don't suppose anybody but Canadians would know what I meant.

We've just completed an operation down there; of course, we call it Operation Codfish, but we're well received by the people in New Brunswick and Nova Scotia and by the miners. Well, why shouldn't we be? We're also breaking into Quebec, believe it or not. We're signing up French Canadians in the City of Quebec, let alone Montreal and a few other points. We're starting in Quebec shortly. Well, when we got enough French Canadians in Quebec to start organizing the French Canadians, they went to work. Get enough in Panama to make it go, and they'll organize that, too.

Gives you some idea of the scope. We're now conducting quite

an operation in the southern states. We have capable organizers and members in Greenville, South Carolina; Roanoke, Virginia; Mississippi; Tennessee; and we're opening up Texas. That gives you some idea of the way it's moving up here.

CHQ is receiving mail from abroad: Britain, France, Belgium, Holland, Czechoslovakia, Yugoslavia, Vienna, Budapest, Berlin, Copenhagen, Norway, and Sweden. Literature is going over there all the time. Some places they cannot pay for it because they cannot send out the money, but they're sending us back literature printed there. Fair exchange, if no robbery.

Of course, many of you did not know that, prior to Hitler, there was a Deutsche Technocratische Gesellschaft in Germany -- an incorporated organization with some of the best scientists in Germany and they published some very excellent magazines; but when Adolf came in, the Deutsche Technocratische was liquidated.

There was a Czechoslovakisha Technocratisha Spolensk in Prague. Well, they published an excellent magazine, too, and they edited and published seven volumes of the best technical job that's ever been done on Technocracy. The only trouble with it is is that the mathematics in it are so beyond the average engineer's mathematics that 99% of the engineers in United States couldn't handle it. Three of the outstanding scientists and mathematicians in Europe wrote it. It was published by the best book publisher in Europe. Remember this was before the war.

There was also the Nederlandisha Technocratsha in Holland, with offices in The Hague. There was an Austrian organization. Those were all liquidated, of course, by the advance of fascism. Some of them died; some of them went to prison and concentration camps; and some of them went underground.

In Italy, there were twenty-six graduate engineers sentenced to 10 years "confino" for advocating Technocracy. They were liberated -- what was left -- by the Allied troops when they captured [Lipari]. They are now back in Northern Italy and they don't like Gasperi.

Now remember those organizations over there were never affiliated with ours here. They took our literature and our ideas and built their own. In some cases they were political and some

cases not. There are two movements in France; one is a political movement, the other is nonpolitical. Both are on the radio in both France and Algiers, publish pamphlets and books, and weekly papers, but we cannot control them nor do we wish to. There isn't any Third International of Technocracy.

A Belgian ran for alderman in the City of Brussels before the war, and he scored more votes than the Rexist Degrelle. Quite interesting, isn't it? That group are now publishing pamphlets, very nicely done, big, black letters on the front: ADVANCE WITH TECHNOCRACY NOW. We just got them in a couple of weeks ago. See, we're in the very peculiar position. Many of these people who have turned up their noses at us for the last 15 years had better get their nose straightened, because if this keeps on going, it's going to be rather funny.

John Carradine and some other movie magnates arrived in New York a couple of months ago, and they invited me to dinner with some of the executives of the MGM and other movie companies, along with their General Counsel, and they were recalling about making the Hollywood stars appearing in public celebrations in Los Angeles. John Carradine read Lincoln's Gettysburg speech. They were pointing out that movie actors appeared there and were paid by the movie company, while Technocracy didn't have a speaker there at all, but the grey fleet rolled in with the veterans and everybody had to rise and salute, and then they sat down and the movie stars did all the talking. At the end of it, everybody had to rise and salute the grey cars going out again. Technocracy got more results without saying a damn word than they did with all their talking. Two of the movie magnates at the dinner said, "Mr. Scott, if Technocracy keeps on growing and gets people like that and cars everywhere, why, don't you think you'll just have to take over the Republican Party or the Democratic Party?" "Why do you suggest anything like that?" "Well, there will just be so many of you," I said, "Are you acquainted with God?" He looked at me in a peculiar way. I said, "Well, if you were, you know, you'd also know that God is always on the side of the greatest technology and biggest numbers, so why should Technocracy take over the Republicans or the Democrats?" [Laughter and applause]

Now it's very difficult for people to realize what makes this "here-now" Technocracy grow. They ascribe all kinds of

reasons to it, but they ascribe what they would like to believe to be the reason. I've had many bankers and industrialists ask me, "Well, how do you get members? Why do people join Technocracy? Do you offer them something?" No, "But what makes them become members?" I said, "I haven't the slightest idea." [Laughter] "Well, now, Mr. Scott, you must have some idea. These people buy automobiles and paint them gray and get gray clothes. Well, now, I'm Chairman of the Board of so-and-so with thousands of employees, and I wouldn't dare to ask my employees to paint all their cars a particular color. "I said," That's right, you wouldn't dare." "Well, how is it that you can do it and our bank couldn't do it." "Well, I said," that's very simple, sir. Your employees know you and the Technocrats know me." [Applause]

Now we're moving up into a new stage. Those of you who went up with the motorcade or followed it along to Vancouver and back -- rather interesting to watch the reactions of people. Do you think that the City of Seattle or Vancouver could handle 5,000? Do you think they could handle 2,000? Now realize the distance. Go home tonight and get out a map of Europe and put a thousand or more miles on it and see how far you could go on the map. The airline distance from London is only 600-some miles to Berlin. One car traveled 2,468 miles. It traveled the same distance back. It just appeared tonight; it's on its way home to St. Thomas, Ontario. [Applause] Put that down on your map and see where it will take you. That's quite a distance. And when human beings undertake to cross practically a continent on their own initiative, at their own expense, for the purposes of this organization because they have faith in it, because they're for it, that kind of loyalty you can't buy. [Applause]

I know it always surprises people. People say, "Well, what are you Technocrats for?" Well, you found out. All the friends you had when you joined the organization -- you've lost them. You couldn't play bridge or go drink beer anymore if you're going to be busy. They didn't want any more of it. You've found a new set. You found a lot of other things. You also found psychological and emotional stability within this organization that people outside do not have. There is a greater percentage of psychos in United States today than has ever been in history, and more people owe their psychological stability and salvation to this organization than anything else.

I have one man's revolver in our safe -- also his insurance policies for a quarter of a million. He lost considerable money. He was going to blow his brains out and leave his wife and two children the insurance policies. Well, he joined Technocracy and gave me the policies and the gun. He's quite healthy and so is his wife and their children are very lovely; so, I don't think his wife will have the quarter of a million of insurance. It's quite a change.

Now, remember, more people went up economically in this war than they did in the last, and if these values are liquidated, there will be more people liquidated in the process. But bear in mind that there are more buildings that are higher today than there were in 1929. When you jump out of the 86th story of the Empire State, you know, it splashes. It's happened. We Technocrats can face the future with a faith and a serenity that no other group of people in this country can, because we know in a general way what the trends are and the future developments, and we're not afraid of it. We're not afraid of this system being liquidated; they are. But we're not going to help save this system. We're not going to be elected into political office. The Republicans and the Democrats, the conservatives and the liberals, Social Credit, and the CCF, they still have a little try at it. Of course, up in Alberta where they publish the Social Credit paper, they publish hot attacks on us every once in a while, and they accuse Technocracy of being financed by Moscow and Wall Street. Well, now the secret's out: You know who's behind us! [Laughter]

During the war -- well, I might preface this with a short sketch. In 1939, when Russia and Finland got into the little fracas, the propaganda coming out of Finland by American correspondents over there was so interesting that we started to plot certain graphs and locations on the maps. The American correspondents' propaganda was that the Russians were just throwing shells at the Mannerheim Line and throwing so many of them that the Russian artillery was pretty lousy, and they couldn't even hit the Mannerheim Line. But they did give us the temperature, the periodicity, and the general position of the misses. We thought that was very peculiar, because the temperature was 47 degrees below zero in January and February, and the misses were all peculiar because they were landing in front of the forts. The Russians, of course, had the second

oldest artillery school in the world, and they've been accustomed to cold temperatures a good many centuries; so, the cold couldn't have been any great variable. There must be a reason for it.

We started to do some little calculations, and we came out with an analysis of the artillery that the Russians must possess. We gave the following general factors: that they had a 240-mm. long barrel, constant temperature control, hydraulic breech, automatic loading, controlled fire. They had a 300-mm. I'm not talking now about howitzers. I'm talking about rifles, because the American correspondents unwittingly gave us the difference, because they were telling us that the Russians knew so little about -- that they should have attacked Mannerheim Line fortifications with howitzer fire. But here they were firing with rifle fire; so, we figured back from the periodicity that must be those size of shells and that must be that kind of gun. True, they were landing shells in there. They didn't want to hit the Mannerheim Line -- hard frozen ground -- but they were throwing shells so fast that hydraulic automatic loading of that size, they were able to excavate -- as we predicted -- ground in front of the Mannerheim Line of the forts, and the forts rolled over in the excavations, and the Vickers and Krupp guns turned up to the sky.

We submitted our report to G2 in Washington. They were unable to confirm that the Russians had any such artillery. It learned nothing from the American Embassy in Moscow or from any other agency. We still contended we were correct; so, one day there was a conference at CHQ, and a high official said, "Mr. Scott, do you know what the latest line in Washington is?" No, sir, I don't have the slightest idea. "Well, it used to be that the Communist Party followed the Moscow line, but now the latest is that Moscow follows the Technocracy line, and that you people have a pipeline to Moscow," He said, "Have you?" I said, "Why, yes. Just a moment, I'll ask them to bring in a pail and you can take it into the next room and get the latest pailful." That's the kind of nonsense that went on.

Just as in September, 1939, when all Poland. Remember our attaches, cameramen, reporters accompanied the German Army in Poland. They littered the top of my desk with the latest photographs and I objected to the wording on the bottom. They immediately notified Washington, and Washington came up and

said, "Mr. Scott, you made certain remarks about these photographs." I said, "Yes, they were photographs taken by U.S. photographers of the Russian Army meeting the German Army at Brest-Litovsk, and they had below it a comparison of the poor equipment of the Russians and the magnificent equipment of the Germans. I asked the ranking officer from Washington if he had any children. He said he did. I said, "What are they?" He said, "Boys." How old? He said, "One is eight and the other is ten and a half." Well, can your boys tell the difference between a Ford and a Chevrolet? He said, "They certainly can." "Well, then," I said, "you should go home and take lessons from your children, because the guns in those photographs are Putleov, 1917." "Do you mean to say the Russians haven't made any guns or trucks or gun carriages since 1917? How do you know?" "Well," I said, "I'm like your children. I know the difference between a Ford and a Chevrolet. The Russians robbed every war museum in Russia, and they told the Germans and the others what they wanted them to know."

The world believed it and it kept on believing it right up to the battle of the Neisse River in front of Berlin. Even Eisenhower and Montgomery thought the Neisse River line was going to hold the Red Army; and in the attack on the Neisse River in front of Berlin, the Russians flung 4,500 big caliber shells in two hours and thirty minutes. They attacked at night and they lighted it up. Those big shells do not include the Katayshas and other rockets. They attacked with 7,000 planes and 4,800 massed Stalin tanks with a 122-mm. gun in each tank; and the reports are that they killed more Germans in one single battle of a few days than we killed or we lost in dead in the entire European campaign -- 3,400 to 3,700 guns to a mile of front. Charming people, these Russians, aren't they?

I would like to call to your attention that 9 out of every 10 world champion chess players in the last century have been Russian. It's time somebody taught Americans how to play chess en masse.

Now a lot of you are worried about your little problems in your locality, the little difficulties you get into in your Section. Most of your difficulties are the result of your cockeyed Price System hangovers. Get that through your head. You still want to either inflate your ego or get a reward psychosis

out of being in a little bit different position or having a different title than somebody else. Now let me tell you something: If there were a thousand grey cars in Seattle tonight driven by a thousand deaf-mutes in grey, they would be worth in effort ten times what you are now. You know why? Because they wouldn't know how to talk to anybody else, and they couldn't hear what anybody else said; but they would be a mass impact on this city and its environs.

All you have to do is introduce mass symbolization in this country back of an idea and a social concept that is collectively organized on a strategy that is in accord with the historic parallelism of events. If it is, then that parallelism of events and that strategy can always implement the policy of that organization, and then that organization will move; but, for heaven's sakes, cut out the nonsense between yourselves. The job is bigger than any of us and all of us put together.

You worried about your job when you wear the Monad? You might lose the one you have? If it's so damn important .... Do you know that four people quit their jobs to go on this motorcade, because the business organization wouldn't give them a vacation, and they quit. Well, you're going to be frightened by someone's attitude in this system or if you think someone is superior because they hold a position in this system seems to be of importance. That's all nonsense. Who are we? Individually, none of us may be important; collectively we're a power. Yes, very funny, and yet some people are impressed with a little show of money or position. You don't have to go in and spit in the banker's eye -- that might cure him. We don't want you to do that.

Now, right here in this city, in this state, you can build an organization. If your time outside of the organization and outside of earning a living is going to be spent on the usual Price System .... you won't have time to develop the organization. We aren't asking you to kill yourself for the organization or on your job, but realize what happens in the average family. You see, it's only the man working. When he gets home, why, his friends and relatives -- I won't say anything about the wife -- take up so much of his time, he hasn't anything left. Now you've got to figure out and allocate your time, because the organization needs every minute of your time that you

can spare outside of making your livelihood in this cockeyed system.

People have worked for weeks and months to come on this tour. They made it. Others didn't have to work so hard. Now we can move this organization -- we have moved it -- and you're proof that it has been moved this far. Those of you who went to Vancouver the other night, remember that was a two-day holiday up there. We kind of knocked the place loose -- just as the editorial of the VANCOUVER PROVINCE accuses me of being impertinent. Well, that's where the VANCOUVER PROVINCE is downright dead wrong. I've never been impertinent. I've been insulting.

You know that old story of the piccolo player in the church orchestra? When someone in the congregation got up in the rear and inquired of the minister, "What the blankety-blank was that fellow trying to do -- play the piccolo?" And the minister said, "You shouldn't call that piccolo player a son-of-a-bitch." And the man in the back said, "Well, you shouldn't call that son-of-a-bitch a piccolo player!"

When you're in this mood, I think you ought to hear the new national anthem. [A recording of "I'm Headed for the Last Roundup."] We're going to get one for Canada, too. You have to have a sense of humor in this thing.

I don't know how many of you came across THE NEW YORKER MAGAZINE a couple of weeks ago. It had about 1,100 words in there, and they opened the 1,100 words with, "The Enemy of the Bourgeoisie," They came over for an interview, but they missed the really fine points; for instance, that part on golf. I said that proficiency at golf in the younger American male was indicative either of approaching senility or general incompetence and a wasted youth. You'll notice I said, "proficiency" in golf in a "younger" American male.

In relation to those few sentences on the capitalization of calamity, when the assistant editor of THE NEW YORKER said, "Well, Mr. Scott, aren't there any more calamities left for us to capitalize?" I said, "We're in a very critical state in this country today, because Farley has cancelled his contract with God, and God doesn't like us any more." They didn't print that.

You notice the VANCOUVER SUN, one of the Canadian papers, misquoted me again. Remember I said that, "Franklin D. Roosevelt had gone to Jesus and Truman had gone Republican." Well, that's not the correct way to say it -- you know what I mean -- but they couldn't say he'd gone to Jesus. They said he'd gone to "heaven." Now, that isn't what I meant at all! That's the trouble with the American public -- they have a dirty mind.

You know, when someone asks me what they would do with all of the stocks, debentures and bonds and everything if Technocracy comes in, my invariable reply is that they be made into a paper, a paper of finer tissue. Yes, but now there you go yourselves. I don't mean what you mean -- I'm talking about Kleenex.

How many members have we here in Seattle tonight? Put up your hands. That's quite a few. How many of you have painted cars? Well, how many of you have not painted cars but have cars? Come on, let's see. Almost as many. You want to go to work and do a job? Do you or don't you? See how many you can paint in the next six months. No reason Seattle can't have a grey fleet, too, and Vancouver. First thing you know you keep this up, Bellingham will beat hell out of you. Can't let that happen, can you? You want to look out for Tacoma, too. Liable to give you an awful run for your money. You can do it. You've done a swell job. You've done a capable job of organizing here, but, remember, you're moving up into another order of magnitude. You have to do a bigger and different kind of job.

Another thing I'd like to say is in the appearance of the Seattle Section, there appears to be more women doing the job than men. That's just from appearances. I don't know where the men are or what the men are supposed to be doing, but the women seem to be doing quite a job up this way, no matter what it is. Of course, up on Vancouver Island, we have a Section that is practically run entirely by women, I've always been wanting to go up there and find out what the devil did it. I don't know whether they chased the last man out yet or not.

Now you can do it here. You're going to get quite a kick out of this: you're going to be accused, you know, publicly -- just as up in Canada it's already started -- that the grey fleet came in to take Canada over, and they actually believed it. One

Englishman pointed at the lead car and said, "Why, there goes Hitler!" Same type of thing, you know, exactly. Just because we have grey motorcycles and grey cars, they're going to call you all the names they can think of. You might as well get prepared for it. Also bear in mind we aren't going to take over Canada.

Now if any Canadian who is not a Technocrat wants to know anything about Canada, tell them we're not going to take it over. Canada's greatest export in the last fifty years has been native-born Canadians. In 1945, they exported over 8,000. Last year over 18,000 to this country, and there's approximately more native-born Canadians in United States than there are in Canada. All Technocracy has to do is ask the native-born Canadians in United States to go and take their own country back. You're going to see a lot of things happen.

Of course, 'Aazardous 'Arry down in Washington .... That must be one of those Republicans up there. Well, it's pretty sad that we have what we have locally, nationally, but the Republican Congress isn't going to improve it. They'll only do the same thing. There's only one political party any more. True, there are several in Canada, but their ambitions and aspirations and platform are for the same thing. They all want to get into office under this system, no matter what they promise.

Remember a political platform is all right to come in on, but it never was built to stand on. Now that's the position they're in. Things are going to be quite difficult for certain people in certain fields. A man in Everett, a businessman, owns quite a nice place there. He says, "You know, I've never found anybody that could meet Technocracy's .... more than my take, and I could not stay open after 6:00. I think I'll get into Technocracy now because there's no sense in trying to own property and run a business under this system if you're a small businessman." I said, "Why, you have the beginnings of intelligence."

You may find an entirely new bunch in Everett out there because you may corral a lot of them in business. They may want to come in and help. They won't know what to do with themselves when they quit their business, will they? They'll have to have something to keep busy at, won't they? Now you can provide them with lots of jobs to do in Technocracy, and all these businessmen

that had to keep busy all these years -- it's up to you to see that they don't have breakdowns.

What's on your mind? I'd like to hear from you for a change while I take my coat off. How about it?

---

[THE FOLLOWING QUESTION PERIOD CONSISTED OF ORAL QUESTIONS AND NO QUESTION POSED FROM THE FLOOR WAS PICKED UP BY THE MICROPHONE. CONSEQUENTLY, SOME OF THE ANSWERS WILL HAVE NO REFERENCE POINT AND WILL NOT BE UNDERSTANDABLE. IN SOME CASES, THE CHIEF REPEATED AT LEAST A PART OF THE QUESTION, AND THE ANSWERS WILL BE SOMEWHAT UNDERSTANDABLE. ALSO, IN SOME PLACES, THE RECORDING WAS BLANKED OUT BY NOISE OR FOR SOME OTHER REASON.]

.... the trailer you have. Don't blame it on him. I understand.

[QUESTION] About as cheaply as living at home? [REPLY] In other words, you could live on the move without practically any difference, relatively speaking. [REPLY] No, we've been investigating a certain type of trailer for some time. It can be expanded -- collapsed. It could travel fast enough so that a car could hit high speed, and we may have something to report on that. There are also some that can be obtained out here. You can, if you handle it correctly, travel with a little butane stove and other things. You can travel very comfortably and inexpensively, but I don't know about children. We didn't go into the children yet. We'll have to leave that until later.

[QUESTION] Well, you know I'll tell this American public of ours, if they ever once get the realization into their head, that we're the most revolutionary social organization on earth and if they ever start going in our direction, look out. All God's children will get wings at the same time. God help you!

[QUESTION] No, there's no danger of Technocracy being suppressed here unless this country goes utterly and completely fascist. That is quite a job to do. There's too many of our men in the armed forces that have seen what fascism has done in Europe. Men right here in this audience that have been in Dachau. You couldn't sell them fascism here or abroad.

Speaking of the public, as one international banker said to me the other day, "We couldn't have fascism or could we have communism here because we haven't any structure internally or have we the discipline to install either." He was speaking of business, not Technocracy. Business and politics like that .... very difficult to transform a collection of rackets into anything corresponding to what Europe has, that is, the type of rackets we have here where everybody wants to be in a racket.

[QUESTION] Why does CHQ have to have headquarters in New York where rents are so high, and why can't it be more centrally located? Because New York is the business, economic, and news center of this continent, and it's also the best research center. New York libraries, the Engineer's Library at Columbia, are even better than the Congressional Library.

[QUESTION] .... not inflating anything in the monetary world. That's only a change on the price tag; it doesn't make any real difference. The question is how are you going to get purchasing power into the hands of a mass of people to buy back these terrific inventories no matter what the figure runs to. Germany and France had terrific inflation, China today has 56,000 Chinese UN dollars to one US. Inflation is only one part of the picture. [REPLY] Now what do you mean by that, sir? [REPLY] Well, that's a different thing. [REPLY] No, the whole world is running short of US dollars, but Great Britain is also finding out that the world is running short of pound sterling, not only US dollars. What was the total world trade before the war? It was only \$25 billion a year -- total world trade of the world. United States never exported in peacetime more than 4% of its total production. It did in wartime. In 1918, it succeeded in exporting 10%. In 1942-44, during World War II, we never reached 10% of our total production, because our productive capacity had increased to such an extent that we were unable to export 10% of our total production with Lend-Lease and export trade combined. We couldn't even give enough away around the world to make our total shipments equal 10% of our total production.

Now how in the devil do you expect we're going to get sufficient dollars abroad to nations when we couldn't even give it away before we gave them dollars? Very simple. [REPLY] Interest rate on some investments are less than that. You want to

continue this any more on foreign ....? Have you got your answer?

[QUESTION] Is it feasible to alter the present structure of Grand Coulee Dam? Yes, you could, but you'd have to let the water out, put an additional fee on top of it. You couldn't increase the height of Boulder Dam because that's a different type of design. It's cheaper to build a new Boulder Dam downriver, put in all your powerhouses on the one side, and when you got it ready to run, just blow the top off Boulder Dam and let it stay down there as a monument under the nice, clear, beautiful water of a new and greater Lake Mead.

[QUESTION] I haven't the slightest idea what the Russians think of Technocracy. I don't speak Russian, I don't know Russian, never having been there, and we never receive any mail from there. [REPLY] No, I think that's some of that bad whiskey you've been selling in the state liquor stores.

.... and you'll find it in the literature that all citizens of United States or Canada are eligible for membership in Technocracy except those elected to political office. It's clear. If you'll read the literature, you'll find it there. You don't have to come and ask me about it.

.... states. In Mexico, yes. A citizen of Canada isn't eligible for membership in Technocracy in United States or a citizen of United States isn't eligible in Canada. Read your By-Laws; you'll find it in there.

[QUESTION] You can circularize the labor unions with Technocracy literature, but don't ask us to direct the strategy, if you please. Correct? I'm speaking of total conscription. That doesn't prevent you from circulating Technocracy literature anytime, anyplace, but you're mixing it up with total conscription, aren't you? You're asking for another reprint of total conscription. Is that what you .... ?

NO, THE QUESTION I WOULD LIKE TO ASK IS: ISN'T IT TIME WE SHOULD START WORKING ON THE LABOR UNIONS FOR [TIME]?

Now that's an entirely different matter. Why, certainly, go right ahead. Any labor union and all labor unions, any one that you're a member of and those that you aren't a member of.

What about the Taft-Hartley Bill? It is identical, in purpose and intent, as the legislation introduced by Hitler into the Reichstag -- the same type of a fascist move. They'll smack up your labor organizations, and they'll smack up something else.

[QUESTION] Well, we have a very interesting development in the east. We have one of the largest unions and one of the largest corporations of its kind on this continent where the union and the management jointly sponsor meetings of Technocracy on the assembly floor. Now you see Technocracy's strategy with labor unions is entirely different than the Communist Party. We at no time will go in and attempt to take over the union or control it. We're not interested in running a labor union or a business corporation. We're only and solely interested in running Technocracy. Let's understand that! But if the labor union wants to come into Technocracy, they may do so. They can hold their labor union meetings in their labor union hall, and when they meet here, they'll meet as Technocrats.

Just a minute. Therefore, you'll find the president, secretary, and treasurer, and vice-president of the union signing the letter, and the union holding meetings in the union halls on Technocracy. How do you like that? Why not? We'll get them educated by and by. Now if we can get management and union to use their industrial plants in which they'll jointly sponsor meetings of Technocracy, then management wants to know how many they can sign up. They can sign up anybody in their Technocracy local of that plant who is operating -- not stockholders. You understand? Is it clear to you what we mean?

Just as we have in a certain city in the east -- we have a considerable number of the members in the police force, one of the largest police forces in the country. There's a considerable Roman Catholic bloc in there and a considerable Masonic bloc in the police force, but you know the only time they meet on a real basis is when they meet on Technocracy in the Section; and we find we have no trouble with it. Outside, up until now, they seemed to have some slight difference between each other. A peculiar organization, isn't it, when it can make two antithetical propositions such as that agree to function in this organization to do something about it?

Just as I said the other night, you know, His Holiness can't talk with God anymore, because God only spoke Russian. Well, of course, you can expect almost any day that His Holiness may want to go to Moscow and consult with St. Joe.

[QUESTION] Well, you know the mileage and the roads. It's quite a while since I've been down to Tijuana. If you don't get lost in that gambling joint down there with those chiquitas, I think you'll probably be able to do it.

[QUESTION] I don't know anything about such operations, and neither do you. That's orders. Fair enough? Well, see that you act accordingly.

[QUESTION] Engineering view? What do you mean by that? The flying wing, after all, is propelled by a turboprop jet -- different propellers, you know. They don't make a noise. And the jet provides 25% of the propulsion even when it's operating the prop, and you can use the full jet for takeoff or higher altitude. Does that .... [REPLY] Well, there's probably some men here in aviation who could tell you what that is.

[QUESTION] Do we still consider it a Technate as what? [REPLY] In order to have a defensible unit, you've got to have an economic organism with which to operate, because the concept of military defense or military offense is overboard years ago. Unless you have a technological operation unit, it's not worth defending. Doesn't make any difference whether you have flying missiles or atomic bombs, you still have to have a technological organism. A contiguous continentalism enables you to operate in this technological day and age. Otherwise, you have really nothing to defend and no real base from which to conduct an offensive. [REPLY] Now they have no fortifications in Alaska. Quit kidding me. We've just got a lot of defunct bases up there that you're turning over to the Eskimos. [REPLY] Well, there's no sense in conscripting foot soldiers. The only sense is in conscripting everybody. If you read the article on total conscription in the INFANTRY JOURNAL a few months back, you'll find where the INFANTRY JOURNAL today is advocating total conscription, but it doesn't want the public of United States to know it.

[QUESTION (APPARENTLY ABOUT NIKOLA TESLA)] Yes, but then

that's rather complicated. I knew the old man, a brilliant genius. He was a complete wreck -- used to come along in his later years and feed the pigeons. The father of all polyphase, AC circuits, and motors -- but what our system does to a genius that far ahead!

[QUESTION] The reason we're avoiding it is that United States has no allies but the noble Japanese, the noble Italians, the noble Bavarians, Wurdemburg, Baden East, Rhineland, and they're so noble they can't fight anymore. Did you see General MacArthur's statement that we will have to protect Japan from aggression for another two decades? Just out today. "Dugout" MacArthur. I see some of you served in the Pacific area.

THE QUESTION WE WANT TO KNOW ABOUT WAS OPERATION CONTINENTAL.

I said I didn't know anything about it and no one else should know anything about it, and that's orders! It doesn't exist. When it does, you'll get your instructions.

[QUESTION] Yes, wind driven is feasible. You have a big generator up in New Hampshire that Putnam put up. It's quite feasible, but you have to build a lot of towers to do it. There are a lot of things that are feasible. The question is the cost.

[QUESTION] Argentina? Well, it has some good wheat and corn land. It's good grazing country. It has a little oil at [Rivadavia] and some way down on the south end at Patagonia, tip end, but not much else. Of course, Argentina would like to take in Paraguay and Bolivia and Chile -- the old estates general of the Jesuit -- then it has sufficient territory and mineral resources.

[QUESTION] The businessman has to have time to ameliorate the recession. You can't expect the businessman to get prepared for things that quickly. He's got to have time to fix up this recession so it's good for the next depression.

[QUESTION] Atomic power for commercial use? What do you suppose all this battle in the United Nations is all about? The atomic power -- there's only one country today that could develop and use atomic power without upsetting its social system --

that's Russia. We only have to have about 15-16% more extraneous energy conversion. We don't even need atomic energy. All we have to do is increase our oil, coal, gas, and hydroelectric. We reached 180,000 kg cals in 1944. It doesn't take very much more. We don't even need the atomic energy. We only need a 15% increase in what we have and then we go to hell, too.

These atomic scientists are very funny, you know. Some of them came up to see us, and they said, "Mr. Scott, a hundred of us have been in Washington for several months now talking before the War Department, the Navy Department, and all kinds of committees, Congress and the Senate, and we didn't get the proper publicity. We came to Technocracy here because we consider Technocracy as the greatest scientists in their field as we are in ours." Well, thank you, and why in hell didn't you come to see us first? "Well, could we have gotten publicity?" You certainly could, and you wouldn't have had to say a word. All that 100 atomic scientists needed to do was to turn up in grey -- that's all, brother, that's all.

It's so funny; they think that they can talk a Congressman or a Senator into understanding. Now even a scientist is dumb.

[QUESTION] Now you can read up on the technical details of that. It's just going to eliminate some more of the employees of the Western Union, that's all.

.... Well, your grey cloth will probably be out this year. We've had the first offer a month ago from the same company that made it last time, but you had to wait until they lost their war contract.

[QUESTION] No, there's enough in the rest of the Technate. We're just running short in United States. Go on and look at our highways on the Fourth of July. You have more idiots burning up gas trying to go nowhere -- hell-bent in all directions; and then when they get to where they think they ought to go, what do they do? They're only there a few hours or a day and they turn around and burn up the tires and gas going the other way again. No wonder you can't keep resources if you've got a nation of psychotics. In other words, their love life at home isn't good enough; so, they've got to wear themselves out going someplace where there isn't any. Well, I'll get down to telling you a right

name in a minute.

[QUESTION] No, that wasn't .... the United Nations Commission proposed that the energy survey of Technocracy and that its technique and methods of analysis be adopted for the United Nations -- an energy survey of the world, but we're still a little bit too far ahead for the United Nations to catch up.

[QUESTION] Modernization of machinery? Well, there's so much going on -- there's never been so much modernization of technological equipment in history. There's the miners in Britain only doing from 0.7 to 1 ton per man per day. In United States, we're averaging 5.3 tons per man per day. Consolidated Coal No. 38 in West Virginia is shipping 70 tons per man per day from an underground mine working six hours and 20 minutes on the coal face; of course, that's still a long way from our process, which would mine 500 to 1,000 tons of coal per man per day. It wouldn't use any explosives -- simply a continuous long wall, 5,000 pounds of compressed air, continuous undercutting, continuous over and continuous automatic loading. You wouldn't have any miners. You'd only have a few skilled mechanics -- no sense in having miners.

[QUESTION] The high wages of what? Why have they gotten the high wages? Merely that they have John L. Lewis, who is an excellent tactician, and who is a good Republican; so, the Republicans are in, and he always plays with the side that he thinks can get him the most. He sees the handwriting on the wall of more machinery in coal mines, so he'd better get them an increase in wages now before they lose their jobs.

[QUESTION] No, we're not subversive. The FBI doesn't issue any statement on anything at any time. We have nothing to worry about. We don't run candidates. We don't support candidates. We don't even propose to take over this cockeyed lousy system. [REPLY: THE FBI HAS .... ] You got it in writing? [REPLY] Why don't you send it in, I'd love to see it. [REPLY] Why, certainly, that's the FBI.

[QUESTION] The amount of gold that was purchased? [REPLY] I don't think I get your question, but I think I know what you mean, American deposits in British banks rose £60-some millions of pounds between the time of the knowledge of the gold devaluation and when the gold was devaluated. In other words,

gold was shipped abroad and came back at \$35 an ounce, 460-some million pounds sterling increase in American accounts in British banks. [REPLY] Who do you suppose gets the swank? Nobody that works for a living gets it. [REPLY] I wouldn't worry about that. If you only have to wait a couple of hours for things in your life, you'll be lucky. You don't know what happened to some of the equipment, but I do.

Maps of the Technate? Certainly, any time you order them.

[QUESTION] No, that's a written statement from the Civil Service. You've had photostats of that published in the magazines. Yes, go back and look, for them. You'll find them -- just proving that Technocrats don't read their own literature.

WHEN WE BECOME A TECHNATE, WILL WE COOPERATE WITH THE UNITED NATIONS?

For heaven's sakes, what do you want in the United Nations for? You only need two nations on this globe, and if those two nations were agreed, all the bastard collection of the rest of them wouldn't make a damn bit of difference if they all agreed or disagreed. Don't you understand? Did you ever read "The Vultures of the Peace"?

The United Nations is a conspiracy to prevent the major victor of this war from maintaining her gain. Clear enough? Just as the Atlantic Charter was the greatest hoax ever perpetrated. It was perpetrated by Franklin D. Roosevelt and Winston Churchill .... the White House. He went in the press conference, and Roosevelt admitted it. It's in print. There's no statement, never was. There never had been an agreement, never had been a charter, never had been any notes on the thing, let alone signatures. Now look at all the jackasses across this continent that fell for it. And the Atlantic Charter was concocted as a nice piece of propaganda for the moronic public of this continent and the world in case Germany won. Here was the head of a belligerent nation making a deal with the head of a neutral nation on the high seas regarding the conduct and outcome of a war in which the head of a neutral nation was not engaged and in which the two greatest participants in that time were not there. What do you call that but underhanded flim-flamming on an international scale? No wonder it stinks to the Russians.

[QUESTION] Well, you're functioning now for that, but this is an educational-research organization conducting propaganda, if you like, for a Technate. That's all you can do about it. You can't do anything about the standard of living under this system. If you want your children to succeed under this system, don't send them to university -- send them to work under a good gangster. They'll succeed a damn sight quicker. Oh, I forgot, you haven't got any rackets in Seattle, have you? And you've even got a pavement on the skid row. Nobody likes to mention that in Seattle -- that's not the nice people.

You know there's only three kinds of women, don't you? Those that hold a card in the American federation of Labor, those that hold one in the CIO, and those that don't hold any card at all. Those that hold a union card always hate the one that doesn't. Come on, can't I tease you about something?

[QUESTION] More industrialization, more installation of energy-consuming devices, and less man-hours. You're already laying off employees out here. You'll lay off a lot more in the next six months, don't worry. [REPLY] Sell them to the sucker.

[QUESTION] No, no more than anyone else. It doesn't make a darn bit of difference whether they did nor not. The same kind of thing, what are you operating on? Even if you got atomic bombs here, you still have to transport atomic bombs to the point where you wish them to be effective. What the Germans were near to doesn't matter anymore.

[QUESTION] It doesn't. Oh, before and during, we were the ones that discovered that the Japanese in California were going back and renewing their Imperial citizenship. So, it wasn't for this organization to spend its time worrying about whether the individual was Chinese or Japanese or what he was. Four Tokyo Roses graduated from universities in California, you know. Charming people!

We have photographs of Japanese processions in San Joaquin Valley before the war, where hundreds of them were marching down carrying the Imperial Rising Sun, going down to the Shinto Temple to celebrate the birth of a new warrior for the Emperor. And the people on this coast were so damn dumb that they permitted it and

you know it. [REPLY] Oh, yes, afterwards, I'm not objecting to their being Japanese, don't misunderstand me. You had the same thing on the east coast with Germans and others. We're such a nice, trusting people if somebody can make money and hand the money around. Nothing to do with their being Japanese -- it's just the foreign country.

Why, I even walked out of the Admiral of the Fleet's home on the Pacific Coast because he had 27 Japanese servants in 1941, and his major domo said, "Mr. Scott, I think you're mistaken," I said, "Don't be stupid. Give my regards to your superior, Takio Oharo, in Tokyo." They were arrested shortly afterward. I'm not talking about the Japanese as a race. I'm talking about the ones that were here that were working for something. You understand the difference?

[QUESTION ABOUT INTERNATIONAL BANKING] Oh, the International Bank is only a reflex of our banking here, so as to have the United States Government loan the taxpayers' money where the private banker won't take the risk, that's all. You're the one that's the International Bank, but you don't know it. Everybody is. It's your money. The other fellow loans it where he wouldn't loan his own. Homo Sapiensus Americensus -- mostly SAP.

Well, I think I've kept you about long enough, what do you think? No? You're willing to stay somewhat longer, are you? I warn you, I'm only beginning to wake up. You want to make some announcements? Well, you better come up here and make the announcements and let me have a smoke.

[THERE WAS ADDITIONAL DISCUSSION BUT THE RECORDING WAS ENTIRELY TOO INAUDIBLE TO TRANSCRIBE ANYTHING AT ALL.]

PUBLIC MEETING  
WITH  
HOWARD SCOTT  
SEATTLE, WASHINGTON  
JULY 29, 1947

World War I came to an end in November, 1918. It took ten years for the technological acceleration of this continent to catch up to all of the -- let's call it social boondoggling: installment buying, foreign loans, and the usual financial maneuvering. That ended in 1929. Most of you here went through the depression; you remember it. It took a decade to catch up to that technological acceleration of World War I.

Today -- we will not hit two years since V-J Day until August -- the United States and Canada have arrived in approximately the same position that it took ten years after the last war. This nation, of course, in World War II, was officially at war. Our armies -- our armed forces -- were out fighting the armed forces of fascism in the rest of the world, but our people at home, what were they doing? They had their snoot and all four feet in the greatest gravy trough of prosperity the world has ever seen, the only thing they regretted is that they didn't have two snoots and eight feet. They actually had the stupidity to believe that they could get rich by working. They're beginning to find out they were dumber than hell.

Naturally this system did not increase their hourly wages except in a few instances like aircraft and shipbuilding; but in the main, the hourly rates remained the same. The workers of United States were bribed by time-and-a-half and double time. They worked long hours. The process of bribery succeeded. We bribed the farmers; we bribed the businessman. We bribed the fruitgrower or the manufacturer. We just love to bribe each other. Every female ought to know what I'm talking about. Somebody laughing back there?

During the last twenty years, the process of government in this country has been a unique one. We resolved every problem, always from one compromise to an ever greater compromise. We succeeded by a continual process of capitalizing ever greater calamities. Roosevelt capitalized all the calamities of this continent, and when he ran out of calamities on this continent, he got into the world's greatest calamity, World War II. Don't you remember those words in Boston, when he said, "I tell you

again, again, and again -- none of your sons will serve overseas." You believed him and what did you get? You love to be deceived, don't you? And you were dumb enough to go down and put your ballot in the ballot box just the same. You didn't even have sense enough to get \$2.00 for it. If you're married, you should have gotten \$5.00 for it, plus transportation, because it's all you'll ever get for it.

During this war, you were given a sample of worldwide deception. On August 14, 1941, the head of a belligerent nation meets with the head of a neutral nation, Franklin D. Roosevelt, on a battleship several miles off the coast of this continent, and as a result of that meeting was perpetrated one of the greatest deceptions ever spread around the world: the Atlantic Charter. Wendell Willkie, the Republicans, the Democrats, the priests, and the ministers, the newspapers, the radio -- everybody acclaimed the Atlantic Charter as the great document of all time, the greatest document since the Magna Carta. The United States Treasury printed an immense number of illumined Atlantic Charters for distribution. Let me ask you: Where are those copies now? Where are those millions of copies of the Atlantic Charter that you taxpayers money paid for? Did they distribute them? They did not.

All because a newspaper photographer from Tennessee photographed the one under glass in the Smithsonian Institution and went over to the State Department to photograph the original, to find out there never was an original. There had never been even a scrap of paper. There were no signatures, there were not even notes on it. Franklin Delano Roosevelt admitted it in a press conference in the White House, and it was published; and yet the sucker public of United States swallowed it hook, line, and sinker. [A roaring noise starts offstage] Apparently I'm getting too strong for something behind me. Maybe it's Republican indigestion backstage.

It is a peculiar process. United States is unique amongst the countries of the world -- historically speaking, because the process of national management which we have here has graduated more low-grade morons into multimillionaires than all the rest of the world has done in history. Isn't that a wonderful achievement? Isn't it magnificent that you can claim that? You, who don't know where your next week's or next month's security is

coming from? Your paycheck today is all eaten up by the high cost of food, rent .... Some of you are still naive enough to believe that and that in 1948, you're going to elect another, different one.

Only a few weeks ago, you have Hank Wallace .... well, Hank, of course, is out to liberalize the Democratic Party. Stassen is out to liberalize the Republican Party. Both of them propose the same thing, that the Democratic Party, according to Wallace's viewpoint, would be a nice party provided they were men of good intent and not a war party, and that United States would spend \$15 to \$20 billion a year for the next ten years abroad. Not on relief -- do not misunderstand me. That does not include food or medicines for foreign relief. It is simply shipping American purchasing power off this continent to foreign countries so that American business can reap greater profits than ever at the expense of the damn fool American taxpayer.

Stassen, of course, is a little more politically vague than Wallace. He doesn't state the exact figures. He only says 10 percent of our annual production. Well, that amounts to the same thing -- between \$15 and \$20 billion a year. McGraw-Hill publishes the same kind of editorial. Acheson's speeches follow the same line. In other words, the only thing an American can do today is send our purchasing power abroad. The only way you can really get anywhere is to be a refugee from your own country. Well, why not?

The papers and radio are filled with the so-called battle propaganda of the new foreign policy of United States. Well, let's review it. A foreign policy of a nation can only be the foreign extension of its own national policy, a reflex of the operational schedules of the national sovereignty. The question remains, have we a national policy internally in United States? And the answer is no. The only policy we've ever had is the policy of dog-eat-dog. There are only two classes of people in United States, regardless of creed, color, size, or classification; chisellers and suckers.

We have gone through the same process of deceiving the public of this country for the last 162 years. We have yet to liquidate nationally the fundamental causes of the Civil War. We have yet to liquidate the fundamental causes of the last

depression. And now you have business in United States -- because it made so many billions out of the last war -- plotting how to start World War III, and a good many of the general public would like to have another war. Why, a lot of you know your friends and acquaintances never were so well off as they were during this last war, were they? And they were sorry when it stopped. Well, don't blame United States for stopping it! You don't like that, do you? Not that we didn't have our share of the dead and the dying and the wounded; we did. But the Russians did 85 percent of it in Europe.

The only reason we invaded Normandy in June, 1944, is a very simple reason: If we had delayed the invasion another eight months to a year, the Russians would have been on the Bay of Biscay. We used the same methods there that we've used at home. Nationally across this country today, everybody's got the jitters. The businessman has bigger inventories than ever. His taxes are rising, while on the part of the worker, his cost of living is rising, his hours are being reduced, and he, too, is facing a serious situation.

At the present rate of speed, the average small businessman cannot afford to stay in business. Six years ago, United States had the same number of farms as Japan. Today, we have 400,000 less farms than Japan. True, the Japanese farms average 2.3 acres in size. The farms of United States today average over 200 acres in size, but only 26 percent of our farms are really in the producing class. They produce 78 percent of our total production. All the rest of the little farmers don't matter except as subsistence units.

Our little manufacturing and our little business is the same way. There are more consolidations going on in every field. More modern technological equipment is being introduced, and those that have the capital naturally are going to introduce more technological equipment. To give you an idea, there's a plant just completed in Texas that has \$2.5 million worth of installed equipment per employee. The only reason that it has any employees at all is because they can't control the rate of flow into the plant and out. If they could, they wouldn't have any employees. What's the sense of having an employee anyway? You only have to pay them wages.

But, you see, the public here -- you really don't want to change. You're like Henry Wallace or Stassen or Green or Murray. You want a little bit larger piece of the same pie. But you want this same cockeyed, lousy system to go on. We're bringing it home to you, quite frankly, that you've only got a little while longer to run.

In 1929, after the collapse of the Credit Anstalt in Austria and other institutions, the depression set in. There was a worldwide collapse of values, but at that time there was a British imperialism, a Dutch, a French, Belgian, and others that were operating mechanisms around the globe. True, people were unemployed but still those operating mechanisms were intact. Today there is no longer any British colonial imperialism in any operating condition. Neither is the Dutch or the French. They're gone and they're not coming back.

United States is out on the end of a limb. We are the sole representative of that great, great thing: free enterprise. It's so free that most of you haven't got any of it, but you go on hollering that you don't want to be disturbed. Now, yes, we're the richest nation on earth financially. There are \$130 billion on deposit in our financial institutions, the greatest amount ever known; that is, individual deposits. But 78 percent of the \$130 billion is held by less than 26 percent of the depositors. It doesn't leave very much for the other 84 percent. Our corporations have more cash than ever before in history. They have \$70 billion.

Now, if you belong in the category where you don't need to work and you can live on your cash, then you shouldn't be here tonight, because you're a particular class of American. You're the louse that loused the situation up. This has naturally led the country, because it has made so many billions, to believe that the top 10 percent of United States was entitled to go on making more billions at the expense of the other 90 percent, because it was your money, your taxes, that ran every business in United States during the war. You are the government of the people. You paid for it. The surplus of \$102 billion worth of goods that you paid for -- did you get them? You did like hell! They sold them to you after you had paid for them. Nothing so dumb as he who falls for the same bait twice.

This country at the top is going reactionary, going reactionary and going fascist. Maybe you don't like that term. We went out and fought fascism in World War II. Our armies -- armed forces -- of this country fought the armed forces of fascism, but never once did any statesman I don't know whether you could find anything like that in United States, but so-called political leader never advocated making war on fascism or the destruction of fascism. Not one single time did any one of our political leaders or financial leaders advocate that the United States declare war on fascism. Don't you remember out of this port and out of the other ports of the Pacific Coast when business was making fat profits out of shipping scrap steel, petroleum, lumber, and wood pulp to Japan? You remember when the scrap steel went out of this port and every other port on this coast. You remember in 1940 when the United States shipped from this coast 22,734,000 barrels of petroleum to Japan, and our Marines, our soldiers, found that same petroleum in the original cans on every island that they captured across the Pacific. It was damn good business financing fascism.

In 1934, speaking across the platforms of this country, the speaker of this evening said then, "Mrs. America, don't squawk when your son is killed with a Pennsylvania coal car, a Ford rearend, and a 6th Avenue El, because when it comes back to you, lady, they won't be Japanese bouquets!" That was 1934. Technocracy is proud of its record. We published the figures every year of what was being shipped to Spain, Italy, Germany, and Japan. Can you say the same thing for the Bank of America, the General Motors, or the United States Steel, or any other corporation in the United States? No, you cannot.

Cap Reiber, who was Chairman of the Board of the Texas Oil, brought in Dr. Westermach, the Legationirach of Hitler, and had him in a Texas Oil residence in Westchester; of course, they fired Cap Reiber from the Chairmanship of the Board of the Texas Oil. He wouldn't have had anything to do, would he, with shipping oil to Spain, Italy, and Germany? Oh, no.

Bob Hague, with the Standard Oil, was making so much money that he accumulated a 26-story apartment house shipping oil to the same sources. What I'm trying to point out to you is that business in United States, Canada, Great Britain, and France financed fascism around the world, and it was damn good business

financing it; and when you could no longer finance it, they financed this country to fight fascism to have even better business. Tough, isn't it?

Back in 1917, the Russian Czaristic Empire collapsed in March. The Bolshevik took over after a succession of political upheavals. On December 23, 1917, Great Britain and United States, in Paris, formed and signed the Franco-British Partition, in which Russia was to be divided up amongst the western powers. Poland was to have the territory up to and including Moscow. The British were to have Estonia, Latvia, and the Baltic Provinces. The French were to have the Krivoi Rog, the Don, and Sevastopol. The British were to have the oil of Baku, Maikop, and Grozny. Very lovely people!

In April, 1918, the Honorable Winston Churchill and his consul sent General Poole of the British Army and 20,000 British and landed them at the Norwegian port of Narvik and sent them overland by the Karano Electric Railroad into Northern Finland. At the same time. General Rudiger von der Goltz of the Germany Army landed at Hango in South Finland with 30,000 crack German veterans. Remember, this is 1918. The 30,000 Germans under General Rudiger von der Goltz, the 20,000 British under General Poole, and the British fleet in Murmansk all operated under the same joint command to overthrow the Finnish Republic, while the British and Germans were, along with the French and Americans, still fighting each other on the western front. You don't like this and you don't believe it? Look it up in your Encyclopedia Britannica. It is all there. It is, every word I've used.

A Cordon Sanitaire was drawn up on paper. That Cordon Sanitaire ran from Finland to Turkey. It was the concoction of Great Britain, France, Italy, the Vatican, United States, and Japan. That Cordon Sanitaire was composed of Finland, Estonia, Latvia, Lithuania, Poland, Romania, and others. Behind that Cordon Sanitaire, behind that geographical barrier, fascism was permitted to grow. Today, ladies and gentlemen, there is no Cordon Sanitaire. The Russians have made it a Cordon Rouge. Remember that the entire countries of the western world were in the conspiracy of the Cordon Sanitaire. They hoped to stop Bolshevism. They failed. They created fascism, and fascism went down to defeat.

Now, President Truman proposes to have a Cordon Sanitaire created around the world by United States alone. All the countries of Western Europe couldn't make Cordon Sanitaire No. 1 stick. Are we stupid enough to believe that we, all by ourselves, can make Cordon Sanitaire No. 2 a reality? It is rather difficult for us Americans to understand either history or geography, because the last time we ever took any lessons in geography is when we were 11-1/2 years old. Don't laugh. That's the last time you had any geography. You don't even know your own state, let alone the other 47, or any other part of the world; but you're smart as hell individually.

Individually, we're the smartest people on earth; collectively, we're dumb. So here we're being asked to vote billions to go out and stop a mythical thing some 6,000 to 8,000 miles from here. We have the so-called liberal-right deviations of Wallace and Stassen. They're proposing a similar thing. You will notice that all of our political leaders -- none of them are proposing anything for United States -- none of them for this continent. It's all somewhere else. It's all to fight some mythical totalitarianism or communism; of course, they never propose to fight fascism, do they? Not one.

Pacelli came over here and made the deal with Roosevelt, and Roosevelt got the biggest majority in history in 1936. Well, he's not in the same position today. The head of the Vatican State, His Holiness, the Pope, as a political leader is one thing; as a religious leader, another. Of course, as a religious leader, he claims to be the Vicar of Christ and talk directly to God. That probably was correct in times past but is no longer correct. He can't talk to God any more because God only speaks Russian.

You're filled up with fears of war. Every few days somebody springs a new one on atom bombs or long-range planes or that we've got to stop somebody or other. Great Britain and United States have poured \$1.2 billion into Greece, exclusive of this new \$400 million loan, and it still hasn't rectified anything in Greece. We've poured several billions into China backing up the corrupt and semi-fascistic Kuomintang government of Chiang Kai-shek; and where is Chiang Kai-shek's government going? Well, UN dollars of the Kuomintang government of China today are 56,000 UN dollars to one US dollar. It's like that old herpicide ad, you know, that used to hang in the barber shops, the three of them

with the head in the comb -- going, going, gone. It won't be long.

Do you think you're going to have a great revival of foreign trade when most of the nations of Europe have nationalized their foreign trade -- Czechoslovakia, Poland, Finland, Yugoslavia, Bulgaria, Romania, Holland, Greece, Norway, France, and Great Britain? The British Empire isn't what it was. You know the flag always followed the trade outward bound until the sun never set on the British Empire. The same process goes on today: the flag is following the trade homeward bound. India goes out August 15th; the Burmese Republic will be next. In Upper Malaya, they're abandoning the rubber estates. They're getting out because they damn well have to.

The white man's day in the Orient is about over, and you'll have a series of new republics in which the Asiatic exploitation of Asiatics will be more ruthless than the white man's exploitation ever dreamed of being. We taught 'em how.

Well, Henry Luce and LIFE MAGAZINE have advocated the American Century. United States is going to revive itself by exporting billions abroad -- water closets and bathtubs for the Chinese. I don't hear a smile or a laugh. My heavens, how would the Chinese grow their food if you sent them water closets? The successful Chinese farmer is he who builds a Chick Sale Emporium out on his road, and if he can find enough Standard Oil cans to flatten out to make a roof to give a little shade, he'll get the greatest repository. Some of you know China, I see. In United States, we're intelligent. Oh, we're more intelligent than the Chinese. We have water closets and sewer systems. We're clean, sanitary people. We just run our sewer system into the lakes, the rivers, and the harbors.

It's the same thing no matter what you're dealing in. We want to send American goods to the Middle African. Well, before you can export the products of a technological civilization, you have to bring the particular area that you wish to export to up to a similar energy conversion; otherwise, they cannot use the products. It takes roads to have automobiles. It takes power plants to use lights and electric irons and toasters. You can go on. United States can't save itself by trying to kid the rest of the world and kid itself at the same time.

Our salvation lies right here on this continent and not 10,000 miles somewhere else. United States is running out of certain resources. I'm speaking now of continental United States. We have fought the last major war in our history with the hematite ore resources of the Mesabi Range. There's not enough high-grade ore left there to fight another of equal consumption with World War II. Our zinc, lead, copper, and petroleum are in declining critical condition, and yet we want to ship oil around the world. I don't know whether you realize it, but United States today is importing more oil than it exports, but it is still trying to sell oil for the lamps of China while it rations the oil in 12 middle western states. Aren't we lovely people? We have the missionary complex that we want to put diapers on the negroes in Timbuktu -- anything, so long as it's 6,000 miles off this continent, but you haven't got guts enough to send missionaries to your own country.

If the salvation you're preaching abroad is really what you say it is, then it should be applied here first before you get so damn philanthropic and magnanimous about it. You know it, but you vote for the next political candidate with that same smug serenity -- you've done your duty! Wonderful, isn't it?

Well now, since Franklin Delano Roosevelt has gone to Jesus and Truman has joined the Republicans, almost anything can happen. I'm being very nice with you, I assure you. I haven't really gotten dirty yet at all. I'm just getting warmed up.

What does our country face? So long as this Price System of ours can pay out sufficient wages and salaries and dividends so as to create an annual purchasing power each year to purchase the total output, everything is lovely. But in order to put out sufficient purchasing power to purchase the technological output of this country, we would have each year to create sufficient new debt in the capital goods industry to pay out an annual sum of salaries and wages equal to or greater than the capital dragdown in the consumer goods field. That would necessitate an annual expansion of the entire economy of 7 percent. The only time that we can assure any modicum of purchasing power or stability at all is when we're at war.

During this war we mobilized 14 million able-bodied

Americans and we spent \$300 billion for the purposes of destruction; and, yet, the public in United States, the most enlightened public in the world, hasn't sufficient initiative to get up off those posteriors and organize their country to spend an equal amount and mobilize an equal number for the constructive purposes of the general welfare and common good of the people of this continent. No, if you can get a new refrigerator and a new gadget and can go out and buy a few beers come Saturday night, it's not too difficult then.

How many of you in this audience tonight hold a union card? Come on, put up your hands. Let's see it. Well, that's quite a likely number. Every one of you that holds a union card is suspect. Do you realize it? I don't think you do. You're suspect. Every citizen of this country that holds a union card is suspect by the fascist clique now running this country. The Taft-Hartley Labor bill is exactly the same kind of legislation that was introduced into the Reichstag by Hitler. In other words, you'll suppress the labor organizations, throw out the 47,000 communists in United States, that's all. A great menace, aren't they, in 140 million people? But they will break up all the other organizations. Everybody with an idea will be suspect, and if you hold a union labor card, whether you have an idea or not, you're suspect. So, you might as well get a card in the most revolutionary organization on earth. If you're going to be hung, you might as well be hung for a sheep as a lamb.

You've got to realize what you're facing. Of course, Technocracy has a cure for people like Taft and Hartley and others. We call it the "Technocracy water cure"; namely, a high colonic of sufficient hydrostatic pressure to blow their ears off. They haven't anything behind the ears anyway. Someone has a sense of humor. They think I'm dirtier than I am. I was only referring to a purely sanitary measure, I assure you.

You've got to realize what you're facing. Business in United States and big politics are definitely reactionary. They're developing all the fascist symptoms. Your labor organization -- that's only one -- then they start on the others. They're going to ask you to vote for nice solid citizens next year to be president. Wallace has ambitions; so has Stassen; so has Dewey; so has Truman. Do you think that electing anybody into the present politico-economic system of United States would cure it?

You think electing anybody or any party would guarantee economic security so long as you have this existing economic system? If you do, you're psychotic. You love to be fooled, don't you. Well, we have one advantage the others haven't got: you can't elect Howard Scott to political office; he won't let you. He doesn't want to occupy the White House. The White House is Early Americana. Let's build another one.

You know the Great Seal of United States? If you have a dollar bill in your pocket, take it out and look at it. There are two sides to the Great Seal. One of them that is in use has the predatory bird, the eagle, on it. The other side, of course, is equally legal and authorized for use, but it isn't used on any documents. It has the Great Pyramid and the all-seeing eye and the words in Latin: Annuit Coeptis -- Novus Ordo Seclorum -- Time Makes Way for a New Order of the Ages. You've got it on the Great Seal of United States -- the side you never use. You use the one with the predatory bird on it, as Benjamin Franklin said. Let's turn over the Great Seal of United States and use the right side of it!

Now, do any of you think that your children are going to succeed in the next decade as farmers unless you have 10,000 acres to start with? Do you think that your children are going to succeed as small businessmen? Now if you had any sense, you wouldn't send your children to college or university if you thought this system was going to last. Just send them out and operate under a good gangster. That's a proper education to get if you're going to live in this system. For heaven's sakes, don't try to get them cultured or intelligent. Al Capone never went to school, and it didn't make any difference if Dewey did. He didn't accumulate much.

Now do you honestly think that a person of limited means, of average means, is going to succeed in the next decade? At what? What are you going to succeed at? Are you going to witness another depression? Not right away, but soon. What are you going to do in the next depression -- go on relief or WPA? Most of you in this audience or any other audience across this country have only your two weeks' salary -- maybe a month. In fact, you're only ten days away from the WPA if you lose your job in this land of the free and the home of the brave. The richest country on earth and you haven't any security longer than 30 days. Isn't it

wonderful? And yet you listen to Bob Hope, the Arkansas Traveler, and all the others, and at least you can escape from reality, can't you? You can go to the football games, the baseball games, the dog races or the horse races, and you will have an escape.

United States has more commercialized escapisms than all the rest of the world. It's no wonder we have so many psychos in our armed forces, and no wonder we have so many more in our population. You see them on the streets of our cities -- they go around talking to themselves. Well, but the businessman, he's reached the point to where he can't even talk to himself. But you still want to let somebody else do it. You still think that if you cast your ballot once in four years you don't have to pay any more attention to national affairs than that.

Technocracy is trying to bring to your attention an entirely different viewpoint. You, as part of the citizens of the State of Washington, remember, permitted the Grand Coulee Dam to be built to its present height. You never protested it. Your newspapers today and your radio are advocating further Columbia River development. Do you take any position on it? No.

Grand Coulee was allowed to be built to a maximum water elevation of 1,288 -- a finished roadway height of 1,310. Technocracy wanted Grand Coulee to be built to a maximum water elevation of 1,420 and a roadway of 1,450. That would have backed the water up beyond the Canadian Pacific Railway bridge at Revelstoke, BC. .... required 640,000 horsepower to pump the water up on the plateau, and it would have generated an additional one million kW. There would have been 350 miles of deep water transportation north of the dam. With double hydraulic lift locks, you could lift 60,000-ton units -- five minutes for every hundred feet of lift; not water locks -- hydraulic lifts. Do you have any vision of the Columbia? No.

The Columbia can be made a transcontinental waterway via the South Clark and the Missouri. But what do you do? The MVA proposes a Missouri Valley Authority, the Bureau of Reclamation for the Missouri River, and it got it distributed so it covers the maximum number of political districts in every state that the Missouri River touches from St. Louis to the Three Forks. When completed, it would provide -- create -- only 51,000 additional new farms of 90 acres each. What a lousy little concept.

Technocracy proposes a 22-foot waterway from the Mississippi via the Missouri crossing at Elliston, Montana, into the South Clark and the Pend Oreille and into the Columbia. It can be done, with more mainline storage than the Bureau of Reclamation ever dreamed of. The concepts have got to be continental in size and scope. They can no longer be stopped by state lines or counties

The Central Valley of California is a similar thing. Each little group, each little bloc, is playing for its own selfish little advantage. They want water to grow more lettuce or more cabbage -- the thick heads -- as if that were the great thing. They fail to see its continental scope at all. We have 3,070 counties in United States in the 48 sovereign states of this confederate union of ours. We have 19,000 police forces, 1.7 million retail outlets, and 5.4 million farms.

Do any of you think [A SHARP, LOUD EXPLOSION OCCURS] .... The shooting is already started. Here we are promised more jobs, better jobs, higher profits for the businessman, better prices for the farmer; in fact, we're promised nearly everything.

President Truman goes on the air today and speaks of the number of rights that we have: the right to a job, the right to work, the right to a home, the right to vote, the right to freedom. Sure, you've always had the rights. Every human being always has had rights all down history; and what the hell good are rights unless you've got the cash to buy it. Yes, you've got a right to a home -- every veteran has a right to a home, but, brother, unless you've got ten grand, your right isn't any good.

To show you how stupid businessmen are collectively, look at the billions they borrowed for real estate subdivisions for the building of homes. They were going to provide homes under private enterprise for the returned veteran. There are 3,400 brand new homes all equipped -- deep freeze, refrigerator, stoves, everything else, in New York areas. They can't sell them. There are hundreds around Dallas, Texas; Boston; Philadelphia; Detroit -- the same way. Why, the homes run from \$9,990 to \$18,000. The carrying charge is from \$80 a month to \$104 a month. Well, if you're going to carry a house like that, you've got to earn \$125 a week -- only 92 percent of the adults of United States earn less than \$5,000 a year. So, the great, smart businessmen of this

7-29-47

country -- our financial institutions -- started in on a grand speculative building, building houses for six percent of the population that already had enough money and had houses to begin with. And yet when they put up a candidate, you go down and vote for him. You love to be fooled again.

We're here to tell you that if you go into another depression, you'll have 25 to 30 million unemployed in the next one, and if you do, you can play a new national anthem and it's one you all know. It's an American one: "Get along Little Doggie, Get Along, 'cause you're Headin' for the Laaaaaast Roundup."

Do you think the returned soldier is going to like being on relief? Or do you think you who are not on relief can support those who will be? Do you think your number will be great enough? Let's see what modern technology is doing to that. Production is increasing; man-hours are declining. Production is rising and so are wage rates per hour, but the wage take per week is declining due to the decline in man-hours worked per week in spite of two pay raises. The steel industry of United States reached its peak in November and December, 1944, in the war with 460,000 employees working an average of 45.7 hours a week. An average take-home pay of \$56 and some cents. Today the steel industry is producing more steel than it did then, but it's only working 34.6 hours a week, 4.62 million man-hours less a week. The pay average is only slightly over \$41 in spite of two pay raises for the entire steel industry. Remember, the steelworkers union thought they were going to get rich. Those boys that have been in the army know that old song: "You're in the Army now, you can't get rich ...." Well, none of you were in the army; you're all in the navy, I suppose.

You have a paper company up this Pacific Coast -- not so many miles from here -- which is spending \$13,500,000 on expansion and new equipment -- not building -- which pays wages beyond the union scale, which has better sick benefits, insurance, holidays, and other employee relations programs than any company in the pulp and paper industry. It's true -- they do. It will be completed next month or in August; of course, the speeds will be up around 1,400 to 1,600 instead of the old 680, 740, and 800. They'll produce 2-1/2 times the amount of paper they did in 1941, but they'll only have 42 percent of the employees left. Naturally they can afford to be magnanimous when

you wipe out 58 percent of your employees. This is the trend all down the line.

In textiles, the new looms coming out, which will be out shortly, and, incidentally, Technocrat engineers are working on most of them, there are several prototypes. There are five different types of the flatbed and three or four of the rotaries. They operate without shuttles; they're vibrationless; they don't have to be attached to the floor. You can bring them into the office and you can't hear them. The rotary, of course, does a six-foot diameter sleeve -- not knitted, woven, only twenty feet wide. It will revolutionize the textile industry with more production and less employment, and, under private enterprise, more profit to the employer -- so long as he lasts.

I wonder if you realize that war is the only salvation -- temporary one -- for American business? If it doesn't go to war abroad, it will have its own war here. You don't think things are serious, do you, until they hit you. Well, they are serious across the country; and, of course, many of our calamity howlers would like us to drop atom bombs on Russia, as if that were curing anything at all.

They forget the Russians could be in the Dardenelles in about 2 hours and 40 minutes, Hamburg and the Keil Canal in 10, and the Po River in twice as much; but if the Red Army moves into North Italy, there will be 15 million Italian Roman Catholics who will move south of Bologna. The Russians won't have to take the rest of Italy; they'll eat each other. If the Red Army moves into Bavaria, there will be 30-some million who will move west -- and you speak of the parable of the biblical locusts -- thirty-some million Germans moving west. United States wouldn't have any place to go either.

So, we better get prepared to face a serious internal condition. If you believe in private enterprise and this political party system not two political parties -- there aren't any. There's only one, and there only has been one in years in this country. The Republicans and the Democrats smell alike. The only thing that distinguishes them is, in the case of the Democrat the jackass asininity, compared to the bovine moronity, but they smell alike.

Now you have to be prepared for a fundamental change. You still want to have little farms, little two-by-four stores? What do you think you are -- Chinese? Living with human toil and hand tools? Do you want to utilize science and technology and engineering, or do you want to run on a starvation level of human toil and hand tools? If you do, then shoot all the scientists, technologists, and engineers, and throw all your equipment in the ocean, and you'll damn well starve fast. Don't kid yourself. You can't run this country on human toil and hand tools; so, you had better organize yourself socially and politically to face the future -- not to elect a Wallace or a Dewey or a Vandenburg or a Truman, or a Stassen.

Do you want to have the same smell? But don't think that if you vote for another one, you're doing anything. You're not organized nationally to do anything except to express your opinion, to count noses. It doesn't make a cent's worth of difference how many noses you count. This is the same kind of system that went on for thousands of years. You're making your social decisions by resolving the conflict of human opinion into a common consensus of opinion. It's still opinion.

In this technological day and age, you have no right to decide the social operation of this continent as a matter of opinion when it can be determined as a matter of fact. We're trying to drive this home to you. We're not a political party. We do not run candidates. We do not support candidates. We're trying as an educational-research organization to carry the message, the knowledge of the design of what this country and this continent can become under an efficient technological operation.

Abundance and security can be produced here and distributed to everyone, but it cannot be produced and distributed to everyone under the existing political system and under the existing fiscal and economic system. We don't kid you. We don't ask you to vote us into office. We're telling you what's going to happen. You may not like it as it is or you may be quite pleased with yourself.

I have hit you from a good many angles. I'd like you to ask me a lot of questions. Give me a little rest, and I'll try my best to answer your questions. Thank you.

CHAIRMAN: In just a very few moments, the speaker will be back to answer the questions that you have ready. So, I'm going to ask the ushers to get ready back there, and in just a moment they will come forward and pick up the questions that you have written out.

---

HOW COULD TECHNOCRACY TAKE OVER WITHOUT OVERTHROW OF THE GOVERNMENT?

Technocracy is a research-educational organization, non-sectarian, non-profit, non-political. It doesn't propose to take over anything. We have no assumption of power theory. It's up to you people to change your own government to suit your needs and requirements. Understand that. Technocracy is not going to take over anything.

WHY DO TECHNOCRATS, AS MEMBERS OF A RESEARCH-EDUCATIONAL ORGANIZATION, WEAR UNIFORMS, PATCHES, AND SO FORTH, AND GO IN FOR SALUTING?

That's very simple. Anyone will tell you that the retention of the human animal is proportional to the repetition. The more you see it, the more you retain it. Look at yourselves when you get home tonight in the mirror. Look at the people you see on the street. When they come out of a church, about 15 minutes after it you can't tell the difference between a Christian and a Democrat. Now those who are representing the organization, we insist that they symbolize the ideas and the principles that they stand for. If they haven't got guts enough to do that, they're no damn good to us or to you either. What do you want -- a lot of Hollywood glamour girls? This color -- we adopted it years ago -- because south of the Mason-Dixon Line, it's grey enough so everybody remembers it. North of the Mason-Dixon Line, it's blue enough so that nobody knows what it is. We're proud of it. You can cross any boundary line on this continent. We're stretched out from coast-to-coast in Canada. We have units in Canada farther north than Fairbanks, Alaska. Brother, that's an achievement -- with no angels, no endowments, and no subsidies.

Our vehicles are grey, our planes are grey, our boats are grey. The United States Navy copied word for word, paragraph for

paragraph, and comma for comma, our specifications in its wording. This is the lowest visibility color. Remember it in your navy release on their grey uniforms. The only trouble with the navy was it didn't make a cloth as good as this.

Now, it's not a military organization. What is it you're frightened of -- regimentation? Look how naive you are. If you had 10,000 babies in here tonight with diapers, they'd all have a uniform on, wouldn't they?

Men and women in this organization are proud to wear it, proud to drive a car. They don't have to be intelligent to beat you. All they have to do is drive an official painted car, and they can be deaf and dumb and you're curious. If you see two, you're perturbed -- maybe. If you see fifty, you're intrigued. If you see a thousand, brother, you join it!

WHAT IS THE FUNDAMENTAL DIFFERENCE BETWEEN A PLANNED SOCIAL ECONOMY AND THE SYSTEM YOU ADVOCATE?

Well, we had a planned social economy under Roosevelt. Now, of course, we're proceeding from the organized, planned economy to designed anarchy under Truman. What do you mean by planned economy? There never was one in this country. You can't have a blueprint for national housing. You've all got to build your own little rathole. Oh, you've all got modern, soundproof, air-conditioned houses? You live in them, do you? You can afford them, can you? Not unless you're running a racket or own a bank. There's quite a difference. Under Technocracy, for the first time in the social history of man, the contract of citizenship in this country would guarantee your economic security so long as you remain a citizen. You have no guarantee today of your economic security whatsoever. You do have the freedom to work, the freedom to pursue it, but you have no guarantee you're going to get anything. Why, you even have to buy an insurance policy so you're worth more dead than you are alive!

Under a Technate, there would be no insurance policies, because every citizen under his contract of citizenship would be guaranteed against disease, accident, old age, or disability, without exception to race, creed, kind, or color. And only citizens could live and work in this country -- understand that. Visitors from foreign countries would be the guests of this

continent, but no one would be permitted to live and work here except citizens. They must be citizens.

HOW LONG DO YOU THINK THIS PRESENT SYSTEM CAN FUNCTION?

Whoever is asking that is looking for business information when to sell short.

WOULD A TECHNATE BE A DICTATORSHIP OF ENGINEERS?

You just love to be browbeaten, don't you? Do you think with all the installed horsepower we have on this continent that any individual or group of individuals can dictate the physical operation of that equipment? In other words, you change the laws of mechanics, of physics, of chemistry, at will? My heavens, wake up. It's a degradation of energy on this continent into use forms and services, and it's those physical laws which dictate -- not the individual. Technocracy is proposing a production and distribution of abundance to everyone on four hours a day, four days a week, for twenty years of service. See if you can match that under your Democrats or Republicans.

ARE YOU CONNECTED OR ASSOCIATED WITH COMMUNISM?

In Russia, the only so-called example of a government supposedly operating under Communist principles, they have state banks, savings accounts, bank deposits. The state corporations have stock. The stock is deposited in the state bank. They have bonds like you buy here -- government bonds. In other words, it's a Price System in Russia exactly as it is here with one difference: here it is privately owned and there it is state owned. The Russians have collective farms. The collective farms average 2,500 acres each, and each worker on a collective farm has a little plot of ground, a little house, a little shed. He also, besides working as an employee of the state collective farm, raises a few pigs and chickens and vegetables and sells those as a private trader either to the collective or in the outside market. Now, 2,500 acres with our technological equipment, that's all right for Communist Russia, but for heaven's sakes, let's get a technological design. Technocracy's agrotechnological units are 25 miles by 25 miles -- 400,000 acres in a unit. What the hell have we got to imitate Russia for?

Oh, we're not deprecating the Russians. Communism is sufficiently radical and revolutionary for the Old World. They still have alternatives in Europe. There is no alternative on this continent. Either you have a technological organization and a redesign of all production and distribution of social functioning on this continent or you have chaos. We of Technocracy consider Communism so far to the right that it's bourgeois.

If you're going to have social change on this continent, don't imitate anyplace else. Let's develop our own. We don't have to borrow from anyplace on the globe. We've got the ability here. We've got the technological knowledge. We have the technological equipment. The only thing we lack is the will to accomplish it. So, let's develop a strategy that is as unidirectional for this country and this continent as the Russian strategy is for Russia.

HOW DO YOU THINK TECHNOCRACY CAN BE MADE EFFECTIVE WHEN  
FASCISTS AND COMMUNISTS ARE WORKING FOR CONTROL?

Well, the Communists aren't fighting for control in this country because there isn't enough of them. But Fascists, yes. The public of United States thinks it can be apathetic and take no position. We're trying to get you to see that you'll have to organize yourselves. An organization of a labor union isn't enough. And we wouldn't insult you by asking you to organize to put somebody in political office under this system. You may insult yourself, but we won't insult you that much.

ARE NEGROES AND JAPANESE-AMERICANS ALLOWED TO JOIN  
TECHNOCRACY?

Any citizen of United States is eligible for membership in Technocracy except those elected to political office. Fair enough?

WHAT IS TECHNOCRACY'S FOREIGN POLICY?

Well, I have to be humorous right here, ladies and gentlemen. I think the most efficacious thing we could do at the present moment is can the businessmen of United States and export them to the foreign cannibal market. They'd poison the cannibals and we'd be rid of the businessmen. Kind of tough on the

cannibals.

It's very simple. There are only two contiguous continentalisms. The U.S.S.R. is a contiguous continentalism by accident. This continent, the continent of North America, the Technate, will have to become a contiguous continentalism by intention and design. The only way you can compete with the one contiguous continentalism is to have an equal to or a greater than contiguous continentalism. Russia, the U.S.S.R., is 8,200,000 square miles. The proposed Technate of North America is 10,300,000 square miles of land area -- 2,000,000 greater.

Now, all this talk of war, no matter what one may think of the Russians -- I don't speak Russian -- I don't know them. I'm only speaking from the data that geologically from the standpoint of land area, climate, and resources, this continent and the U.S.S.R. dominate the resource position of the globe; and if Russia, the U.S.S.R., and this continent were a defensive and offensive alliance for the preservation of peace, all the rest of the world couldn't make war if they wanted to.

Under a Technate, we would have no interest in sending our troops or our warships to finagle some foreign territory for the benefit of a bunch of American chisellers. We would make this continent the finest place in the world to live, and the rest of the world could learn from our example here. We would export methods and specifications of continental operation that would be worth something to the world instead of the dollar diplomacy and the dollar goods that we're trying to shove down the throats of the Chinese, the Romanian, the Italians, and the French or anybody else.

HOW DO YOU PROPOSE TO BRING ABOUT THE CHANGE FROM THE PRESENT SYSTEM WITHOUT VOTING OUT THE OLD SYSTEM?

That's up to you. You can vote it out, you can add a 22nd Amendment to the Constitution, you can have it nice and peaceful, provided it's done as an organized, disciplined, sane proposition; but if you wait until the posterior gets kicked back of your ears, you won't have time and you'll have mob violence, and it won't be nice. We of Technocracy don't propose to do it. We're merely pointing out that you as the public have to do it. We're not up here posing as a great leader condescending to

impart information. We're not intellectual liberals, you know, who spend all of their time acquiring the erudition of the higher institutions of learning in order to make up their minds to decide to decide not to decide. So, the job is yours. It's your choice. It's the choice of all the little people of this continent. You have a choice of becoming big people for the first time in history.

I AM BUYING A HOUSE ON THE GI BILL. WHAT ARE MY CHANCES OF PAYING FOR IT OR WILL I LIKELY LOSE IT?

Depends on how long you hold your job, unless you married a girl that can support you. Of course, the question is today -- even if it is sanctified and legalized -- whether you're really married on less than \$6,000 a year. In New York, I'd raise the ante. If it's less than \$4,000 a year, you're really living in sin, because it's an economic state you can't maintain. Of course, when both the husband and wife work, that's being very democratic, isn't it? You both help to bring in the income. In that case, if you both lose your jobs, it's a hell of a mess, isn't it? So, if this GI who asked the question, if he loses his job, does he expect the bank that holds the mortgage to give him the house free under this system? The government didn't guarantee him a house, did it? It only said he had the right to buy one. You got the right, brother. Just hang onto your rights.

HOW ARE WE ASSURED OF A TECHNATE AND NOT A DICTATORSHIP IF WE SHOULD HAVE TOTAL CONSCRIPTION?

Dictatorship in a technological day and age -- see, it's still decision by opinion, whether it's the opinion of one or a hundred million. What do you do? You just count noses. In the case of the dictatorship, it's one nose. In the case of 140 million, it's more noses. Both are stupid. If you change the economic system to where no individual can acquire economic power, where no individual is permitted the private ownership of public property but every individual is guaranteed the private ownership of private property, that's quite a little difference. Most people wouldn't like that, though, because you wouldn't be able to control the production of wheat or cotton or coal or oil or anything else. That would be public property. In other words, you could raise roses if you enjoyed roses, your own books in your home, etc., but you couldn't control the economic processes

of this continent. If there is no private ownership and there is no political representation but there is a governance of function, you can't have dictatorship, because for the first time in history, those who would originate legislation must also execute it. Congress and the Senate never did that in history. They only legislate, and then let the poor sap out here try to operate.

DO WE HAVE ANY REASON TO FEAR RUSSIA?

That's some more propaganda that the Russians are going to come over here. Why should they? They're not as dumb as we are. We're proposing to go over there. Do you think the Russians want to take Italy? Are any of you stupid enough to think that? What's Italy got that anybody would want to take it? No, we're the ones that have got all the deficit areas. The Russians in Korea have the largest square mileage. We have the smallest. The Russians have 192 Korean population per square mile; we have 514. Aren't we wonderful?

Remember in the last days of war in Europe when the Flemsburg Radio was broadcasting every minute of the day, telling the retreating Germans to continue to fight the Russians but retire and surrender to the British and Americans? They did. The Russians said they're all yours, brother, you have them. We've got them today. Who's dumb -- the Russians? Huh-uh. Homo Sapiensus Americansus, mostly SAP.

Come on. Do you think the Russians want to take China? We'll tell you how much they want to take. They don't want a line running beyond, say, twice gun range of their 240-mm. or 300-mm. self-loading gun south of Pushan, Pushin, Keiping, and Tatung. Do you know your geography? You don't. That line runs just north of Peking. The Russians wouldn't take the rest of China as a gift, and if we had any sense, we wouldn't either. Now what lies along that line? One place I mentioned is near Mukta. The other is westward in Yeho. The other is still farther west, and Tatung is the most extreme west. Along that line lies the great coal deposits; south of that line, China has no coal. That line runs just north of Peking. Would they take the rest of China? No, they'll give it to us so we can send missionaries out to help out our business boys.

Right now we have Japan. Japan without the Kuriles, Southern Sakhalin, Korea, Manchuria, Inner Mongolia, and North China hasn't the resources. Japan has two high-cost coal deposits. It has more than sufficient copper. It has excellent pine forestation, fish, seed pearls, camphor, and a highly developed hydroelectric power. Ninety-nine percent of all the hydroelectric is developed in Japan. She has only one percent left to develop. Japan's population is increasing at one million net a year. Who's dumb?

India's population is increasing at 50 million every 10 years or 5 times as much. Down in Puerto Rico -- and the United States, remember, they're citizens -- the Puerto Ricans have a birth rate of 43 per 1,000, 12 points higher than Japan. When we took Puerto Rico from the Spanish, they had slightly less than a million. Now they have over two million. We'd better wake up.

Here we are trying to support the deficit areas of the globe. Do you think we have the resources to underwrite American profitable business abroad by shipping our goods and shipping them sufficient money to buy it? Do you? We even haven't got the resources to carry it out. The Truman Policy is now being modified by the Marshall Policy, and the Marshall Policy will have the same failures as the Truman one. Realize what we're up against.

CAN THE AMERICAN POLITICAL STRUCTURE SURVIVE THE NEXT MAJOR DEPRESSION?

Well, what do you think after this? Do you think we have any statesmanship? What do we do when we advertise a political candidate? Take Willkie or Dewey; we show photographs of them in LIFE -- pages. They'd be out kissing the baby, you know, talking to the railroad worker, and then he finally winds up on the farm patting the horse or sitting on the stoop with the neighbors next door. Well, what's the propaganda about? It's to make the political candidate look exactly like the man that lives next door to you. Well, you know the guy next door. You know him. The sap isn't any better than you are, and that's who you want to run the country? Isn't it magnifique? Isn't that wonderful? You put an escrow Indian or a lawyer or a mining promoter like Herbert Hoover -- not an engineer, a mining promoter. He never was an engineer but you elect him. Shades of Herbert Hoover, the Keiping

Coal; same Keiping Coal today the United States Marines have just evacuated. You better read up on it. It's very interesting.

WHAT CAN I DO TO BETTER THE CONDITIONS IN AMERICA?

That all depends on how long you think this system is going to last. If you've got sufficient capital, dig in; dig a hole and pull the hole in after you. If you haven't, you better get organized.

I'd like to ask all of you a question. Those of you who realize that we have to do something in this country, not as individuals by themselves, but only as individuals collectively organized. How many of you are willing to give your time and effort above that of making a living in doing something for this country as an organized body? How many of you have got the initiative? Come on, let me have your hands, have a showdown here of who's going to do what. Now, if you're really interested and really take some action -- now we don't want you if you're going to backslide and be a Republican or a Democrat. If you're that dumb, for heaven's sakes, get the hell out. Those of you who put up your hands, if you really meant what you said, well, come on up here. There's no politics in Technocracy. Nobody is making any money out of it. You've seen a Grey Fleet out here roll up from Los Angeles. They're only part of what's in Los Angeles. The cars are owned individually; they're the members' own cars. They paid their own money to drive the cars. But if this has surprised you here, I would suggest that when the next time it rolls through here, it will be 50 times this size. I want to invite all of those who are interested in helping to organize a new America to come up here and put their efforts in this organization. If you put up your hand and meant it, come on, move up and let's start it. Thank you.

MEMBERSHIP MEETING

GAP IN TAPE

.... one of the first at the time of -- the question of the Treaty of Brest-Litovsk, you see, was up for discussion, and Trotsky, of course, was for urging world revolution. There was an American spoke on that platform -- John Reed -- and he made a very emotional and enthusiastic speech. There was, of course, steady snowfall -- snow was piling up -- and as he ended his speech he was going toward the wings. Finally, right at the wings, he throws up his hands -- he's going to organize the workers of the world to fight the Germans. Lenin was over there at one side, and he said, "Tovarisch, you've forgotten your overshoes." So, I have them on.

I've been bothered with a virus infection of the sinus that just burns, that's all, if nothing else, I've been fighting it. You have noticed it last night. Probably by the time I got back to Detroit, I'll either be worse or better.

The thing I'm trying to get over to all of you is that the present change is a change in the direction of an American Fascism. (Let's have that clearly understood. Now you analyze all the factors and what? You get the same symptoms showing up that you had in Europe. You have what? The widespread attack on anything that is an idea that differs from the traditional, conventional, any expression of criticism of things as they are is right away labeled what?

Now, you see Technocracy happens to be in a unique position. I've tried to drill it into you down the years. We're an American organization. We've never borrowed anything from abroad. Our ideology is purely the creation here in this country. We didn't borrow any ideological components from anyplace else. Our intellectual forefather, if you want to use that term, is Willard Gibbs, the great thermodynamicist.

We never had any affiliation or contacts with any of the elements that are behind the eight ball today. Back in the early thirties, we had requests from various organizations like the Windrow out in Kansas, the Duetschbund, the White Camellias, and

HOWARD SCOTT  
MEMBERSHIP MEETING  
CLEVELAND, OH

1950

the Silver Shirts -- you can name a lot of them -- for permission to reprint and use our literature. We wrote them all letters denying them that privilege on the basis that we were opposed to their concepts and their methods. When they were apprehended in 1942 and 1943, naturally the FBI found our letter paper in their files, preceding them, of course, by some 6-7-8 years. They were very curious why, for instance, we brought charges against a graduate of Harvard, a PhD and a prominent attorney, in 1935. He was dismissed from this organization. Of course, he's serving 30 years for sedition, but we dismissed him in 1935. They caught up to him in 1942. There are a number of others. Naturally, Washington was quite curious as to why we made the ruling back in '32, '33, '34, and '35. There's our signed correspondence to prove it, which they picked up when they seized the records of these organizations. We're not on any subversive list, and to get us on one, you have to have a trial. Do you realize that? A court trial. You can't have a ruling. It would have to go to the United States Supreme Court, I would love it. A lot of other people wouldn't.

So here is a picture of our background. Remember we started this battle back In World War I. I was one of a group who was called upon to design plants and equipment for the war industries of World War I. My rating was a war-necessary technologist. I was exempt because of that rating. We were asked to design plants from sulphuric acid plants, cordite plants, almost every kind of plant, but there were a lot of things that stuck in our crop.

We were asked to produce 3 million saddles and 3 million bridles, when there were only 22,000 horses in the armed forces of United States. Well, we naturally were curious, and we called for a recheck -- wasn't there something wrong? Mind you, this was not for foreign orders. This was for consumption within the United States. And the astounding reply came back that we better stick to our own business and remember that saddles deteriorated faster in storage than they did on a horse's back.

Yes, in one plant we built 1,550 one-ton electric furnaces -- not 50 -- 1,550 one-ton electric furnaces. Well, material in World War I -- they only got a glimpse of the chiseling techniques which they have, let's say, perfected in World War II. We were in on the ground floor. There were hundreds of thousands and millions of arms parts, rifles, machine guns, 75-mm. Well,

HOWARD SCOTT  
MEMBERSHIP MEETING  
CLEVELAND, OH

1950

where were they?

When our forces went abroad, did we have the Springfield rifle? A good rifle at that time. We couldn't equip our forces with them. We had to buy the Enfields back from the British that we'd made over here and sold to the British. The 75s, of which the country was littered, part of the breach blocks were here, here, and here; the barrels were here, here, and here all over. The carriages were in a half dozen other places. They just never got together. So we bought the 75s from the French Government. You could go on down the list -- thousands, tens of thousands, of items in which the same thing happened.

Colonel Buxton Going was in charge of the entire ordnance and made a general. He had been a prominent engineer, and, in fact, he was Editor-in-Chief of THE ENGINEERING RECORD for some years prior to that. He threw up the job in utter disgust. He had it all organized. He had competent men in every division office, and when the financial boys came in, they dismissed every man, rearranged every office and put in whom? Anybody that knew anything about the technology of the production of arms? Oh, no, if he did, fire him, get him out of there; but if he had a financial rating, cush, brother, how much do you want?

Yes, I had men. Most of the men that were working under me were years older than I was. Why, the Public Service Commissioner of the Commonwealth of Massachusetts was moved under me. We had one big plant where you had the operating staff -- remember, the plant was not yet built, but the operating staff, especially the operating police, and higher officials were already there drawing their salaries.

Well, who was appointed general superintendent of one of the greatest plants of its kind? Why, he's Park Commissioner of New York. Yes. And who was Chief-of-Police of the operating police, understand? Well, he was a sergeant. He had been on the Aqueduct Police in the New York Aqueduct, New York Water Works. He had to get out of the State of New York because of the slush fund under Piroy Mitchell. You remember the scandal? There was a warrant out for him, but he was Chief-of-Police of the operating police.

It was rich. Now this occurred what -- in one place in United States? Oh, no. It occurred in various states like that

HOWARD SCOTT  
MEMBERSHIP MEETING  
CLEVELAND, OH

1950

all over. Well, remember that Wilson was elected to keep us out of the war, wasn't he? Remember that? And he was inaugurated, that is, they used to be inaugurated later, you know. So he took us into the war right after he got inaugurated the second time, didn't he? So when any of our national leaders profess that they're for peace, look out!

Now the great purchasing for the allies was done through Morgan & Company, and Morgan & Company would buy, for instance, in Chicago, all the terrific supplies of foodstuffs: meat, wheat, corn, everything else. And they'd pay for it by issuing Board of Trade Certificates. The Board of Trade Certificates were sent to the seller. The seller, of course, merely took them to his bank. He received currency from the bank, but the Board of Trade Certificate called for payment in gold. Out along the Long Island Railroad of New York, for miles on both sides, the goods were piled up. As bad as it was in Great Britain in World War II, where the joke was if they put six more shiploads in, the island would sink. The highways of Britain were piled, hundreds of miles, in fields alongside.

Well, when those Board of Trade Certificates got up to where they went into the billions, United States had to validate those Board of Trade Certificates. So, if we hadn't gone to war for one reason, we would have gone to war for any one of a thousand other reasons. You had to validate because, once again demonstrating that, regardless of the political party label. Democrats or Republicans, chiseling business dominates the party label.

We went to war in 1917 to validate the Board of Trade Certificates; of course, that wasn't the reason the public was told. We went to war to "make the world safe for Democracy," didn't we? Well, we didn't make it safe for anything, and after Germany was defeated, let's review the process. What happened? We turned around with the Young Plan and the Dawes Plan, didn't we? And we poured money into Germany to revive Germany and Austria-Hungary, and when it got sufficiently revived, we sunk the Weimar Republic and Bruning became Chancellor of Germany. Bruning was head of the Catholic Centrist Party, and Bruning dissolved the Catholic Centrist Party of Germany to make way for Hitler.

Remember this organization kept hollering about the sale of scrap. Do you remember my statement? I believe it's been used by

HOWARD SCOTT  
MEMBERSHIP MEETING  
CLEVELAND, OH

1950

thousands of publications all over the world; "Mrs. America, don't squawk when your son is killed with a Pennsylvania coal car, a Ford rearend, or the 6th Avenue El, because when the bouquets come back, it won't be nice. They will not be Japanese flowers."

We exported our scrap to Japan, to Italy, to Germany, and we gave the same buildup. Why? Because it was good business. Let's get that clear. I was having dinner in an apartment in New York before Pearl Harbor, and I was having a discussion with the owner of that apartment building -- a penthouse apartment -- and his wife said, "Bob, he's correct. Why don't you quit it?" He said, "Chris, you know better than that. You can't quit a million dollars a year." His name was Bob Hague -- no relation to Hague the political boss -- but chief of transportation of the Standard Oil. Now he and Cap Reber, who was chairman of the Board of the Texas Oil -- let's get this clear -- were running oil and high octane gasoline to Italy, Spain, and the Azores, and they were being paid for it in tankers built in Voss & Blum in Germany.

Texas Oil flew -- even after 1939, while the British naval blockade was on -- they flew ships' crews by air to Sweden, put them aboard the completed brand new tankers, and those tankers ran the British Navy blockade to Bayonne, New Jersey. Those boys got a huge bonus for bringing in the brand new German-built tankers. They were supplying the oil. They supplied it in 1936 to Franco, and they built up the oil reserves of Germany and Italy so much so, and it was so bad that in 1941 Cap Reber -- I accidentally came in contact with him and he had had a few drinks, and he said, "What the hell are you going, you damn Technocrat?" I said, "Well, Reber, that's no way to talk. You've had it pretty good." "Well," he says, "if you were smart, you'd do the same thing." "The trouble with you," he said, "you've got ideas." I said, "Well, maybe you're right." But I said, "I wouldn't get tough if I were you." "Oh," he said, "what are you going to do?" "Maybe we'll see."

I went out and telephoned the owner of our biggest newspaper and I said, "Do you want a break? A real one -- only don't send a man over. Come over yourself and bring your top political man with you," He started to argue about it. "How big a break is it?" "Well," I said, "it's front page around the world. Say yes or no; don't wait for it," He came over, and he said, "What is it?" I

HOWARD SCOTT  
MEMBERSHIP MEETING  
CLEVELAND, OH

1950

said, "Hitler's Legationrarch is here in United States living in a Texas Oil house and has two Texas Oil cars with chauffeurs. Do you want it or don't you?" He said, "Yes, let's have it." The lid blew off. Captain Reber, Chairman of the Board of the Texas Oil, lost his job in 48 hours. It was too lousy raw.

Well, what? Did your papers print it? Oh, they only printed a little of it, enough to make a sensational story out of one little angle, that's all. The big thing? No. When we came out with the nice little item that the largest tanker in the world, the French Sheherezade, left Port Arthur, Texas, with so many hundred thousand barrels of high octane gasoline, the State Department said, "That wasn't correct. That's for Spain, that Spain had a permit for truck and bus gasoline." We pointed out that the clearance and the Harbormaster in Port Arthur, Texas -- it was high octane, not truck gasoline; in other words, if you're going to lie, get all the boys to be consistent about it.

Now you had various factors like that building up all over. In Pearl Harbor, we had an intelligence, and the intelligence division was functioning. United States has had a unique genius in the matter of cryptography on codes, and the Japanese codes -- diplomatic, naval, military, maritime, and commercial -- had all been decoded, and the position of Japanese maritime ships, merchant fleet, and naval vessels was located on the map every day where they were. Two weeks before Pearl Harbor, almost three weeks, G2 was ordered to cease and desist the plotting of the position of Japanese ships. Rome, London, Berlin, and Washington all expected the Japanese code message to come through to read: "NORTH WIND RAIN." That would have meant a Japanese attack on Vladivostok and Manchuria. Instead of that, it came through: "EAST WIND RAIN," East being United States.

Now, two days before Pearl Harbor, a Japanese submarine was sunk outside and yet the booms were wide open to the harbor nevertheless. There was nobody on the what do you call the listening devices? [Inaudible reply] Yeah. They weren't manned. The Navy mostly had been given leave, hadn't it? And by accident, one private goes up to one and another man goes up to another one, by accident, not by orders. They were deserted and it was reported. Of course, the Navy took over one portion of the patrol -- the air patrol. The Air Corps took the other. But one comes off duty at 7:00 and doesn't inform the other that there's no

HOWARD SCOTT  
MEMBERSHIP MEETING  
CLEVELAND, OH

1950

patrol out, and there they are, all lined up at Hickam Field with the gas in them and the munitions in the guns and the high octane gasoline tanks were under the concrete of the officers' tennis court. Did it get hit? Right on the button!

Remember we came out and protested the construction of the fortifications in Hawaii under that particular contractor? And what were they using? Japanese cement. We gave the number of bags if you go back and hunt it up. We haven't been arrested for libel. They don't even touch us. They use dirtier methods. You've seen some of them around here four years ago, didn't you?

Now a similar set of conditions is coming up. Japan was defeated. You're equipping Japan -- no Young Plan or Dawes Plan. No, it's a different plan today, isn't it? Italy and Germany the same way. Bear in mind that Eisenhower and the British signed the Italian surrender in Spain before a United States soldier landed in Italy. The boys who were wounded and died in Italy, they didn't know that -- or the ones who lived.

Of course, you come up to a thing like the Rapido. You have the German bunkers on the other side. We don't even lay down an artillery barrage. We order our troops to cross the Rapido without any artillery support at all. No wonder the Texas Division wants to shoot Eisenhower. Well, Mark Clark is notorious for it. Of course, Mark Clark was one of the boys in on the original dirty work. He went ashore from the submarines in North Africa with those millions of dollars in gold to bribe the Darlan crowd. Well, he poured out so much that Darlan wasn't in on it. You see? So Darlan hops over to Africa to cut himself in. Why not? He cut himself in so much, they bumped him off.

Now the same kind of a fabric is being woven today. What are you doing? Anybody in your schools or your labor unions or anyplace else -- the few Reds there are in United States are insignificant -- but they're doing the same fascist technique as they did in Europe. What was the game? To kill off anybody with initiative, anybody with an idea, anybody you could classify as progressive or liberal or semi-intelligent.

Remember they did it in Europe for several centuries under the term, "The Inquisition." Didn't matter whether you were or you were not. If you were charged under the Inquisition, it was

HOWARD SCOTT

CLEVELAND, OH

1950

sufficient. You fought a Hundred Years' War in Europe. You fought a Thirty Years' War as the result of the religious schismatic conflict of one trying to dominate the other. And up until the Treaty of Westphalia .... TAPE ENDED HERE.

TELECON -- 1951  
HOWARD SCOTT  
R.D. 12349

GREETINGS, CHIEF. This is Donald Bruce speaking.

Hello, Donald.

WE HAVE A VERY GOOD REPRESENTATION FROM WASHINGTON AND B.C.  
POINTS HERE TONIGHT.

Well, that's fine.

WE'RE WONDERING HOW THINGS ARE WITH YOU PERSONALLY, CHIEF.

Well, I wish to transmit my felicitations and greetings to the representatives attending the British Columbian and Washington Area Conference and especially to 12349 -- members and officers, their hosts on this occasion. Personally, my health is excellent. My weight is as usual -- 215, and I do not believe that my height has altered appreciably.

WELL, THAT'S FINE. WE'D JUST LIKE TO ASK YOU A FEW QUESTIONS, CHIEF, IF YOU DON'T MIND.

Go right ahead.

HOW DO YOU EVALUATE THE PRESENT ECONOMIC SITUATION ON THIS CONTINENT, PARTICULARLY WITH RESPECT TO PRODUCTION CAPACITIES, INVENTORY, EMPLOYMENT, AND PURCHASING POWER OF THE PEOPLE?

Well, to sum it up quite briefly: United States and Canada are not as yet war economies. They are armament economies. And due to the fact that the deficiency in national purchasing power in United States in 1950 was approximately 25 percent of the gross national product, it will be interesting to note that our war budget is just \$1 billion over that 25 percent, being that our gross national product was \$280 billion approximately last year -- estimated. Now, naturally, inflation is going ahead without any real brakes being put on. There will be more of it. That, of course, is heading into a more serious situation.

Our national inventories are in excess of \$64 billion at the present moment. So-called employment is at an all-time high. For

instance, capacity of the automotive industry ran for a week or so at a rate of 10 million passenger cars per annum; and last year, of course, it produced approximately 6.3 million passenger cars and yet only scrapped 2.3 million, or a scrap of only 5 and a fraction percent of those cars in use. It is quite obvious to any student that as our capacity increases, the disparity between consumer purchasing power and actual production -- if the production is maintained -- will continue.

The interesting part about all this is that scarcity is being enforced in consumer goods by the instrumentality of armament production. Am I making that clear?

YES. WHAT DO YOU THINK OF THE RECENT TRENDS ABROAD, CHIEF?

The trends abroad are very interesting. It is quite obvious from reports that the Germans are not interested, the Western Germans, in becoming cannon fodder in a new war. The same appears also true of Britain, France, and probably Norway and Holland. The Italians, of course, do not wish to fight. They wish to supply materials. I believe that there is something similar in the Canadian situation, is there not?

YES.

Of course, the most interesting thing at the moment is the impasse that is not being very much discussed; namely, the nationalization of oil in Iran. Iraq, of course, is not yet signed up for any long term, while the Saudi Arabia -- Aramco has forced through a 50 percent of the net profits and an increase in the royalties and a percentage of the reserve. So the American and foreign oil companies are really going to manage the properties, let us say, for the Arab nationalists. These are very important things, because United States is no longer a net exporter of oil; it is an importer of oil, and Western Europe could not fight a war with the oil of Iran excluded from Western European consumption, because a Mustang or Thunderbolt fighter in World War II that consumed 60 gallons of .... [CONNECTION INTERRUPTED]

I'M AWFULLY SORRY, CHIEF. WE GOT CUT OFF AND YOU WERE JUST TALKING ABOUT THE MUSTANG?

That was the last?

YES, THAT'S THE LAST WE GOT HERE.

Well, I was merely pointing out that the Mustang fighter in World War II consumed between 50 and 60 gallons of fuel an hour, while the same jet fighter today of comparable size consumes 260 gallons per hour; therefore, the fuel requirements are greatly amplified.

Another thing about the trends in Europe is that Europe today -- Western Europe -- her total production is in excess of 30 percent greater than prewar, while her resource consumption -- due to increased capacity -- is 50 percent greater than prewar. So, any further increase in resource consuming capacity necessitated by additional equipment for rearmament will aggravate an already aggravated situation, causing further pressure -- inflationary pressures -- and allocations in world markets if the resources can be found. I think that answers that one.

YES. WHAT ARE THE PROBABILITIES FOR WAR AGAINST RUSSIA?

For war against Russia? Well, I would say they're extremely doubtful unless it can be managed from countries outside of Russia. Russia doesn't need a war. It hasn't the inflationary pressures that exist here, and the dirtiest thing the Russians could do to us, of course, hereon this continent, is to leave us strictly alone. Of course, the propaganda is that the Russians would bomb the Greater New York Area with atom bombs, but it's doubtful that even the Russians are that stupid or crazy, because the greater metropolitan area of New York has a population of around 12 to 14 million, and there's a greater density of social and economic parasites in that area than there is in any area on earth. Therefore, it would be more advantageous to the Russians to allow the parasites to boll weevil it than to drop a bomb on the metropolitan area.

SO IF WE DON'T GET A WAR, WE'LL GET A DEPRESSION. WILL WE?

Well, that is the great fear. The hope of business today is that we get some kind of a war -- any kind of a war; in fact, a limited war of unlimited duration is what they're seeking. Now

TELECON WITH 12349  
HOWARD SCOTT

1951

some years ago, remember that I wrote an editorial advising a declaration of war against the greatest area on earth: the Pacific Ocean? I think that should be reread today.

YES. HOW ARE CONDITIONS IN THE ORGANIZATION?

I think that they're the most promising in years. The organization is beginning to realize that our long-time strategy and knowledge hasn't missed any bets. I'm delighted with the way things are going.

AND WHAT PROGRESS IS BEING MADE WITH THE EXPANSION PROGRAM?

Well, we lost out on one purchase offer -- not through our fault, but to factors beyond our control. We made an offer, but there were too many parties involved and a foreign owner. Then the real estate boom, of course, is quite crazy down here at the present time. So we have several other things in mind if this does not mature, and we have sufficient cash to meet most of it. There will be a report made sometime later on the financial report on that fund.

WHAT SHOULD BE OUR IMMEDIATE OBJECTIVE?

I think the immediate objective of the organization should be to enlarge our scope, bring in more members and start our Farads all over again. After all, you ought to remember that, because I think you were practically one at one time, weren't you?

YES, I SURE WAS.

Well, I wish I was out there to join you in this conference, but ....

WE HOPE YOU CAN MAKE IT SOME TIME NOT TOO FAR DISTANT.

I'm hoping to be able to do it this year.

GOOD.

And give my regards to everyone at the conference.

TELECON WITH 12349  
HOWARD SCOTT

1951

WOULD IT BE POSSIBLE TO SUPPLY THIS TALK TO OTHER SECTIONS?

That will be quite all right; only send us a copy if you can so we can play it back here.

FINE. WELL, THIS HAS BEEN A REAL BOOST TO ALL THE ASSEMBLED MEMBERS, CHIEF, AND WE WILL BE STIMULATED TO WORK EVEN HARDER.

Salute to everyone.

THANK YOU VERY MUCH.

Thank you, Donald.

MEMBERSHIP MEETING  
WITH  
HOWARD SCOTT  
8141-15 -- CLEVELAND  
1951

This organization of ours has a very interesting background -- whether it's known in part or in whole to any or all of you is a question. We're unique in the history of organizations in the world. We happen to be the only organization in United States and in Canada that covers this continent that is not a political party and is not a charitable, welfare organization, a political or a business racket. We haven't a single angel or endowment from large and special interests. What we have done, we have done from the nickels, dimes, quarters, and a few dollars -- fives here and there -- from our members.

The farthest north group in Technocracy today is Kotzebue, Alaska. In case you don't know where Kotzebue is, when you go home, look it up on the map. You'll find that it's north of Nome, practically on the Arctic Ocean. They're up there engaged in, let's say, confidential work for the United States Government. That's all I can tell you.

We have members in Hawaii, Sidney. Nova Scotia is reporting a fair growth. You can't expect those codfish down there to suddenly wake up, you know. Bluenoses they call them in that part of the world. And we have a few members here and there down in Venezuela and Panama.

Before the war, in 1932, '33, and '34, there was the Deutsche Technocratische Gesellschaft in Germany with some of the outstanding .... a very interesting group of Dutch scientists and engineers. They lasted, of course, until 1940 when the German Fascist troops invaded Holland.

There was a chap who ran as alderman in the City of Brussels and later for the Champ de Depute of Belgium, and according to TIME MAGAZINE, he scored more votes -- polled more votes -- than the Rexist Fascist Degrelle, which is very interesting.

In France, there is a Movement de l'Abondance, which today has two newspapers, radio programs. We don't care what they call it off this continent. They can call it Technocracy or an abundance movement, or a Come-to-Jesus movement if they want.

That's their privileges because they're not connected with us as an organization; but if they wish to use Technocracy as a body of thought and its literature, they're perfectly privileged to do so.

Of course, in Italy, Mussolini -- just before he, let's say, corroborated the Rooseveltian statement of the "stab in the back", arrested 26 scientists and engineers for advocating Technocrazia Italia, and they were sentenced to ten years confino. They were liberated by the Allied troops when the Allied troops liberated Lipari. They were returned to North Africa. Unfortunately, they were not soldiers and prisoners of war. They were released political prisoners, and, therefore, as trained scientists and engineers, they had no standing in the war.

The Norwegian Teshnisha Octe Bolaga, that, too, was extinguished by German Fascism, but there are signs of life.

Way out in Indonesia, the interview with the American press of the Premier of the Indonesian Republic, he stated the other day that what the Indonesians wanted -- when some smart American newspaperman asked him if the Indonesians weren't slightly indolent, that they were charged by the Dutch with being lazy -- he said, "No, they're not lazy. They merely don't see any sense in work. What we want out here is what you call Technocracy in United States." After all, it seems that the Indonesians weren't so dumb.

We have sent literature out there. We're sending literature to various places, not that we want any affiliation. If they want to start something anyplace in the world, they're quite welcome to start it. They can go it on their own. Here, as you know, we have no affiliation with anyone, and we have no political axe to grind.

As we stated in our first issue of TECHNOCRACY magazine, we would never appeal to the population of United States, this country or this continent to indulge in either bullets or ballots -- do you remember? Well, we've gone a long way since then, and a lot of you who have been ridiculed by your friends and associates, remember they said, "Oh, no, it won't occur in your lifetime." Well, whose lifetime?

There was a time in 1920 when you could have said that if you didn't expect to live another forty years, but we're in the amazing situation today: something that has never happened before in history and never will happen again. One thing about a balloon, you know, the more pressure you put in and the more gas you pump in -- there is a limit, though -- and there is a limit to what we can do, the powers that be, with this economy of ours.

We have installed more machinery, more equipment, and more technology, and we have increased our productive capacity, but kindly bear this in mind -- there are other countries whose percentage increase in their productive capacity in the last ten years have far exceeded the increase of United States. They are moving up percentage-wise. True, their total volume is not as great as ours, but their acceleration is greater.

Our propaganda -- you've been deluged with it -- all your neighbors and co-workers and associates have been deluged with it. You're suffering, nationally, from the dilemma of being in one of the greatest booms the world has ever known; yet at the same time, the nation is suffering from a national schizophrenia. We're scared to death of tomorrow, and we're scared to death we might find a "red" under the bed. Well, it isn't the actual Communist they're after. It's the same Fascist movement that went on in Europe; namely, to intimidate and submerge the, say, ten million people on the North American Continent who have an idea. The fifty-some-odd thousand Communists, members of the Communist Party, doesn't worry them. They never cut any ice. They never were a party that swung any political power in Congress. They never dominated any city or state in United States. Why, they even did better in Canada. They had one member up there in the Dominion House. Of course, you might say that the Canadians have always been a little more intelligent than we have down here; namely, there are less morons in Canada than there are in United States. The simple reason is there are less population.

I remember back in 1920-21, when Stuart Chase and a number of others that are well known today, thought there was going to be a revolution in these United States; and we objected to such an analysis and a verdict, because the concentration of technological equipment hadn't reached that degree of saturation. There was still sufficient latitude to which the system could manipulate. But today, it's another matter.

In 1929 and the early '30s, you heard the same cry. Now, the Marxian concept of social change is all right under certain conditions; namely, that the proletariat would rise in their wrath and overthrow the nobility and the bourgeoisie and install a dictatorship of the proletariat. The only thing amusing about that was that Lenin himself, while he preached Marxian revolutionary doctrines, committed every Marxian heresy on record, because they never organized the proletariat in Russia. How many were there in 1917? The total number of Bolshevik in January, 1917, in Czarist Russia were less than the number of Technocrats in United States, and to give you a comparison, there were 4,004 students at the Petrograd Conservatory of Music. There weren't 4,004 toolmakers in all Russia. They were good on the arts.

But here's an entirely different situation. You can't get the average American to consider anything until the march of events shoves his posterior slightly out of place. As long as he can have something to eat and he's on as good a basis as his neighbors, they may be a little bit squeezed; but then if his neighbors down the block or in the same church -- if they're squeezed, too, "Well, we'll all do it together. I know-it's kind of difficult, and so on, but ...."

Those of you who are in the steel industry, yes, you're enjoying a boom -- the automobile industry and the refrigerators. Well, there are 37 million passenger cars in United States. Sit down with your pencil and see if you can determine statistically how many more passenger automobiles United States can operate -- not if the people pay for them but if they get them as a free gift. You know what's happening to your traffic in every city in the country, don't you? Can you have 15 million more on the roads? The City of New York and the City of Detroit are calling conferences this year to bar the passenger automobile from those two cities between 8:00 A.M. and 6:30 P.M. Charming, isn't it? The automobile leadership of the world. We've sold them, we've produced them, but we're so damn dumb we don't know how many to operate until it backs up and hits us.

In Europe, they've been forced to put in a ring traffic system years ago. Britain has it a number of places. They're putting in more of it, when you drive your car to the outer ring

and then you take a public conveyance from there on in. Only doctors, nurses, and emergency can operate passenger cars within the city limits during the daylight hours.

So, it won't make the slightest bit of difference whether you have a Cadillac, will it -- a Rolls Royce or even one of those little jitterbugs, you know? Wouldn't make any difference what you have. You'll still have to park them outside. Well, does it solve anything? No, it doesn't. It only temporarily stalls it.

Now, even if we increase installment buying and make it 30 years for you to pay for your automobile, that doesn't help. That merely opens the production wide open faster and you sink quicker. I would like to see them do it. Merely, it would make the end nearer and less painful.

Everyone knows the National Cash Register. That's abroad. That's one of the symbols of United States and Americanism. Well, today the National Cash Register has finally come to the end of the road -- I don't mean the monetary road. They have more money than they ever had; but there's one cash register today for every 32 human beings in United States. That's correct. Now, then, the annual report of the National Cash Register, what does it show? What percentage of their gross business is done in United States? Remember this is the symbol of Americanism, the cash register. Are cash registers the great production here? Oh, no. Sixty-four percent of the National Cash Register's gross is done by foreign owned subsidiaries abroad producing for what? For United States? Oh, no, to make foreigners the same dumb clucks as it did here. Now how much more can you saturate us here with -- cash registers? The answer is practically nothing. And if it hadn't been for their bookkeeping machines and other specialized machines which temporarily keep them stepped up in their production, they would have slid to a standstill some time ago.

The same thing is happening in other lines. General Motors, Ford, and others are now proposing to manufacture crankshafts, timing gears, and engine blocks in their plants abroad and bring them in. Those of you who have a CIO pension agreement in the automotive industry, it's going to be interesting, isn't it? Remember that your pension doesn't come into practice until you've worked there 25 years. Well, the joker in that is, if you've worked there 25 years, you're no damned good for anything

afterwards. I mean, let's look at ourselves. And it isn't payable until when? How old have you got to be? Sixty-five, isn't it? Well, if you have 25 years before that, and you have to wait until 65, what's the use? Life may begin at 40 but it's wound up before that if you're going to wait for your pension.

How many of you bought bonds during the war -- just hold up your hands. I don't care the amount. Just how many. Nice collection of patriotic citizens. Oh, I know, it was shoved down your throat. How much do you think you lose on them? Now, wait a minute -- how much do you think you lose on them in purchasing power? The dollar that you bought them with is not the dollar you'll be paid in; but not over 34 cents, let's put it that way -- about 34 cents of the dollar that you'll be paid in compared to the dollar in purchasing power you paid for it. Wonderful, isn't it? Homo Sapiensus Americensus -- mostly SAP.

The same thing comes up in insurance policies. You can buy \$10,000, \$20,000 or \$50,000 policies, but if it's going to take 15 to 20 years to come due, where is it going to take you? How many people here bought a home ten years ago or nine years ago and you still have it? Well, if your home was built prior to that time, it was fairly substantial in the majority of cases, and you can get 2 to 2-1/2 times financially what you paid for it -- approximately -- isn't that correct? Well, but the joker in that is this: if you paid, say, \$8,000 for it, well, you can get around \$15-\$16,000, but if you take the \$15-\$16,000 out that you would receive for the sale of it -- never mind the capital gains tax, of course, that would deprive you of something, because not having a corporation to do it for you, being an individual it exceeds the 25 percent surplus, doesn't it? So, they would take a little of it away from you there; but if you went out to buy a new structured home for the amount you received for this, you would find that the \$16,000 had shrunk, because the house that it would buy for you wouldn't be anything like the cubic space that you had in the one you sold. You all know this. Now that's the condition that's climbing up all over the country, and because there's been increases in wages and increases in farm prices -- remember, our Congress the other day voted \$2 billion more to the farm subsidy; so, this coming fiscal year, there will be \$6 billion available to hold up the farm prices instead of \$4 billion.

Copper, of course, has gone over 22 cents; steel scrap went to \$48 -- No. 1 the other day -- \$48 a ton, and we're buying back the scrap we dumped in Germany. We're also buying back the scrap we dumped in Japan and China. We let the Chinese cut up our war equipment and now they're selling it back to us. The German is doing the same thing. And yet, by and large, in any city across the country, the average American says, "Well, I'm busy. I'm doing so many hours or I'm doing so much business. Well, maybe it isn't quite as good as last year, but it's still pretty good." Well, is it? Speaking individually, yes, he may be a little more fortunate than somebody else, but collectively, how long is it going to last?

We have approximately 370,000 on the welfare rolls in the City of New York. Now, that's not unemployment compensation -- unemployment compensation is in addition to that. Here's the great City of New York with a million human beings -- remember, we're the most prosperous country in the world -- here's the greatest city in the world. Of course, if you go to Scranton, Pennsylvania, there are 26,000 adult workers that have no work. That's almost 17 percent of their working force in Scranton. And, of course, ex-Postmaster General Walker -- a few more -- they've gotten together with the AFL, the CIO, the mayor, the banks, and the business, and they want labor in Scranton to deduct so much an hour and the banks to put in so much and to start a new industry in Scranton to help out the unfortunate Americans, while we dump millions of billions abroad to help out the unfortunate of the world. We haven't got enough sense and guts to rectify our own unfortunates here at home.

Yes, we sell potatoes for a cent a bag to Germany and they can make money on the bags. Those burlap bags, you know, cost a few cents; so, if you -- yes, almost 11 cents a bag -- so, if you get them for a cent a bag -- the East Germans have a lot of alcohol plants -- so they'll put the potatoes in the alcohol plants, feed the mash to their cattle, and sell the burlap bags back to us for about 7 cents profit. The Russians aren't so dumb.

Now, we're a supposed welfare state, but the question is, whose welfare? Any of us that have what we think is a future to look forward to, what security have you? Well, you're never going to make enough at wages and salaries and small business to accumulate a financial security. There were Technocrats in this

war and there were quite a few of them came through CHQ, highly trained men, \$800 to \$1,000 a month and all food, medical attention, transportation, and officers' clothes. And, of course, their wives were working for a few hundred a month, too. And they said, "Chief, if this only keeps up for a couple of years more, we'll make so much money we'll devote the rest of our lives to Technocracy," And I said, "Nuts." It's stupid; it didn't last. Why? Because the ordinary GI, who was working for \$50 a month, was doing the work they were supervising and getting a thousand a month for. So, the dissension in the Army and Air Corps was so great, they had to send them back home. So, they didn't get the war prosperity long enough to retire for the rest of their lives.

There are still people who think their business or their profession or their job -- they can resolve it by little angles, enough so that they'll have security. Well, what kind of security? You mean security under this system? Well, you have to have a lot to be able to buy it, because I just pointed out to you in the bonds and the insurance company, the money you pay in you might succeed in paying in the policy or you might succeed in buying enough bonds, but the dollars you're paid in won't be the purchasing power of the dollars you paid for them.

We have a controlled upward spiraling inflation, and that is the object of Washington and Wall Street. They don't want a deflation. They're scared to death of it. They would prefer a war -- any kind of a war -- to deflation. The only trouble with a war is that we haven't any allies. The Italians, nationally speaking -- I'm not insulting them -- biologically have forgotten how to fight and the French can't fight, the British won't, and who's going to be our allies. Why, even the noble Germans -- the latest census taken by the United States Intelligence is very interesting. They don't want to publish it. All the young German males of those who served in the armed forces during the late war and those who have come of military age, 18 and over, since, over 80 percent of them don't want to fight in any war, but they wouldn't mind if the Americans fought the Russians. They said they'll look on and see how we do -- we tried it.

No, your French and West German, your British and Norwegians and your Italian, they know that the war was fought there -- the last one; and if there's a next one, it will be fought there and they'll be the first to die, too. So, they're getting kind of

tired of dying first, and they're suggesting to United States that the Americans die there first, then they'll believe us; and after that, they may decide or may not, depending on how we're going.

It's a very interesting setup and I'm going to give you something quite contrary to the usual baloney. The Russians are only 20 miles from Hamburg -- that's all, look at it on the map -- they're only 20 miles from Hamburg, and how far is Hamburg from the sea? Well, it's on the North Sea. It's an ocean port, isn't it? Now, in case of a war in Europe, the Russians wouldn't have to declare war on France, Belgium, or Holland. All they would have to do is move west to the Rhine, Western Austria, and the northern part of Italy -- and let's see what happens. This is a strategy quite contrary to all the baloney that's spilled in LIFE and all the other magazines -- COLLIER'S -- of how the next war would be fought.

As the Vatican, of course, is at war with the Kremlin, well, that's the Vatican's lookout. The Pope, of course, hasn't any divisions, and in Rome today, your Italians are not renting the modern built apartments. "You have them, senior. They are too close ...." I don't know whether you understand me. In the case of a war, they're too close to something. There are new houses and new apartments in Rome going begging. This is not by any Russian propaganda; this is Italian reports. After all, the Italian has enough sense to know, don't be on a hot spot.

So, your Russian troops would only have to take Italy down to Bologna and the Apennines. They would only have to go to the Po. Then what? Well, there would be about 7 million Italians from North Italy would go south, they'd see to that. All the devout, nice Catholics and the aged. Well, naturally they'd shove those out, wouldn't they? They're too old, say, to work or too incapacitated. They're perfectly ruthless; they'd do the same thing in Germany. They'd shove them over into France. Well, then, what kind of France or Italy would you have or Spain? Do you think they could fight? Well, South Italy, you could say, "One-a-meatball." It's about what would happen. You take the only productive district of Italy, the Po Valley, the only agriculture; so, some area of the globe would have to feed South Italy, Portugal, Spain, and France. But France would say, oh, 18 million additional population. There'll be hell to pay there.

So the French -- even the West Germans, the Italians, and the British don't want war. It's only Washington, Wall Street, and a few other places that would like to have a war or the scare of a war in order to continue this pump priming. You don't have to blame the Russians. They've made colossal mistakes. They put their foot in it every other week, but they haven't reached the same stage of being the colossal jackasses we have. Maybe the only reason they haven't is because they haven't as many automobiles and can't travel as fast.

But Europe today -- let's take a look at it, just a short look. France before the war was doing around 6 million tons of steel. American money has poured in there and American equipment. The new Solax Steel plant in Southeast France will do 870,000 metric tons of sheet steel a year with the latest 6,800 feet per minute continuous strip mill. There won't be many Frenchmen work there at 70 miles per hour, will there? The new steel plant in Northern France will be 1.8 million tons, and that, of course, will have the latest open hearths, electric furnaces, strip steel, and hydraulic floor. All of this, of course, is being done by the United Engineering and the Mesta. Mrs. Mesta, of course, in Luxemborg, has secured a new steel plant for Luxemborg of 470,000 tons with the latest Mesta engineering equipment. Wonderful to have a female ambassador with those connections. Of course, you and I and every other American pays for it, but then we're paying for so damned many things, what the hell's the difference?

Well, there's this difference: United States money, Marshall Plan, EGA, and the Army military funds that have been dumped in have completed or have under construction at the present time in Europe, West Europe, of course, oil refineries with a total capacity of 1 million barrels of refining capacity a day. Beautiful!

British steel production is running at 20 million tons, France at over 12 that used to do only 6. West Germany, with the Hermann Goering Geschellshaft, is capable of doing, say, 17 to 18 million tons.

West Europe today has a surplus of steel, ceramics, and coal, boots, and shoes. Your stores in Brussels, Amsterdam,

Paris, Milano, Genoa, Rome, and Frankfurt are loaded. Oh, you can get food in the best restaurants. You can get anything you can pay for, but the average Italian can't pay for it or the average Frenchman, the average German. Oh, this is only for the deserving ones, the ones who have been successful "Amerikan". We've taught 'em how.

Well, we're completing a big steel plant in Britain. The Russians are completing a big one in Poland, another one in Czechoslovakia. Those of you who came from Czechoslovakia or people who came from there may have remembered the giant Skoda Works. The giant Skoda Works employed 14-16,000 under the war pressure of Hitler, is now employing 51,000, and is over three times in acreage greater than it ever was under Hitler. Charming thought, isn't it?

The Manfred Weiss, which is the Skoda Works of Hungary, that, too, has been amplified. There's car plants, car wheel plants, aluminum plants, power plants. Poland today has a bigger crop than Poland ever had in history. Hungary is coming in with one, bigger than it ever had in history. France's wheat crop today will be a big exportable surplus.

The largest car wheel plant in the world, outside of United States, is in Poland, a duplicate of the one in Russia. The Russians are building 100,000 kW turbogenerator units, 3,600 rpm, 1,875 psi, 950 heat, supercharged, hydrogen cooled, and they're all on a single shaft -- the high pressure and the low pressure -- not on two shafts. Well, we have them here, 100,000 kW, but they're on two shafts. That shaft takes a 250-ton forging, ladies and gentlemen.

We've been operating on the theory that we're the only first-grade citizens in the world, that is, the American businessman is; and every other citizen around the world of every other country has been some kind of a second-grade jackass until he's been educated by the American businessman.

Well, 1,500 Czech cars are entering Canada. You've got Czech shoes being laid down in Boston, \$2.34 a pair selling for women's shoes, beautiful shoes selling for \$14 to \$15 dollars retail. Japanese shirts -- 50 cents dumped on your market. But even if they are our allies, they can't do that to us, no, sir. We gave

1951

them the cotton but they can't come in here and ruin American business for themselves to ruin others the way we ruined it.

Now, Japanese coal is not coking coal; so, we have to supply coal from United States in order to make the Japanese coal coking coal in order to make Japanese steel. Is that clear to you?

Well, if you think that's funny, the Volte Redunda, the giant steel plant of Brazil, we have to supply twice the percentage of US coal to make the Southern Brazilian coal cokable; in other words, we supply between 65% and 70% to Brazil and 35% to Japan. How long can we keep it up?

Now we have quite a famous general cut there in Japan -- General "Dugout" MacArthur. Oh, he's got a good record card and he's said all the proper things in his File 201. See, you can get to be colonel, all right; you can get that on your record card. But when you get to go above being colonel, it's on File 201. If you say the wrong thing to Mrs. Whosit at somebody's dinner, that goes down in File 201, and then you don't get the promotion, because you're not a deserving colonel. In other words, you have to be a "yes man" from then on, like Eisenhower. Eisenhower, of course, his record card was all right, but he's a smoothie. We've said this before and we still stick to it. Technocracy defines a "smoothie" as "one who shaves a posterior before he kisses it." Well, he got to be president of Columbia University, didn't he? And they make Stassen president of Pennsylvania. Neither of them ever went in for education. They didn't know anything about pedagogy, but they did the proper things -- that was the payoff.

Now, our press is continually harping on that we should hold onto Japan. Well, it's an untenable position. In order to operate Japan, we'd have to pour in somewhere between 24 and 26 million barrels of petroleum a year outside of the small amount of petroleum which they extract from that very thin strip on the North Shore of Hokkaido Island. We'd have to do about 28-30 million tons of iron ore -- that's assuming 50 percent or better Fe content. They have excellent copper. They have rice, of course. Japanese forestry is excellent. They've got excellent pine growth, but not enough. So, we would have to supply between 5 and 6 million bales of cotton a year and about 2 million tons of cellulose, let alone all the other metals. The question is, can we? We hain't got it no more, honey!

And oil? Yes, we're drilling more wells than we ever drilled. We're drilling them with faster, better machinery than the world has ever known. Given the right formation, we can sink a well 4,000 feet in 24 hours with the new rotary -- for what? Well, 96 percent of your average oil wells, you know, after it hits its peak, declines 96 percent in four years. The average output of wells in United States today is between 11 and 12 barrels per well per day. That's with all wells pumping.

In Venezuela, it's 300 to 400 barrels per well per day. In Arabia, it's 3,000 to 4,000, but they're blowing off practically a billion feet of gas a day, Saudi Arabia and Bahrain. We're after the oil, brother, and we're going to get it! Damn he who cries, "Hold, it is enough." Well, then what?

All of this, of course, has a bearing. Let me ask you what will happen, from your own personal experience, if you had to pay 50 cents a gallon for gas? What percentage of people with cars do you think could afford to run them on 50 cents a gallon? Not many. Especially if you drive 25 to 30 miles each way to work. You're mortgaged enough now.

Our mortgages are over \$60 billion. Our installment buying is at \$19 billion and going up. Automobiles only a little over a year ago were only 28 percent on installment, and now they're well over 60% on their way to 70% on installment buying. Of course, televisions, they're way over 70% already. Well, you have to give away a set of dishes to get them to buy them now.

The automobile industry is operating at 10 million cars a year -- that's the rate. Refrigerators at over 5 million. Well, can you run two years -- 20 million more passenger cars? How many homes are there in United States that have electric wiring? Slightly less than 37 million. What percentage have refrigerators? Well, it's over 70 percent. Beginning to look like those cash registers, isn't it? Saturation isn't so far away. I don't mean it's within the next week or next couple of months -- don't misunderstand me. What we're making is a conditional statement that if these rates continue, what difference does it make whether it's a year, a year-and-a-half, or two years? It doesn't make much difference, does it?

Now, there are some other things that are coming up. We have a surplus of cotton, of course, which the Department of Agriculture buys up along with the surplus of wheat, corn, and other things, and they try to reduce the acreage. Well, they succeed in a little minor way, but the scientists are doing a very peculiar thing on the other side of this. The average production of cotton per acre in United States last year was approximately 270 pounds, but that includes a very high average for a particular acreage. So, that high average, particular acreage running into the millions of bales, was subtracted first. The national average would be considerably lower.

Out in California, your agrobiologists have succeeded in the last couple of years of making it a state law -- it doesn't make any difference what size acreage you have or whether you like it or whether you don't like it -- you are compelled to plant Ocala 442 by law. Otherwise, they can come along and pull it up. Well, what is Ocala 442? It's the biologic development in plant breeding. Its major cross on one side is wild Mexican cotton and a combination on the other side. Well, the average for Ocala 442 is between 670 and 700 pounds to the acre. Its fiber is longer and has a higher tensile strength than even Sea Island. So, Ocala 442 is sold before it's planted, and California is not a party to the agricultural program of United States. It doesn't want any part of it, because Ocala 442 is selling at a premium away and above any cotton.

The State of Texas and the rest of the 47 fought the war -- Texas, Arkansas, Tennessee, Louisiana, Mississippi, and Alabama -- they're all demanding a cotton prototype for their area that's the equivalent of Ocala 442 for California. Well, it can be done, but there's a little peculiarity about it. We would then be able to produce an abundance of cotton, the same amount now that we're buying up, on only 30 percent of the cotton acreage of United States. What do you do with the other 70 percent?

We're not finished with this yet. We could show you pictures of a field of wheat -- nice big, big field of wheat, multiple head, and it averages 144 bushels to the acre, baby. And you don't need top-grade soil to do it. One head of wheat of the multiple -- throw them on the scale and they'll outweigh 8 to 9 ordinary heads of wheat. You don't have to believe this; you just make the test yourself. So, we've got too much wheat land,

haven't we? We've got too much cotton for what's coming up.

We used to plant 7,000 to 8,000 corn plants to the acre. It used to take 120-126 days to bring the corn plant to maturity. Now they're planting 16,000 stalks to the acre, and it matures in 81 days. But it has three full-size cobs on the stalk. Well, sucker, where are you going to be? Because this corn will ripen north of Edmonton, Alberta. Canada is going to get smacked with it, too. Why not?

We've got better machines to handle greater biological marvels. It's going to mean less farmers and less acreage. Well, where are we going to store it all? We have regulation in this country but no controls. You can travel across the countryside today on our roads, and we've seen nice great big round storage -- all looks like aluminum, aluminum colored; but when you get up close to it, it's just ordinary plywood painted with aluminum, sitting on the ground full of corn. My, my, my, won't those European rats have a wonderful time! They'll go through that plywood, you know, like a hot knife through butter. There they are, sitting on the ground, full of thousands of bushels of corn, just the plywood run around in rings like this and painted with aluminum paint. Well, after all, it gets a government loan; what are you kicking about?

Now we're increasing our power capacity -- generating capacity -- both here and in Canada -- never mind about abroad. Of course, France in doing her hydroelectric program calls for 250 percent of her prewar hydroelectric capacity. Switzerland will be over 300 percent. Here we're doing 5 to 6 million kW this year -- maybe a little more. Next year, we have more than 6 million kW scheduled to be installed. What does it all mean? Well, we only need a few million more and you won't even need the atomic energy for industrial development. We'll be right there where Moses put out the light. Even your atomic scientist admits it. You don't have to wait for it.

Of course, all of you run against it in your friends and fellow workers and associates. You've been looked on as well, to say the least, slightly peculiar, haven't you? Well, but you have to realize that Technocracy has no friends collectively speaking in the Price System. They're going to dislike you or have suspicion of you, but let the wrong numbers come up and deflation

starts to set in, and then, of course, they're all going to come and ask you what to do now. That's what they did in the thirties; they'll do it again very shortly.

We can always tell in New York when the bankers and business executives want to come to CHQ and ask about their insurance and their investments. Then that particular stink comes out, because you know there's something coming. They always want to get in a safe spot. They're even willing to ask us.

Now, in the history of this organization, we've had several attempts to sell it out. One was back in 1920 and another was in 1932; and, of course, the other one occurred in 1948. Now, of course, rats are an animal that are not endemic to the North American Continent. They were brought over here from Europe -- that's correct -- there were no rats here when Columbus discovered. And in any organization such as this, you're bound to have people who want to inflate their own ego and who carry a grudge or a chip that are wide open for an inducement from outside people for a little money. It's been proven twice before. After all, Rautenstrauch was offered the head of the Industrial Research, Jones was offered head of the Industrial Planning in Washington, and Leon Henderson was made Price Administrator. Come on, this was all before it broke. We've gone through all of this garbage before.

Where did Atwater and Langan get \$5,000 to pay their attorney -- out of the members of this organization? The hell they did! And their attorney is a graduate of Fordham and Chairman of the Greater New York Committee of the American Liberal Party.

[Clouse, the member who did the wire recording, breaks in at this point with the following: At this point in the original recording, there was a 10-minute blank spot on the wire. If the information deleted here is of enough importance, perhaps the Chief can record it on another wire and we can dub it in in the proper position here. All the information missing seems to be about the CCP.]

.... with rigging the elections, with being dictators, worse than CHQ ever was. What does this sound like? That they altered the minutes? In other words, they're a collection of unmitigated

scoundrels, and they're to pay their dues to whom? To Anderson in Dayton. Come on, let's have a laugh. Well, they bought cloth, they paid fares for a meeting in Chicago. At ordinary train fares, that would run around \$4,000. You get a pencil and start to figure it out and you find they spent a lot of money. Of course, Oscar Floyd, one of the 27, he's thrown out. Harrings of Detroit is thrown out. Who have they got left? Langan, Atwater, ....

So, the others that are thrown out turn over their original correspondence to CHQ. [The Chief whistles, "My Country, 'Tis of Thee."] And the more we get of it, the dirtier it smells. A lot of them -- it was done innocently on their part. They fell for a lot of baloney. You see, they perpetrated the nonsense that CHQ had a million dollars. Well, we only wish we had a small fraction of it. And that we have several bank accounts, and I believe that I was supposed to be living at the Stork Club with several girls. Well, I've always wanted to be a kept man, but .... I've heard about these kept women. I've no objections provided I be well enough kept. We still haven't got the Cadillac car. The same car there -- it's ten years old.

They claimed we had different bank accounts. The organization has never had but one bank account. It has every voucher, every check ever sent, ever received, or ever paid. Kindly bear this in mind. They made this mistake, don't you make it. All entries in the books at CHQ are made by a certified public accountant, every single entry, every check is paid out by him. He happens to be also employed as Comptroller of one of the largest hospitals in the City of New York. Our annual report is compiled by a firm of certified public accountants, of which he is not a member. Two entirely different collections of certified public accountants.

They could not afford to falsify the books or the federal reports or the income reports. One would lose his job and his license as a Comptroller of a hospital; the other would be cancelled out as -- I think they're the fifth largest firm of auditors and accountants.

Well, we knew that if we let them spill all the lies and dirt and get it over with and get down to some constructive work that when they attempted to be constructive, there wouldn't be an

1951

idea in the lot of them. I'm not going to rehash a lot of dirt of what we thought about it, but there were only 70 in the original crowd, the 70 that hatched the conspiracy.

Of course, one of them belongs to the CCF in Canada today -- joined the party, political party. One belongs to the Conservative Party in Canada, and a couple of them have joined the Democrats in United States. We haven't heard of them joining the Republicans yet, but no doubt they will.

Now the motive of that crowd was to make Technocracy a political party and to sabotage the organization. Our membership records were fouled up. It took us practically a year. They had charters, applications, and MAS never processed dumped in the back of files and underneath material. They had MAS without cards and cards without MAS. In other words, they deliberately fouled it up for 18 months and issued fictitious reports to me. What do you call it? In the army, they've got a word for it, and if it was a partisan warfare, I think the membership of this organization would know how to deal with it.

We haven't any ill feeling, but we've had it happen twice before. The interesting thing that twice before at least they were offered decent money for it. They were offered good money to sell out, but this cheap bunch of rats did it for practically nothing. I mean, when you're offered \$25,000 a year, well, an individual .... no one, but half a dozen of them, at least that's something; but these people -- it's despicable.

Of course, out west they're a little tougher. Some of them got on the police blotter, some of this CCP crowd. They better not try it again, because they're already on the record. This time, they don't tell you three times to get out, and you don't break in -- break and entry twice with once already on the blotter agin you.

Instructions were sent out to steal records, to falsify them. They didn't have many, but they had a few scattered here and there in the various Sections. They actually instructed them to steal the property of the organization and to falsify them. Atwater's letters across my desk said one thing and the messages he sent by radio -- ham radio station in New York -- were entirely different. We have the log books of the receiving

stations that received those messages, officially recorded. You have some idea of how dirty it was.

Well, as far as we're concerned, they're washed up and down the drain, but it's taken a while. It's cost us chiefly time. Naturally, they tried to pull all the dirty legal work they could and it didn't get them anywhere. Now we're ready to go on from here. As the western members say, "Well, the ship smells clean now that the rats have gone." So, let's keep it free of rats from now on. It's your job as well as mine, you know, and when somebody starts pulling something that, "Well, don't tell CHQ." After all, CHQ is the chief of your strategy. Remember those people, myself included, it's no sinecure, you know. It's no prize job living on what we live on. Might be able to get by in some little small town but not there. That's why we've asked for the Expansion Fund. By the way, those Expansion receipts were printed -- that's where Norris got the word of the "Expand Technocracy" from. He saw the printed receipt books; so did Atwater four years ago. Interesting, isn't it?

Well, we're trying to get a farm and move out on it. In order to have a training school, be able to pull speakers in -- organizers; brief them, and at least be able to give sufficient space for those who want to come in and work, and there's a good number who do. The CHQ staff, of course, will welcome getting out of New York. We have made an offer on a place. Whether that's accepted, we won't know until next week, but if it is, CHQ in 60 days will be in another location.

I've just given you a few high spots. I don't know whether you're all tired out and hot and drippy, but if you can ask me some questions, for heaven's sakes, don't be backward; say what you think and I'll do my best to answer them.

---

IS IT TRUE ABOUT GREY SUITS?

Not in United States. Canada has them. Tip Top Tailors across Canada make them for male and female. I told you they were more intelligent up there. No, the Cleveland Worsteds has too many orders for United States Government departments. Nobody wants to

make cloth out of 64-70 Merino, 88 to the inch, when they can make it out of 50 and 40 threads to the inch and sell it as ladies dress goods, do they? Or men's lightweight suiting.

COULD YOU TELL US WHAT'S HAPPENED TO THE ....?

Well, of course, it was going out to make prefabricated housing, wasn't it? Shouldn't do that. [REPLY] Shouldn't do that. After all, Tucker started out to do a car, too. Shouldn't do that.

In 1925, some of the Technocrats got some money from a foundation, and they built on top of one of the giant concrete warehouses on the Hudson River. They built a prefabricated house in 1925. All you needed to put it together was a socket wrench and a crane to lift the sections -- no wood, no plaster, no paint, no bricks, no stone, no paper. The floor sections, the wall sections, and the roof sections were all the same -- steel truss, insulated, closed in magnesite. Well, the doors were made by the Dalstrom Metallic Door that also makes the art metal furniture, you know, and we used vinylite -- solid vinylite -- for the first time in doors. Of course, now you get lots of things in vinylite.

The switches were just little flip switches like this, and all the piping was flexible piping. You didn't need any plumber, because you could put the piping together, and the male and female joints were coated just as the old Schraeder tire patch, you know. Just light a match like that -- it soldered itself.

We had an engineer and his wife who had three young boys. So we got them to live there. We provided them with all the edged tools we could think of, and the kids went to work. They were three healthy, husky boys -- hammers and chisels and drills and everything else. They went after the floors and the walls. They had a wonderful time. Funny thing about it is that when they couldn't knock a hole in anything, they quit. Tried it all over the place and it didn't work so well. It was too hard, so they gave up. Lesson on how to educate your children, but you have to have a house to do that with.

That foundation, of course, was connected with the American Radiator and the Standard Sanitary. The upshot was that the

banks, the American Radiator, Standard Sanitary, the unions, everybody complained because you could put an 8-room house up in 24 hours complete with all wiring, all piping, and everything else, and you could take a Chicago pneumatic hammer and half a dozen 7/16 steel plate in the bedroom, put the hammer on top of them and let her run. Take those No. 3 Chicago burners on one meter of surface, light them, open it up, run it 24 hours wide open. The surface would be almost white hot, but there wouldn't be a 10° rise of temperature on the other side. You could take a whole section and drop it in the water tank after you'd weighed it on an accurate balance, leave it there for 72 hours, pull it out and the difference in weight could not be detected on any commercial scale -- completely immersed. Fireproof, waterproof, verminproof, insuranceproof -- you couldn't burn it down. You could take it down and reassemble it a hundred times. It was just as good, and, of course, the wall panels fitted in like this, like the old-fashioned bedstead but a little better fastening. And then you had male and female long tie rods which you wound up. And you have a roof deck on it, a spiral metallic metal staircase, and a garage.

It was so far advanced that it wasn't worth a damn. FORTUNE MAGAZINE tried to photograph it with a telephoto lens from the top of the Chrysler Building, and if you'll look back in one of FORTUNE MAGAZINES, you'll see a little photograph of it on prefabricated housing -- little one like that -- that's all they were able to get, I've slept in the place; so have several other Technocrats. It was torn down and the entire thing was placed in storage in 1929, and there's never been a damn thing done about it since. That's the same reason, do you see? Because if you really build something to last -- what? You can't burn it down. You mean you could take the house down and move it and put it down in Florida or move it up to Alaska and it's still the same house and just as good?

The sound transmission in that house was less than 7 decibels, if any of you know your technical .... Oh, we did a job. The Lustraub didn't even approach that, but it was just enough like the Tucker car to where it was too much.

WHAT ABOUT THE U.S. STEEL ....?

Well, they're enameled steel plates, you know, fabricated

steel panel, and your what corporation -- there are several of them that do the same thing like the White Tower Restaurants. They're made out of it. That's all right as a temporary thing, but then what corrosion proof have you got? To build the entire housing for the people of this continent out of steel, it isn't necessary. As a merchandising proposition, it's a beautiful sales game for the steel industry.

WHAT HAPPENED TO THAT DYNAMAXIMUM HOUSE THAT BUCKY FULLER HAD SOMETHING TO DO WITH?

Bucky Fuller -- we've known him for years, for at least 30 years. Bucky is a darned good artist -- sincere. Personally, there's nothing wrong with him -- he tries; of course, he kind of feels a little upset because at the Chicago Exposition -- World's Fair, remember -- the control commission on design asked me to look over the building they were building on the suspended diaphragms. They had part of it up. It was under construction -- had the center mast up. They had the flooring in the diaphragms, but they hadn't the outside laced in. Nice concrete floor down here on the bottom. And they said, "What's wrong with it?" I said, "Why, the resonance factor, and if you calculate it on Whitaker's hidden frequency, you'll discover what's the matter with it." "Well, we never heard of that." "Well, I said, "you're just architects; you're not physicists." "Could you prove it to us?" I said, "Have your superintendent -- got a couple of men?" "Yes." "Well, bring them over here and upend that 22-foot yellow pine plank." They stood it up on end. He said, "What will we do with it?" I said, "Well, just stand aside and let the plank fall naturally on the concrete floor," It did. About 70 men in that steelwork came down so fast they burned their hands on the ropes. You see, the vibration hit the concrete, she set up 28 recurrent cycles. Boin-ng-ng-ng. Those two diaphragms were just like drums, you see? Oh, no, never again. So they didn't finish the building.

Now the Tacoma Bridge fell for the same reason. You saw the moving pictures when she starts to go. Now it wasn't that the wind was of hurricane velocity. It was at that critical, you see, where it created that resonance factor where she starts to go. Because your towers up here were not stiff enough, they permitted the resonance factor to amplify; therefore, the top of your tower twisted and your main cables went like that, which started your floor, and anyone who understands harmonics and music understands

what it is. And the floor started to move because the more she went -- finally she turns up like that and wham! Now, of course, you fix it by doing something different -- you dampen the resonance factor.

WITH THE ADVENT OF TECHNOLOGY IN EUROPE AS YOU DESCRIBED IT, DO YOU CARE TO COMMENT ON WHAT IMPACT IT MAY HAVE ON OUR EXPORT TRADE AND PRICE ECONOMY?

Well, Japan will have to be permitted to build ships. She just launched last week a 22,000-ton boat, first of that size since the war. In other words, you have to permit Japan to rebuild a modern, high-speed, big tonnage merchant marine fleet, as well as a passenger fleet, and you also have to permit Japan to utilize its cotton spindles and its rayon, as well as its silk. Bear in mind that before the war, Japan was doing 6 billion yards of cotton, exporting 2.3 billion square yards of cotton goods a year, or greater than Great Britain. She chased Great Britain out of the Orient. She's only doing 3.6 billion now, that is, two months ago; so, if you permit maximum operation, Japan will come back as the big cotton producer, and Japan was in 1940 the world's largest rayon producer. Am I making this clear to you?

Now if that happens on one side of the world and you have the increased capacity in glass, ceramics, textiles, steel, coal, and chemicals in Europe, and as our inflation continues upward, it renders US dollars dearer in the world markets, correct? It makes them dearer and dearer. In other words, other countries are less and less able to buy in a rising inflationary US market. And with increased export manufacturing capacity, they have more to dump more places, with the result that US foreign trade will decline to its normal position of less than 4 percent of our total production.

Remember that during the war, with Lend-lease and foreign aid included, our capacity had so increased that United States was unable to export and to give away and to dump away 4 percent of its total production. Now, of course, we loan them your dollars so that they can buy it from us. No wonder they think we're stupid.

HOW LONG CAN THEY PROMOTE THIS WAR HYSTERIA INTO PRODUCTION?

Oh, they can keep it up here until they choke, which isn't so very long. Europe doesn't want the war. India doesn't want it. Indonesia doesn't want it. You see, after all, who's going to fight a war? Are we Americans going to fight the war -- for what? Never mind who you're going to fight; what would you do if you won? You haven't got enough customers now! Oh, then, Technocracy was correct to declare war on the Pacific Ocean. The Pacific Ocean couldn't surrender, it couldn't capitulate, and you could always dump it in, couldn't you? The only trouble about that is continental United States hasn't got the resources: copper, zinc, lead, petroleum, and iron ore, let alone lumber. So much so, we have a shortage of newsprint, and Russia is offering newsprint to the world. Come on, have a laugh. It's really funny.

[A QUESTION ON APPROPRIATIONS TO PAROCHIAL SCHOOLS.]

Parochial schools? Well, naturally, they're trying to shove through federal aid to parochial schools. Well, while the Catholic Church has the richest diocese in the world, the Catholic churches in New York, and the richest parish is in Detroit, still they haven't enough money to run and maintain their schools, because, after all, this installment buying is mortgaging the Roman Catholics as well as the Presbyterians, isn't it? Well, until they've got nothing left. That's why local options; you're advocating it downstate, isn't it? The local merchants want what? They want local options in order to cut the liquor out so the butcher, the grocer, and everybody else, they hope, will get the money that's now going to liquor. How many counties in Ohio have gone dry? Come on, somebody tell me, you live in Ohio. [REPLY; Only 27 counties.] Thank you. Out of how many total? [REPLY; 88] Well, it's climbing up.

WHAT ABOUT THE LATEST MILITARY DEVELOPMENT -- GUIDED MISSILES?

Guided missiles -- whose guided missiles? [INAUDIBLE REPLY] After all, what good are proximity fuses unless you have something to fire at? Proximity fuses are not good if you come in at low level. Of course, the Swedes, you know, they reported some very interesting things. So, we sent over General Sarnoff of the RCA and General Dolittle and about 140 others. Well, they would come across the Baltic at constant contour, that is, you get one

radar this way and another one this way, you see. So, you come along a level and you come to a mountain; it comes up and climbs up over the mountain and goes down the other side. You set it for about 400 feet above anything. It keeps 400 feet above anything. So the Swedish Observatory has got the only photograph. When the Swedish Air Force tried to do it, why, every time they came near it, it stepped on the gas and went off at about 1,600 miles per hour. So the Swedes decide to stay neutral. You get it now?

WHAT'S THE FINAL ANSWER BETWEEN CHIANG KAI-SHEK AND MacARTHUR?

Oh, Chiang Kai-shek is finished. [WELL, HELL, WHO DIDN'T KNOW THAT?] Well, MacArthur's coming home. So, they could both meet in Los Angeles and Hollywood.

WHAT HAPPENED TO OUR PEACETIME ATOMIC ENERGY DEVELOPMENT?

.... at the present rate of development, they don't want it. You see -- not here. It would only be advantageous in certain parts of the world. Here they have so much invested capital in public utilities and generating equipment for energy from other sources, why develop it? Of course, Britain is developing a pilot plant; so is Canada; so is France, Denmark, and Norway. Well, Canada doesn't need it so much, but Britain could stand some help. But we're not likely to get it. You see, we have the Monsanto Chemical, the General Electric, and all the other large corporations all operating it for patriotic reasons, aren't they?

DON'T THE LAWS OF THERMODYNAMICS HOLD TRUE FOR ATOMIC ENERGY ALSO?

Certainly. Of course, if you can handle hydrogen, hydrogen is much easier to obtain than U-238. Most of your U-238 is far away and it's 1 percent ore. Then what? To get U-235, it's 1/140 or 140 times that. Correct? So, it adds up to quite a lot of ore in 235. Then your energy obtained in your fission to actual utilization is only a small percentage of that released. Just as the plutonium plant out there at Hanford; they're using so much water they're heating up the whole Columbia River and killing all the fish; but you couldn't use the heat for anything useful.

WHAT WILL ORGANIZED LABOR ....?

Well, after all, hasn't the AFL and the CIO both stated they want to take political action? Isn't that correct? In other words, they want to join together with probably John L. Lewis and the Railroad Brotherhoods to elect the same jackasses. It doesn't matter whether he's honest or dishonest; you're putting the man in political office to do what -- to change something? No. You're putting him in office to continue the office so he'll be reelected; and you expect him to pay off with certain favors for your particular group. Well, but we're all at it, aren't we? The farmers are at it, labor is at it, the common carriers are at it, the public utilities are at it -- communication systems. Everybody wants an increase in rates. It all depends on whose bull is gored. How far can you go with it? So, it doesn't make the slightest bit of difference whether the AFL or the CIO -- they're not proposing anything except hoping that the industrial pie will continue.

Now, try to bear in mind you had a 70 percent drop in the depression of the thirties, but you don't need 70 percent to get hit just as hard as the thirties. All you need is another 15-18 percent. Figure it out. Seven million unemployed today would cost more than 20 million in 1933. Just 7 million, that's all.

HOW IN HELL ARE YOU GOING TO GET THE PEOPLE TO GET THIS IMPORTANT THING ACROSS THAT YOU'VE GOT TO DO? THAT'S THE THING I WOULD LIKE TO KNOW. WOULDN'T IT PAY TO MAKE AN INVESTIGATION OF ....?

Just let me try to answer it for you. We had President Calvin Coolidge, Harding, and Herbert Clark Hoover during their beautiful reign of the roaring twenties, with the stock market going through a new roof every other few days. Could you get any sizable audience anyplace in United States to say, "Don't put your money in equities"? Why, no, the General Electric at \$300 a share were going to a thousand. You can recall it. And Roosevelt and his New Deal wouldn't have had a chance of a celluloid dog chasing an asbestos cat in hell in 1927. And it was only after it hit in 19- what -- 1929, '30, '31? No, it was only in the fall of 1932 when the country was up to its eyes in it. And then they said, "Let's throw the rascals out. Anything is better than what we've got."

So, Roosevelt, who could have bought the entire bonds and stocks of all corporations in United States, listed and unlisted, for less than what was paid out for relief -- no, he didn't do that. He'd have cleaned the slate if he had. He paid out more money for the relief of corporations than he paid out for the relief of individuals, and by 1937, business thought it was so good that it didn't need the subsidy. And what happened in 1937? She fell faster in 1937 than it fell from 1929 to 1932, didn't it? And how! Then they had to come back in September and use the fire hose. "Watson, the needle!" wasn't enough. It was "Delano, the fire hose," with a high pressure pump on it. All right, it pulls it back up. In 1939-40, we still hadn't gotten anywhere. We couldn't even get business to prepare for war, could we? We couldn't get them to rearm or retool their plants. No, not until they were bribed with open and negotiable contracts, subsidized with government money, supplied by scheduled materials on a guaranteed contract. Then, of course, with \$300 billion in credit, we went off to the greatest war boom in history.

Well, go on out here and talk to people. "Why, no, I'm pretty good, hem haw, etc." "Why don't you read so-and-so?" "Well, I haven't got time to read. I'm so busy doing this and that, you know, my interests. Why, I'm practically on the go every hour I'm awake!" Yeah, he's important as hell. He belongs to this club, that club, and so on. He's on the Republican Committee or the Democratic Committee for the county or the state. He hasn't read anything in years. He doesn't want to read anything except his bank statement or the dividend notice; and his wife, of course, she knows he's a dumb cluck, so, "Yes, darling, you don't have to do anything like that." She just takes it away from him.

Now those are conditions. Could you get any reaction nationally? There are a few individual exceptions, yes. A few voices spoke up, but, collectively, did it amount to anything? No. And Roosevelt, when he gets elected, what does he want to do? He wants to drag in every member of Technocracy that can serve him. He didn't have any brains, so he had to come where there were some. For heaven's sakes, he couldn't use his legs, and this one can't use his head. I don't mean they weren't sincere. The country is full of sincere damn fools.

We've been preached at for the last 3,000 years about a government of men and a government of laws. Hell, what we need is a government of things, when you have 37 million automobiles, lawn mowers, all power-consuming devices. We're going to be cluttered up with them. Our great-grandfathers never ran into any problems of abundance. Their ox carts were never in a traffic jam, were they? Their sewerage never backed up on them. They had the wide open spaces and the burdock leaves.

Oh, wait a minute, you think this is going to be funny. The orders of the New York Water Department are to cut the pressure 50 percent if your water in the reservoir is below a certain amount. I'll explain what that means. A 50 percent drop in the water pressure of the City of New York and all of those little household niceties, you know, that exist-above the second floor, well, they won't work any more. So, about the 8th day, there's going to be the greatest sale of Airwick and other things that's ever happened in history. You'll know what Americans really smell like.

#### WHAT ARE THE OBJECTIVES OF TECHNOCRACY INC.?

Every organization has its objectives. We're an educational, research organization, and it's our job to keep ahead of the events and to keep the public of this country and of this continent informed of the trend of events and the technological design most capable of operating this complex on this continent for the general welfare and the common good, so as to provide and distribute abundance to everyone with the maximum conservation of resources, human and otherwise. Is that what you wanted? Same then, same now.

#### INAUDIBLE QUESTION

.... call them all in. You've got to deal with human beings as they are. [REPLY] Oh, suppose I took that attitude? No, wait a minute; suppose I took that attitude? Well, I happen to be one of those biological accidents. Suppose I said, "Well, if these human beings haven't got the memory that I have." Just let's put it on that basis; never mind my knowledge of science and mathematics; but they haven't got my memory, so they wouldn't qualify. Do you think that's an approach to make to ....? No, do you see what I'm driving at? You've got to take human beings as they are: black,

white, brown, green, or whatever their color, size, or state of moral turpitude.

INAUDIBLE QUESTION

Approve what?

PASSING OUT LITERATURE ON STREET CORNERS LIKE JEHOVAH'S WITNESSES.

Pass it out in an undertaking establishment or church if you want to. I mean, we're not questioning, but that's for the individual member to try in his locality. [INAUDIBLE REPLY] Well, now, we have a member, in fact, a few members, up here in New England. They happen to have a little money and several corporations. Well, they also have a big fleet of trucks -- one of the largest refrigerated truck lines. They also have planes and they have a big banner 200 feet long with 8-inch high vermillion letters, and they tack that on back of the plane -- they have to catch it between the loops, you know, and lift her off the ground -- and they fly it over Dewey meetings or a Truman meeting or the Yale football bowl or any other place: JOIN TECHNOCRACY NOW. They come right down. It's their planes; they pay for the gas. Now, not everybody could do that. We don't necessarily say it's the best way to do it, but they happen to have the planes, they happen to have the aviators, they happen to have the gas and the sign, and if you want to look at an 8-mm. film -- color film -- of it, we'll send you one.

There's nothing in Technocracy's regulations to prevent the individual or a Section from entering any place or any group of people or approaching them in any way, shape or form. We don't advise lead pipe unless you do it in the dark.

Now, we have a number of Sections where they have a lot of majorettes -- they twirl the stick, you know -- and they have a good set of gams. Well, now, it's very interesting. The American male, he sees 8 or 10 of those, uniformed like that, well, he comes in to investigate Technocracy, believe it or not.

Now, individually, you can all hold meetings in your own house, invite your social friends in and say: "All right ....

.... are only strict regarding the general policy and the general strategy. It gives the latitude to any Section or to any individual as long as they don't break the law. I don't know what else .... If we had the money, of course, we could provide you with a whole setup of visual education, moving pictures and everything else, which we hope to do when we get this place. We want to make models and take movies of them of the marine trains and the hydraulic locks and your commodity terminals and modern urban planning. Well, but that can't be done in a day.

DO YOU THINK IT WOULD BE WISE TO GO TO THESE PLANTS THAT HAVE THESE LAYOFFS AND PASS OUT LITERATURE THERE?

Go ahead. Don't do it on the company time. We've told you that before in directives. Same as in the army, the same thing applies: If your ranking officer comes up and wants to discuss Technocracy with you on time, "Sorry, Mr. Superintendent or Mr. Vice President, I'd be very glad to do that at some other time, not on your time." Then you're perfectly in the clear. Now when they're laid off and they come out, if you know there's going to be a layoff, meet them at the gate, invite them up to the Section for a cup of coffee or at your place, hand them literature and say, "We hope you learn something." In other words, something like the negro that was going up to the scaffold to be hung. He said, "Ah know, this is going to be a lesson to me."

WHAT'S THE FIGURE ON KILOGRAM CALORIES PER CAPITA CONSUMPTION AS OF NOW?

Well, that's pretty difficult to get because you've got a lot of stuff going into military, you see. And that would be credited, but it's not correct to credit that because that's not civilian production, you see. That's an exaggeration, but she is climbing up. After all, your entire automotive industry -- Detroit is on a single-shift basis. That's been retooled. You've got an 8 million capacity in 48 weeks on a single shift. Remember when it used to be 3 million on multiple shifts? Not any more.

WOULD YOU GIVE US AN APPROXIMATE FIGURE ON IN ENERGY DETERMINANTS THE DISCOVERY OF ATOMIC ENERGY, THAT IS, OVER AND ABOVE PRIOR TO THAT?

No, you see atomic energy is no different from any other

energy, only its source is different. You can't distinguish energy from the atom from energy from coal or energy from any source once it becomes energy, and you still haven't sufficient uranium to release any in vast commercial, continuous quantities -- as a war project, yes. Of course, if you get the fission of the hydrogen atom, then hydrogen is much easier to produce where you have electric power than to find uranium ore. Is that clear?

Now there are still other means. Your air molecule is charged every day with solar energy. You can, theoretically it's possible to have a rotary converter where the peripheral speed approaches the molecular, and -- not the first law of motion but the second -- you could generate power with it. That we actually haven't done it yet, well, that's a question of development and experiment. But when we're at it, permit me to say that the fusion of the ovum and the spermatozoon is a damn sight more dangerous than the fission of the atom.

INAUDIBLE QUESTION. Oh, yes, we'd like every adult Technocrat and family that has children to bring them into the Section and get them going. You have them on the Pacific Coast. You have to get someone that has some peck rights amongst the kids. You can't shove the kids around; they're shoving you around, you know what it is. So, you get someone of the group to talk to your children. You'll find out who is the real live wire and who isn't and so on. Then you'd know, you see, who's who.

AM I CORRECT WHEN I SAY THAT AT ONE TIME YOU STATED THAT  
UNLESS YOU HAD 65 TO 70 PERCENT ACCEPTANCE OF THE CITIZENRY  
OF THE CONTINENT TO TECHNOCRACY?

Oh, no, we never said any such thing as that. After all, if the -- what's the traffic density -- how many automobiles per mile does it have to get to where it's unanimous on the part of everybody that they stop regardless of how they feel? See, we never made any such statement as that.

HOW DO YOU GET THE PEOPLE TO EFFECT A PROPOSITION ON HOW YOU  
GET THE PEOPLE -- WHAT'S THE USE OF GOING THROUGH A WHOLE  
MESS OF PEOPLE WHEN ALL YOU NEED IS TO GET THE RIGHT PEOPLE  
IN?

No. You see, social action in the mass is a different thing

from the social cognizance on the part of the individual. For instance, in 1939 I pointed out in the City of Winnipeg to a giant audience in the auditorium that some day there would be a fortuitous combination of snow, rain, and climatic conditions, and if there were, then the Red River would do certain things, and it wouldn't make any difference in the meantime who they elected to the House of Commons or how much money they had in their bank account if the water was on the first floor of the bank. And, by God, the water was on the first floor of the bank. Our Section in Winnipeg -- the cellar and first floor are still flooded, that is, it was ten days ago. Over \$100 million damage was done.

Now Canadians are just as forthright people as we are, but could you get them together to take any vision on what they should do to the Red River and the Assiniboine? Oh, no, they were too busy with other things. Then when you get a few hundred square miles of the best farmland in the world -- the Red River black bottom, you know -- plus their own city buried under it -- couldn't do anything with them. Now, of course, they're sadder but wiser. Are they going to do anything about it? Not until it hits them harder.

No, acceptance comes when it becomes impossible for any social system to continue because the intolerance is so great. Go on out here on the highway and count the cars, and when they're moving at 40 mph, you'll find that there's a certain specific number, a density of cars per mile. You increase the density, down comes movement. Increase it again, and finally at a specific figure, it doesn't move at all regardless of the moral turpitude of the drivers or their age or their financial or social condition. It comes to a stop and it stays that way. What? They've all got opinions, haven't they? They all have feelings; they all have a vote, correct? And you're totally powerless, aren't you? And they were all doing the proper legal thing going about their business but they were all going about their own particular individual business at the same time. It's all right so long as a little minority did it, but when you get the overwhelming majority doing it, it's all wrong.

[CLOUSE BREAKS IN WITH THE FOLLOWING: RIGHT AT THIS TIME THERE WAS A LONG QUESTION FROM ONE OF THE MEMBERS IN THE AUDIENCE IN RELATION TO THE INEFFICIENCY OF THE

ORGANIZATION. SEEMED LIKE HE EVIDENTLY WAS A GI BOY AND CAME BACK HERE AND DIDN'T LIKE THE IDEA THAT WE HADN'T MADE BETTER PROGRESS IN THE ORGANIZATION. ONE POINT HE BROUGHT OUT TOOK UP A LOT OF TIME IN COMMITTEE WORK, DECIDING WHEN TO HAVE ANOTHER COMMITTEE MEETING.]

Well, after all, what you're learning is the futility of the democratic method. Here you're members of a membership organization. CHQ can lay down a general policy and a strategic implementation of that policy, but the tactical execution of that policy is dependent upon efficient administration of each and every local unit across the continent. Now we or a Section's officers do not possess the spiritual power of excommunication. We can't take back your lot in the hereafter and your halo and your harp and say you can't use it. We haven't the fiat power of the armed force where you do it or else. You haven't the economic power of either a union or a corporation on the job, where, unless it's done, you're fired or you're docked or you're laid off.

It has to be done as a voluntary proposition on the part of every member. I have no working hours. I have no spare time. What? Because anybody, any individual thing compels me? No. Now it's a very difficult thing to do. It's one thing to have a disciplined army with universal military service, and it's another thing to have a self-disciplined bunch of guerillas that maintain their own discipline regardless of how fast they move or whether they're in contact with the other units or whether they don't hear of them for a year or two. Do you understand what I'm driving at?

It's an extremely difficult thing. Now, CHQ has had difficulty because we have units -- somebody out there says, "Well, Charlie Jones, he ought to do that or Mary Smith or somebody else, they can do that. Why don't they do it?" Well, what are the conditions? Charlie Jones has a sick wife; he's willing to do it. He's got a child in braces. What? He'd have to have a considerable economic standing. Maybe he makes \$150 a week, \$110 or \$75, but he's doing the best he can. Now if you come along and try to high pressure him and overdo the thing, you've only got so much leisure time, you've only got so much surplus time. You spend it on the job or in the profession or business, and it's the strategic use of that time, but if you're

1951

going to overload the individual member and wear them out, you're not going to join it. You're going to say, "Well, oh, let Charlie Jones do it. He's got a truck. He's got a car. Or he's got something else." Well, but he needs help. You do it in the corporations. You run on shifts. And what is it? It's a new type of esprit de corps. Howard Scott can't compel you to do anything, and, incidentally, he never tried and never will. I've never asked you to do anything that I wouldn't do myself, but because I'm doing it, I don't say that you have to do it. If you want to do it, you're with it.

If you don't, nothing I or any continental director can do to compel you to do it. We're not a punitive organization.

We had one director -- well, the name he joined under was fictitious. He was paroled from one state penitentiary and he had served two terms in two other penitentiaries. Well, he only tangled up \$4,000 or \$5,000 worth of funds in spite of the warning to the Section Board. He could have been sent back because he violated his parole. He married a 19-year-old girl, the daughter of one of the Section members, and when we called for his resignation from CHQ, he resigned. When I came there again at half a dozen Sections -- the general membership -- people said, "He was one of the live wires, what did he quit for? One whole Section's Board of Governors were very much upset. I said, "Come up here to the platform." I took an envelope out of my pocket and the criminal record photographs of three penitentiaries and held them up in front of each individual and said, "Do you recognize him?" They said, "Yes." Front face, side face, and fingerprints, sentence. "Well," they said, "why don't we arrest him?" "For what? We're not the FBI; we're not a police force. It's not our duty. Our duty is to stop the thing from happening in this organization and see that it doesn't happen again." But to deprive somebody of their livelihood or to act as a punitive proposition, no. Fair enough?

We're called on to make all kinds of things like that. Now any place locally, you've got to go along and do the best you can with the people in your community. For instance, we have a tough taxicab driver in a certain city. He has a fleet of taxicabs, and he's wider than Freddie Block. He's huge. He's a pretty tough guy. He's rough, but his taxicabs roam the streets of that city night and day, and he's got a flock of darned good tough drivers,

too. Maybe they don't wear a necktie as often as they should or maybe they don't have the proper haircut and a few other things; but if you want certain kinds of jobs done, call on that bunch of tough taxicab and truck drivers, and if it's something they know how to do, move over, brother, 'cause they'll move it. Now but don't expect them to edit an encyclopedia; that's not their job. You know it and I know it.

Find out what the person's capacities are. Most human beings may be working at a job, a profession, or a business, but they also have a little hobby or a little slant that they have a capacity for doing. The writers in Technocracy never wrote before in their lives. Wilton Ivie, yes, he's a biologist, ex-Utah University, University of California, member of the AAAS. He never wrote anything until he got in the organization. Well, other people are the same way. Some of them have some education, some of them none; it doesn't make any difference. Try them out, put people to work in the organization. Get them to develop their capacities. Bring your kids in. Where are they? Going in for juvenile delinquency? Well, I'm a little bitter about it. Get a college degree in the arts -- in a technological world? Can anything be crazier than that?

Now you can do it. If you haven't got officers that will function .... bank balance and monthly statements to be sent in from every Section every month. We'll audit it at CHQ the best way we can, but let's pull together. If you have somebody that's a square peg in a round hole, try somebody else.

As for efficiency, we know how it should be. We can tell you how to be efficient, but that takes a different size of organization. Now where you get 300-400 members, then you begin to see it shape up. About 500, yes, it's there, but at 100, 150, 200, 250, you probably haven't got the time and the personnel. You're making compromises all the time. Well, look at the compromise we had to make at CHQ. We had Atwater there. We took what we had and in most cases it was all right. Some cases it does us dirt. Same is true of your Section. Well, how about it? I still think it's the only organization worth fighting for.

We've been correct across the years -- painfully, too painfully, correct for a lot of our friends and associates, and what's stranger still, we'll be more correct; because the next

1951

five years are going to be the most significant in history -- not the next fifty. The decision will be made in the next five. I think most of us here, barring accidents, will see the next five.

CAN WE TAKE THAT FOR A FACT THEN THAT OUR PROGRAM OR SOME OTHER PROGRAM WILL BE INSTITUTED IN THE NEXT FIVE YEARS?

No, I don't mean that. In other words, things become more and more critical, and there will be major decisions forced upon this country and this continent and upon the world in which the social vision and the design that we have promulgated will become more acceptable and more apparent. As we have pointed out, the solution on this continent is amenable only to a unique one. There is no alternative.

While I'm at it, I'd like to say a few words. Technocracy objects to United States and this continent being torn apart and made a conflict and a battleground between the collaborators of the Kremlin and the collaborators of the Vatican. Now that is not a question of any religious antagonism. We take the same attitude with the Mohammedan, the Shinto, or any other ecclesiastical body that makes its plays on the political-international field.

Unfortunately, the economic situation of this country and of this continent is so complicated, and to further increase the intensities, hatreds, and feelings by the introduction of an ecclesiastical-political program, we regret it; but your Roman Catholic Church will probably regret it more. That's not the individual Roman Catholic; don't misunderstand me. The Mohammedan Church is running into the same thing.

You'll notice in your news that certain statements are being made by individuals, senators, and other prominent people. Now it ill behooves anybody to make a play on this national scene unless you can back it up with a long-range program. In other words, the Vatican has overreached itself, and in overreaching itself will compel a cohesion of non-Catholic groups which will make it tougher for everybody all around. They thought they were being smart and clever; they were, but not intelligent.

WAS SENATOR MCCARTHY AND LOUIS BUDENZ MIXED UP IN THIS IN ANY WAY?

Why, certainly. Louis Budenz -- I was called on the telephone a couple of years ago by a dozen people. I had forgotten about it, but I was in a club one night when one Louis Budenz was proclaiming what a radical and revolutionary he was, and as I came in, there was considerable discussion, and they said, "Listen to this. Louis over here contends he is a radical and a revolutionary." I said, "Why, hell, Budenz, you're not a radical. You're not a revolutionary. You're just a Roman Catholic on a debauch with the Virgin Mary, mentally and spiritually speaking, and when you're satiated, you'll go back and get absolution." That was 20 years ago. Now, don't think because he was a Roman Catholic I said that.

I know them, whether they're Presbyterians, Baptists .... When anybody plays that game. What was he? He was emotionally unstable then. He had a bunch of informers, perjurers, and what? They were all perjuring on each other.

Like during the war -- if the G2 came in, well, the ONI came in on its heels and the State Department after that. Why? Because they had to spy on each other. None of them could trust anyone.

.... hearsay evidence. You only have 55,000 Communists out of 152 million people and they're ruining the country? Nonsense. Most of those are within 300 miles of New York, 80-some percent of them. So, you have this hysteria. Naturally your political press and certain ecclesiastic institutions beat the drums to keep it up. The parties keep it up, and it provides a lot of .... You chased them out of the unions and now you've got all the proper people in the labor unions in the proper position.

You've cleaned out everybody in the educational institutions, so you haven't got anybody with an idea left in any of them.

Did you see the case of the man in the post office charged with being a "red". When they called in those in the post office, they said, "How do you know he is a red?" "Well, he's always reading books." "Well, do you know he's a member of any party?" "No, they didn't know he was a member of any party." "Well, what books did he read?" "Well, I don't know what books he reads but he's always reading books." Another one said, "He said that wealth ought to be more evenly distributed. The rich had too much

and the poor didn't have enough." He said, "Well, that makes him a communist."

A professor out here in the University of California bought an album of records in a bookstore. The bookstore happens to have one communist partner; so, therefore, he was associated with a fellow traveler. We have, of course, the chief perjurer in the Washington case out in Seattle with a warrant for his arrest in the State of Washington, but the judge in New York refuses to honor it because he's in the psychopathic ward in Bellevue (the federal government witness).

Well, of course, we have psychopaths. Forrestal was slightly that way. He only jumped out a window because the Russians were coming. The window happened to be 16 floors up or something, Wynan shot himself -- ex-Ambassador Wynan. Dugan jumped out of a window on Fifth Avenue into the snowbank. What's-his-name was found stabbed and drowned in the Potomac. Bidault, brought back from France under arrest by FBI and placed in a cell in Miami -- jail cell, shoots himself with a gun in a jail cell under arrest. What does it smell like to you? We state it; we know the facts.

Perk is back in as mayor, isn't he? I wonder if there is still any gambling in Cleveland, huh? Don't have any gambling here anymore; it's a clean town! I don't know what it is now, you know, but there used to be a \$5,000 check every morning at 10:00 right here in Cleveland. Now, there isn't anyone here would want to kid me on that, is there? Every morning at 10:00 or they don't operate that day. The same is true of New York; don't kid yourself, only it's a little larger there -- same kind of thing. So, you're going to kid the public of this country that you're going to clean up gambling? How to stop gambling on horse races -- just stop the horses -- simple?

WHAT'S ROBERT MONTGOMERY'S ANGLE?

Oh, he's got a fascist slant. That's all; went to his head like Victor McLaughlin. Victor McLaughlin had the Hollywood Hussars in Hollywood. Oh, yes, they had horses, uniforms, and everything else -- trained them for riot duty; and, incidentally, there's a couple of individuals who have served in the Hollywood Hussars who are Technocrats. Of course, they were in the movies, you know. They were officers in the Bengal Lancers -- remember the

picture? We know the scoop.

WHAT ABOUT THE REEVALUATION OF THE US DOLLAR IN FRANCE?

You mean they're reevaluating the franc -- that's what they're trying to do. The US dollar is going up in relation to foreign currencies with the exception of Switzerland and Russia. Russia being on a gold basis, naturally we can't hope to compete with her in the capitalist economy. Russia is selling gold in Macao, Tangiers, and a dozen other places around the world. She brought the price of gold, you know, in the foreign markets down from \$70-\$80 to parity with United States, \$35 an ounce. She went out and sold gold until it came down to that level.

THERE WAS AN ARTICLE IN THE PAPER WHERE GENERAL FRANCO HAS SUDDENLY AND COMPLETELY DISAPPEARED FROM SPAIN JUST FOR A FEW DAYS, IT ALSO WENT ON TO SAY THAT IT WAS SPECULATED THAT FRANCO MIGHT BE ON THIS TRAIN TO MEET WITH US MILITARY FORCES FOR A SECRET MEETING. I WAS JUST WONDERING ....

Well, that's the -- you see, the Brewster-Senator McCarran-McCarthy clique down in Washington, they've been trying to pull that along with Farley and Coca-Cola, and, of course, Admiral Connally called on them, but there's too much stink in Europe over Spain. Besides, Spain hasn't much to offer anyway. Of course, the Armstrong Cork down here in Pennsylvania and a few more like to have dealings with Spain; so do a few import companies. But militarily, she's no particular advantage. If we're operating on the fool assumption that we're going to have air bases in Spain -- air bases against whom? We're as bad as the Irish Air Force during the war; they were neutral; and the Irish air officer asked his superior, "Well, we're neutral, all right, colonel, but who we neutral agin?"

WHEN IS CHIANG KAI-SHEK COMING HOME?

I don't know when he's coming home. After all, his brother-in-law is up the Hudson here -- sister -- No, nobody gives a damn about Chiang Kai-shek; he's lost face. He's finished and so are we in Asia, for the simple reason we didn't have sense enough -- our mistake in the Far East way back in 1911, the Sun Yat Sen revolution; in fact, it proceeds farther back than that to the time of the Spanish-American War. President Teddy Roosevelt made

the deal with Japan, slightly after the Spanish-American War, to exchange recognition of US sovereignty in the Philippines by Japan for US recognition of Japanese sovereignty of Korea. That was the deal. North Korea has only about 1/3 to 1/4 the population density of South Korea. You see, we've been so smart .... therefore, in the Russo-Japanese War, United States, unknown to the American citizen, was an ally of Japan, and the only reason Teddy Roosevelt wanted to frame the Treaty of Portsmouth was that Japan was bankrupt and couldn't go on. The Russian losses were not as high as the Japanese losses, and the Japanese were at the end of their rope. And when the Japanese demanded the billion dollars indemnity, Konsarvinoff at Portsmouth got up and lit a cigarette and walked out. He said, "We can continue to fight." That was part of our attitude.

So, Sun Yat Sen, being a revolutionary and overthrowing the old Manchu Regime in China, we wouldn't have anything to do with him; and when he came to Washington to ask for aid, we turned him down. He went to London to ask for aid; the British turned him down. He went to Moscow and Lenin sent him General Borodin and 250 assistants.

Well, Chiang Kai-shek, who married Sun Yat Sen's sister-in-law after Sun Yat Sen was dead, when Chiang Kai-shek combined with the gangsters, the landlords, and the warlords in Shanghai and staged the massacre of 1926 and 1927, then Chiang Kai-shek becomes persona grata and acceptable to United States. History has a strange way of repaying it. Madame Sun Yat Sen, kept a virtual prisoner for years, is now a Vice President of the Peoples Republic of China, and if her sister, Madame Chiang Kai-shek, comes back, she will have the kind office of officiating at having her head chopped off in public. History brings some strange revenges. Never kick a man when he's down, unless you're sure he's going to stay down for good. If you are, then kick him plenty; but if there's ever a chance of his getting up, you better look out.

#### ANY INFORMATION OF INDUSTRY IN YUGOSLAVIA?

They're building a steel plant. They have built the railroad into those coal deposits and through to the coast. Of course, as you know, they have the greatest copper mine in Europe, the Mines d'Bor, and they have a giant set of lead properties in Tropzia.

There's been a lot of building going on over there -- highways, railroads, other building. They need machinery. They're building machine tools. It's doubtful if they're going to get the amount of aid that the press, of course, has been playing up, because Yugoslavia is a collective economy, and while it may be anti-Stalin or anti-Russian at the moment, it is certainly not a laissez-faire business enterprise economy of the west. You see what I mean? So, the west doesn't want to help them too much, the Yugoslavs. They only want to help Yugoslavia enough to oppose Russia. Same thing that India has turned us down on and Sweden has turned us down on; we want India to be anti-Russian, and they say no. If you want to help India, all right, we'll discuss it, but if you merely want to help India join you in being anti-Russian and anti-China, you're crazy.

WHAT ABOUT CZECHOSLOVAKIA'S RATE OF POPULATION GROWTH?

Czechoslovakia's population growth -- they haven't the numbers to start with. Great Britain's population today is over 50 million and increasing at approximately 500,000 net increase a year. Italy is 47 million. France has its first major change upward in its birth rate in 50 years.

Yugoslavia is about the same area as the British Isles or Italy, correct? But Yugoslavia has resources: copper, lead, zinc, coal, oil, bauxite, iron ore, excellent timber, and it is not a mined-out land, but it has only one third of the population of Italy and the resources that Italy and Britain haven't got. So, the cards are on the side of the country with the resources and the less population density.

North Korea has only about 1/3 to 1/4 the population density of South Korea. See, we've been so smart that we enticed the population behind the iron curtain over to West Germany, didn't we? Oh, come on over; we will save you. So, they came over. The Russians see they come over, see? Go on, go on, eh? And the same thing in West Berlin, the same thing in South Korea -- oh, you want to go? So, they shove 'em over. We get the population; they get rid of the surplus. Dummkopf!

What are you going to do with the Italians -- the rate of increase -- or the British, or the French -- the West Germans? Argentina? No, the Argentine has got enough of them now. They've

got a couple million. Argentina is not a big country. After all, you've got a big stretch in Argentina, you know, that is Patagonia, which is not very livable. They already tried out one Italian settlement down there in the extreme end of Patagonia. Well, they did a good job at building but how many buildings can you put on a territory where the wind is so strong that the tent stakes won't hold, that you have to pile rocks -- are you going to put a lot of population there? Are you going to put a lot of population at Hudson Bay? What -- polar bears? Cross the human being with polar bears and seals, maybe you might get something that will live up there. Even the Eskimo has no sense.

Your populations are proceeding dangerously. It isn't a century away. Remember, in the year 1800, there was less than 800 million population on the globe. Today there are 2.3 to 2.4 billion population. The waste spaces are filled up. So, there's a virtue in more human beings, is there? When you haven't got the resources, the land? Well, of course, you can argue that they all have a soul whether they're syphilitic or whether they're intelligent or moronic. And you can say the benediction over them and bless them, marry them, and have more of them.

Puerto Rico had less than a million when we took it from the Spanish. Now it's got 2.3 million. There should only be 350,000 Puerto Ricans on the island. Now we fly them into New York to work in all the restaurants. Does it solve the problem? No, it just keeps the Puerto Rican birth rate up to 43-44. They can dump the surplus someplace else.

His Holiness the Pope now advises the Italians and others to migrate -- emigrate. To where? After all, Italy has been down there in the Mediterranean in the days of the early Romans. How much of Africa did they ever do? The Carthaginians, the Greeks, the Romans -- just a strip, wasn't it -- thousands of years; and Africa is still black and blacker than it ever was.

South Africa has what? Two and a half million whites and around 8-1/2 to 9 million blacks. Well, who's going to win? Put your bets down on the black to win. There's more of them and they breed faster. Why kid yourself? You can have a black Jesus if you want to for them. What's the matter? Or a black Mohammed, whatever you want to call it. Good salesmanship.

WHAT ABOUT MYRON C. TAYLOR GETTING AN AWARD FROM THE NEWMAN CLUB?

Well, that's their privilege. Myron C. Taylor used to be Chairman of the Board of the United States Steel. He's an Episcopalian worth a lot of money, bought a palace over there and acted as a special envoy of President Roosevelt. He wasn't an accredited diplomat to the Vatican because that would stir up too much fuss here. So we do it around by the back door. We come in by the privy instead of the front door. He possessed savoir faire and naturally his efforts were appreciated by all and sundry. It's perfectly within the prerogatives and privileges of the Newman Club or the Vatican to award him honors. After all, the Vatican awarded General Donovan a very high order for his services to America in World War II. I think that's laying it on a little -- foreign political power awarding an honor and a decoration to an American citizen for his services to United States in the war, but that's just between you and me.

WHAT ABOUT ANOTHER WAR?

Oh, will we have another world war? Well, the difficulty with having a third war is where are you going to fight it? We'll have to be the aggressor. After all, did you ever know in United States history of American businessmen ever having sufficient foresight to be an intelligent aggressor sufficiently ahead of time to be anywhere? No, they always wait until the procession starts and they jump in the head and lead somebody else's procession, don't they? No, they wouldn't want to be an aggressor. They want the fear of war to continue so that you can pump money for military expenditures and foreign aid into US business here. Practically every big US business is running on government priming -- government credit, but you can't do it all the time. You can't do it for very much longer.

INAUDIBLE REPLY. Now, I may be pretty good, but I never attempted to usurp God's omniscience.

HOW MUCH HIGH-GRADE ORE DO WE HAVE LEFT IN THE MESABI RANGE?

There isn't very much of your high-grade hematite. You've got a few billion tons of low-grade taconite from 22 to 30 percent, most of it nearer 20 to 22 percent; and that, of course,

takes a special process of refining. But that's very interesting you're asking that question, because I was the consulting engineer in 1919-20 to two of the largest ore mining companies of the country, and I made that report in 1920 stating that the economic feasible ore of the Mesabi and other ranges would be exhausted by 1950. Well, if you'd had no depression, it would have arrived, and you haven't sufficient economic feasible ore of high Fe content to have a World War II consumption again. Is that making it clear? Of course, now there are Labrador and Venezuela; well, but they were advised of Labrador then.

Do you realize how much brains the steel industry had? The Mesabi was back in 1840, wasn't it -- originally? The cost of transporting iron ore from Mesabi to lakeside Superior is the same as transporting it down the lake to right here; and from lakeside Lake Erie to Pittsburgh is the same as down the lake. In other words, 2/3 of the cost is the rail cost. You could have run the canal into the Mesabi and put a canal down here to Pittsburgh -- 22 feet, and you could have delivered ore for 1/3 the cost now and you would have paid the entire cost off years ago. Check?

Now you want to put a traveling belt to carry ore from the Ohio, don't you?

I UNDERSTAND THEY HAVE DISCOVERED A DEPOSIT OF IRON ORE ABOUT 28 MILES WEST OF MESABI.

No, there's no big field in there. That's been core-drilled and prospected all over. I personally inspected thousands of core drillings covering square miles -- thousands and thousands of core drillings all laid out and all numbered with their key on the map, and there isn't any high-grade ore in there. There's a little left in the steep rock across the line. That's the same formation in Ontario. Now, there is a magnetite farther east in the Algoma District in Ontario. Well, that's a different type of ore.

INAUDIBLE QUESTION. It's business. Now that we've restored his credit and loaned Peron enough to pay off the American exporters, why, we'll do business then.

I think I've kept you all long enough. If those of you from Akron and Kent will stay a moment, I want to talk to you about

MEMBERSHIP MEETING, 8141-15  
WITH HOWARD SCOTT

1951

going back down through, there and whether to stop in Kent or Akron on the way back. I don't know how you're fixed for tomorrow or Sunday. How about Sunday?

Well, I've enjoyed it, even if I am soaking wet. Some of you are, too.

MEMBERSHIP MEETING  
DETROIT, MICHIGAN  
1951  
HOWARD SCOTT

It's been quite a while since I've been out here and a lot of water has passed under the so-called bridge.

This organization of ours -- there's one thing about it; it smells a lot sweeter since the rats got out. A lot of money was spent, not to improve the organization -- as their propaganda was dished out -- but to destroy it. When people work in CHQ and then go over and spend three or four hours in Henry Wallace's Progressive Party Headquarters, it has a peculiar odor, doesn't it?

The real purpose was not to improve Technocracy; the real purpose was to destroy it. They paid their attorney, Murray A. Barron, \$5,000 cash. They didn't get it from the organization. None of them had it personally. Murray A. Barron is a graduate of Fordham University; he is also Chairman of the Greater New York Committee of the Political Party. Do you begin to smell something?

Well, they pulled all the dirt that they could think of. Letters were written to the chief of the post office of the United States in Washington accusing this organization of using the United States mails to defraud. One of those letters was signed by A.W. Atwater, and the other was signed by Langan. The upshot was that they came into CHQ 7-1/2 months after the charge was made. (He) said, "We have been out investigating them. This is the last call; we merely want it for the record."

Now this organization has been through a lot of dirty work. This isn't the first time they tried it. They've tried it in various ways. If you want to get on the payroll to be a gumshoe, that's easy. You just go down to the proper people and say you're a member and you can work from the inside. Well, of course, that would get a laugh from most of us, because there isn't anything to work for on that basis. We'll tell you in any Section what we're doing.

You see, it's like the FBI coming to us during the war after they had found letters in other organizations they had closed up -- letters in which we denied those organizations the privilege

of reprinting any of our material because we considered their organization un-American back in 1935. We dismissed certain members at that time and we preferred charges against them. One of them is serving 25 years for sedition, although he has a PhD from Harvard.

It's kind of hard to take. Remember we have plenty of enemies on the outside without having a lot of lice inside. We can keep ourselves clean at the same time we fight a good, clean battle on the outside. There's nothing that worries us about our opponents on the outside. It's only those on the inside who try to damage the organization.

Now you've seen what one example did. They were going to improve the organization. Well, the ISE isn't anymore -- they haven't even got an office. Remember there was the Buffalo Conference first, wasn't there? The initials were OVC. And what was the next set of initials? The CCP, the Chicago Conference Program. Then there was the CSSD. Then they incorporated it, the membership organization, the Institute of Social Engineering in Illinois. Well, of course, that's gone. There's the ACFE, and now there's another set of initials for the few that are left.

The ISE has disappeared and the remnants are supporting General Holdrige for president of United States. Herb Clark, out in British Columbia, is the platform manager of Father Duffy Speaking for Peace. Soong has joined the CCF, which the Canadians know more about than most of you. They have it up there. And there is one of the ex-members of Toronto -- his name is on the Progressive Conservative Committee for Strategy; in other words, the Republican Party of Canada.

You might go on: the Atwater-Langan break -- Milligan openly advocated voting for Henry Wallace, Atwater made the statement that Henry Wallace would get 15 million votes. We said, "Don't be stupid. He'll be lucky if he gets a million." Why, even Henry left his party, didn't he?

So here we are, an organization today that's cleaner and has more vitality and less deadwood in it than it had three years ago come this September. All their legal actions didn't work, and we are today in the State of New York an educational-research organization. GAP IN TAPE. ....

three years, it cost us a lot of money for use with legal fees, but the organization has won most of its battles in the field.

Now what have we to look forward to? Some of you Technocrats get out in some communities and you may get a little downhearted just because the Price System isn't falling down about your ears overnight. Well, you take a man that's been licking up a lot of liquor until he gets 56 inches around the waist -- it takes him quite a while to get that corporation. Did you ever see one trying to reduce that corporation? Yes, but he can't do it overnight; it takes a while to get rid of it.

We haven't anything to worry about except our own solidarity and our own cohesion. If we maintain that, we are the ones that have aces -- all aces, not the others; because this system today is living on borrowed time. Right here in Detroit you have an explosive situation coming up, due to what? Crime or immorality? No, not at all. Due to the underlying technology. We are the most prosperous people on earth. Never has a nation in history accumulated so many self-satisfied bourgeois as we in United States.

After all, what is the pattern today? Well, the pattern is to have a Fleetwood Cadillac, a Corona Corona cigar in the side of your face, and to be quite wide across the posterior, and to drive with that kind of self-satisfied smugness that goes with that kind of posterior breadth. Well, you know what it is. You hear kids say it. Why, if they're hit with a Ford -- even if they aren't physically injured, they're spiritually injured. To be hit by a Cadillac, that's all right. At least he was hit by a big wheel. But one of those damn jitneys, it's an insult.

Look across the country today. There's one word that the financial controllers and the special interests of this continent do not like and are afraid of. It's "saturation." We have in United States today 49 million registered, licensed automotive vehicles -- trucks, busses, and cars -- approximately 34 to 40 million passenger cars. There is a capacity in the automotive industry of passenger cars alone of 10 million cars a year on a 48-week basis, 40 hours, single shift.

Do they know what to do if they had 15 million more passenger cars licensed than they have now? No, they don't. The

roads won't take them and the hospitals aren't big enough. The jersey Highway to Pennsville Ferry was blocked the last holiday for approximately 20 miles out for 7-1/2 hours. People died; women had babies; others fainted; and the ambulances had to go over the front lawns and the flower gardens. What? Were any of those citizens breaking the law? No, they were not. They were all fairly decent citizens, forthright, trying to get somewhere for a holiday, but the trouble was that they all wanted to go in the same direction at the same time.

Now, in one of these beloved democracies -- pardon the word -- that we have, it's all right so long as only a minor percentage of our population want to go in a certain direction; but the moment that any great number of our social society tend to go in the same direction at the same time, there's hell to pay.

Now if you look back. World War I gave this country and its technological capacity its first great impetus. That, of course, necessitated foreign loans, installment buying, and even Hoover instigated and organized the RFC. The only trouble was that he made the RFC an inch-and-a-half pipe line when he should have made a 36-inch pipe line.

World War II threw in more and more capacity. Then we had the postwar boom; so that last year, in 1950, our gross national product was \$280 billion. There was a 25 percent deficiency in national purchasing power. Our national budget for last year was how much? Seventy billion, wasn't it? Armaments and everything included, or, in other words, equaling the deficiency in national purchasing power.

The inflationary spiral that we are in today in Canada and United States bears no relationship whatsoever in its symptoms, trends, or characteristics to the inflationary period of Germany, China, or any other place on earth for the simple reason that in plain monetary inflation you merely change the indices on the price tags, the numbers on the bills, but that the physical process goes on the same; while here, we take the taxes out of the populace to support free enterprise and to build new plants and new equipment. And the new plant capacities that go in are more modern, more highly productive than anything that ever went before.

Try and visualize, if you can, the physical process of producing physical wealth for thousands of years was so slow that a bond issue had to be on a hundred-year basis. Why? Because human toil and hand tools could not create a great enough increment annually to pay off the interest and principal and amortize it out in less than a hundred years; so, therefore, so long as the world had those conditions, there was no hope for 95 percent of the population of this country or the globe, so long as the production of physical wealth was dependent on human toil and hand tools.

In the last fifty years, the acceleration has been terrific, and you might say -- copying Hollywood -- in the last twelve it has been colossal. The Corrigan Plant over there in Cleveland, the new paper plants in the south -- remember that their amortization basis is not 100 years. If they run at 75 percent or more of capacity, they pay off in less than thirty months. We have equipment operating today in United States -- for instance, there is the Greenlee outfit, it costs around \$1.8 million. This is a small case. If it operates at 75 percent or greater of its capacity, it will pay off in 5-1/4 weeks.

Here is the capital payoff time, where for thousands of years it was only once in a century; namely, you could only pay it off and reinvest your principal once in a century, once in a hundred years. That rate has been multiplied by science and technology to where it is now -- with the latest equipment in United States -- 964 times a reinvestment of the original capital in a century.

Not only does the modern application of science and technology produce more and more in the way of physical goods with less and less man-hours, but it reduces the capital payoff time to weeks. Where are they going to reinvest their money? Why, they're going to reinvest their money in still faster capital payoff times. You begin to see it? In fact, the only thing they have left for large blocks of capital is to invest it in selling the present equipment short by putting in new ones.

One of the members of the Continental Board is chief of design of the world's largest hydraulic press -- 68,000 tons per square inch. It requires to feed that press an extrusion press of

22,000 tons per square inch several floors below ground and several times that number of floors above ground, but with those pressures -- did you ever see a spaghetti machine work, where it comes out in a flood? Well, you can put stainless steel in that press and it will come out just like spaghetti. And our armed forces down in Washington said, "Well, if it can do all this, let's order fourteen of them!" They don't know what the hell to do with one, let alone fourteen!

How did it get to be 68,000 tons? We'll tell you. They took a model down to Washington. They had it in the Pentagon Building, and the chief question regarding it was, "Well, what have the Russians got?" That was the main concern of the top brass of the United States, both political and military, when they were told that the world's largest press up until now had been built in Germany and operated in Germany, but that the Russians had removed it and that it was 33,000 tons. They said, "Well, let us have one twice as big as what they've got." I'm telling you this to show you how asinine -- not a question of a technological requirement -- oh, no. Do you require a press that large? It doesn't make any difference -- how big is the one the Russians have?

Well, what could you do with a press of that size? If you want a side of a freight car, a whole side, whether you want it out of 3/8 metal or 1-inch thick steel, it doesn't make the slightest bit of difference -- oomph -- one side, just as fast as that, as fast as you can touch the trip and take your foot off. Want an entire top half of a wing of a plane? You do it in two halves and put them together. Well, it does that just as fast. You say, "Wait a minute, it's 200 feet long." That doesn't make the slightest bit of difference: it will do it.

General MacArthur said the boys would be home by Christmas, didn't he? They're not anywhere yet, are they? They're still there, and, of course, Hazardous Harry, when things get too much for him, he goes for a trip on the yacht. Well, don't blame him, it isn't his fault; he tries. After all, when he was a road commissioner down in Missouri, he went in to Big Tom and said, "Boss, I'd like a transfer to the tax department." He said, "Well, Harry, what for?" "Well, he said, "I've got to have more money. I've got to have \$1,500 a year more." "\$1,500?" "Yes," he said, "I really need it. I've got to have it. How about it,

boss?" "Harry, we'll make you a senator." And he said, "Boss, I don't want that. I just want a job in the tax department." He says, "Hell, Harry, I said we'd make you a senator. It doesn't matter what you think about it. You'll be all right. We'll elect you," Well, they did, and the public is just as happy as if he weren't elected.

No, it's a pretty sad and sorry situation nationally. You try to realize that our foreign policy and our internal policy -- if you can use those words at all -- are a matter of one expediency after another. We're always trying to get out of one hole into a larger one. I don't know whether any of you ever remember "Ben's Father" cartoons in World War I. They were on the front page of a number of magazines, where two of them were down in a shell hole, one with the old walrus moustache and the tin helmet on, and one is cursing blankety, blank, blank, and so on, and the other one says, "Ah, what's the matter with you? C'mon, Bill, if you know there's a better hole, go to it." The trouble is they don't. No wonder they're frustrated.

What kind of a situation have we? What's our productive capacity, and where do we stand nationally, and where do we stand internationally? We have so much distilling capacity in United States today that the distillers of USA -- leaving Canada out and not including that of liquor held by liquor stores, saloons, and distributors -- if they never made another drop of liquor, they could supply the present national consumption for eight years and four months. Whose figures are these? The National Distillers Association. Even they admit they're goofy.

Automobiles you'll find all over the country and trucks. The same situation exists in farm equipment, construction equipment. They had auction sales of construction equipment the other day, and there was so much construction equipment, they were disappointed. Some of it only brought the price of scrap. Good equipment.

Well, the National Cash Register is known around the world. It has a few competitors, yes, but there's one cash register in United States for every 32 Americans -- men, women, and babies. "Marvelou," isn't it? Is there any future for it? Well, not unless you have one in the Johnny and one in the kitchen and one in the dining room.

Here's this word "saturation" coming up again. What does this country do with one for every 32 Americans? Do we need that many cash registers? Oh, no. Well, 56 percent of the income of the National Cash Register comes from abroad today, not from United States and Canada. The only hope they have left is somewhere else in the world, not on this continent, their own home. The Burroughs adding machine has completed a beautiful new plant over on the Clyde in Scotland. They're making parts for the machines in United States now, and the new improved Burroughs adding machine, which will be marketed the world over, will be made in Scotland, not in USA. Homo Sapiensus Americensus -- mostly SAP.

Here we have supplied the money and the material in gigantic underwriting both during the war and since. We've held up Italy, Great Britain, France, Belgium, Holland, Denmark, Norway, Greece, and Turkey, let alone all of South America. We've pumped approximately \$6 billion into Chiang Kai-shek's National China and equipped how many divisions? Over 100 divisions. Where are they today? Well, Chiang Kai-shek is in Formosa but the divisions we equipped have a star on them. And you have the Peiping radio used to broadcast during the fighting that Chiang Kai-shek was chief of their supply division, and they would thank the United States for supplying the arms.

Syngman Rhee in Korea was out of Korea for over 30 years -- almost 35 years. He lived in Austria and married an Austrian. Start thinking, will you? An out-and-out reactionary, he cannot even speak good Korean anymore. Bao Dai lived in France and married a European. Here, we in United States, in the last 12 to 15 years, have underwritten every reactionary bum around the globe.

Now you go to any Chamber of Commerce and any Board of Trade meeting, and they swell out their chest and they think they've done pretty good because it's brought them more business. Yes, temporarily it has. United States funds have under construction, completed or will be completed before spring, oil refineries in Western Europe that will have in excess of one million barrels a day refining capacity that did not exist there before. We've built new steel plants -- how many? What is the steel capacity of the rest of the world exclusive of the Iron Curtain? Why, even

Germany is in excess of 12 million tons a year -- Western Germany. Britain is running between 17 and 18 million tons. We've stepped up what? We've stepped up the resource consumption by installing American plants. The money was supposedly to go over there. No. Most of it was spent here underwriting American private enterprise to supply them with brand new equipment.

We've had Technocrats who have been all the way practically around the globe installing new equipment -- a cement plant in the Philippines, 150,000 tons a year .... from Milwaukee. Oh, yes, we've built the Volta Redunda in Brazil and two other steel plants. The Armco is building a beautiful new steel plant in Argentina. A \$100-some million plant in Chile is completed, but we're also building steel plants in Venezuela, Colombia, and Peru. The Arthur G. McKee Corporation of Cleveland has the \$46 million contract for the brand new steel plant in the Republic de Colombia. Now there's a joker to all this -- just have a laugh. The only coal in Brazil comes from the Rio Grande de Suel. It's of such high moisture and high sulfur content that you can't coke it. So, in order to get coke for Brazilian steel plants, we have to ship them 65 percent of the coal requirements from US coal. The only other place they can get it is from South Africa. Buenos Aires and Rio are running on South African coal.

Over in Japan, where they had a steel capacity of 11.7 million tons, the Japanese have paid out tremendous sums in research for years trying to find the process that will coke Japanese coal. They have two different coal deposits. They are high cost and they are non-coking coal. In spite of all their research, they have never discovered -- and won't -- a process to coke Japanese coal. But Japan is a little better than Brazil. They only require 55 percent of American coal to make coke.

Japan, previous to the war, was the great cotton exporter of the world. Japan was the greatest rayon producer of the world prior to World War II. In 1939, Japan exported 2.3 billion square yards of cotton goods a year.

Japan's population is moving higher and higher every day, while its empire has shrunk to the original islands. There are 84 million population in Japan today, an annual increase in excess of 1.6 million a year. It has no iron ore. It only has a little oil, about 2 to 3 million barrels a year. Who is going to supply

Japan with iron ore, with coal, with cellulose, that is, cotton, wood pulp, and other metals besides copper. Japan has excellent copper. Are we going to do it? Well, we're short. We're running out of copper, lead, zinc, hematite ore, and petroleum. United States is no longer a surplus oil producing nation. True, we're doing 6,200,000-odd barrels a day, but then our consumption is well over 7 million a day, and we're importing a million a day, and this, of course, is where Iran comes into the picture.

US and the British are finished in the Middle East. They might just as well get out now and get out gracefully before they have to do their face up in burnt cork and get out in the dark of the moon in low gear. It's only a question of time. Iran has passed its nationalization law and means it. We've exploiting them, whether it's the Chinese or the Iranians or where. We've looked down our noses at the yellow race or any other race. We were the big wheels of the globe. Why, sure, didn't we make more automobiles than anybody else on earth? Didn't they say that in Detroit once? They're still saying it.

I'm trying to give you in a very short time and a very sketchy manner a sketch of the process of the trends that are going on. The United States and Canada of today are not the Canada and United States of 1914. They're totally different. Back in the early thirties -- before the late twenties, when I was taken through the first strip steel plant, they showed me with pride where it was running at the marvelous rate of 480 feet a minute. Yes, that was pretty good, considering that it had never been done before. Your Jones & Laughlin strip steel plant is rolling at 6,800 feet a minute. The designs on the drawing boards now for the new steel plants call for 10,000 feet of 160-inch width steel a minute -- 70,000 horsepower motors. It only requires 12 per shift. Well, why not? This is what Technocracy has been trying to drive home.

You're moving up in every single field. We have a plant today -- a couple of them -- where the invested capital in equipment -- not in building or land, but in equipment -- is almost \$3 million per employee. Isn't that wonderful? The only reason they have the employees is because they have no control over the gathering or the disposal. If they did, it would be completely automatic like an automatic power station. What do the employees do? They look at meters and they read books and funny

papers. I've no doubt they even read Buck Rogers, because they have plenty of time on their hands.

Well, this is the trend. Remember there's only a few of these, but the trend is toward that. Textiles and steel are two of the most backward, obsolescent processes industrially that we have. The old spindles and looms -- everybody is familiar with them. We've had firms in this country building our textile machinery for years. Yes, there was some improvement. Up in New England, they built the Draper Double X loom. When the Japanese came over here some years ago and wanted to buy Draper XX, no, sir, we're not going to sell our beautiful textile equipment. So, the Japanese went out in the open market and bought up secondhand junk, took it over to Japan, turned their engineers loose, and out came the Toyota loom, 2-1/2 times faster than the Draper XX.

When the Golden boys tried to sell their process in shoes to the United Shoe Machinery Corporation, of which there is no other, no, they didn't want it. They were making money fast enough. So the Japanese took them to Japan and gave them the equipment, the aid, and the financial support, and just before this World War II, the Japanese were shipping shoes to London and to Europe generally for next to nothing a pair. Why? Because every time a sawed-off Nipponese slammed his foot down on the trip, he put the soles on 262 pairs of shoes in one bang! The Goodyear process? Well, why sew them if you can put them on with a hydraulic press. Simple.

After all, nichrome steel came to the automotive industry not because of any vision or judgment on the part of the executives of the automotive industry of the United States and especially of Detroit. The engineering departments had all approved of it, they had all made tests of it, but a consolation party was given out here at Grosse Point Yacht Club, and after four double martinis, the wife of one vice president comes out in the nice sunshine of the last of June and -- we'll say his name is Georgie -- she said, "Georgie, I want that.." He said, "But, darling, that's an experimental test car," She says, "I don't give a damn; I want that." And in order to shush her up, he shipped a brand new Cadillac to be made that way: and when all the other vice presidents' females saw that one, they had to have it, too. So, the nichrome steel came to the automotive industry. The female is pretty powerful, in United States.

No matter what field you're in, the same trend is on. In catalysis in chemistry and synthesis, we're going to knock the roof off in the next two years. Cortisone from Mexico, yes. But now your latest announcement from Britain is you can synthesize it from toluol cheaper than that. Well, why not? And we can build chemical plants to make it just as penicillin. Remember when penicillin was way up on the roof? You could still sink it a lot lower, but you're making it on mass production.

Where is all this leading to? We've all got automobiles, radio sets, and refrigerators out in the kitchen. Of course, if you're really in the dough, you've got one of these great big 20 inch, the latest tube out is a 32-inch tube. Use the wall on your bedroom. You don't go to the movies; you have a show all by yourself. I don't want to give you any bad ideas.

Our elections, of course, in United States are coming next year, and the powers that be would like to keep this inflationary spiral moving up, at least until election.

Abroad we're taking on every bum that we can find: Franco, the King of Greece, Chiang Kaishek, Bao Dai. If there were any more bums around on the international scene -- oh, I forgot Salazar of Portugal -- we'll take on Reran, we'll even make Evita vice president. Why not? Good looking dame. Besides Buenos Aires, it's far enough away that it doesn't matter.

Well, is Franco going to be any help to us? No. A resource-deficient nation -- internally it's in a bad way. Would the Spanish fight? Yes. Would the Spanish fight the Russians? That we don't know about. They'd sooner fight the Spanish.

Will the British fight? Why should they, they've 'ad it. The West Germans, they've been liberated, too.

Over in Korea, they've suffered the greatest desolation of any acreage on earth. Over 10 million homes have been destroyed, over 3 million South Korean civilian casualties, let alone 265,000 to 300,000 of the South Korean military; of course, when we mention Korea in the press, they forget to tell you that 12,000 of the United Nations forces went AWOL. Yes, sir. They're not listed as casualties; they're listed as missing, if at all.

They're not listed in the official missing list. Why? Because they're AWOL, aren't they? Right. Therefore, they're not missing and they're not dead. They're just AWOL. To show you that figures do not lie but liars can do some awful figuring.

Well, what are the chances? The whole propaganda is that Eisenhower is going to build up a defense of the west. To impose an armament race on Western Europe means lowering the standard, means increasing the living cost and impoverishing the nations of Western Europe whether they wish to or not. Try to understand that.

Norway is in just as bad a position regarding food as Britain. The Norwegians have to go to Sweden to get a meal. Of course, if you're a Churchill in Britain, you can get your income from the articles in LIFE paid to you in Portugal and go over to Casablanca and paint pictures, but the rest of the 50 million-odd Britishers cannot. They have to live on their austerity. They've done a marvelous job in Britain in revamping a lot of things. Remember in Britain today, they have less strikes, less man-hours lost due to labor disturbances than has ever been in British history. Their health is better. But what do you hear in the US press? Why, that Labor-Socialist Government is b-b-b-b-b-b -- they're bringing the British to perdition. The only trouble with the British Labor Party is they didn't carry the revolution far enough. They'll have to complete the process or go down. And next month, you'll receive some indication at the TUC -- Trade Union Congress -- and a further one at the meeting of the Labor Party in October. Manurin Bevin is sweeping the British Labor Union into his fold and support. If he succeeds, you can kiss the Atlantic Pact goodbye, because it won't be even good tissue.

Some financiers a little while ago asked me about Eisenhower. Well, Eisenhower has gone to bed twice in the last couple of months for some days. Look at his face and he shows it. He isn't going to make the grade. He'd better come home before they bring him home. Eisenhower is a commander with a war record, yes, but he was no strategist. Politically he's a smoothie. A smoothie is one who always shaves a posterior before he kisses it. I'm not deprecating him unduly; I'm just giving you the label of what he is.

Do you expect a Taft or a Dewey or a Stassen or a Warren in

the Republican Party or their like members in the Democratic Party to solve any of our national problems -- or international? Is there that kind of leadership in any political party in United States or Canada today? And the answer is no, there isn't. The unfortunate part about our national political leaders in Canada and United States is that the stumblebum at the top is only as good as the stewbum at the bottom, except he's a little cleaner. We've gotten into a mess in Korea. We're into another one in Iran, and we may be in another one in Indochina; and if we can get the British to land troops in Egypt and Iran, we'll be in a swell mess in the whole Middle East.

Some of you have children -- some of you have relatives -- in the armed forces. Well, you didn't quite know what they were fighting for in Korea, but if they go to the Middle East, they can at least die for the dear old Standard Oil. That's something; but it isn't going to solve our oil situation. Failure of one or two oil fields in United States -- remember, we haven't got it anymore. We're drawing in over a million barrels of oil a day, and we'll shortly have to pull in two and more millions a day. What's going to be the petroleum consumption in United States in 1952 if you run the automotive industry at its present rate of production, plus the other industries that produce engines -- tractors, boats, etc, planes? The fighter plane of World War II that consumed 56 gallons an hour, well, what does its jet counterpart today consume? Two hundred sixty gallons an hour.

We have advocates, Senator Lodge and others, who are advocating a 180 Group Air Corps. That means a lot of money. And if the Air Corps can get that allotment, then the Army and Navy are not going to have anything left. That means a war budget of \$100 billion a year. Isn't it lovely? If you think you're paying anything now, wait a while.

You know there's that old story about the man who was caught in an embarrassing position in the wringer. Well, wait until he jumps on the handle! Your inventories are going higher, and in spite of the transfer over to armament work, we are still accelerating our production of consumer goods. With the new plant capacity going in, it's 8.7 million kW being installed in your utility industry this year and in excess of 12 million kW new capacity for next year. Isn't that going to be wonderful -- there's going to be power galore. Canada, of course, is doing its

share and will come right along with a lesser amount, of course.

The steel industry is going to be between 120 and 130 million tons a year. Of course, right now we're consuming for tin cans -- about 24 to 26 billion cans, not millions, billions. The days of millions are gone. You're just a piker if you talk in millions. The old hothead, you know, who used to blow his roof talking about the millions -- can't do it on heroin anymore, you've got to go to Washington. Well, this new capacity that we're throwing in -- power, steel, chemicals -- every single field, by next year, we'll have sufficient capacity in United States to produce a gross national product of between \$340 and \$360 billion compared to \$280 billion last year.

In 1950, there was a national deficiency in purchasing power of 25 percent, but when you run the GNP up to \$340 to \$360 billion, the deficiency will be nearer 29 percent. Then what do we do? Raise the wages again, raise the salaries, raise the prices, the railway rates, the express rates, the telephone rates, and raise the taxes to pay for it. Well, how many times can you do this? We're running near the end of the rope. Remember that famous fight that the two negroes had? Razors were very sharp and they made passes at each other, and one of them said, "You didn't touch me." The other says, "I didn't touch you? Man, just wait until you shake your head!" Well, that's more or less the position we're in.

We want war in United States, I regret to say it. A limited war or an unlimited war in a limited area such as Korea is not big enough. We want an unlimited war of indefinite duration around the globe because we require war to hold up this inflationary spiral. This social and economic system of ours, in other words, today requires war to hold it up; and our point is that any social system that requires war to maintain it, we'd better get rid of it before it gets rid of us. I'm not speaking of peace from a standpoint of Russia or any other place. The prerogative of this continent, that if we had spent the money we've squandered in the ratholes around the world in the last ten years on this continent, it would have rebuilt the continent of North America -- rebuilt it from soup to nuts.

Instead of a 4'8-1/2" gauge railroad system, we could have had a 3-meter gauge. We could have had a continental hydrology

underway and a great deal of it completed. Now, Canada is getting so mad that she proposes to build the St. Lawrence Seaway herself. More power to her. Canadians are rather funny people. Out in Saskatchewan, they're building a dam at the elbow on the South Saskatchewan. Now I can't tell you how it happened, but the elevation of that dam when completed will be exactly the elevation of the dam that we would require for a continental hydrology for the later flooding of the Qu'Appelle Valley. Well, maybe we can do it by indirection.

After all, look back at the history of this organization. We were the first to advocate the cotton picker, the sugar cane harvester, thermodynamic heating, centrifugal casting of metal -- why go on? Remember when Henry Luce in FORTUNE published the front cover of TECHNOCRACY MAGAZINE in 1935 or '36, saying that the Technocrats are using the cotton picker to frighten the American bourgeoisie? Today, of course, Henry's magazine is publishing full page ads in color of cotton picking companies and their production. There's a funny way of boomeranging; and, of course, the things that we said down south then have come true with a vengeance.

When we pointed out to the southern states: put in the equipment, and the problems which, you now have which are peculiar to the states south of the Mason-Dixon Line, you'll have no longer; because those problems will become the problems of the nation. When you can pick cotton so cheap that you can't even afford to rehabilitate the poor white -- and the negro with them -- then the poor white and the negro are going to leave the southern states, and those states north of the Mason-Dixon Line are going to have that problem -- and there's empty housing in the south. Well, where did they move to? They're moving north and west -- and why not?

After all, whether they're black or green or yellow, whatever their color is, don't forget they're Americans, and they're our problem and nobody else's -- and there are 13-14 million of them. After all, you can't talk, like Lincoln did, of sending them back to Africa. There are too many of them. Besides, up north, the politicians have discovered they've got votes.

Now, if we had 5 million Mohammedans in United States, why we'd pay off to the Mohammedans for their votes. We pay off to

the labor bloc, the farmer bloc, the railroad bloc, the power bloc, the mining bloc -- very soon we'll have to pay off to so many that there's no payoff left.

You can run any racket under a Price System provided that you can pay out 80 cents of every dollar you take in. Everybody is willing to get in that kind of racket, but when you can pay out only 20 cents, they leave you for greener shores. Well, we're headed to it. We're not going to solve it by Christian Conferences or new elections, because you're going to elect just another set of jackasses slightly different from the ones you had previously.

When anybody proposes that we Technocrats run for political office, bear that in mind. It's got to be a physical change of conditions. Howard Scott in the White House wouldn't be worth a damn -- not today or any other day. The White House might be a historic building, but let us in our thinking leave it as a historic building, a nice building for antique Americana.

There has to be a change of concept on the part of the public. The public of United States and Canada has enjoyed the greatest prosperity mankind has ever known. They're apathetic on one hand and they're scared to death on the other. They're frightened they're going to find a "red" or a subversive under the bed or under the washbowl.

You go to any bar or restaurant, what have they got? They have the television or radio turned on so loud that you can't even hear yourself drink a glass of beer. You ask the proprietor, "Well, do the people like this?" "Oh, yes, yes, they like it." "If you turn it off, what would happen?" "Oh, no. They want it turned on." "Well, what do you think they want it turned on for?" Well, some of them are a little more observant than others, and I'll tell you. The reason they want the radio or the TV on is so they can say something to the one next to them and it won't be overheard, because they're scared to death to say anything even to themselves.

Try to picture to yourselves the entire complex of the American scene. United States today has 3 million less employed in agriculture than it did in 1946. The employment -- this is total employment -- the total employment in mining is declining.

Has the total employment in manufacturing risen? No, but the output is rising. Now those of you who belong to labor unions, you have pension plans. You also have those with pension plans who do not belong to labor unions. The present pension plan, of course, is merely tacked onto the price, but in most cases of company pension plan, the pension plan is not transferable from one industry or one company to another. The pension plan should not be corporation pension plans; they should be federal. Let's get that clear, because all this is doing is just tucking it in, just the same as the present amortization policy of our armament industry where you're permitted to amortize out 25 percent a year. How is that done? The 25 percent is added in, then the profit and depreciation is calculated on top of that. You begin to see it? Wunderbar! Oh, magnifique! And who pays for this? The average citizen of the country pays for it, and the trouble is, he's such a self-satisfied dumb jackass, he doesn't know it -- and he wants to elect him back into office so he can get more of it.

Now with the new equipment going in, remember that's a very small percentage of the total equipment we have, but the little man is getting squeezed tighter and tighter, whether he's the little businessman, the little farmer, or who he is. Figure up the national scene: where are the 62 million so-called employable employed? Where are they? They haven't increased in agriculture, they haven't increased in mining, and they haven't increased in actual manufacturing. Well, then, there must be a terrific increase in all these parasites, these fleas on the backs of lesser fleas -- you know, and so on, ad infinitum. A terrific increase, yes, but you could only maintain that kind of an increase provided there's a continually increasing spiraling inflation. So long as you can add it on today and collect tomorrow, but there comes a day when you cannot carry it any longer, and we're rapidly approaching that.

Our national situation is not one that is going to be critical 25 years from now or 10 years from now -- oh, no. Washington and Wall Street hope to God that it won't happen before election. They're trying everything possible. The only trouble is that we haven't been able to start a big enough war anyplace to pump enough in -- not that war would cure it, oh, no, just temporarily. It sets aside the so-called civil powers and the ordinary rules; in other words, instead of playing straight

poker, you play with all the cards wild, and when you play cards on that basis, it's an infinitely short time to where the cards have no spots at all. Then what do you do? Well, that's what Forrestal faced, that's what Dugan, Wynan, Sumner Welles, and all these people psychologically faced. Forrestal jumps out a window, Wynan blows his brains out, Dugan jumps into a snow bank, but he missed it. Bidauit in a jail cell arrested by the FBI, he got a gun somehow, so he shot himself. Another one was found in the Potomac with his throat cut. Charming people, aren't they?

They talk about juvenile delinquency and the dope traffic. Well, anybody that has any knowledge at all knows it's very simple. After all, there's one simple way to handle the dope traffic. You just open federal clinics. You fingerprint and register all the addicts and you get it free. Very simple, isn't it? Then you know who they are. They don't have to pay for it, but does anyone want a solution? No, they don't want a solution. They just want a new gang in. You change collectors, in other words.

Juvenile delinquency -- what are they trying to do? They're trying to blame it on the parents and the home. Well, that's a very skillful attempt to pass the buck, but they're hypocrites, because the home -- what home have the kids got, if the parents, for instance, have to hold two jobs in order to maintain it? There are more married women employed in outside occupations in United States today than there are single women, and there's a terrific number of married women and married men holding two jobs apiece in a vain attempt to maintain the so-called home under the rising costs of this system; and then someone has the damnable impertinence to suggest it's the parents' fault, that they should train their children.

I'm trying to give you a series of pictures. Here we as a nation are in a dangerous position in the resources of petroleum, of copper, lead, zinc, and hematite ore. The hematite ore in the Mesabi for a World War III on the same consumptive basis of World War II does not exist. CHQ has advocated ore from Labrador and Venezuela for years; in fact, it was 1920 when I was consulting engineer and wrote that report on the Mesabi in which it was stated that, "The Fe content of the ore bodies in the Mesabi and Cayuna Ranges will decline as a function of depth and the economic feasible ore, if continued at the existing rate of

consumption, will be exhausted by 1950." I lost my valuable account, United States Steel, because Judge Gary said that my report was inimical to the best interests of the steel industry of United States -- 1920! Well, too bad the judge isn't alive. One of us would have a laugh. His brother, you know, was a faith healer. That's a fact, he was. Not that the judge went in for that kind of faith.

We're faced with a similar situation in every single field. Now try and realize that the traffic jams at the Pennsville Ferry were not due to the immorality of the thousands of car occupants; it wasn't due to any juvenile delinquency; it wasn't due to any deterioration of their spiritual health -- it was due because thousands of Americans carrying out their legal right wanted to go in the same way at the same time. They landed in a jam. Well, millions of North Americans all want to go in the same direction today at the same time. They want security, they want peace, and they want some psychological-emotional stability to the economic and social order into which they can be human beings with some integrity. Today, you can't make the grade and have the slightest vestige of integrity left. You can only do it by undermining whatever stability you have and breaking all the laws. You know it and I know it.

This technological avalanche which we're headed to -- we've been carrying this on, as you know, for a number of years. We have made minor errors of omission, but strategically we have made no major errors of commission. It's pretty difficult to maintain it -- the position. It's tough in your community, and it's just as tough at CHQ -- \$35.00 a week less tax is \$30.90. That is what we all get. A stenographer doesn't get any less than I do. Now you can say that's maybe one of my crazy slants, but I prefer people who are going the same way as I am, that burn their bridges behind them. I don't want anyone in CHQ with any reservations on anything. That's hard, I know; and, of course, some of you accuse me of being a cold-blooded monster at times. Well, if I had been one of these flabby emotionalists, we'd have stepped into a lot of traps before now, brother, because platinum handcuffs are very easy to take but they're damn hard to get rid of.

We have tried, and we have maintained the integrity of the organization be where it is -- Hawaii or Alaska. They send in

money from Alaska to send them literature -- bundles of it -- by parcel post express. That costs them a small size fortune to ship it up there by plane, but, after all, they're Alaskans and they pay for it.

Stop and think of the influence that we have had. We've done it with money -- we've gotten into political office? No, but yet we've had more effect on this continent and its thinking and of the world than any organization ten times our size and a hundred times or a thousand times our economic wealth -- which is what? You find the British publications today using our phrases. Where do they get them from -- out of the NEW YORK TIMES? Not exactly, the NEW YORK TIMES belatedly admits.

I'm glad to announce, of course, that one of the worst of all Americans, William Randolph Hearst, passed to his just reward. I have the original telegram, signed in his handwriting, which was sent out to every Hearst official that the name "Technocracy" was not to be used under any condition whatsoever. They were subject to dismissal and severance from the Hearst organization if they did so. That I consider one of the nicest mementoes that we have.

Don't forget that during the war the G2 came to see us, and they had just received from abroad the first photographs of the German Tiger tank, the Mark VII, and the Russian Stalin tank, and they said, "Mr. Scott, do you think that the Germans and the Russians could have gotten hold of Technocracy's tank design?" And I said, "On what basis do you make that statement?" "You know the Stalin tank has a 122-mm. gun in the turret and Technocracy called for a 120-mm. gun in the turret, only 2-mm. difference." "Well," I said, "after all, you had full knowledge of our tank; it's quite possible." It didn't quite dawn on them for a moment what the implication was. "You mean that officially it leaked?" "Well," I said, "after all, we told them nationwide. You had it but didn't do anything with it." So it kind of hurt a little. "And," he said, "do you know what the latest rumor in Washington is? That the Communists in United States follow the Moscow line, but that Moscow follows the Technocracy line." I picked up the phone and spoke to Miss Dennis. I said, "Would you bring a pail in here?" She said, "A pail? Good heavens, Chief, is anything wrong?" "No, no," I said, "bring a pail in. I want a pail." She brought in a pail. I said, "Give it to the general and take him

out to the tap and turn on the tap and get the latest pailful from Moscow." I mean, how stupid can you be?

After all, we had an American who developed smokeless powder. He never got a break here. You know him historically much better as Sir Maxim -- the Maxim machine gun. An American -- he had to go abroad to get any recognition.

One of the best tank designers the world has ever seen died of starvation during this war with two of his tanks in the US arsenal. You'll notice that the suspension of the Stalin tank the Tiger Mark VII MK IV is different than ours, but they're a copy of the American designer that died of starvation. The foreigner could copy our brains but we couldn't use him.

The chief medical officer on Guam went out there before the war. We were having dinner with a number of others, and he said, "Well, what do you think?" "Well," I said, "if this war -- it's pretty sad because the Imhaus fuze you have in your anti-aircraft batteries -- the gun, the rifling had to be adjusted because their German clockwork mechanism -- and our rifling was so fast, too many turns, so we reduced the rifling in order to accommodate the Imhaus fuze -- the net result of which will be that if the Jap planes sail overhead, your ack-acks won't reach them." And his wounded out on the beach were bombed with the ack-acks going full blast. Their bursting height had been reduced quite a few thousand feet. We had a perfectly good anti-aircraft shell and the timing mechanism by an American, but we couldn't use that. We had to buy the American rights from an American corporation of the German invention!

What's the matter? Haven't we any brains in United States -- we that produce all these beautiful automobiles with all the chrome gingerbread? The answer is: the brains aren't in the right place. You have to be a politician, a racketeer, or something else today to have it count, and we're in that unfortunate position that, unless this country develops a new type of leadership and a new type of thinking -- remember, it isn't the Russians, the dirtiest thing the Russians could do to us is leave us strictly alone, and we'll pile it so damn high, we'll be up to our eyes in it. It's tough. Who's doing the situation today -- the Russians? No. The Russians are carrying out their own strategy, their own skullduggery. We're the ones that are going

to make it tough for North Americans. Why should the Russians come over here and bomb anything? For the simple reason: In Greater New York, the metropolitan area, there's the greatest density on the surface of the globe of chiselers who can do more damage to this continent than all the atomic bombs the Russians have. Think it over! And yet you have damn fools -- successful men, but they are damn fools. Hoffman of Hoffman's Ginger Ale out in Clinton, New Jersey, goes into the side of a big hill and builds a gigantic bomb shelter that you can drive trucks into. We were over there. The average American hasn't any such money to build bomb shelters. We're going to stay and face not the bombs but the increased cost of living and a transition -- a social transition -- which is going to be painful, and the danger is it may be totally anarchic. God help this country in a crisis if it's going to be managed by Republicans, Democrats, and the businessmen of United States.

---

QUESTION PERIOD

IT'S PURELY CONJECTURE IN THE CIRCUMSTANCES YOU HAVE OUTLINED TONIGHT, BUT WOULD YOU GIVE US YOUR VIEWS OF CHANCES OF US GETTING INTO A WAR WITH RUSSIA? WILL THEY GO FAR ENOUGH?

Will who go far enough, the Russians? Well, where are the Russians? They're not in Korea; they're not in Iran. I'm not defending the Russians, don't misunderstand me. I've no use for the Russian system, political, economic, or otherwise, and Communism may be radical enough for the Old World, but it's so damn far to the right on this continent, it's bourgeois. It smells like the American businessman. We get that farm, I'm going to raise big dogs, and they're going to bite a businessman in the dark by smell.

I mean try to understand this. What we are proposing is something so far beyond Fascism, Communism, or the so-called free enterprise system that it's hard to visualize. The Russians don't like us either. Why don't they like us? Because, after all, we're up at the top of the board; they're only "meanies" down here. What's the size of their agro-unit? 2,500 acres. What's the size

of ours? Around half a million, isn't it? We should bother with that junk? Who wants to go back to a Model T? Could you give Model Ts away today, let alone any other car? Well, we have the equipment on this continent; we don't have to copy the Russians or the Italians or anybody else. Let's, for heaven's sakes, be American and develop something which is endemic to our own science, technology, and our own geography and climate and people.

Now as far as war is concerned -- what? They'll try every damn thing on top of earth to get a war. After all, in Korea the whole world was told openly by China that if you cross the 38th, they would not tolerate it. Just as in these truce negotiations, we opened the invitation on the basis that the 38th parallel would be acceptable. That statement was made by Marshall, by Acheson, and by others, and with the truce negotiations underway, we proceed to sabotage it. Now I hate to say it about my own country, but it's a pretty lousy way to conduct any kind of negotiations. What in hell difference does a piece of Korean territory mean compared to the life of a single American? The territory is what? Just a little piece like this north of the 38th. We had to go to the 38th anyway to accept the political status quo ante.

Well, all right, are we going to lose face by retreating a few miles? They would also have to retreat, because they're south of the 38th in the west end. Oh, no, we can't do that. We're trying to stir up trouble in every conceivable place. We undermine governments, we bribe officials, we've done our damnest to create trouble with Pakistan and India. After all, Pakistan did invade Kasmiri -- Indian territory -- and does India get any of the Marshall Plan money? India had 2 million troops in World War II under arms. Did she get any gift? No. She asked for it, and after almost two years, she gets a loan of \$20 million. Can you blame the Premier of India for saying, "If we had been an enemy and an adversary, we would have received your bountiful aid?"

In other words, all over the globe the term "America" is becoming one that's not wise to be associated with. And who is doing it? The American policy is doing it. We are the ones to blame. We permit them to go ahead. Name me a single Protestant Minister in United States that in his sermons has come out and

made any direct unequivocal declaration. Name me any leading citizen of any city in any state. Is there one? If there is, we've never heard of it, and I'd like to know the man.

The only reason that we haven't got war with Russia is that Russia isn't where we think she is. After all, they didn't tell you the truth in the last war and they aren't telling you the truth or the facts now. Russia didn't have any guns in World War II. She didn't have any artillery; she didn't have any tanks; she didn't have any planes. You get a British aviation journal today and what do you find? The new Russian twin-jet bomber has 2,600 pounds thrust per engine more than any jet engine we have. Remember, that's not my opinion. There are so many blunders now, the Russians retreat. We keep it up, we'll make a blunder all right.

WHAT WAS THE NAME OF THAT SUBSTANCE USED TO MAKE CORTISONE?

It's a wild sweet potato -- big, this size. It's "beeta de negro", I think it's a Mexican term. It's a wild sweet potato, poisonous variety, that grows in the jungles down there, and the original discovery of that extraction was from an American who was in the Sapogens Corporation. He was in Penn State College, and then they squeezed him out of Sapogens.

I CALCULATE THAT THE DOLLAR WILL BE WORTH 31 CENTS AFTER THE NEW TAX BILL GOES INTO EFFECT. HOW DOES THIS STACK UP WITH YOUR FIGURES?

Well, that's hard to say. There's a lot of guessing, except that it will be lower than it is now, and why worry about whether it's 10 cents lower or 20 cents lower -- it will still be lower. I mean, how low do you have to get before .... In other words, do you have to be like that old-time thing that you're down so low you can reach up and touch the bottom? I mean -- not that I'm making fun of the questioner, don't misunderstand me. What I'm trying to show you is it's irrelevant whether it's 31 cents, 41 cents, or 21 cents -- it's less.

YOU SAID THAT FRANCO COULDN'T DO ANY GOOD FOR THE UNITED STATES. WHAT REASONS HAVE WE GOT FOR ALLYING WITH HIM?

The military theory is that the Pyrenees would be an

impregnable line of defense. The political reason is that we want to prop up Franco. I don't know whether there would be a religious reason or not. Of course, the five largest banks in Spain are owned by the Society of Jesus. You see, the Pope used to be the Vicar of Christ. That's the claim of that ecclesiastical hierarchy and probably there was some substance to it; but today, that's no longer so. Then, as Vicar of Christ, he used to be able to talk to God directly, but he can't talk to God any more, because it seems that God only speaks Russian these days.

You see, what Europe resents about the Franco thing is this: France has been liberated, Belgium has been liberated; so has Holland; so has Germany -- West and East -- Austria, and Italy; and, if American military policy is going to use the Pyrenees as a line of impregnable defense, that means that the seat of Christian civilization, Western Europe, exclusive of Spain and Portugal, will be liberated again.

You see, how far are the Russians from Hamburg -- do you know? Twenty miles -- 20 miles from Hamburg. In other words, they're 30 minutes from Hamburg. Now as far as the Gallipoli and the Dardanelles, you mustn't figure over 4 or 5 hours. If the Russians did fight a war in Europe, they wouldn't have to declare a war on France or Belgium. They would take Austria, Northern Italy, and West Germany; of course, when they entered West Germany, there would be about 17 million who would go west. And in North Italy, about 10-12 million would go south of Bologna in the Apennines. Well, that part of Italy with 12 million more -- they can't feed themselves now. They have three million unemployed, and they're trying to buy coal from United States at anywhere from \$22 to \$47 a ton. All you'd need is 12 million more Italians shoved on top of the Italians that are already there. The Russians wouldn't have to go there -- they'd just put the Italians there.

The same thing in France. They wouldn't have to go to France; they would just shove all those Alsatians and West Germans over; and even if we did take France and Italy, we'd have to have a greater number of American soldiers there to suppress the population than to fight the Russians who wouldn't be there.

Of course, the Vatican would move; so would all the large

banks; so would all the reactionary population, nobility -- they'd move or else. But I don't think the Russians want the -- what would they do with Italy? Even the wops don't want Italy. They want to come over here or go to Argentina or Brazil. They don't want it. They know what Italy is like. Did you ever see Italian women going out to hoe the fields or a little Italian town? They know what they're up against. It's a Christian civilization and what a smell! You've got streets in Naples so darned narrow that I can't walk through them with my shoulders, but there's a sewer right down there where you walk.

Now anyone who was born and raised in Italy knows what I'm talking about. If you want to mention any particular place, we'll go to that. I'm not deprecating the Italian. I'm trying to show you what conditions are there. Why should anybody want a resource-malnutrition of Italy, that hasn't the resources, that can't feed itself? France, yes, can feed itself. Spain hasn't got the resources. Why, if you've got a pair of shoes in Spain, you're rich.

IN YOUR OPINION, DO YOU THINK THERE'S ANY CHANCE, SUPPOSING WE EVENTUALLY HAD FASCISM, THAT THE HEIRARCHY IN THE VARIOUS PROTESTANT SECTS COULD OVERCOME THEIR ANIMOSITIES AND GET TOGETHER WITH THE ROMAN CATHOLIC HIERARCHY -- I MEAN IN UNITED STATES?

Don't forget in Germany you had an acquiescence of the so-called Protestant clergy to the Fascist proposition. They acquiesced. Was there a Protestant church in Germany that openly fought it? No, because it was good business. Even the Jews who were chased out of Germany wanted Hitler to feed it. Why? They wanted to go back to Germany to get their business back. You see what I'm driving at -- the psychology. In other words, the bourgeois of Germany thought they were smart. After all, that this was a way out of their difficulties -- Fascism; but, after all, German Fascism died on Russian soil. The Red Army did 85 percent of the casualties in Europe. Ask the German youth and the German men, the ex-soldiers and officers of the Wermacht, as our intelligence has done, and what do you get from 98 percent? We fought them with the best we had; we're going to sit this one out and watch you do it, brother.

No, Fascism is always the last resort. You have an attempted

Neo-Fascism now, you see? A little modification. They inquire as to what you think now. Of course, the mistake of that with most people is they just don't think, so they're wasting a lot of paper. But they're putting in all these measures, you see, which are suppressive measures, surreptitiously coming around to this and that -- your school system, civil employees, employees in industrial plants -- all this pressure and you eradicate one so-called American liberty after another. Do you have a decent trial today? Well, maybe if you steal a few million, but not if you have an idea.

After all is said and done, the whole "Red Menace" of United States could have been solved very easily and straightforward: All Congress has to do is to pass a law declaring the Communist Party illegal in United States and abolishing it. Do we do that? No, we don't do that. We want it wide open so anybody can be smeared up as a subversive or something else.

You know what every small town is. If some woman is seen out in somebody else's car (the Chief whistles). She's just a tramp from then on. Well, that's the way we are. After all, our actual morals are no different from anyone else, but we are holier-than-thou all around the world; and it's propaganda that we want to lead the world when we build the lousy, damnable shacks for Americans right here outside of Detroit or any other city. Look at them, and on top of that, that's what we want to build for the rest of the world? Good God!

YOU SPOKE OF THE COMING ECONOMIC BUST AND THAT THE "INS" WERE HOPING IT WOULD HOLD OUT UNTIL AFTER THE ELECTION. WHY -- BECAUSE THAT WOULD PUT THEM IN A PRECARIOUS SITUATION?

No. You see, the American public is so constituted that if it gets something wrong with its individual or gets a pain in its intestines, he goes to an expert. If there's something wrong with a car or the machinery, he goes to an expert; but when it comes to the tremendous problems of running this nation and this continent, what does he do? He wants to exercise that God-given stupidity and he goes down to the ballot box and puts the ballot in and then he comes back and says, "Well, I cast my ballot. I did my duty," Once in four years, isn't it; then he doesn't want to be bothered about it again. Yes, sir. He's gotten rid of that for four years more. Do you see what I'm trying to put over to

you?

Now that's the psychology of the public. They'll get all wrought up about the election as to which one or the other goes into the office, but the real problems of the country are not discussed in any election. It's a game to pass them over and kid the public. That's why they want that. They think, you see, that if they can get it past the election point, there will be something else come up that we can have another Kefauver Crime Commission and drag 'em in.

FRANCO, DURING THE SUCCESS IN THE CIVIL WAR, LIQUIDATED ALL THE COMMUNISTS, SOCIALISTS, AND LABOR LEADERS, THEY SHIPPED THE JEWS OVER IN WORLD WAR I AND GOT RID OF ALL THE PROTESTANTS AND FREE MASONS, AND, AS MOST FASCIST COUNTRIES, THEY LIQUIDATED EVERYBODY EXCEPT FASCISTS. WOULD THAT INFLUENCE OUR POLICY TOWARDS FRANCO?

That just goes to show you how dumb the Masons were. There you are. A few years back I addressed one of the largest meetings of the Masonic Order. I'm not a member of any fraternal order myself, please bear that in mind, but by invitation. They were very horrified and very shocked when I stated that unless they changed their perspective and vision, the day would come, if these trends that we stated were correct and they stayed on the same side of the fence, that the march of events would take those damn diapers off from around their waist and wrap them around their necks. Well, what? Who's doing -- who's representing any forward thinking or any social perspective? What does this organization propose? We propose from soup to nuts -- railways, cars, commodity terminals, continental hydrology, waterways. We don't want this cockeyed waterway they want now with 27 feet. Let's have it so we can bring the boats of the world up and control the level of Lake Erie, Lake Michigan, Lake Superior, and Lake Ontario. Let's lift 60,000 tons up and 60,000 tons down the 326-foot difference between Lake Erie and Lake Ontario in 15 minutes instead of 8-1/2 hours. The technology of this continent can do it, yes. There would be a different sight in the Detroit River out here, wouldn't there?

I'D LIKE TO MAKE REFERENCE TO THE IDEA OF 5,000 YEARS OR 50 CENTURIES OF CHANGE AND MORE CHANGE TAKING PLACE IN THE NEXT FIVE YEARS THAN APPROXIMATELY THAT TIME. COULD YOU CLARIFY

THAT MORE?

No, I don't think we said more change.

WELL, WHATEVER YOU DID SAY.

That's different. That the next five years in United States and Canada will be more socially decisive than the previous centuries, and the next ten would be the most conclusive. Quite a difference.

THAT WOULD BE A CHANGE IN BASIC FUNDAMENTALS?

Oh, if you can't ....

WE HAVE HEARD THAT UP UNTIL RECENTLY AT LEAST ALL UN FIGHTING IN KOREA HAS BEEN DONE WITH LEFTOVER WORLD WAR II EQUIPMENT. DO YOU KNOW HOW NEARLY CORRECT THIS IS?

Well, there's a great deal to that, but also the North Koreans were doing with leftover Japanese equipment and leftover Russian equipment. So what? We formed the Republic of South Korea. Remember that during World War II, the Russians invaded Korea both by land and by sea -- amphibian, and were in Seoul before we got to Korea. I don't know whether you know that or not. So we set up the Republic of South Korea. We equip and arm the troops of Syngman Rhee. The Russians set up the People's Republic of North Korea. Well, they equip and arm the troops of the 9 million population of North Korea, while we do the same thing for the 22 million in South Korea. Now it's goose for the gander; it's sauce for the goose. So don't let's call them any names for doing what we did. Both did the same thing. So we supplied the South Koreans with military materiel and weapons, and the Russians and the Japanese -- their leftovers -- supplied the North Koreans.

The tanks that we met over there are the Russian T-34, which is a light medium tank. The big Russian Stalin -- 122-mm. -- they've never showed up -- they haven't been there. And the Russian 152-mm. howitzers which, according to our own Ordnance Department and Hanson Baldwin, military critic of THE TIMES, outrange our United States 155 -- they haven't showed up. Nor have the Russian 240 long-barreled rifle, automatic loading,

Schneider compensator on the muzzle and cooling -- that hasn't showed up. Neither has the Russian 300 or the Russian 498, nor the big Russian anti-aircraft gun, which is somewhere around 110-mm, but is automatically loaded. They haven't showed up.

So, while we didn't have the latest that we had in stock here, we rushed over the new bazookas. We rushed over some other things, but we haven't got the most powerful; neither have the Russians in the struggle. They both have, say, second-hand equipment.

AS A RESULT OF THE DEVOTION OF OUR ENERGY TOWARDS THE EXPLOITATION OF THE AMERICAN PEOPLE ABROAD TO MAINTAIN THE PRICE SYSTEM, OUR PROBLEMS INCREASE HERE IN THE U.S. WILL THIS NOT MAKE US ARRIVE AT AN IMPASSE HERE SOON AND NECESSITATE OUR FACING OUR OWN PROBLEMS, THUS AUTOMATICALLY RETIRING US FROM THE INTERNATIONAL PICTURE?

I'm afraid that question is kind of complicated. Certainly. There was a day when you could say in United States, "Well, we didn't care what happened someplace else." But we have to look elsewhere for our manganese and our copper and our lead, zinc, and oil and hematite ore. The world is short of sulfur. Yes, a new discovery of a sulfur dome down in the Mississippi Delta -- well, that will help a little as far as US is concerned, but it's only 500,000 tons; but there's a 5 million ton shortage.

Now have we as citizens ever really faced a problem collectively speaking? After all, the original political revolution -- what kind of a revolution was it? After all, it was led by a gentleman, the richest one in North American -- at least he was married to the richest woman in North America. He wasn't a general; he never did know how to do anything like that. Remember he surrendered out here near Pittsburgh, once by himself and the second time under Braddock in exactly the same place practically. There were a few generals in the Revolutionary War. One of them got so disgusted that he turned traitor. Clark drank himself to death, and Morgan -- it's kind of dubious what happened to him; but none of those ever became famous in US history. So we never faced the problem that was brought up by the Equalitarians in the Declaration of Independence and sabotaged by the Constitutionals. They got away with it.

The War of 1812, Texas, and the Mexican War, and the war between the states -- we never faced the issues, the underlying issues before this country. We evaded them by taking in more territory. "Go west, young man, go west." And now the only west to go to is the Pacific Ocean, and there "ain't nothin' there." As a lot of you discovered that were in the forces out there, you don't want any part of it.

So as a public we never have collectively faced a fundamental issue in our history. It's going to be a little difficult for us. Imagine facing a national and continental issue in United States without a television in every John. Just imagine. That is the sad part of it. Wells I'm trying to show we never had -- we will be compelled to when situations force us to. And then what are we going to do? We're going to become as we do usually -- hysterical. And the first lot that screams for something, well, that's going to be by-passed; but when it gets to 10 million or more that demand something and demand it fast .... After all, they're voters and the politician that doesn't want to try and get out of this continent on high gear, because it's a long swim to the next continent -- he wants to stay here.

Now we're trying to provide through this organization and its literature a social perspective. You have hundreds of thousands of people in United States and Canada know about Technocracy. Privately, oh, yes, we're correct. "Well, not at this time," and so on. Well, who's going to convert them? We're not going to convert them, but the march of events are.

Always in a crisis, you know, the organization that puts its social objective up to the top of the board wins. That's a history in psychology, because everybody else is going to try and shove their ante up to meet it. The closer they get to our ante, they surrender. You get it? I don't want to tell you all the answers.

TOTAL CONSCRIPTION TO ME LOOKS LIKE IT MIGHT BE ANOTHER SHUFFLE OF THE PRICE SYSTEM IN MONETARY TERMS. NOW COULD YOU CLARIFY THAT?

What do you mean "another shuffle in the Price System?" If this country has to fight a war on half a dozen fronts without

any allies, they'll have to conscript everything they've got. Now nowhere in the press of United States or Canada have they ever fought us on the issue of Total Conscription. Do you notice it? They drop it. They can't call us subversive. We're the most patriotic organization in the country. Under Total Conscription, nobody makes any profits, nobody makes any money. There wouldn't be any debt or bonds or inflation. Well, what do you think if you had Total Conscription in for three years? There wouldn't be any war and you wouldn't have the present system either.

IS IT POSSIBLE THAT THIS PARTICULAR [OIL] SHORTAGE IS AT THE BOTTOM OF US CONNIVING WITH THE IRANIANS TO THROW OUT THE BRITISH THAT WE BROUGHT IN?

No, it isn't a question of our conniving with the Iranians. You see, we are in Maury Island and Quatar and Kuwait. The Anglo-Iranian Corporation operates the giant refinery at Abadan which is the largest in the world. It has a capacity -- it has been running at -- in excess of 700,000 barrels a day -- not the 490,000. And one of the "niggers in the woodpile", using that phrase, is that the internal machinery of the gauges on the main line were set three times the figures on the faceplate in the Iranian oil field. To put it mildly, the Anglo-Iranian owes the Iranian people more money than the total capital investment of the Anglo-Iranian Oil. There's only 82 wells that produce all the oil in the Anglo-Iranian field. With the thousands of wells we have, we only average 12 barrels a day per operating oil well. Venezuela does three to four hundred. Iran is 4,000 per well per day.

The Anglo-Iranian owns 23.75 percent of the Iraqi Oil -- that's your big oil company of Iraq. The Iraqi Oil owns outright the oil development of Quatar. The Anglo-Iranian and the Gulf Oil of United States 50 percent each operate Kuwait. And what is worrying United States GAP IN TAPE which is Arabia and Barea Island. That here are the Iranians going to get away with 100 percent GAP IN TAPE one of the great sedimentary basins in there. That's a great sedimentary basin and a great thickness. In Baku you -- have seven oil stratas, one below another.

And while we're at it, the sedimentary basins of possible geologic holding for oil in Russia is three times the sedimentary basins of the United States and just as thick, that is, in depth,

as our sedimentary basins.

WILL THE PRESENT WORLD TENSIONS .... NOT TO BE RELAXED IF WE  
HAVE AN ECONOMIC CRISIS HERE AT HOME?

Well, the only answer I can give to that is somewhat ironic, because the progression of this country has been from the covered wagon to the melting pot and the snake pit -- I mean, psychologically what? What's it all about today? You have more divorces, you have more youth in your delinquency and crime, highway accidents -- all the others -- and your psychiatrists have more patients and there are more beds in the hospitals of United States occupied by mental patients than there are by anything else, and more on the way.

[A QUESTION ABOUT FASCISM IN UNITED STATES]

Well, they can always attempt it, but to run this country on a Fascist basis -- you see, Europe froze the peasant to the soil, the old Salic Law, the law of primogeniture. Land couldn't be mortgaged or sold; it had to descend to the eldest son. It made a nice pyramid up here with your political hierarchy, your ecclesiastical hierarchy and your economic hierarchy at the top of your pyramid based on a frozen human toil, hand tool base. You haven't got that here. After all, who's the proletariat in United States -- you ever see one? No, oh, no. We're an entirely different nation than the European, and we follow different physical characteristics. Our animals are different here, although they may be the same kind. Our animals here have big heads and big forequarters and small hindquarters. The European animal has a smaller head and smaller forequarters and large posteriors. Now when they get in a storm, they put their large posteriors to the storm and go with it, but the big-headed American animal -- the buffalo, the elk, the caribou, and the bear -- they put their big head into the storm and go against it.

So here we're a nation that only has one aspiration: we all want to be chiselers and we all want to be bourgeois. We all want to sit in that Cadillac with a Corona Corona and have everybody else but us do something. Now that's the wrong kind of a social and industrial climate on which to base Fascism. Because in Germany, for instance, Zimmerman -- that's a carpenter -- well, Zimmerman by name wanted to be Zimmerman for his life and his

son's life and his grandson's life, because his great-great grandfather had been a Zimmerman -- been a carpenter. They were content provided it was just a little bit better. Just as in your European farmhouse, the real farmhouse, the peasant piles his manure in the front door, and the larger his manure pile, the richer he is. Just try and find the manure pile on the American farm.

Well, here's an entirely different thing. They've been conditioned and patterned for centuries to certain rituals and certain discipline. Now discipline here, someone says, "Discipline, what's that?" Now every German knows when it says, "Es is verboten." He knows, he understands that, he knows what it is, but when the American sees the sign -- so and so forbidden -- "What? Who in the hell does that guy think he is anyway?" After all, over there, the man is head of the house. In United States, what is he? Down in the office or the plant, he may be a big shot, but, by God, when he drives in his own driveway, I won't name the end of the animal, but it's part of a horse. Now you know it to be so.

Just as in any community in United States -- elect the man next door? No, you know what he is. You're not telling anybody, but tut tut tut, you know. Now there's no cohesion. We're the greatest joining nation in the world. There are 19,000 organizations in the State of New York that have to do with tax reform, ballot reform, and others. I'm talking of registered organizations. You say, "My God, is that possible?" Oh, yeah, but wait until you get to Illinois; they have 32,000. As you come west, it gets better and better. We're the greatest nation of joiners on earth. For what? Well, we don't know, but ....

Now, go in at lunchtime to any Rotary Club or Kiwanis. They've got the big buttons, you know, up here, and they stand up and put their hand over their heart and repeat the oath to the flag and then they say a prayer and then they sit down. Well, now, they've done their little bit for the week. Of course, if they're American Legion and can go to a convention, why, they get away from the womenfolk. The reason why a lot of men go to war. No, you have to admit it, face it. How many people do you know in your community, if you're living outside of a big apartment house, that have any independent position. No, they conform with everybody else on the block.

In Europe -- those of you who know Europe, can you imagine on a Sunday in a small German agricultural town or other, a German woman leaving town just to walk, to take a walk and do nothing else but take a walk just to see ....? No, no. She's got to have a basket or a tool or something else. She's got to walk to do something. Work -- high moral purpose. Now you know that.

What's the mathematical percentage of real rebels in United States? Well, I'll tell you. It's about 0.0004 of 1 percent. I'm talking about intellectual rebels who treat the values with contempt. Someone gives them a Cadillac, the average person, well, they've arrived. The only thing they dream of next is a fur-lined terlit. Oh, I mean this is part of the whole stupidity. Who's built this up over the last 50 years? Do our students at a university go through to acquire knowledge and learning? Oh, no -- points.

You blame the ones in West Point? No, it goes on in every college and in every university. Every fraternity has all the -- at least not every fraternity but the real good ones -- have all the past examination papers and all the questions. They do it everywhere. Why, do you know that I was once offered \$75 a week to go to two American universities -- very important ones -- and when I inquired why how that was done, "Well, we could play a game of billiards, a little game of cards once a week." I happened to have an ability to kick a field goal from 55 yards out. Well, naturally, it could have paid off -- didn't have to have any scholastic ability --- all you had to do was kick a football. Who's responsible for all this? You know it.

Little Junior is out here playing with a bunch of kids. Nice bright, sunshiny day in the better class suburbs -- not the low-class ones, the better class -- and he's jimmy and he's about 9-1/2. And Bobby, who's about 11-1/2, he's quite superior; so Bobby calls Jimmy's father something and Jimmy hauls off and smacks Bobby for a row of gilded ashcans. Well, what happens? All the mammas of the respective children rush out and grab them -- the little brats -- and Jimmy's mamma, just like every other mamma, drags Jimmy in and says, "Jimmy, you mustn't strike Bobby!" "But, ma, he called dad so and so and he called me a liar. I took a crack at him." "But, Jimmy, you've got to understand you mustn't strike Bobby." "Well, mom, but why not? I don't get it." "Jimmy,

Bobby's papa is daddy's best customer." And right then you've made a heel out of yourself and a hypocrite out of your offspring because what? The parents didn't have guts enough to stand up to a position.

[A QUESTION ON IMMIGRATION]

Well, they're coming in here. We could support a lot of population provided we didn't have to give them any work to do. We're supporting millions of people around the world today who are not working here. Encourage people to come here? I think our position is quite clear. I think before we become magnanimous on a world basis that we ought to clean up our own house and our own backyard, and that when we've established this country and this continent on a sound fundamental basis -- not on a 10-year plan or a 5-year plan, but on a 100-year basis to where there won't be any droughts, that is, of continental significance or there won't be any epidemics, and where everyone has education wide open to him limited only by their ability, and to where there's a stable operating physical mechanism continent-wide for the production and distribution of this abundance -- then I think we can be magnanimous and offer to take in 250,000 students a year free as guests of the continent and educate them for four years, and may God have mercy on their souls when they return! I mean we could do it with no tax at all -- I mean tax in the sense of burden.

[A QUESTION ABOUT NONPRODUCTIVE OR OVERHEAD EMPLOYEES!]

How many of you here have ever been inside a big flour mill -- Pillsbury No. 5, for instance? You have? Well, it's quite high, isn't it? You come down through the various floors and you look the long run -- you didn't see any employees -- but when you got down to the office, there was a magnificent big office. Well, our investigations are a close approximation, but, after all, we don't have a complete checking on them, but the great employment in there is in their office, financial, and supervisory staff. Only about 24 percent of their employees are actually engaged in the production of flour and handling of flour, wheat, and grains. Most of them are engaged in conducting all the little operations that go with keeping track of the financial ledgerdmain of hedging in the grain market.

The same thing applies to the New York subway. The employees who generate the power, take care of the tracks, run the cars, and valet the upholstery and all the rest of it, they do not number 25 percent. The majority of the employees are engaged in taking care of the nickels and then collecting the nickels and then accounting for them -- several at each station, per shift, you know. Of the slightly under 4 million meters in New York City, most of the employment is engaged in the billing, meter maintenance-repair, and the collection of funds, not in the production and distribution of power.

So, before we talk about nonproductive employment, let's get down to what is productive employment. How many appliance stores have you in your community -- in other words, how many spider webs have you?

We have found out in experimental little surveys in maps that in a transition you could institute a distribution system by taking five blocks in New York or Chicago -- five blocks by five blocks -- that's 25 blocks; and you place all your stores in the center. Therefore, they only have 2-1/2 blocks to walk and your store distribution units would run through from block to block. Trucks would drive right clean through. Well, I don't know whether you realize what a reduction that would be, but the average reduction would be 38 to 1 and provide 24-hour service, whether it's lambchops, Grape Nuts, or what it is, it would be better than now and you would have a surplus of equipment left over. Thirty-eight times is now engaged to what would handle it under that system.

What is it we mean by nonproductive? We increase our federal employment, our state employments and our municipal employment. The tax revenue income from the states today is not great enough to maintain the existing roads -- we have so many miles of them -- let alone build the new highways that are required by heavy loading and high-speed traffic. The New Jersey Turnpike, whose bonds were bought by one of the great insurance companies -- the cost is \$2 million dollars a mile, isn't it? Isn't that wonderful? Where does it go?

WHAT IS THE DEAL WITH CARDINAL SPELLMAN'S OFFER -- SHALL WE SAY SANCTUARY -- TO NINETY STUDENTS WHO CAN'T BEHAVE THEMSELVES IN OUR MILITARY SCHOOLS?

That's playing politics in public. After all, they're human beings and they err. To err is human, to forgive is what? Take it away -- it's limburger. Now all you've got to do is have the Protestant Bishop of the Episcopalian Church make the same statement and the goo is complete.

DO YOU HAVE ANY FIGURES ON THE OIL PRODUCTION THAT THEY'RE DRILLING IN NORTH DAKOTA NOW?

The oil production? Well, they also have oil just across the line in North Dakota at Virden, Manitoba, just on the line, but so far the yield on those wells, it's down at quite a depth.

THE BASIN ISN'T BIG ENOUGH?

That I won't say, but the yield is not enough, to sustain anything as yet. They'll have to have a larger yield. But the big discoveries in oil are the new discovery in Tabasco in Mexico, the one in New Guinea, and the three big new oil fields in Russia 2,000 miles from the Caspian. Those are the big new oil fields. Of course, you have a whole basin there, but as to whether you can get oil in a big enough quantity .... You see, that first well there was 12,000 feet, and that was only a few barrels a day.

WE HAD A STATEMENT MADE IN MINNEAPOLIS BY A SO-CALLED EXPERT THAT THIS BASIN UP THERE WAS GOING TO PRODUCE AS MUCH OR MORE THAN ALL OF SAUDI ARABIA. IT WAS ON THE RADIO.

Well, your oil companies are frantic. After all, one of the Continental Governors of Technocracy is Associate Director of Research of one of the greatest oil companies of the world. We have some little idea of the way the oil company is thinking. They're financing more wells, drilling of more wells, more geophysical and geologic survey parties than they ever did in history.

Now the wells they drill -- if they can get the steel -- will run close to 45,000 and even greater this year, but the percentage of dry holes is climbing -- 34 percent; and of wildcats, only one in ten is a wet hole; nine are dry. In other words, the spots are going off the cards. You used to be able to

stack them like this and come on out with a certain percentage. It's all right playing chess, but when you put the squares in motion, the pieces no longer mean anything. That's the same thing here. There's oil there -- there's oil up through the Canadian Provinces and at Peace River, and there's possible oil on the west shore of Hudson Bay -- sedimentary there -- and other places; but as to whether it's there in sufficient volume at a depth that we can take it out is another matter.

If we have a failure in one major oil field of United States, that will be very interesting. If it's in two major oil fields, you'll have to make up your minds in United States where 80 percent of the population is going to get the gas to drive a car. What would happen? Who's going to decide all of this? The local committee of the Kiwanians or Rotary or Chamber of Commerce? That only the deserving Americans get gas for their cars. We're going to worry about Communists? Hooey!

[INAUDIBLE QUESTION]

Well, they always want to build up the resource because that's the basis for your bond issues. Remember I was let out of my contract -- a very lucrative one -- as consulting engineer, because I made a factual report based on thousands of core drillings, geologic surveys, and everything of associated companies, engineers, geologists, and everything else, and those were the conclusions we came to and I lost a very nice income. Why? Because the bond issue is based on something that was only going to last that long.

WHAT IS THE MAXIMUM DEPTH NOW THAT WE CAN GO ON?

Well, pumping -- if you've got the casing big enough to put it down there -- we can drill wells over 20,000 feet. You can drill them straight, you can drill them faster than you ever have in history, but that is not the problem. The problem is exactly the same as your giant calculating machine, Norbert Weiner, and others. You can build calculating machines that can calculate any problem and remember it, but that is not the problem of the people of this country and this social system. The problem is to find a human being of such standing to ask the machine an intelligent question.

Same thing comes up -- it's not a question of how far we can drill. Our modern rotary rigs with their high power and the high pressure air or mud or if you want to go down and burn your way down. You've got the new high frequency arc with aluminum, and it will produce a temperature equivalent of that of the sun and you can walk through granite like that with it -- only get a little distance away, because the molten granite will spray all over the place. You go down faster than any drill could. Of course, the Russians may be using atomic fission to blow up mountains. That's the best use for it.

HOW ABOUT THE WATER SUPPLY IN NEW YORK AND HOW MUCH FURTHER HAVE THEY GONE IN SABOTAGING THE FLYING WING?

Well, the water supply in New York -- we haven't got the water resources in the present water reservoirs. We're using more and more water. Do you know what people say down there? Show you how naive they are. Water? Why, there's any amount of water. All we've got to do is go up and take it out of the Great Lakes. That's actually printed in your papers. How many million gallons can you take out of Lake Erie a day before it starts to show? Here's your proposal just west of Chicago, the Fox River and beyond. How many hundred million gallons a day do they propose that the Chicago Metropolitan Area Water District pump out of Lake Michigan over the Fox River Divide? Who's crazy anyway?

They think water is something that is illimitable -- it's infinite. No, it isn't. Water should be farmed on a continuous crop runoff basis the same as anything else, but we take water out of the lakes or the rivers, the springs -- do we put it back? Oh, phooey, dump it in the sea, do anything with it. Put sewerage in it -- if you fall in the Passaic River, you're either poisoned or asphyxiated. You can't drown in it, it's too thick.

Your water consumption has jumped in every American city with air conditioning, more baths, more showers, more refrigerators. Have we increased the water potential any? "Oh, the Great Lakes are there. We just pull it out of the Great Lakes."

Now you have the same thing down through Ohio, and don't think it's just right here. The water table has fallen all across the continent. And you have it up in the Peace River, "They're

MEMBERSHIP MEETING, DETROIT,  
WITH HOWARD SCOTT

1951

not short of water up there." Oh, yes, they are. And then we blow up such things in the SATURDAY EVENING POST about the San Joaquin where we build the Shasta Dam, you see, and run the water downhill from Shasta, then we put in a giant pumping station with huge motors to pump the water that was uphill after we run it downhill to pump it up again ....

END OF TAPE

**THE WORDS AND WISDOM OF  
HOWARD SCOTT**

Volume 2

Technocracy Inc.

**HOWARD SCOTT** (April 1, 1880-January 1, 1970)

Mr. Scott is best known for founding the Technical Alliance and also Technocracy Inc. both of which he directed. Scott was an American industrial engineer noted for his efforts in the application of the thermodynamics and vector analysis of American mathematical physicist Willard Gibbs to the realm of economic and other social phenomenon. His 1932 essay on the subject of the energetic regulation of economy was *Thermodynamic Interpretation of Social Phenomena*.

MEMBERSHIP MEETING  
AKRON, OHIO  
WITH  
HOWARD SCOTT  
AUGUST 29, 1951

What I would like to do this evening is go back and give a slight review of the evolution of political and social thinking in United States. Some of it is going to sound a little strange. Of course, we are accustomed at this time of year to having the myth and the propaganda of the bretheren landing on the Plymouth Rock, which doesn't exist. They didn't land there at all, and the Thanksgiving -- of course the Indians had Thanksgiving for centuries before any European ever landed here; they always celebrated after they gathered their crops. They also had a type of celebration in Europe -- a different time of year, of course. Our Thanksgiving here is a little late, but then that's due to political interference. Lincoln, of course, pulled it the first time.

Now, if you'll remember our founding fathers -- most of them never had an idea of ever having a Republic of United States. They were engaged in high-class racketeering-smuggling, land stealing, and general freebooting. After all, my ancestors down in Virginia grabbed off all the land they could ride around in a day. Over in Pennsylvania, they got into trouble with the walking purchase, if you remember. That was permissible. The Indian never had any idea of property rights such as we have when he sold the so-called property. He wasn't selling the land; he was merely selling the hunting privileges. We took advantage of it.

Now George Washington was the husband of the richest woman in North America. He never had an idea. He was a gentleman Virginian, and most gentlemen Virginians never had an idea. I say that because I know my fellow countrymen. They are charming people, ladies and gentlemen, and they've never been anything else. Well, he didn't want to start another country. He had no idea of a revolution,

Thomas Jefferson -- well, he was a country gentleman. He advocated 50 acres for everyone. That was very nice of Thomas, because Thomas had 10,000 in one farm alone, and if you have 10,000 of your own, you can always be charming and noblesse oblige about other people having 50 acres apiece. These are the fathers of our so-called Democracy.

Hancock and the others up in Boston were engaged in the profitable racket of smuggling against the British Laws, and it was so profitable, of course, that several of them were up for apprehension. Don't you remember that Benjamin Franklin made that nice statement when he said, "Gentlemen, if we do not hang together, we'll all hang separately." What were they proposing to do? They were proposing to retire to the wilds of Virginia -- or now West Virginia -- and wait until it all blew over.

Well, a printer by the name of Thomas Paine wrote THE RIGHTS OF MAN. He had a few concepts of what political advancement of his time should be, but Washington, Jefferson, the Adamses -- go on down the list, Hancock, Carroll -- all the rest of them, no one of them ever advanced an idea and find one if you can. You can't; they never had one. Let's be frank about it and face it, because the population of the original thirteen colonies, there were only a few percent that were entitled to be called real citizens. Over 90 percent were what? Either slaves, indentured servants, apprentice mechanics, or renegades out in the bush.

Well, the original boys found it easy to deal in land titles from the King and to swap them between themselves. There was great trading in land grants over in London by those who never came to this country; and remember Washington went in for a nice little deal of 500,000 acres that were here on the Ohio, didn't he? Remember that? Nobody likes to talk about it except down home where we know all of them. We know their background. Down in Virginia, we don't think the Byrds are anything. Who are the Byrds, anyway? Just a lousy, bloody bunch of upstarts. They're like the Fitzgeralds in Ireland. The Irishman said, "Well, who are they? They've only been here 800 years!" Byrds make good cider. They did once upon a time, but now they got into politics and they don't even make good cider anymore.

Did any of the founding fathers have any idea of what they were to found? Oh, no. Finally some of them got together and you had the Declaration of Independence, the Equalitarian. That came out of the few, but the Equalitarians and the Declaration of Independence were sabotaged by the Constitutionlists in 1787.

George Washington -- what did he ever win as a general? Did he win a battle? Did he win the revolution? Yes, Cornwallis surrendered at Yorktown, but there were more French troops than

there were the Continental Army at Yorktown, and the French Navy, the French Fleet, under Lafayette, without them there would have been no surrender of Cornwallis. We had, of course, at that time the Revolutionary Army. We had three generals. One was Clark. He fought throughout the war, out here in Detroit, Illinois, and Morgan. We had one more -- Benedict Arnold. Benedict Arnold was so frustrated at the inefficiency that he turned traitor.

Clark, of course, after the Revolutionary War Congress voted him a jeweled and golden sword, and when he was presented with it, he broke it across his knee and flung it in their faces and went out and tried to drink himself to death.

George Washington, if you remember, was captured by the French near Fort Duquesne, and some years later Goddard -- in the same place -- was caught in the same coup d'état. I mean, how dumb do we have to be!

Now all of this is written up quite differently in the conventional history, and the conflict that was formulated between the Equalitarians of the Declaration of Independence and the Constitutionals of 1787 has never been resolved, and it's still here. The War of 1812-14, the Texas and Texas Republic, the Mexican War, and the War between the States are all part and parcel of an unresolved political conflict because we never followed through in our thinking. All this is germane today because it is coming up with a bang.

I had an uncle who occasionally had a lucid interval, and he didn't think states rights were worth fighting for in 1861. So he became persona non grata in Richmond and went to Boston. He believed in a lot of things as smelly as he did in Richmond, so he wrote several pamphlets summing up that the economic cost of the war to preserve the Union and states rights and to free the slaves would cost many times more than the economic development of the south, and you still had the problem on your hands after you won the war.

You see, I come by my tendencies naturally.

Well, after all, Sam Houston down in Texas -- the Austin and Long Agreement, the Empire of Mexico -- what were they? It was a contract to settle citizens in Mexican territory, then, of

course, Texas. The contract called for the settlement of Roman Catholics, which is only natural. The only trouble is that the signers of the contract on this side couldn't deliver that kind of religious persuasion. So, Santa Anna set up to teach them a lesson, and General Sam Houston, knowing his Texans -- oh, yes, you get the publicity of the Alamo and all that -- but Sam Houston knew that there was only one way to make his Texans fight: he retreated until he got between the two arms of the river. Then he sent his special squad around and they burned down the bridges behind the Texans. He sent them around the other way after the Mexican Army had crossed and burned them down behind the Mexicans as he had burned all the settlers' homes on his retreat. Well, his Texans couldn't retreat any farther and the Mexicans couldn't retreat; so, they had to fight. And he defeated the Mexican Army and captured the Emperor of Mexico. The Republic of Texas was born, but he knew his Texans. He didn't stay long in that position, because he went back to live with the Indians.

Now we've had a terrific expansion during all these years and yet here the political thinking of these United States isn't a great deal different than it was 100 years ago or 150. I'm talking now of the published and expressed thinking. I'm talking about the actual thinking of the individual. That's a different matter, but we're still believing in states rights. We still mouth all the nonsense of liberty. Oh, we love to proclaim that we're all born equal -- we're all for that; but we know that we are a little more equal than the rest of you. You find that all over the country don't you? Everybody is born equal, but we're a little more equal than the others; otherwise, we wouldn't feel good about it.

Down in Mexico today they refer in the press and on the radio to three social classifications: there's the "Cadiac,", the "Nylon", and the "Rayon". The Rayons are at the bottom, the Nylons the next up, the top is the Cadillac. That epitomizes the social classifications. In other words, you haven't arrived unless you're in the Cadillac class, and, of course, like those in the school class who were hit in the automobile accident and taken to hospital -- they were chagrined because they were hit by a Ford. No college student wants to be hit by a Ford today. It's all right being hit by a Cadillac.

Now Lincoln was a politician. He occupied almost every

political office before he got to the White House -- from Postmaster, sheriff, and a saloon license, he became the attorney for the railroad interests. He was for slavery in the slave states; he was opposed to slavery in the non-slave states. Comme ci, comme ca. He didn't split rails -- that's hooey. Nice little fiction. He wanted to build the Union Pacific three feet wide. It's over his own signature.

Mr. Thomas Jefferson -- even if Jefferson didn't lead the way in negotiating the Louisiana Purchase from Napoleon -- who was bankrupt at the time -- still Jefferson believed firmly and so stated over his own signature that west of the Mississippi wouldn't be populated in a thousand years.

What was their concept politically? Well, under the original constitution, only those who owned certain property could vote, correct? And women didn't have a "soul" in United States until 1846. That's the first instance of a printed word contending that women had a soul in United States -- 1846. So you females today, spiritually, you see, you have only had a background a little over 100 years old.

Bathtubs? Oh, yes, we had kind of a makeshift one, but they used to be handmade out of block tin, and a cabinet maker would black-walnut it. They cost around \$4,200 for the tub. Well, if they were still handmade by craftsmen of that time, none of you would be coming clean here tonight because you couldn't afford it.

Now try to realize that Pericles or any other Athenian statesman could have had breakfast with George Washington, and they would have understood each other perfectly because their concepts, their mode of behavior, and their values were identical.

We've moved up into another age, and it's only been within the last 40 years. After all, Senators in United States were appointed by the State Legislature, were they not, until 1912. Am I correct? You just never had an opportunity to vote for your senator. Now you can elect him; you can pick your own jackasses. And you've demonstrated that he's just like everybody else. Of course, in Ohio, you have honest politics -- you don't have gambling or crime!

Well, there's been skullduggery in every election from the first one down to today. Why kid yourself that politics are anything but what they are? Now if you realize that our Constitution is what? A contract, really, of confederation in which the economic channelization of the 48 sovereign powers are guaranteed to be conducted in perpetuity for the benefit of the prime holders of debt. That's the real essence of our Constitution, What? Change our Constitution? Not over our dead bodies! You've only changed it 22 times; you'll have to change it again.

We are the only major nation on the face of the globe whose political institutions haven't undergone a fundamental renovation in the last 150 years. We're the most outstanding anachronism of political institutions extant. Britain, Canada, Australia, New Zealand, France -- every other major country -- India is far superior to us. We squabble over every little county, every little police force, township, municipality. Well, so long as we had new territory to expand into, new economic horizons to reach, everything was wonderful, and we've had a grand time doing it. Oh, there was suffering along the road, yes, but we've never been really invaded. We've never had to fight for years. We've had it damned easy compared to a lot of other people, and our political thinking is going to change, not because Americans are suddenly going to become gifted with omniscience or superintelligence, oh, no. Look what we've done -- with the aid of modern technology, we've exploited our earth, our mineral resources, the sea, and everything around it. We've built up the greatest producing mechanism that man has ever known, and we haven't the slightest idea what the hell to do with it.

Our ministers in our churches are screaming about the materialism which they, the ministers, priests, and rabbis, enjoy. In other words, they've never had it so easy either, because never has the public of any country had such an income to divvy up to them. And the Holy Fathers for centuries had to go to outdoor privies. Now they can speak under very comfortable circumstances and enjoy the indoor plumbing.

Now it's getting more and more difficult to frighten the populace of this continent with the terrors of purgatory and life beyond the grave, and the nearer you come to abundance, the less

you can bludgeon the population with the fears of the abstract and something beyond this life. You can scream about materialism, but you notice that they all accept it. Why, the Vatican has its radio station; so do these other churches. They're all going to get in on television because they realize, as demonstrated by the last two political conventions, that never has the populace of this country been provided with such an opportunity to mug yourself across the country. And every single delegate at the convention -- what? Did he damn it to get up there and make some motion where the television camera would single him out for his constituents.

Well, one of our Americans some years ago once defined a patriot and a diplomat as an honest man who is appointed by his country to go abroad and lie about his own nation. We've never had to do much thinking as to whether our institutions were fundamentally sound or to what the next state of progression was going to be. You simply voted them in, and four years from now if we didn't like them, we voted them out. Now that was all right provided that there was always room for continuous expansion, always more resources for further exploitation and development; but, today, we have reached a situation that has never existed before. Writers, intellectuals, philosophers, and speakers have from time to time in the last century and a half talked about crises arising in American history. There never was any crisis, fundamentally; we never had a real revolution. We only had a political transference, that's all. The boys in the rackets merely shifted over and took over under a new name. You know how they do it here in Akron or in Cleveland. When they get pinched, somebody else -- the brother-in-law -- takes it over; of course, Governor Lausche ought to know. You didn't elect him, did you? Well, that is what's happened.

Yes, we've had great coal fields, great oil fields, iron ore bodies -- we had them all, and United States in 1820 was one of the great virgin areas of the world, and, brother, have we moved up. Well, we've reached a point that no other civilization in human history -- there's nothing to compare to it. There isn't any precedent to go by -- it's unique. Now there isn't going to be any long-haired Bolsheviks in the streets. Nobody is going to force you with that, but you're going to have change, not the type of change the Republicans are screaming about in the election. People in United States didn't want any change; they

only wanted a shift of gears. They're scared to death there might be a change. They thought if they changed gears, they might get on the "right" side.

Well, let's see if we can give you a picture of it for a moment.

Our industrial capacity has been increased by the greatest investment in capital goods ever known -- \$26 to \$27 billion a year. Canada is even doing a greater percentage. Now, if you had giant charts on the wall in front of you, your production capacity would be way out here in the tallest column, and then your actual production would be back of that -- a certain spacing, and your consumption back of that. In other words, your consumption is not equalling your actual production and your actual production is far below your actual capacity. Now so long as we had scarcity and also had the land and the resources, the water, and the manpower, and were not subject to attack by outside forces, you'd have recurring little cycles but you had no fundamental situation. We've never had one -- even the Civil War wasn't. They didn't know what they fought the war for, and when they finished with it, they didn't know where they were at. Well, here we are in an organization that has been battling for a number of years, battling for a new idea, not for a political party, not to be elected to any political office, and not to make money either. Well, it's a kind of strange proposition, but don't forget, ladies and gentleman, that there is a background for this. In 1830, there was a book that was a best seller of its day. In 1880, you had Edward Bellamy's "Looking Backward," a little greater development of the one in 1830. True, it was an artistic, emotional projection -- both of them, but they were on the right track. Technocracy comes along and starts a technical research and design which is entirely different. Now, we contended in 1920 that there wasn't going to be any revolutionary upset, there wasn't going to be any barricades in the streets, or in the '30s.

There were thousands and thousands who thought, "Oh, my God, it was going to be torn down overnight." You remember. We said no. Wait until you have the capacity and the abundance, then watch out how quick it will happen. We've had various little splinter things happen over the years. There's been things like \$20 every Tuesday and \$30 every Thursday, Upton Sinclair's EPIC

program, end poverty in California; Dr. Townsend's old-age revolving plan; the non-partisan League of the Dakotas; the Farmer-Labor Party of Minnesota; the Greenbacks; the Populists long before those; they flared up and died.

When the Civil War ended, yes, General Paret, General MacIver, and General Hunt reached the Mexican border when the Amnesty Proclamation was issued, and MacIver and Paret turned to Hunt and said, "Well, you have a wife and children; you can go back -- we'll go on." They served under Maximilian, and when Maximilian had to surrender at El Otero, they were allowed to march out with the honors of war. Juarez, of course, the Mexican executed Maximilian and the French generals, but those two went on and MacIver became Field Marshal for the armies of Emperor Don Pedro of Brazil. Paret, years later, moved out to an island in the Pacific with his famous bullpup gun. That was General Paret -- bullpup gun of the Confederate Army. When he died, the stars and bars were still flying, and the bullpup guns were still under the flag out in an island in the Pacific.

There were southerners who migrated to Brazil and other places, but there were no political ideas or philosophies that went with them. We never had any. We just did a "fittin" to be "fittin", that's all. Never knew what the hell it was all about.

Of course, over in Korea, we fight one day to take one ridge and then they take it away from you the next, and if you do take that ridge and ten more ridges, what have you got? You don't know. They don't know why we went there in the first place, they don't know why they stay there now, and when they come back, they don't know what they came back for.

We've never been in a really tough war. We've always been in a war in the last fifty years that was a walkover. Well, kind of a disagreeable thing; let's tear into it and get it over and get back home -- which we've done; but now we're in an interesting and peculiar situation. Our oil wells are going deeper every year. The number we have to drill are increasing. The yield per 10,000 feet of oil well casing is going down, down, down. And you say, "Well, what difference does that make? We're doing 6.4 million barrels of oil a day." Whoopee! Nothing to bother about. Sell them some more oil. Sell them some more automobiles. Well, we've got the automobile capacity up to 10 million cars a year

and estimate they would like to produce 5.5 million in 1953. That will shove the passenger automobiles in United States to practically 50 million.

Remember back before World War I? Well, there never was any traffic problem with cars and trucks. Why, no, you could start out and know you'd never get in a traffic jam. Now they get in a tangle on the Jersey Throughway and you have 14 of them pile up in one place. We're going to build more throughways, but it has reached that nice situation in the State of New York where if all the registered cars in the State of New York were placed bumper to bumper, there's not enough highway to take the cars. They would have to go over in another state. Smart people this, isn't it? We're so smart.

We have an oil refining capacity at around 7.8 million barrels a day. We're importing practically a million barrels a day. For the first time in history, we're building 40,000-ton deadweight tonnage tankers. Do you realize what that means? That means that we're building tankers the size of the Liner UNITED STATES, because it doesn't have the equipment inside of it that the UNITED STATES has -- 950 feet. What for? We're in a rush to build the world's biggest tankers. We have to pull the oil from someplace else. California never thought it would live to see the day when it had tankers coming in every week -- from where? Far off Sumatra, from Africa, with oil for California.

What's beyond in the oil? Well, nine out of every ten wildcats are dry. Their average depth is over 4,000 feet for every well and increasing. Thirty-five percent of all wells drilled are dry. The odds on discovering an oil pool with sufficient total production for one year's consumption of petroleum in United States are in excess of 1,000 to 1. Any gambler will take you on that basis. Even the dumbest cluck will never walk into a gambling house and buck 1,000 to 1. That's too much. But we have 158 million that are dumber than that, Let's face it. Where are we going to get it from? Let's have more trucks, more busses, more automobiles -- somewhere we'll find it. Eisenhower will talk to God and that'll be all right. He's a little closer to God than Harry was. Fixed it up with Archbishop Spellman beforehand.

It isn't a question of whether anybody likes these facts.

Technocracy doesn't make them. They're cold, hard propositions, and when people say to you, "Oh, we'll never have real radical ideas in this country, oh, no. Now, I myself am Republican and my father has been a Republican, my grandfather has been a Republican -- we'll always be Republican." Well, whether he's for the Democrat doesn't make any difference or a Republican.

If you have a failure of one major oil field in United States, what are you going to do? Are you going to tell 15 million car owners that they can't go to work tomorrow? Oh, no, you're not, brother, You're going to have more raving "Reds" or whatever you like to call them in 24 hours than Russia ever saw. "What! You mean to say I can't go to my job? I can't get the pay envelope to feed the wife and kids?" There's going to be action -- and they never even voted -- but they did drive a car.

Water is another serious thing. It's a problem all over Canada and United States, a serious problem. Yes, there's water, more water on the North American Continent than any like area of the globe. What we've done is what we've done with everything else -- the hell with today and let the devil take the hindmost! What's New York City proposing to do today? Why, come up here to the reat Lakes and lay pipe lines from Lake Erie -- take the water out of Lake Erie -- billions of gallons a day; and when you say, "What about the other cities?" "Well, that's up to them. Let them take the water out." See how anarchic this whole thing is? The Puritans were anarchists; they weren't tolerant. They were an intolerant lot of BBs. So are we. What are you going to do with all these cities? Only the big ones have the capitalization to put in the giant aqueducts. The little fellows are out of luck.

You have a city here in Ohio that's having a wonderful time for the last 60 years. They have a certain type of limestone formation below. It was pumping its sewage down in that limestone formation, wasn't it? It didn't have to have a sewage disposal plant. Whoopee! Now, what happened? Well, the bacteria count 50 to 60 miles away reached the danger point all because forthright American citizens in that Ohio city had taken the easiest way. They weren't doing anything wrong; they were just getting rid of the FAB. Now typhoid turns up miles and miles right around it and they're worried because they've got to put in sewage disposal plants.

Water? What did we ever care about water? We've got lots of it. Go up in the Peace River today in Canada and they're going 20 some miles for water. The water table has fallen all down the western plains, and it's fallen in California. California has had a wonderful time. The Bank of America has advanced money -- loans all over the place -- the [Grasti?] industry, backed by the Bank of America -- beautiful fields of green out there in the desert. You come up over the Hatchfield Rise and there they are -- stretched out -- magnificent. Now you're standing in the south end of San Joaquin Valley looking north, and that's the great California trough, 550 miles long, the small farms are on the east side, or your right, looking north on the map. Your big ones are on the left. Well, the Gross de Boers had the money to put in diesel and electric power and drill wells. Well, but they have gone down 369 feet since the last of the war -- 1945. Over on the left side, they're drilling 2,000 feet. Can you go much farther? Oh, yes, you can drill a hole 25,000 feet; that doesn't say you'll get anything. But if you try it, you should have a hole drilled in your head first -- save the country trouble.

We have water pollution. Well, it's the usual talk of the local board, the local county, or the state or something else, the fisheries, the wildlife. You know, there's any number of these things. Yes, you should put a stop to that, but the sewage goes out whether it's human sewage or industrial sewage -- it pollutes. We use the water up. We dump it out on the road to the sea where it can't be used again.

Well, water isn't illimitable; it's a definite, limited, physical reality, the same as our oil or our coal or soil or anything else. There isn't any political party today in United States that dares touch water -- fundamental water hydrology of this continent. Oh, no, we'll think up something, boys. We do the best we can. We'll submit it. We'll have Congress decide it. Well, what has Congress ever decided about water? After all, they're elected from states, and the boundary lines of many states are up the center of your rivers, aren't they? Couldn't expect to get any agreement regarding the Mississippi because the boundary lines of the states on the Mississippi are at the center of the Mississippi and the center of the Mississippi shifts. The boundary line moves over this way and moves over that way.

Now to really do a job on the Mississippi, let's look at it for a moment. It's around 870 miles. It's 470 miles by airline from New Orleans to St. Louis. It's about 870 to 890 miles by the river. If you straightened the river out, you'd take 400 miles out with the kinks. Well, but real estate -- the boys that are in the grab bag, some of those places wouldn't be on the river when you straightened it -- the new one. They would be up there, high and dry or over on the soil bank. That would ruin the real estate values. Oh, you couldn't do that. We've been building levees on the lower Mississippi for 300 years. To prove it to-anybody, all you've got to do is take a sample of their water at any given point and go a hundred miles downstream and take another sample, and you'll find the sedimentation content has increased. "Well, I know it's a problem, but you can't -- just can't do certain things to the river."

You can't have a St. Lawrence Seaway. It's all right to have one of those 12-foot things but a real seaway? Huh-uh. The railroads are agin' it, Montreal is agin' it, New York is agin' it, the banks are agin' it, everybody's agin' it. And the people? They don't know anything about that; they're not even interested. They're like the people in the San Joaquin Valley in California. They don't know nothin' from nothin', except when the water runs out and they scream.

We build a Boulder Dam -- pardon me, Hoover. We build it in the wrong place. Do not misunderstand me. The actual technical construction of the dam is excellent. It's efficiently done, but it's located in the wrong place. Why? Because it was located by politicians. It's put in Black Canyon. It should have been put lower down the river, and, of course, the State of Nevada and the State of Arizona -- the dam has to be built so that the state line will be exactly the center of the dam. States rights -- yes, sir! Got to have a powerhouse 50 percent on each side. Below Boulder-Hoover Dam, the river goes down like that and does a nice curve, a regular little hairpin loop. The dam should have been lower down the river, and then you tunnel through that and the powerhouses should all have been on one side. Ah, you couldn't do that -- that would all be in one state! Can't have that. My God! That would leave the face of the dam free for hydraulic lift locks. Got to fix it so it's a mess.

Now the same thing -- we're agin' planning. We can't plan

anything. Why? Why, it's socialism, creeping socialism. BUSINESS WEEK says so, COLLIER'S says so, SATURDAY EVENING POST -- all the press of the country. You can't do anything about conserving the production and use of oil, coal, minerals, iron ore, water, or anything else. Oh, no, it interferes with states rights, and we are going to hand the Tidelands oil back to the states.

Now you see, Lincoln was the baby that opened up the federal resources of United States for exploitation. That's why he's always so extolled. I don't know whether you understand that or not. There were a couple of amendments, were there not, passed by the Lincoln regime? They were responsible for opening wide the exploitation of national resources by private business. Remember Lincoln also said he'd win the election because they had enough land out there to give every soldier in the Union Army a quarter of a section and another one for his wife. Why not? It's there to give away. And we've had a fine time.

These problems that are coming up here, we've never had to deal with them. We could always avoid them by the expediency of some immediacy. We'd juggle it for the moment. There are two classes of people in New York City: those who stay awake all night because they can't sleep and those who stay awake all night to learn the angles. Well, we've been so busy learning the angles for the past 150 years, we've never had to do any constructive thinking.

Our railroads are 4 feet, 8-1/2 inch gauge. The Erie Railroad and the railroads in the southern states were all better gauge than that. Why has the Erie got the biggest machinery shipments between Chicago and New York? Because its right-of-way was the old wide gauge. The railroad gauge of the southern states wasn't changed until long after the Civil War. And while Lincoln advocated three feet for the Union Pacific, it wasn't design. How did you come to get 4 feet, 8-1/2 inch? Narrower design? Oh, no, that was the gauge of the stagecoach and milady's carriage in Britain, if you know. Yes. When they laid the first rails, they were just strap iron on timber. So they copied the same gauge as the carriage and the stagecoach.

You can't really design a passenger car or a freight car on a 4-foot, 8-1/2-inch gauge because no matter how you try it, you have to have a long girder construction, and you have to go up in

the air to carry the load. The center of gravity is way up above the rails, and if you try to hit any speed with it, she whips.

Now if you have a 3-meter gauge, or 9 feet, 10.1 inch, then you really can design a car and a train, and the center of gravity comes down below the top of the rail. You can hit 150 miles per hour average train speed and there's no whip. Six hours between New York and Chicago. You couldn't afford to run bulk passenger planes if you had that train speed, and your freight train wouldn't be any longer than they are now; but instead of 5 to 6 thousand tons, they would have 15 to 20 thousand ton loads.

Are our automobiles designed? No, we're still copying the carriage. Cadillac, your Packard, your Buick, any one of them, are they vehicles for transportation? Just look at them. In the same overall length, you widen the gauge out. You could really have a job. Why, it's senseless to have axles in an automobile. It's stupid. You've still got the engine in front. It doesn't belong there.

We engineers can design a car with a thousand less parts in it. Why don't we? We have. Well, what's the trouble with it? The same trouble -- the automobile industry wants a little innovation that it can introduce every year as additional sales to sock the public.

Well, now you've got cars up to 50 million. You produce 5.5 million more in 1953 and gasoline and street and highway operation have become a problem. Now it isn't a question any longer of who pays for a car or whether anybody ever pays for a car anymore. When you get over 50 million passenger cars in United States, it doesn't make a cent's worth of difference who in the devil owns any of them. Put them all on the road -- do you move? Where do you go? Do you go anyplace? Did you ever stop to figure it out? A nice little job if you've got an adding machine. Get your maps and your mileage and add them up -- 50 million passenger cars. They're yours, they're all paid for; they're full of gas, and you're going someplace. Oh, are you? Brother, you aren't going anywhere. Anybody going to stop you? Any dictator out there? No. You all have your own vehicle; you're all obeying the law. The only trouble is that there are too darn many of you all wanting to go the same way at the same time.

Now remember that the so-called concept of political democracy we have -- we extol ourselves that we're all born equal, we've all got all these liberties, and we all want the same thing; and it's all right so long as only a few of us have them. But the moment that you get millions to have them, then the fun starts.

Are you going to rectify it by putting in Democrats or Republicans? Oh, no. The people of this country have got to do a job of thinking. Now they may have it forced on them by circumstances, but the probabilities are that the circumstances will be the force majeure rather than any initiative of themselves. Or to state it mildly that it's only when they're hit sufficiently hard on the posterior that they become conscious of it back of their ears. I'm speaking collectively.

We never have time to know how the neighbor in the next block lives or the next county; and, in fact, we never give a hang unless we all land in the same boat at the same time. Then everybody screams. That's the way we have social progress in United States -- not by intention or by design.

So I'd like to point out that back in World War I there were a number of intellectuals, liberals, so-called progressives -- Walter Lippman, for instance. Walter Lippman graduated from Harvard and so did Stuart Chase. So did John Reed approximately the same year. Walter Lippman became secretary to the Mayor of Schenectady, the Socialist mayor. He joined the Socialist Party, Well, Joyce Frankfurter -- a whole lot more -- some of them went to the Supreme Court, some of them went to the younger brain trust of Wilson to Paris and Versailles, and they slipped over from their so-called radicalism of the left to the well-paid conservatism of the middle.

Stuart Chase, of course, went to work in the Federal Trade Commission. Jack Reed became a war correspondent via Mexico and then went over to Europe, and by accident he landed in Petrograd in 1917, just about the time the regime blew up. He wrote "Ten Days that Shook the World." He came back here a member of the Socialist Party. He wasn't when he left, and, of course, he advocated action, and the left wing of the Socialist Party was formed. And while you are at it, he asked me to speak at this meeting in the Opera House on West 23rd. I didn't know what kind

of a meeting it was, so I went up there and tore the meeting to pieces. And it broke the Socialist Party wide open. And what the hell did they do but they formed the Communist Party. This happens to be history you don't know. I was never a member of the Socialist Party or any other party. Just simply because I laid it on the line. That was the left wing, if you remember, the left wing movement in the Socialist Party.

Well, remember during World War I, Rose Pastor Stokes, Victor Burger. Eugene Debs -- they all went to jail. Now they were sincere. I'm not decrying their sincerity. There were thousands of others that went to jail. What did they go to jail for? They were opposed to war. They had pacifistic ideas, humanitarian ideas. They thought they would really be able to do something. What happened? Well, the leader of the Socialist Party -- I shouldn't say he is now -- but Norman Thomas, the perennial candidate for president, just before Pearl Harbor was on the platform in Madison Square Garden jammed to the roof. So was Father Curran, so was Kathleen Norris, so was Lindbergh, so was Wheeler, and a lot more. And the photographs what? The Fascist salute to the stars and stripes. It's there. You can find it. We've got it in our files. Every newspaper had it.

In this last election, the Socialist Party -- the remnants of it -- divided in half -- advised their members to vote for Stevenson. Now Henry Wallace in 1948 was the only millionaire businessman running for president. He had six beautiful big farms, hybrid corn, hybrid chickens out in Iowa, besides the AGRICULTURAL JOURNAL. Henry Wallace was sincere, ambitious, a Middle West Evangelist. He hooks up with the commies, the liberals, the intellectuals to form the Progressive Party. What the hell is the sense? Yes, he got a million votes. The Dixiecrats got more electoral votes, of course. Wallace didn't get any. And then after the election is over, he deserts the Progressive Party and what was it? In actuality, he put the finger on anyone that stepped out to help him. Is it clear? It stinks. Now remember, I haven't anything personally against any of these things. I'm merely pointing out the consequences of their actions.

Here we in United States have finally come to a position where we have the technological capacity for the first time in the civilization of man and we haven't the slightest concept of a

national policy or a national strategy to implement that policy. What are we hoping for? Why, that the population will increase by 1960, and there will be more babies, more diapers, more buggies, more nursing bottles, and we can sell them more homes, more automobiles, more life insurance policies. What's this about the dog you had? More fleas ad infinitum? On his back to bite him, and they had lesser fleas ad infinitum and so on to bite them.

Well, that's all very well, but never in our entire course of history have the forces reached a point that would compel not just one or two but compel a nation and say, "This direction thou shalt not go, whether you like it, lump it, or what the devil you do."

The political boys have been pretty smart. Those same intellectual liberals of World War I -- Walter Lippman, you see, is very conservative today. John Reed lies buried inside the Kremlin wall in Moscow. Stuart Chase? Well, I pulled him out of the Federal Trade Commission when he was an accountant and after a couple of years in Technocracy, what happened? He started to write books. "The Tragedy of Waste," his first one, and he went on to be an author. Then during World War II, you had the greatest exhibition of its kind. A president of United States put more Technocrats and ex-Technocrats into political and administrative positions from this one organization than from any half dozen. Dick Tolman, Atomic Representative of the United States on the Combined Chiefs-of-Staff. Otto Byers, Deputy Administrator of the Office of Defense Transportation. Leon Henderson, we won't mention him. After all, that ad that was in the subways about O'Sullivan's heel was of Leon Henderson's face -- the biggest heel in America. He made them take it off. It was too much, you see. I don't blame Leon for that. Leland Olds, Federal Power Administrator. You can go on down the list of 18. It was true, they pointed out to Roosevelt that \$2 billion was a lot of money, and if he would assign \$2 billion to the atomic bomb project, there would be results. They cynically remarked that the reason they thought of \$2 billion was this: that \$2 million, there would be no chance of success of getting it, but if it was \$2 billion, they would be positive of it. So the atomic project was born as the result of the efforts of two men. I'll leave you to think of who they are.

Roosevelt grabbed all he could grab. He thought if he

grabbed the individuals out of this organization or ones that had been previously in it that the New Deal would become something. Well, here is the same sad situation of your intellectuals, your liberals, your progressives what? Jumping on a new bandwagon. Hoopla, let's go for a ride.

Now labor unions in United States in the last 20 years have been naive. You could see it at big labor union conventions where they'd have a stock ticker and a news ticker right up in the, let's say, executive offices of the convention. I don't know whether any of you were present when I spoke at the Quadrennial Convention of the Railroad Brotherhoods in Cleveland a number of years ago when I pointed out that the Railroad Brotherhoods had more vice presidents than Chase National Bank and that they couldn't run a railroad but they had better consolidate.

Remember we were the organization that kept pounding at the question of mining coal by a different method? Well, John L. Lewis has 100,000 less coal miners than he had just a couple of years ago. He's going to have 100,000 less coal miners in the next couple of years. In other words, sometime between now and 1960, there will be so few coal miners in John L. Lewis's United Mine Workers that the royalties per ton per year will be equivalent to one year's wages of the remaining coal miners per capita. Am I making it clear? Dividing it by the existing coal miners of that time, the royalties will equal their total wages. So, they will have two years' pay coming to them. Is the rest of labor going to holler? Um, um. They'll all want to get on the same boat, won't they?

Farm population in the Revolutionary days was about 95 percent. Today the farm population of United States is less than 16 percent and falling. Mining is falling. Manufacturing is falling. Now during the war -- World War II -- of 2,160,000 employees in the aircraft industry of United States, 46 percent were women. Today there's less than 640,000 and only 14 percent of them are women, and the number is going to go down because when the new presses go in, they'll take a block of aluminum, a block of magnesium, or a block of stainless steel and will shove out a wing spar longer than the length of this room with one umph -- 50,000 tons! Well, don't forget there have been Technocrat members working on those things. We have Technocrats, members and officers of this organization, working in projects in United

States from every damn thing, including the H-bomb down, but we haven't any illusions about it. Where do you go from here? You've gotten so many appliances in your kitchen that the man and his wife have to have two jobs each in order to keep up with their appliances. Yes, smart we are -- and they want to sell you more.

I mean you never had it so good. The Democrats were right in that sense, except they didn't know how good they had it. Well, people are very funny. They asked us about who would be nominated. We said it vocally and we said it in print, didn't we? Eisenhower. Eisenhower uber alles. Alles untra Eisenhower. I don't know whether my German is correct or not. Well, yes, you had a Truman mess in Washington. The Democratic Party started going to pieces, the war, the final dissolution was when Roosevelt, of course, had two strokes. They knew he wasn't going to live, and you had to get Wallace out of the vice presidency. Well, get any kind of a stooge in there but get Wallace out, and they did with the deals and from then on what happened? It got so rich, it got smelly.

Well, now, take two months ago, two of the chief Irish politicians in New York said, "Mr. Scott, you people probably know more about conditions than anybody else in the country. If you were making book on the election, how would you make book?" "That's an interesting question." "Can you answer it?" I said, "Yes, provided you'll answer me one question. You tell me what the orders of the "powerhouse" are, and I'll tell you which one is going to be elected." Do you know what the "powerhouse" is? Presumably you don't. The powerhouse is the name always used in referring to the Cardinal's residence.

Now the deal was made before the Convention. Let's get that clear -- business and the church. Labor, that has been operating under the delusion that it could be an equal partner with ownership and management over the last 20 years and that it was nice and decent and polite and went in for collective bargaining, that they could get a little larger slice of the pie each time and they might even work up to where they get whipped cream on their slice of pie -- oh, brother, are they in for a comedown.

Now, it's very interesting. Up in Massachusetts, the Irish-Catholic machine, the Democratic, the state goes Eisenhower -- the machine delivered; but the machine also demonstrates that it

MEMBERSHIP MEETING, AKRON,  
WITH HOWARD SCOTT

8-29-51

can deliver the vote the other way because what? It sinks Eisenhower's righthand bower, Henry Cabot Lodge, and elects a political unknown -- correct?

In Rhode Island, the state goes Eisenhower with a Republican for the first time since 1924, but they also deliver Pastori on the Democratic ticket for the state. In New York, Flynn, one of our great bosses, never even registered, and was out at the racetrack on election day. Fitzpatrick was playing golf and the District Democratic Clubs of Greater New York never sent out a damn piece of literature, never made a collection. What is this? What does it smell like?

In Ohio, Lausche -- he was three times governor, was it? -- this is his fourth? -- the state goes Eisenhower, correct? And Stevenson -- in Youngstown anyway and Cleveland -- receives more votes than Truman did in 1948, and yet the machine can deliver Lausche and defeat the brother of Mr. Republican.

They did the same thing in Detroit and Michigan. In Illinois, Jake Arby, the political boss of Chicago and Cook County -- remember the man that put in a political unknown, Adlai Stevenson, with almost 600,000 majority two years ago -- why, they put in a Republican. He doesn't even deliver the vote. Labor did turn out its vote for Stevenson -- let's get that clear. Labor did deliver the vote, but the Irish and Italian Catholic Democratic machines or the Democratic Party did not. They sold it down the river because the deal had been made.

"Well," people said to us, "wouldn't you rather have Stevenson?" We admit Stevenson was more intelligent, but we prefer to have Eisenhower, because if Stevenson had got in, it would have smoothed it out for four more years. You begin to get what we're driving at?

We've got the most reactionary setup this country has ever had. John Foster Dulles, honor student, valedictorian of his class, brilliant lawyer, member of one of the great corporation firms of attorneys whose chief clients were I.G. Farben and all the other Nazi concerns -- oh, that's perfectly respectable. An outstanding Protestant lay leader, his son has just graduated from a Jesuit Academy in Connecticut. After all, it's quite all right. Aldridge has just been appointed U.S. Ambassador to Great

Britain, and my friend, John Lodge, has been appointed Ambassador to Italy.

On Marito Beach a few years past, John was arguing with me that the United States was no fit place to live in because there wasn't sufficient culture, etc., and he and Franchesca couldn't take it anymore and they were going over to Italy and live in Lake Como. He married Franchesca Branchiatti of Bridgeport. He did; he went over there. He got in Italian movies. He was decorated by Mussolini. He was there for life. He wasn't returning. Of course, when the so-called stab in the back came and the Italian Mussolini regime rounded up all the diplomats and everything else, John Lodge was put on the boat. He's a brother of Henry Cabot Lodge. Henry's the same. They're nice people, I want you to understand. They're smart people up in Boston. The Cabots only talk to the Lowells, the Lodges only talk to them and to God. That's the old saying up there.

Well, they've been in politics for years.

John Foster Dulles' grandfather was Secretary of State once of United States. His uncle was Lansing, also Secretary of State. They've got the background. They're proper people but reactionary, the most reactionary collection. The Democratic regime was bad enough. After all, poor Harry, it wasn't his fault. Poor Harry walked into big boss -- what's his name out there in Kansas City -- and said, "Boss, I've got to have another job. Can't you move me over into the tax department where I would get \$1,500 a year more?" Big Tom looked at him like this and he says, "Hell, Harry, that's chicken feed. We'll make you a senator." He says, "Look, I don't want to be senator." The boss says, "You didn't hear what I said, I said we'd make you senator, period." It's all right. Harry is all right. He never understood what it was all about.

When George Catlett Marshall went over to Moscow and the Russians take off all restrictions on the radio and press and everything else, the gang here knew that Marshall would probably flatten it out and come out with an agreement; so, Marshall is there only 48 hours before Truman comes out on the air with his Truman Doctrine, which was tantamount to a declaration of war. George Catlett Marshall should have resigned from Moscow, Unfortunately, the position he was in as a five-star general and

his loyalty, he couldn't have done so. It kind of upset people the other day when he returned on the boat and somebody said something about the election, and he said, "You can quote me. I have never registered, I've never voted, and I never will."

Here we are. We've seen a political maneuver. Many of you witnessed the two conventions out there on the TV. it was framed, cut, and dried. What did they discuss? Did they discuss national conditions, national problems? No, they were all in a furor over who they could manipulate around what. Well, it's here. Dulles is as close to a Fascist as you can get in United States, one half degree less than Joseph McCarthy,

Now, Democrats were bad enough with types like McCarran, but here's Eisenhower. He's got to carry Taft, Jenner, McCarthy, ; and then he loads up with what? Now we're going to have a government of a military junta. There are going to be more generals in Washington than we've ever known; GENERAL motors, GENERAL Petroleum, GENERAL Electric, GENERAL Eisenhower, GENERAL Mess, and GENERAL Confusion.

We're going to reduce the budget. We're going to decrease the taxes, and if the Reds over in Korea won't agree to us, we're going to take the war into China. Thirty months, you know, we've been in this police action in Korea. If we had any sense -- I'm not talking now of whether we should have gone there in the first place -- let's dispose of that, but having gone there and MacArthur coming off the first time, if we had stopped at the 38th parallel, we would have then been in the unique strategic position of, "Well, we have stopped aggression in the Republic of Korea," and then turned the problem from then on over to the United Nations. Oh, no, he has to get a swelled head along with the rest of the Pentagon and big brass. They're going clean through to the Yalu, and they're going to hop-skip the Yalu in one jump. Well, they never got to the Yalu. And the only reason that there are any Americans left in Korea is because the Chinese didn't have the trucks to travel fast enough to catch up to us -- that's the only reason.

Now we come up to the 38th parallel again. Did we learn the first time? Oh, no, we crossed the 38th and we go north on the righthand side looking at the map or the eastern front. It curves up like that. Well, what are we on that for? Why didn't we go on

both sides? What is it that is peculiar up there? Well, it may interest you to know that the second largest producing tungsten mine in the world is right in there. Well, they're dying over there and they don't even know what is there.

Now Syngman Rhee wants us to conquer all of Korea for him, and Syngman Rhee's police force has shot 30,000 so-called guerillas, and now that Eisenhower is coming, he's arrested all his political opponents on the basis of security.

United States, in its foreign policy -- now this is not going to be changed. Foreign policy is no different under the Democrats or Republicans -- to support Syngman Rhee, who was 35 years and more out of Korea, who married an Austrian girl. You can add 2 and 2 to that, can't you? We're supporting Bao Dai who lived in France. We're supporting the French in Indochina, the British in Malaya. We're supporting reactionaries around the world. Eisenhower himself calls this a crusade, does he not? Crusades have a bad habit of coming to a bad end when you take in too much territory and too many people.

Now, Technocracy will be writing more on this and will be presenting a much more thorough analysis in the days ahead. I'm just trying to give you a few pinpoints. I've thrown this stuff out to see if I can get some responses out of you. Suppose you turn around, let me take a rest, and ask questions. Thank you.

---

Don't think I'm going to throw the kitchen sink at you. Now you're not a big public audience. In a big public audience, I have no reservations -- I'll take anybody's hide off. You know it.

THE LABOR VOTE CAME OUT FOR STEVENSON, BUT THE DEMOCRATIC PARTY DIDN'T. HOW DO YOU KNOW THAT?

I'm giving you some of the facts. The Democratic Party machine in Boston, Rhode Island, New York, Newark, Scranton, and Ohio --

HOW DID YOU GET YOUR FIGURES?

From the reports of the Democratic District organizations. I know it's hard to believe, but the facts are there. You should hear the Democrats in New York howling. I'm not a Democrat, you know, and I'm not a Republican, so don't -- I'm not approaching this from any partisan political viewpoint.

I REALIZE THAT, BUT THE POINT I'M GETTING AT IS HOW DO YOU ARRIVE AT YOUR CONCLUSIONS? THERE IS NO WAY ANYONE COULD TELL HOW OR WHO YOU VOTE FOR.

But you can tell in your Democratic District Clubs. If they don't go out and collect the money and don't do the legwork, don't send out any mail, don't get the usual workers to do the usual work. Now the reports of 8-some percent of the District Clubs, Democratic Clubs in Greater New York, they weren't called upon to collect a nickel, to mail or to ring any doorbells. It's one of the lousiest sellouts in history. Now, I'm not saying this because of any sympathy for the Democratic Party or Stevenson, but I'm pointing it out as part of the trickery. Labor actually went out and did a job of getting the vote out, and so did thousands of other sincere ones -- Democrats. Stevenson never had the support of certain Democratic machines. Now it's been mentioned on the air, it's on the front page of TIME -- two issues ago. What? That the Irish Catholic machine and the Italian Catholic Democratic machine were dragging their feet for Stevenson and hadn't come through. There's all kinds of evidence.

I'm telling you the deal was made before Eisenhower ever was nominated. This organization said so.

WHERE DOES VICE PRESIDENT NIXON FIT INTO THIS?

Well, that's a smell from California. I might like to point out that one Mr, Brennan is a political boss in Van Nuys, California. Remember we've got Sections all up California. He occupies the same position in southern California that Hague occupied for 30 years in the State of New Jersey. Does that mean anything to you? That the other backers are what? Lumber, oil, what else? Now the point is, why bother about the nice sentimental appeal about the dog. Remember? It wasn't the dog -- it's that \$18 million -- \$18 thousand pussy that they're so serious about. Come on, you'll dig up something if you keep it up.

8-29-51

HOW AND WHY WAS THE SQUELCH GIVEN TO KEFAUVER?

Well, that's very obvious. After all, Kefauver is somewhat naive. What -- investigate crime? Now you see that anybody that enters politics, you should always promise, you know, to wipe these things out, but never do it -- oh, certainly not!

Up in Cleveland, the Kefauver Committee held its hearings, did they not? Am I correct? And there was no gambling in Cleveland? Oh, no, none in Akron either. Well, how about that \$5,000 check that had to come in the mayor's office every morning at 10:00 or it doesn't run, brother? You can print what I say. Nobody's going to sue me for libel.

That's like out in Chicago when the Board of Education out there in the City of Chicago didn't want us to speak in the high school auditorium unless we made a contribution to the Police Protective Association of \$1,000. We pointed out that we were not a wealthy organization, were not in business, and not a racket, and that we couldn't make any contributions, but we had some material here which we thought they might be interested in. "Well, that's the way -- we don't have to bother if you can't dig up a donation like that." No, we can't dig up a donation like that, but we have a few photostats here that might be of slight interest to you. "Oh, yeah? What are they?" "Well, they're just some of the duplicates of the probation officer records of homosexuality in the schools of Cook County for the last ten years. Do we speak?" Yes. We speak and we're paid for it. Play them at their own game.

Now crime -- what? You pull in a few like Costello and the others. Oh, but how about the big take? There are more teletype machines over in Jersey City licensed to the AT&T wires than there are in Wall Street. Well, nobody is saying anything about those. What was Hague's take? Hague was mayor and political boss and deputy vice chairman of the National Democratic Party for years, wasn't he? Well, his salary as mayor was only \$6,000 a year. He could own a big apartment house, a grand place in Florida, a yacht. Well, what was the take? The take is \$2 million a year. The boys got so much, the national machine got so much, the church got so much, and he got the rest.

Now, any time that you go out under this system, you're going to eliminate crime? He's either a damn fool or he's crazy, because you're not going to do it under this setup. Every police force in the country knows it, and every straight police officer knows that he could wipe it out in 24 hours if he is given the orders. Will he be given the orders? No, because, like Seattle, when they had the reform administration put in and they grabbed off this very competent man, yes, he closed skid row, closed it completely. There wasn't anything happened, but there wasn't railway cars enough, there weren't busses enough, and there weren't cars enough to take the people out of Seattle in the exodus which followed. What happened in six months? Your Board of Trade, your Junior Chamber of Commerce, Kiwanians, Rotarians, Masons, and everybody else joined in to rescind the thing, because the girls had to be brought back and the wheels, the dice, and everything else. It wasn't good for business. Now do you see what I mean, madam? He was naive. He thought because of his very nice manner and his replies on the television that he should be a presidential candidate -- but he should never have touched crime. After all, he should have gotten a donation from all the boys and blackmailed them. Then he would have been able to buy the TV time.

I'D LIKE TO HEAR YOUR COMMENT ON BELLAMY'S SECOND BOOK, "EQUALITY," AND ALSO WHO IS THE FOUNDERS OF THE WORLD FEDERALISTS?

Well, that's a double-barreled question that one. Your World Federalists have a nice lot; of business in it. When you analyze it down, what are you going to do? You are going to have all the powers unite with a kind of international currency, but they're also going to retain their own sovereignty? It smacks too much of nice Christian ideals. Now you know what Christian ideals are -- you promise to be good. Now you look at what a damn fool you've been for doing it. The same applies to Mohammedanism or anything else. You see the trouble is that it takes us 40 years to find out that our parents are liars, and by the time we found that out, we are too old to start over again.

Now under this system what? To tell the truth, be honest? Yeah, and where do you get? Like prominent men ask me whether their sons should go to MIT or Cal Tech or some other institution and take up science. I said, "What do you wish them to be -- a

success?" "Why, certainly, I want them ...." And I said, "Don't do that. Don't send them to a university. Just send them up here to and have them go to work under a good racketeer. Why go through all this nonsense?"

WITH THIS NEW ADMINISTRATION COMING IN, HOW LONG CAN PEOPLE  
KEEP ON SAYING WE'VE NEVER HAD IT SO GOOD?

Well, how are they going to handle production? We've got plywood to where we've got an abundance. We're drowning under 278,000,000 gallons of whiskey -- wine the same way. We have a full-fashioned nylon stocking capacity of 1 billion pairs. Even if the women had six legs, you couldn't solve it. We have four billion square feet of plywood. Now back in 1928 there were 12 plywood plants -- only 128 million square feet. It's 4 billion square feet today, and, brother, they don't know what to do with it.

We have overproduction in penicillin. Your hours in actual civilian production are falling in the plants across the country. Rubber right here, tires, is 6 hours, isn't it? But your defense industries are up here, and your defense production is the highest on record right now and mounting. And what are you up against? Where in the devil are you going to put these 105s and amphibians and the anti-aircraft guns? You'll soon have to award gigantic construction contracts to build underground chambers or buildings to house them in. I mean, how stupid do we have to get? Do we have to have war continuously to keep this cockeyed system alive? That's what it comes down to.

In other words, you're throwing this terrific amount of energy and material into goods that you know that will never come out of the consumer's market, but if this thing keeps up, how long have you got to go? Have you got two years? You can't do it two years. Remember, this is the organization that said the productive capacity of United States in World War II could not run wide open for 20 months, and it didn't. Did it? No. It reached its peak in November, 1943, and started to shut down. Now you've got greater capacity than ever before, and what are you going to do with it? You can have guns and butter, too; so, you'd better make up your minds which you would like to be drowned under. Where are you going to dump it? Western Europe has 72 million-ton steel capacity. They don't know where they're going

to get the ore for it. The ilmenite ores of Alsace-Lorraine are not the hematite ore the Mesabi is. They're only a little over 30 percent ore. You come to mine that ore and make 72 million tons, and you've got to do better than 3 to 4 tons of iron ore. Well, that means a terrific tonnage of iron ore. In Alsace-Lorraine, they never mined any such quantities; and if you make it into steel, where are you going to put it?

This country is in surplus production right now of steel. Sulphuric acid is surplus, ethyl alcohol, polyanhydrides, go on down the list. What are you going to do with it -- dump it abroad? Well, those damn foreigners have got new plants. They've got new steel plants in South America, India, Australia, Europe. New Oil refineries, new chemical plants, new textile plants, cement plants. And behind the Iron Curtain, ladies and gentlemen, the industrial expansion exceeds that of Western Europe. By whose admission -- the Russians? Oh, no, by the admission of the United Nations and the United States State Department.

WHAT IS THE SITUATION IN REGARDS TO INDIA MAKING THIS PEACE PLAN? WHAT IS INVOLVED AND WHO?

The Geneva Treaty of 1949 specifically states that all prisoners are to be returned, that no screening, forcible or otherwise, is to be permitted, and that as a soldier does not have a contract to quit at any time, he is under orders from his government, that when he is captured by the enemy, he is still a soldier and he has no choice either as a soldier in action on his own side or as a prisoner in the hands of the enemy. Check? The United States is signatory to that. So United States, for peculiar reasons of its own, is deliberately double-crossing the very thing it signed. Now what India is trying to do, India is trying to get the war stopped; so are others. Remember today that China is the third military power of the world, and China has been holding the forces of the United Nations with all the best equipment. Correct? Well, who is gaining face? Not U.S.A. In Asia, China has held us.

Now India refuses to join in any blockade and insists on being neutral. India has a very interesting sense of humor, because they had 2 million soldiers in World War II, and they point out that they would have been much better off if they had been an enemy country and been liberated. Then they would have

MEMBERSHIP MEETING, AKRON,  
WITH HOWARD SCOTT

8-29-51

gotten billions in loans instead of a mere \$20 million -- correct? The Indians are very sensitive about it. You can hardly blame them.

Now as to whether they put up this peace proposal with any ulterior motive, I don't know, and it doesn't make any difference whether they did, because we could have stopped at the 38th and called it a day long ago; but if you don't have war, what in hell are you going to do with the economy at home?

DO WE DARE GO INTO INDOCHINA? DO WE HAVE THE ?

In Indochina?

YES. CAN WE KEEP A WAR GOING?

In Korea?

ANYWHERE.

Well, we're doing our best. After all, we have officers down in Indochina and we're supplying arms, equipment, and everything else to Indochina and in Malaya. If you keep this up, this leads to the same thing as you had under the Romans. You have proconsulships in various parts of the world. Am I making my point clear? Which had to be held up in the days of the Romans by Roman Legions. In our case, by American armed forces, American ships, American materiel. Now, it's lovely for business because that's what it's done. It means \$750 to \$800 million US a year for war in Japan alone, plus the \$10 billion we pump in the situation in Korea.

We've been trying it. It's all right if you're worth \$30 million. Let's face it. If you're worth \$30 million, then anybody who is only of just average income should be delighted to die for you, for heaven's sakes.

WHAT ABOUT THE PEOPLE GETTING FED UP WITH THE WAR?

Oh, they are? Why, you didn't hear much about it. A few little squeaks all over.

WHAT CAN WE DO?

Well, we went out and voted, didn't we?

NO, I DIDN'T.

I'm not speaking to you, madam. The country. I'm speaking collectively now.

WHAT IS THIS PUSH BUTTON ERA GOING TO DO TO THE WORKING PEOPLE OF THIS COUNTRY -- PUSH BUTTON MANUFACTURING?

Well, there's a new plant -- two of our associates designed the plant for one of your large corporations -- it's completely automatic. It makes those little flashlight batteries you get for the flashlight at 12-1/2 to 13 cents apiece, two for a quarter. It produces 1 million of those per shift, completely automatic, right into the little carton, little boxes like that, and then into the bigger carton. Well, there's only 18 men work there. The cost is 4 mils per battery. The price is the same and 389 don't work there anymore.

WHAT IS THE DIVISION BETWEEN THE UN AND THE USA?

I don't quite understand.

DOES NOT THE UNITED STATES COMPLETELY CONTROL THE UN?

It controls most of the UN. After all, if you remember back, I wrote, "The Vultures of the Peace," before the first meeting in San Francisco was held. Isn't that correct? I wrote it and published it before the first meeting. After all, there were only so many real belligerents in World War II: Great Britain, United States, China, and Russia. That's all; the others didn't count. There are only two nations -- if those two nations were to say, "No war in any place on the globe. Don't even get your tie out of place, brother." If you wanted peace, the United States and Russia could say that to the world and you wouldn't need any UN. All you'd need is a treaty. Too bad boys, take in the rug; you can't play marbles there any more. Correct, isn't it? Do we want peace? Not as long as it's not profitable. We've got a capacity up to such a huge situation that we can't sell it at home, we can't dump it in the Pacific Ocean. This organization long ago pointed out that there is only one thing to do: that is to

declare war on the Pacific Ocean.

IF WE DECLARE WAR ON CHINA, WHAT WOULD RUSSIA DO?

Well, she probably doesn't have to do anything. We are in all this difficulty fighting on a front 154 and a fraction miles in length. You want to lengthen the front out to 1,000 miles or 2,000 miles? Bear in mind that the Chinese could maintain 6 million combat troops a year and suffer 25 percent losses and carry it on for 25 years, and they would be better off at the end of the 25 years than when they started, because they would have reduced their total population. It's tough, yes. It's hard-boiled and no political speaker would say it. You know the old, old story: We killed so many of the Chinese and lost so many of our own. You know what the Chinaman said? "Plenty soon, no Americans."

IS RUSSIA ACTUALLY DICTATING TO CHINA OR IS CHINA INDEPENDENTLY ACTIVE?

No, they're allies, mutual defense pact, but what I'm trying to do in answering your question is that Russia doesn't even need to come into it. There aren't any Russians in Indochina or Korea. I'm not defending the Russians, don't misunderstand me. They can be a lot of unmitigated S.O.B.s, but the trouble is that we're worse. We're a bunch of damn fools, because we smell a "Red" under every bed. Sure, we can't even enjoy ourselves with a good woman.

WHERE DOES FORMOSA ENTER INTO THE SCHEME OF AFFAIRS TODAY?

Well, Formosa is a part of China, and the 470 million Chinese have a government whether we recognize it or not. It is the only government of 470 million Chinese. And, true, we have military advisers and officers down there to supply Chiang Kai-shek's so-called troops. Now they've been out on that island for several years, and if we're fool enough to try and back that and to land that kind of thing on the Mainland of China -- they're not Formosans, you know. They come from the Mainland. Well, honey chile, they's all gonna go home -- three years and no vacation. Humph, what do you think? Just like the American correspondents in Shanghai watching the marching of the victorious Red Army, men and officers. The American correspondents said, "Could we take

photographs?" "Yes." And they they said, "Why, that's American rifles you have. That's an American overcoat you have." And they said, "What have you got on?" And the reporters and photographers said, "Oh, they're made in the United States." "So are those. After all, Chiang Kai-shek was our supply officer."

So what I'm trying to get over to that question back there is that Russia doesn't have to come into it. You have your same stupidity of article after article in your press. You have one in this week's SATURDAY EVENING POST by Hanson Baldwin, "We Can Defeat Russia." Well, that isn't the problem. He and all the others today are operating on the assumption, and have been for the last seven years, that the Russians are going to attack.

Technocracy has pointed out that they do not have to attack. All they have to do is sit where they are. And what are we going to do? Prop up Italy, Greece, Holland, Belgium, Spain, Portugal, North Africa, and the Middle East. Where is West Europe? What's it got? The French coal mines are thin seam, steep angle, high cost, and very poor coke -- practically impossible. Japan, with 11 million-ton steel capacity, it's got 2 coal deposits. Will Japanese coal coke? It will not. The Japanese Government has had a prize of thousands of dollars for Japanese scientists and foreign scientists to discover a coking process for Japanese coal for years. It takes 60 percent of Manchurian or United States coal to make Japanese coal coke.

Japan has 84 million population. Its population is increasing at 1.6 to 1.8 million a year. The hydroelectric power of Japan is 99 percent developed; there is only 1 percent left. Japan has excellent copper, excellent seed pearl industry, and some of the finest pine forestry of the world. They're diligent workers, but they haven't the resources. Where are they going to get them? From USA? The costs are too much. Japan requires 26 million tons of iron ore a year, 5 to 6 million bales of cotton, 24 to 27 million barrels of petroleum a year, 3 million tons of cellulose -- I can go on down the list -- in order to run. What kind of nonsense is this?

The population in Holland is over 200 per square mile denser than the population of Great Britain. Do you realize that? Holland has lost its overseas colonies. Can she maintain the . Holland that once was? No.

France is going to lose her overseas, Britain has lost India and Burma. Malaya is on the way. As I said in one article, "Have your last Singapore Sling in Raffles Bar, gentlemen." That's where all the nice rubber planters gather at tiffin time. Raffles Bar -- it's famous the world over. But you better get it and get out. And we, the United States, are trying to hold it up with US dollars and US lives. So we vote in a man in the White House ....

.... THEY HAVE A BIG PROJECT IN THE SOUTHERN PART OF OHIO THAT GOODYEAR IS GOING TO OPERATE.

Well, I'm glad the rubber boys are in on it. Monsanto and the GE and the Du Pont.

WHAT'S BEHIND EISENHOWER GOING TO KOREA? IF HE KNOWS ALL ABOUT IT, WHY DOES HE GO TO KOREA?

Well, you're making an assumption that he knows about anything. He didn't even know what he fought the war in Europe for. While we're at it, just remember that under oath Eisenhower and the British representative signed the Italian surrender in Spain before a single American soldier landed in Italy. How do you like that? If what I'm saying isn't correct, I could be arrested.

Just like General Marshall on Pearl Harbor Day couldn't, under oath, remember where he was. This is his testimony in the hearing. Remember Stark and General hearing in Washington? You can get it. So, in other words, Italy surrendered, but we go through the farce of Rapido, Casino.

In Africa, Rommel had a front of 18-1/2 miles from the sea to the swamp of the [Quatarra] Depression -- 18-1/2 miles, the sole fighting front of the allies outside of Russia. He had six German divisions, and when the British poured in enough with US equipment, he retreats 1,400 miles on a single road -- there is only one road -- that's right along the edge of the sea. We never could catch up to him. [Comment from audience] No, no, our tank engines, you know, never had enough life. They would always heat up and burn up. Remember those Chryslers? Six different types of tank engines.

Well, Bizerte, the greatest naval base in the world -- underground machine shops, hospitals, food storage, dormitories, everything else -- nice conical high ice-cream mountain terrain, warm climate. Rommel goes back to Africa. The Germans and Italians had ammunition, they had food, liquor, cigars, chocolate, cigarettes, everything, and they surrender. Do they surrender to the French? Oh, no. Do they surrender to the British? Oh, no. What's the international law as to who you surrender? When an officer surrenders to another army, he gets the pay of the same rank of officer of the army he surrenders to. Well, do you think he's damn fool enough to surrender to those French -- the British? Hell, no! He can surrender to the Americans and get real pay. And a nice little trick question. The German Commander, after Rommel's jump over to Europe -- I have said this on the platform many times -- his mother was living in Pasadena, California, and had been living there for several years. How cute. The Germans came out in a truck with their baggage, waved at the American troops, and said, "Sucker, you think you're on your way to Berlin. We're on our way to USA."

WHAT EVER HAPPENED TO VON PAULUS?

Well, Von Paulus is over in East Germany. Of course, he didn't surrender at Stalingrad; he was captured. They fought in below zero temperatures. They were wounded, their ammunition gone. Wounded piled up. They really put up a fight at Stalingrad. At Bizerte, they didn't fight. Something gestinks!

WHAT IS THE ACTUAL SITUATION AS YOU KNOW IT IN KOREA TODAY REGARDING THE TROOPS OF THE USA AND WHAT OTHER TROOPS THAT MIGHT BE THERE.

There are other troops there. There's Greek, Canadians, British, a French unit, there's even Thailand. There's a little contingent from Colombia and a few other places. United States, of course, is the bulk of the foreign troops. Our casualties are running to 1,200 a week lately, the ROKs have been running 4 times that. The ROKs -- the Republic of Korea -- in fact, their slaughter was so bad that they stopped it. US officers stopped a ROK attack. So there's a nation of 22 million in South Korea and 9 million in North Korea. Eisenhower said, "Let Asians fight Asians." But Syngman Rhee says, "No, they won't take that." We have to capture all of Korea for him. We'll get a bellyful if we

stay at it long enough.

IS IT SAFE TO ARM THE SOUTH KOREANS?

Why, sure. The moment we pull out, someone will shoot Syngman Rhee and then we'll have to start all over again.

I READ AN ARTICLE IN "COLLIER'S" THAT SAID THAT ONLY 12 TO 25 PERCENT OF THE AMERICAN BOYS RETURN FIRE WHEN UNDER FIRE. DID YOU READ THAT SAME ARTICLE?

Yes, that happens in armies, but in the type of warfare you have out there, it's still not as bad as it could be farther north, because your mountain ridges and hills run laterally across the front where they are, but you go a little farther north and they run straight up and down like this in troughs. Then you can't go laterally across the front. That's where MacArthur got caught and the marines got caught. They went up these troughs and the Chinese got up in the ridges and chopped off from behind. Now if you fight for one little ridge after another, they're like the ripple on the edge of a pie. They run this way across the front so that ....

THIS ARTICLE WENT ON TO SAY THAT DUE TO INHIBITION THE AMERICAN BOYS WERE TAUGHT NOT TO KILL AND THEY HAD A SORT OF QUALM OF CONSCIENCE ABOUT RETURNING FIRE, ABOUT SHOOTING DOWN SOMEBODY ELSE IN COLD BLOOD.

I think that's Coca-Cola with a little soothing syrup. You get out there and what? They're fired at and you fire back. If you don't fire -- some of them may withhold their fire because they don't want to be fired on, that's different. You understand me? In other words, they don't want to divulge their position to the enemy, that's one thing; but to withhold fire because they have so-called inhibitions about shooting or something -- we're a nation of hunters, aren't we? Every fall we go out here and knock down the fences and bang over everything from hell to breakfast, and you say we've got inhibitions about shooting off guns? And these kids got all the toys -- brrrrrrrt. They're on every corner and they go brrrrrrrt. Where do you get this stuff?

WHAT IS THE GAIN THAT THE POWERHOUSE EXPECTS TO GET?

After all, Eisenhower's Chief of Staff in World War II was General Bedell Smith of the Holy Name. Come on, name the other organizations he belongs to. General Grunther, Chief of Planning, now of NATO. Major-General Donovan of the OSS -- Papal Chamberlain, if you please, as a reward for his services to the United States in World War II -- nice little buster boy from Abilene. Ah, that's nice! Rover Boy Dewey from New York couldn't do it.

WILL THERE BE INFIGHTING OR A REBELLION WITHIN THE REPUBLICAN PARTY IN THE NEXT 4 YEARS?

Well, they'll scrap a little. The trouble with the Republican Party coming in is that they've been out of office for 20 years. This is the first time in the history of the Republican Party that they have been out of office 20 years. Eight years has been the longest. Check back. You'll find I'm correct, and there are a lot of blood-hungry sharks. My God, 20 years out of office -- 20 years without your snoot in the trough? There aren't enough jobs in the administration in Washington to pay off. Of course, Farley taught them a few tricks: you couldn't fire the man directly in Civil Service, but, for instance, the Customs Officer in Salt Lake was Republican. Well, now, you couldn't fire him, but you could abolish the office, so you move the Custom to Denver and made it a Democrat. The Republicans, of course, can do a similar trick. But; they only have about 10,000 jobs that they can really kick out. 'Tain't enough, sonny! Look at the way Eisenhower -- he had two Mormons, the General Motors, he's got the Hanna Company and the Pittsburgh Consolidated Coal. He's had to pay off all over the lot.

Now, John Lodge is going to be made Ambassador to Italy because he speaks Italian, and Franchesca is a blonde Sicilian, and that's a throwback, you know, to the Norman Viking invasion of Sicily in 1080, and the Italian Government has a standing offer to any male that's a throwback: they can have a life job as a beach guard at Lido, Venice, but the rest of the family doesn't look like Franchesca. I know Franchesca; she's charming. It's all right.

HOW DO YOU HOPE TO ATTAIN TOTAL CONSCRIPTION UNDER A SETUP LIKE THIS?

That is exactly what's interesting us. You see, if Stevenson got in, it would have been smoothed over for four years more. This way, it's going to become funny. Now there's nothing funnier than a crusade that falls flat on that portion of its anatomy. Now if you'll notice that Charles E. Wilson, John Foster Dulles, and a number of these others of the Cabinet, they stand like this, don't they? You see their photograph? They're all pregnant. And as that US Senator when he said that Charles Taft accused him of the same thing, he said, "Well, you know the famous story of so-and-so and me and such-and such."

So here you have a Cabinet which is what? It's reactionary, it's big business all down the line. Collective bargaining -- what are they going to do to it? They'll shove that out. Now as your hours go down -- well, that's tough. Labor needs to be liquidated anyway. It's been fussing around in the White House too much, hasn't it? It's got to be taught a lesson.

Democrats, you know, made the farmer a first-class citizen. Price support and everything didn't it? Now they're producing so much that we can't handle it. What are we going to do with that? They're buying up all the cotton and surplus wheat. You see, abundance is what's going to kick us in the pants, not the scarcity. We'll have plenty of it.

UNDER THIS NEW ADMINISTRATION, AFTER THEY GET INTO POWER,  
HOW LONG WILL WE HAVE TIMES AS GOOD AS WE HAVE HAD?

Let's point it out this way: We've said it before and we'll say it again -- the next five years in the history of United States and the world will be the most socially decisive history in mankind's time. The next ten years the most conclusive. You haven't got fifty years, you haven't got 25, and you haven't got 10. India's population is going up at 5 million a year, Britain at . half a million, Italy at half a million. Where are you going to put them? The population growth in South America is higher than in Japan. It's the highest in the world.

You see, the population of the globe in 1800 was only 800 million. It's 2.4 billion today. There aren't any waste places today. There aren't any new hemispheres and a thousand Golumbuses wouldn't do any good. Where are you going to put them? Build

space ships like Buck Rogers and go on out in space to the moon? O.K., brother, that's about all you've got left, but you'll have to get down to earth and do some scientific planning. You'll all be caught up probably before the end of 1953. Now we of Technocracy would like to see \$27 billion more in 1953 spent on capital goods. We don't want to see it stop. We want to see more and more capital goods -- the bigger the better.

You don't need 17 to 18 million unemployed today like you had in '33. You only need 7 million. Seven million today would cost more than 20 million in 1933, do you realize that? And what are you going to do? Here's the General Motors plant in Trenton. It turned loose a technically trained man to make a study, and he checked up on all the 4,600 employees and they're scared. They dragged him right out to Detroit right away. Anybody will tell you that the average man can get by provided he only has to pay out one week's salary in a month to his installment buying and his mortgage and so on, but when it gets to two weeks, it's dangerous -- 42.34 percent. They're not only scared of themselves, they're scared of the entire industry and others.

You have a junior executive in U.S. Steel's General Office in New York, married, wife is a nurse, both in good health. She works seven days a week and he's got two jobs. A junior executive in U.S. Steel's office, and he works in Macy's nights and weekends. None of you here have two jobs, of course. You wouldn't do anything like that.

What's happening in the rubber companies or any other companies across the country? You're wondering whether you should slam down on your employees having any other extra employment, aren't you? It's in your personnel departments now. You're worried about it, and you're afraid to put your finger on it, because if you do .... Beautiful, isn't it? And then these men come to us and say, "what's a young couple going to do?" The young man today can't go farming anymore. If he pays \$40,000 for the farm, it is going to take another \$20,000 for the animals and equipment. If \$60,000, it's going to take \$90,000. Where can he get it? The answer is he can't. And then they come along and say, "Well, what's going to happen if I get married and get a job in such and such?" Well, what? "Are you only going to marry one woman?" They look at you. "Well, that's where you make a mistake. You should marry three. Have the three work and work yourself.

Maybe you can pay for the appliances." Let's face it. Our inventories are going up. We kidded ourselves because we had a 25 percent national deficiency in purchasing power. We had a GNP of \$280 billion and a 25 percent deficiency is \$70 billion. Our budget was what? \$71 billion, wasn't it? Very neat!

Now we're throwing in new capital goods, and we will have, by the early part of 1953, a capacity for a GNP of \$380 billion annually. \$380 billion GNP will require \$100 billion, not million. Now the American public have had it taken in taxes. It goes into the treasury, the treasury advances the credit. This is not monetary inflation, ladies and gentlemen. It bears no relationship to the monetary inflation of Austria, Germany, France, and China. Monetary inflation only occurs when there is a shortage of goods and you print extra currency. You increase the zeroes on the dollar or ruble or whatever have you. That is monetary inflation.

This is not monetary inflation. It's credit amplification. We advance the money and they build new plants. Monetary inflation could have gone on to a hundred zeroes, and it would not have altered one iota the physical processes of production and distribution of Austria, Germany, France, or any other country. You would have merely changed the numbers on the inventory tags or the price tags, is that clear? Merely change them. The physical processes remain unchanged.

Here by the use of credit amplification you build brand new plants, just like the battery plant I'm talking about, and it does change the physical processes; and the joker of it is that it's the money collected from all of us that provides the negotiable contract in the first place. Then to add insult to injury -- Hitler did a little of it but we go him 10 better -- we get a Certificate of Necessity. Now the Westinghouse Company in Pittsburgh and the Carbide and Chemical are both going to spend between \$400 and \$500 million each on their expansion; so, they go to the life insurance companies and borrow \$300 million, don't they? Well, what's the joker in it? Very simple. If you have a Certificate of Necessity, you add in the amortization on top of materials cost, labor, depreciation, taxes, etc. If it's \$500 million, the total cost approximately, then you add in \$100 million a year and then you calculate your profit on top of that, don't you? Well, suckers, you gave it to them in the first place

MEMBERSHIP MEETING, AKRON,  
WITH HOWARD SCOTT

8-29-51

and they stick you for it a second time, and they make you pay for it. We're the smartest people on the face of the globe individually and the dumbest collectively. We'll take anything until we get it kicked up back of our ears.

WHAT HAS BEEN THE CAPITAL GOODS INSTALLATION THE LAST SEVERAL YEARS?

Running about \$26 and a fraction billion last year, \$27, \$25 before that. All we need is around \$27 billion for 1953.

WHAT'S THE TOTAL INVENTORY IN SURPLUS NOW?

That's over \$70 billion. That doesn't count the war storage stockpiled. That's not included.

IF WE'RE WORRIED ABOUT DEPRESSION, WINCHELL SAYS WE'LL HAVE A MARSHALL PLAN IN UNITED STATES IF WE GET TOO MUCH UNEMPLOYMENT.

That's good. The only trouble about it is this, but let's face it in another way. If you view the trends on the data that we've had building up for years, there's only one conclusion: What are we traveling to? The hours are falling. Without the defense industry-in the United States today, your civilian goods -- you would not have 35 hours a week. It's questionable whether you would have 30. In other words, your week hours are falling. You're producing more and more with less and less men. It's shortly going to reach the point within the life expectancy of anybody here -- in other words, within the next decade and less, where the minority -- let's get this clear, the minority of the healthy able-bodied adults of United States will be able to produce and distribute abundance in this country and the majority will not be required. Then, ladies and gentlemen, what are you going to do? Are you going to have ration tickets for mink coats and night clubs, Cadillac cars, and champagne? And hand them out to the majority so that they can consume this terrific abundance that the minority produces? Very interesting. Then, of course, your Christian conflict comes in: Well, are you your brother's keeper? Well, it will be the minority keeping the majority. That's right. That's what you're headed for.

Now there are 1.4 million females of adult age more than

there are males of adult age in United States, and the preponderance of females will continue to increase. In any civilization in history, when the preponderance of females over males reaches a certain proportion, the prevalent and previous existing mores of morals, monogamy, or anything else goes overboard. It doesn't matter what the males have to say about it; the women are in preponderance. Out here in Detroit during World War II, remember, the Naval Training was opposite the big office building. What's the name of that park? And they built a big high fence. What was it -- to keep the boys in? No, to keep the girls from raping the Navy boys in broad daylight at 4:30 in the afternoon. Oh, that's a fact. I mean I'm stating it and it may be a little shocking to you, but the movie cameras -- records -- show it. It was the protests of the surrounding offices and corporations and so on that led to the building of the fence. Now that's where there was 50:50, where there was equal numbers. Just think what would happen if there's a preponderance.

WHAT IS REALLY BEHIND THIS QUICK MOVE ON THE PART OF O'DWYER GETTING OUT OF MEXICO?

I think you have it incorrectly stated. Oh, he has resigned from the United States ambassadorship. That isn't saying he is getting out of Mexico. Now, if you understand, Bill O'Dwyer was a nice well set-up good looking type, all right, and he was a cop over in Brooklyn. Well, they take him and put him through night school at Fordham University and make a lawyer out of him, and he becomes District Attorney eventually; and, of course, gambling has kind of gone on in some places, Now, Alemant in Mexico, Presidente Alemant, is above reproach. You can never make any deal with him, but if you really wanted to be a scientifico, you saw his brother. His brother, of course, and Alemant had nothing when they came in, but the brother now owns hotels in Acapulco and other places. Now in New York, Bill O'Dwyer -- you didn't see Bill, you saw Paul; and, of course, a lawyer can receive retaining fees. So there's a distinct relationship of identity of types between the Alemants and the O'Dwyers. Am I making this clear to you? There's an affinity, an affirmation, in other words.

So, after all, Bill can remain in Mexico City and open law offices as a lawyer for foreign clients -- perfectly simple. Why not? It is safer than coming back until after -- what is it when

MEMBERSHIP MEETING, AKRON,  
WITH HOWARD SCOTT

8-29-51

time runs out -- how do you say it legally? Statute of Limitations. After that, well ....

IS THAT BOOK OF MORTIMER LEY, "U.S. CONFIDENTIAL," EXAGGERATED ANY?

All those books are exaggerated. They're like Drew Pearson. They give enough of the dirt so as to titillate the average listener. Real dope and you drop the book right away. It would be so hot it would have to be printed on stainless steel.

WHAT'S THE PERCENTAGE OF LABOR IN WAR PRODUCTION?

That's very hard to get figures on. They don't want to give it out, but it has risen considerably. The same way in L.A. The percentage has gone way up there. Every day is payday. Your supermarkets are keeping open 7 days a week and 3 nights a week. Well why? Because every day is payday in the defense industry and they want to catch them as soon as they get the pay envelopes.

Liquor stores, of course, are open until 2:00 A.M. out there and even the supermarkets sell liquor. Everybody sells liquor, and what's your report on liquor? Some areas have fallen 37-40 percent in sales of liquor. You mean the men and women are losing their thirst for  $C_2H_5OH$ ? Oh, no. It just costs too much.

IS JOSE DeCASTRO'S "GEOGRAPHY OF HUNGER" A RELIABLE BOOK FOR REFERENCE ON POPULATION?

It is not -- distinctly not. On the basis that if they're hungry, there's a higher, more prolific, and a higher birthrate. Well, there's a biochemical reason for that. They do not even produce the sperm and ovum under those conditions -- the same percentage of normal. See what I mean? But he's fabricating that. That's a typical South American approach. They've got one of the high birthrates of the world. Now they try to justify it.

WHAT WOULD YOU SUGGEST TO SOLVE THE TRAFFIC PROBLEM?

There's no use making any suggestions on that. After all, we have signally failed in the last fifty years to develop any adequate system of public continental transportation. We've always pushed it over on the consumer, haven't we? We used to be

able to go from way up in Maine clean out into Wisconsin by trolley car. The trolley cars jump the rails. A few places you have trackless trolleys like you have here, but not so many. The cost of transportation has risen all over. Railways run the wrong way.

After all, here's Ohio. Just stop and think a moment. Iron ore has a lot to do with Ohio's economic life here. The cost of transporting iron ore from the Cayuna-Mesabi to the railhead at Lake Superior is exactly the same cost as transporting it down the Great Lakes to Ashtabula. From Ashtabula down to your steel plant at Youngstown and so on is the same cost as transporting it down the lakes. Well, we could have built a canal. We would have 22 feet coming in from Lake Erie and going down the Ohio and do it for 1/10 of a cent. No, you couldn't plan that far ahead. So what have you got? You've got some brilliant jackass who now wants to put a moving conveyor belt to take the ore and coal, haven't you? Must be working for the Robbins Conveyor or the Link Belt, eh? Now, you're not going to save oil by selling more cars and more of this and that. You can design engines that use the same lubricating oil for how long? We have equipment running for over twenty-five years with the same oil in it. Now it's due to probably run another fifty years unless it's dismantled for other reasons, not for its lubrication. That isn't the purpose. The purpose under this Price System is to design something that can be sold to the purchasing power of the community but doesn't last -- only long enough to amortize out the cost of the merchandise and place the consumer of that in the position where he has to buy another one. That's what you're face to face with.

You've got your life insurance companies today. What's their total assets? Close to \$40 billion, isn't it? And after they've paid off everything a year, all their charges and everything else, they've got over \$3 billion -- sometimes \$4 -- in the clear. If you keep it up for another few years, then the government either has to take over all the life insurance companies or the life insurance companies have to take over the Government of United States, because why? In 21 years, they'll own 95 percent of all that's ownable on the Continent of North America, not because they're greedy or vicious or criminal, but simply because they're expanding at 7.7 percent per annum.

Corporate business in United States -- the individual

executives who rise to be Chairman of the Board and so on, they can always boast, well, they can cover last year's mistakes with this year's expansion. What do they say? Why, it's due to the hard work and genius. Well, my God, any jackass could do the same. Let's be frank about it; let's face it.

You go down 2,000 feet for water and you can't find it, and they're drilling like mad the same way in West Texas -- Sprayberry Field. Once your bottom hole pressure drops to near 1,000 pounds, goodbye to the well -- and they're dropping. Now, don't come back and say, "Well, we've got oil in Canada." Yes, we have oil in Canada. How much would the entire Canadian oil production -- how long would it be, the entire Canadian oil production? Think it would last a year in United States? Six months -- or thirty days? Which is the nearest? [REPLY: 30 days.] Right. In fact, the entire oil production of the great East Texas pool since its inception down to today would not satisfy United States' consumption for one year. We're up in order of magnitudes today the people of World War II never dreamed of, and George Washington or Abraham Lincoln or Andrew Jackson, it would be totally incomprehensible to them.

See if I'm making it clear. Seven, eight million barrels a day, 365 days a year -- this isn't peanuts anymore. An oil field has to be some size, and you can't solve it by political legislation or inaugurating a new crusade with a man on a white horse. The people of this country have got to do a job of political thinking for the first time. That's what I was getting at in kind of giving a rough tracing of political evolution; because if you don't there isn't anybody to teach us. We can't import any foreigners that have any previous knowledge, because there's nothing to go on. There's no past to learn from. Technology creates its own ancestry and its own precedents and it has. We'll have to go forward from where we are, but there will have to be planning, not of the political type -- planning and designing such as the world has never known. It can't be guesswork and you can't do it by counting noses and opinion, good, bad, or indifferent.

#### WHAT IS THE POTENTIAL DEVELOPMENT AND USE OF ATOMIC ENERGY?

As far as the energy from the fission of U-235, that's all right; you can use it. But when you develop that power, how are

you going to develop it? You can't do it under the ordinary system of heat exchange; you have to have a binary and tertiary system. So you'll have to use a molten cadmium or something else in your first and then over into a chlorinated or what do you call them -- a phenol compound, in your second, and then in water in the third. And then you have a terrific waste product to dispose of unless you're producing plutonium and operating from there -- making a by-product as it were. But you're mining ore -- most of your ore is around 1 percent. Now remember that ore is U-238, and U-235 is how much in relation to U-238? It takes 140 of one to do one of the other, and if this is 1 percent and it takes 140 of 1 percent, how much ....? You have to move a hell of a lot of rock.

WHAT IS THE PROJECT GOING ON IN FLORIDA OF EXTRACTION OF ORES FROM THE EVERGLADES?

Well, that's from your phosphates by flotation. That's a chemical process developed by America Cyanamid, my old-time rivals.

WHERE DOES THE WATER COME FROM ON A PROJECT LIKE THAT?

You can use your water over again in flotation. There's your leaching and settling, you see, and then basins -- pump it back again. In Florida, you've got a nice deep water strata, you know, in several places, but they're exhausting that. They're drilling down into -- and the danger there is the same danger as you're hitting in Southern California around Los Angeles, where you're pumping so much that the sea water is coming in underneath.

And now you're proposing to bring Colorado River water over and pump back in the ground to repressure to drive the sea water back out. You could have stopped this in the first place. You've got to farm water annually on an annual crop basis. Do you understand? And if you take water out of the ground and you use it for any purpose, and it is not evaporated, then you've got to dig a [ ] well 8 to 12 feet in diameter and 150-foot radials at the bottom down to your gravel or water strata and either flow the water in there by gravity or pump it in and it becomes a regular magazine. It feeds into your water table. Now in order to do that, you can't pollute the water.

In Germany, your mayor and your technical officer have to go down to the water plant and in public drink the water that comes out of the sewerage plant. Well, they see to it that it's all right. Here, if your politicians did that, why, they'd just drop over. Maybe we should ....!

HOW MUCH PHYSICAL OR POLITICAL EFFORT DOES THE VATICAN USE AGAINST RUSSIA?

Well, the Vatican was responsible for the Cordon Sanitaire after World War I. There's one point I'd like to make clear: We're not anti-Catholic -- Technocracy is not. It is definitely anti-clerical. Let's get the distinction and the difference clear. We take the same objection to any ecclesiastical institution, Catholic, Lutheran, Presbyterian, Mohammedan, Buddhist, Lamistic, the moment they cross the line from their spiritual field to interfere in the political administration of any national sovereignty. Is that clear?

We have as little use for John Foster Dulles, a Protestant -- not a Catholic -- using his religious thing in the same way. In other words, theirs is in the spiritual field, and their relationship -- any man's religion is between his conscience and his God -- that's personal; but when they trot it out as an organized ecclesiastical insitutionalism, and "this way you shall vote and this way you shall behave," then you're headed to a theological state relationship. That was the trouble in the Middle Ages, the trouble in the Inquisition.

After all, the Roman Catholic Church wasn't the original. It was part of the Orthodox Catholic Church, and in the schismatic break the Pope, the Bishop of Rome, was excommunicated by the Orthodox Church in 1000 A.D. So, they have been in business on both sides of the street for quite a few centuries, and several of your crusades went over and your greatest slaughter of Europeans in Constantinople wasn't done by the Turks. It was done by the Crusaders of one bunch of Christians slaughtering the other bunch of Christians while both of them were going out to fight the Infidel.

Kindly bear in mind that there has been more human blood spilled in the name of Jesus Christ, a million times more, than was spilled by Hitler.

Mohammedanism has the same kind of cockeyed setup. That's why you're having trouble in the Middle East and in North Africa. Communists? They're not enough in there. You look at the babies and the flies crawling in and out of their noses and mouths and the garbage, the smell, and everything else. You don't need any Communists or Karl Marx or Lenin or anything else. It blows up of its own stink. And the Mohammedan Church has the same thing; so has the Lutheran; so has the Mormon Church.

The Mormon Church out here -- who goes to heaven? Well, come on. Does the Negro go to heaven? No. Eisenhower has two Mormons. If we had 5 million Mohammedan votes in United States, he would have two Mohammedans. Let's face it. What kind of bribery do we have to go through? Do we have to bribe every cockeyed kind of bloc? The farmers, the labor union, the bankers, the railroads, the churches? You've got to pay off to everybody.

Well, what are you? Citizens of United States last and all the other things first? Well, you'll have to make up your mind. So will everybody else. Now understand, I'm not in any way deprecating anybody's religious belief. That's theirs and we'll respect it, but we'll fight anything in any ecclesiastical institution that steps over that line and says, "Because I'm a Lutheran, a Methodist, or a Roman Catholic, the rest of you should do this." So, wait a minute! That's contrary to separation of church and state in United States and we're opposed to it. That fair enough?

TELL US A LITTLE BIT ABOUT JOE McCARTHY.

I don't know what you have to have me waste my time over something like that for. McCarthy's technique is exactly the same kind of technique that the Fascists used in Europe. Exactly. Now McCarthy is going out to form McCarthy Clubs with a photograph and book by McCarthy for each member of the McCarthy Club. He wants to run for president in 1956.

Years ago, I was consulting engineer to the State of New York, and Al Smith, before he was nominated, said, "What do you think of the chances?" I said, "Well, Al, you're one of the best informed and cleverest backroom politicians that the State of New

York has ever known, and you have an integrity, but when they nominate you for president and when the 'powerhouse' and Mrs. Moscovitz convince you that you're a statesman, that's the end. You won't find it out until you cross the Mississippi where the sidewalks of New York don't mean anything."

Months later I was going up Madison Avenue; he was coming down. He reached out and grabbed me and said, "You've got to come in with me." We went into Longchamps on Upper Madison and he said, "Well, you called it." He said, "I know, you're right. But I couldn't turn it down." I said, "Now you'll wear those little stuffy britches and the gold sword and the frocked hat. They'll give you a reward." In other words, he played out of his field. Have I answered your question?

You see, you have to bear in mind that over in Italy with its population of practically 48 million, the Monarchists are good Catholics, the Fascists are good Catholics, the Christian Centrist Party are good Catholics, the Socialist Radicals are good Catholics, and the Communists are good Catholics, correct? Now, Italy and the Vatican would be in one hell of a mess if there weren't any Communists in Italy, wouldn't they? Couldn't get any aid, could they? Look, how dumb do we have to be? So, if there aren't any there, for heaven's sakes, create them, so we have a menace that you come over here and have to help us out, don't you? It's wonderful, wunderbar, as the Germans say.

You have 55,000 Communist Party members in United States out of 158,000,000 people. What percentage is that? Is it 1 percent? It isn't, is it? It's less than 1 percent, isn't it? And we're scared to death. We beat the drums. Anybody that takes exception to anything is some kind of queer person. Why, Mrs. Roosevelt was a Communist. So is George Catlett Marshall. They were all Communists, weren't they? Dean Acheson? Oh, you too, certainly; you're here listening to me. You see how crazy this thing has become.

HOW LONG WOULD IT TAKE IN AMERICA TO GET THIS MIND OF THE HUMAN ANIMAL DOWN OUT OF HEAVEN AND GET IT ON EARTH AND DEMAND ABUNDANCE HERE INSTEAD OF HEREAFTER BECAUSE THEY ALL DEMAND ABUNDANCE IN THE HEREAFTER?

Look, my dear sir, the public of the world, whether it has

been Christian or otherwise, has been so for several thousand years. They have been selling real estate in the hereafter and No. 8 size halos and harps, and it's become part of the mores of people whether it's India, Africa, or where it is, that it's the thing to do -- to live like pigs on this earth so you can get your reward and be angels hereafter. Now one of the things that's upsetting the whole of Africa and Asia is the fact that the tools of modern technology are demonstrating to hundreds of millions of people that what? They can have in the here and now something greater than all the promises of philosophers, priests, kings, and emperors all down history have ever promised. They have seen the bulldozers, the machines, come in and do it in their time.

Malaria -- they've had malaria from time immemorial. What happened? You come into Solon, just as we came into Naples; we laid the women down on the street like this and the men and one squirt gun, you know, one at the feet and another at the neck, and you shove it down the back of their dress and up their trousers and up their pants and wheeee -- we stopped malaria dead in Solon. What happened? The life expectancy, the death rate is way down like that. We did it in Naples, we did it in Solon, we did it in different places. We do these things as expediciencies, and we have no planning for the result. What are you going to do with it? Go out and vote Republican or go out and vote Democratic?

HOW MUCH ROOM IS THERE. IN AFRICA FOR THE INCREASE IN WORLD POPULATION?

There isn't any room really. There's not sufficient arable soil today extant. We're short. It takes 2 acres per capita. There's 2.4 billion population and there's not 2.4 billion acres. We're half a billion short.

HOW WILL WINSTON CHURCHILL FIT IN THIS NEW SETUP IN UNITED STATES IN THE REPUBLICAN PARTY?

He fits in very well. He's Tory and reactionary -- about 78 years of age. Did you see the picture of him at this party where he had to be helped up the stairway by two men. Well, he's been living on brandy, you know; and, of course, when they take to art, you know they're slipping. You know, his latest hobby.

I HEARD NOT TOO LONG AGO THE STOCKHOLDERS SOLD THEIR STOCK  
IN THE ROCKEFELLER INSTITUTE. IS THAT TRUE, AND, IF SO, WHY?

In the Rockefeller Institute? Well, I don't understand you.  
If you're talking about the Rockefeller Foundation. Is that what  
you mean? Well, now, you see there are a number of foundations  
and the Rockefeller is one of them GAP IN TAPE collection this  
country has ever known. They're all Cadillacs,

HOW LONG CAN THEY KEEP THIS GOING?

You can't keep it going long, because to keep it going you  
have to keep adding more and more to it -- expanding the credit  
amplification. The greater the credit amplification, the more  
capital goods you have to put in. Do you see the process? And  
that's lovely. Then what happens? You build a million houses a  
year -- well, what are they? Are they fireproof? Weatherproof ?  
And, of course, they sold a tremendous number of them on 20 and  
25 years to pay for them. You ask the average man that has one,  
"Oh, he owns it." You say, "Are you all paid?" "No," he says,  
"I'm paying like rent for the next 22 years." Twenty-two years?  
But he owns it! You've really plastered it.

You see, you have so many current misconceptions. Now you  
ask 99 people out of a hundred if they've got money in the bank.  
I'm speaking of those who have a bank account. And they'll say,  
"Yes, they've got money in the bank." That isn't correct. When  
you take your cash money down to bank, what is it that actually,  
technically, and physically happens? No depositor has any money  
in the bank, technically and legally. You've always held that  
idea, haven't you? You take your cash money down and you sell it  
to the bank for a credit currency. You haven't got a dime in any  
bank, and yet you believe, by God, that you have money in the  
bank. Well, when you have a nation that all think they have money  
in the bank and don't know the difference, why in the hell send  
them to public school or high school if they're that .... You  
sell your cash money to a corporate institution, and in exchange  
for that, it gives you a credit currency. They've got the money  
-- not you. "Oh, I've got money in the bank."

Don't forget that the Attorney-General of United States  
wanted to move for my indictment for making statements inimical  
to the safety of public institutions because in July, 1932, I

predicted that the banks of United States would close on or before April, 1933. And he asked us, "Is there any reason why he shouldn't proceed?" I said, "No, not at all. We would be delighted. As and when that happened, we would like to open up the Hibernia Trust of New Orleans, the Union and Guardian of Cleveland and Detroit." Remember, some of you, when I spoke in the Cleveland Civic Club December 6th -- I think it was in 1932 -- and the papers of Cleveland came out and shrieked bloody murder, and interviewed all the leading financiers and had their photographs in there in The Plain Dealer, and the names they called me? I was a wolf in sheep's clothing. I was this; I was that. "No, nothing like that could happen. We had a Federal Reserve system. Impossible."

I was speaking before the National Education Association annual convention in the giant arena in Minneapolis -- 22,000 were in there. I was the first speaker, and I asked how many of them had their return ticket to hold up their hands. I said, "Well, those who don't have a return ticket better get one, and if you've got an account in a bank back home, telephone or wire to withdraw." I got back to the Curtis Hotel. I'm there only a few minutes and the mayor, the district attorney, the governor, the attorney-general, and the state treasurer -- what did they come up for? They came up and they thought they were going to hand me a warrant. Disagreeable duty, yes, sir. The telephone rang. "Mr. Scott, the extras have hit the streets. The Governor of Ohio has closed all the banks in Ohio." I said, "Send up a hundred!"

They looked at the headlines -- big banner headlines like that -- and they looked up and at me and I said, "You may have the copy. And just one thing: kindly observe the time. The difference in time between Ohio and Minneapolis, I was making the statement at the same time the governor was closing the banks of Ohio." And then you have the governor and others saying, "Mr. Scott, what would you advise us to do with the funds of the State of Minnesota?" "Far be it from me, sir, to offer fiscal advice to a governor of a sovereign state."

I mean, we have a record that goes back. The record is unique. We have made mistakes of omission, yes, because we haven't the personnel or the money to have the executive force to cover it; but strategic errors of commission, we haven't any.

Hanson Baldwin, General Fuqua, Major Elliott, and all these, they did excellent military analyses of every war theater except when they came to the Russian; and then their prejudices and so on got the better of them. Why? They believed in Von Clausewitz, Scharnhorst, Schlefer -- there was only one general staff in the world, the Wermacht. The Russians didn't have any armed forces; it didn't have any generalship; and it reached such a point that the reason the Germans were defeated in Russia was because Hanson Baldwin didn't come out with his analysis. For instance, he came out with one analysis that it would take six weeks to invest Warsaw in the New York Sunday edition of THE NEW YORK TIMES -- a beautiful one. It hit the streets around 10:00. The 11:00 news announced what? The fall of Warsaw. So, at the end of the thing, I went down and got one of those long calla lilies. Great big long one in a single little box. I had the man put it in the box and wrap it in umpteen layers of plastine tissue, and I put my card in there and wrote on it, "To an intelligence and aperceptivity that lies buried on the Russian front." I get called up about it. I shouldn't have done a thing like that because, after all, gangsters send lilies to people they bump off. You see, the men were good over here, and they become absolutely imbecilic over it. I mean, did Eisenhower ever develop an idea? Has he ever been guilty of having one -- or Harry? Neither one or the other -- they never had an idea. In the armed forces, you run on your record card until you're colonel. Then above colonel, it's File 201; but if you have ever said anything at any dinner party or if you've played around with the wrong woman, it will be in File 201, and you won't get promoted.

Now Eisenhower was MacArthur's deputy. He was there right with the troops when they shoved the bonus boys out of Washington. Right there back of the marching units. You knew that. He was MacArthur's deputy in the Philippines. Anyone disagree with it? You see, Harry only got to be a captain. That's his trouble; he never even got to the stars -- just got to the bars. Well, do you think you've had enough?

ARE THEY GOING TO LOWER PRICES SO WE CAN BUY THIS SURPLUS OR  
ARE THEY GOING TO RAISE WAGES AND PRICES SO WE THINK WE'RE  
RICH AND BUY IT?

Well, what have they been doing the last ten years? They

raised your wages a little to raise the prices, didn't they? There comes a day when you can't keep it up anymore, then what do you do? Well, after all, it takes an organization. You don't have to indulge in bullets or ballots.

Do you realize that if there were ten places, ten urban centers in United States, that had 1,000 painted cars -- that's all, ten places -- you wouldn't have to have any violence or any overt act, because if you had 1,000, they'd think you had 100,000. Anytime. You see them go back in their offices and to work -- they didn't know they saw the same one eight times. They can't count after five.

DO YOU HAVE ANY STATISTIC OR COMPARISON OF THE RUSSIAN STANDARD OF LIVING AS COMPARED TO THE UNITED STATES?

Well, what do you mean?

THE MAGAZINES ALWAYS HAVE THE RUSSIANS WORKING SO MANY HOURS TO BUY A LOAF OF BREAD. I FIGURE THEY WOULD STARVE TO DEATH IN TWO DAYS.

Yes, they wouldn't live the week out, and that some miracle is performed. Either the Russians don't have to eat and live on love or vodka or something. If you go in for those kind of statistics, you can prove anything anyway,

IF THERE IS ANY BASIS FOR THAT, IT MUST BE THAT THEY ARE GETTING A LOT OF FREE RENT, FREE THIS AND FREE THAT.

Well, they admit they get meals and all kinds of things. We've adapted the stupid proposition that our enemies haven't any scientific or technical brains. They haven't any generals.

Now in the Finnish-Russo War, the propaganda just piled in here and the Finns were capturing Russians every day, ambushing the equipment. The Russians didn't have any uniforms or arms, didn't have any shoes. They were freezing to death. Well, THE NEW YORK TIMES and the NEW YORK TRIBUNE finally cut it out. What did they cut it out for? We were talking to them and said, "It's awful funny. Do you know what the tabulated report of your papers mount up to? These Finns are amazing. They've captured more Russians than the total population of Finland!"

Now remember it's just like advertising, A successful advertising man in New York is all right so long as he doesn't believe his own lies, and the moment he does, he's on his way to a rest home in Connecticut. Nothing drives them cuckoo quicker than when they start to believe the guff they hand out. Get this clear: Propaganda is the enemy's lies; truth is our lies -- that is, the truth that we publish officially. You understand what I mean. I'm not using the word "truth" but what we publish as truth is our lies and propaganda is the enemy's; and the unfortunate part is that we're not doing anything to clarify the factual position of the American public. We pull all kinds of things about how bad the others are, and then we begin to believe our own tripe. And we think that our brand of hooey is three times as good as the enemy's hooey; so then we combine both of them.

Well, after all, Goebbels in his propaganda had a little basis of evidence. We've gone to the place where we don't have to have any facts in it at all -- just chop it out of the blue sky. Now it's pretty sad because the public is deceived, has false illusions, false hopes. It's not their fault. Where do they get it? Well, all you have to do is appear on TV. "Well, I saw it on TV. It must be so." Otherwise, forthright people are totally misinformed. Just a simple thing, as I was pointing out about money in the bank -- you haven't got it. But 99.9 percent of Americans believe they have money in-the bank, don't they?

DO YOU THINK THAT LABOR WILL LOSE THE TOEHOLD THEY HAVE  
GAINED UNDER THE DEMOCRATS NOW THAT THE REPUBLICANS ARE IN?

Well, they may not lose all of it but they'll be kicked around as they haven't been kicked around in years, and the only thing that's going to teach labor is where they thought they were going to get a bigger piece of the pie each time and have whipped cream on top of it, that they had something in common with the board of directors and the stockholders; and your labor unions have stock tickers, news tickers at their annual convention. I've seen them. They would hire attorneys who play golf.

I don't know whether any of you remember the time they asked me about Richberg -- what's his first name -- he was the attorney for the unions. I said, "Well, didn't you know you couldn't trust him? The louse played golf! You're hiring him as a labor attorney

MEMBERSHIP MEETING, AKRON,  
WITH HOWARD SCOTT

8-29-51

and he's going out to play golf? I said, "What's the matter with you. You've either got to be one side or the other." And they looked at me. This was the labor convention. He was going to sell you out. And this is before he did and he did.

You see, it's all been so nice. It's been a nice chromium-plated snoot trough. We've had our snoot and all four feet in it. Now when they pull that snoot trough away from you and you really have to root hog or die, it's going to be tough. Have you had any ideas come out of any top flight labor leader in the last 20 years? They don't even write an editorial worth talking about. I'm not trying to belittle the labor leader, don't misunderstand me. I'd like to see some of them who would fight; but, no, what are they fighting for? Little hamburg sandwiches when they could have the whole steer.

Well, I don't know whether I've got my message over or not, but I've done the best I could under the conditions. Generally it takes about three speeches for me to get under my belt before I really get going. Coming back through Cleveland, I'll be in condition.

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO  
AUGUST 30, 1951

WILTON IVIE:

Greetings, members and friends of Technocracy. I assure you very much right now that this is not a voluntary and urgent wish on my part to be up here. I just came along for the ride. Like that story they tell unofficially about Mark Antony when he crawled into Cleopatra's tent at 2:00 in the morning -- he said, "I didn't come to talk."

We've heard Technocracy defined as "science applied to the social order." That may sound like a rather innocent statement, but it implies a great deal more than the mere words. You have to understand something about the meaning of science. During the past 300 years, science has become prominent in human affairs. Before that, there were authorities and philosophies that governed human conduct and human affairs. They still do, we might add.

Now there are six major branches of knowledge and affairs which have for subjects of scientific application and investigation. To five of those, science has been applied very thoroughly. First was astronomy, the study of the stars, planets, and other things beyond this earth. There's the study of geology, the study of the earth, its history, its composition, and the factors that influence its change and development. Then there are chemistry, physics, and biology, making up the five major branches of science as they exist today.

There's one branch which has not developed into a science yet. That's the science of human affairs. Human affairs are still very much regulated by the same processes, the same concepts, the same philosophies, and the same values that pertained to the other fields of science prior to 300 years ago.

Technocracy is the organization which represents the forefront of the application of science to human affairs -- science applied to the social order. Science is not an innocent little device that has come along to help out mankind. It's been the most disruptive thing in human history. Science is an intrusion which is destroying an old era in the history of the

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

earth. A new era is being born. The significance of that will be more apparent when we decide that there has been only one era in human history up to date -- only one era, its past period and its ages, its epochs; but there has been no fundamental change before this.

Human beings came on the earth, as near as we can determine, as a form of animal life. They lived an animal-like existence for many hundreds of thousands of years, not essentially distinct from the life that was led by various other species of animals which we might mention -- the chimpanzee and the gorilla as analogies.

So, then human beings organized into small tribes for mutual protection, to help each other out in hunting for food and in building shelters, and thus human beings evolved into the state of savagery and formed these savage tribes. For a long time they existed in that form. There was no private property in these savage tribes, that is, the houses did not belong to the individual; he merely occupied them. They were part of the community. When they went out on hunting expeditions and killed the animal, it was shared by the community. It did not belong to the person who was successful in capturing or killing it. That was the second period of human history on the earth.

The third period was the period of barbarism. This had certain characteristics which grew out of savagery. Human beings developed certain institutions and behavior characteristics that were different from the previous period. They acquired private property and the concept of property rights and values, that is, property values. You can't say they had monetary values in the early days because they didn't have what now passes for money; but on a barter basis, they had the equivalent.

Well, the savage period developed up. Politics became prominent. There became wealthy people and poor people and all the chicanery that goes with that sort of human differential. The politics developed into quite an institution wherein certain individuals attempted to gain control over the affairs of the majority. Then there became the economic process which developed into an enterprise, and the rules of the Price System were laid down and developed over the centuries.

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

There developed what you might call the witch doctors and the medicine men and the priests to influence human behavior and gain control over human beings from another angle. Those were the three main authorities of the period of barbarism: political authority, the economic authority, and the witchcraft or priestcraft authority. They had various manifestations, various forms, but they were all essentially the same fundamentally.

Thus, we've had the three periods in the first era of human history. We're in the last stages of the period of barbarism now and it has various aspects.

But about 300 years ago, a new institution was invented or discovered and introduced into human society. That was the method of determining the most probable, otherwise known as science. Science is a method, a method of discovery, of finding new knowledge. Well, we can compare the periods in human history to the periods of a geologic era. Take the Mesozoic Era, for example. That's the age of the reptiles. It began about 200 million years ago, lasted for about 135 million years. The first: period was the Triassic, in which the reptiles began to develop into prominence. Then came the Jurassic, in which they developed further. They became larger. And finally into Lower Cretaceous, we have the huge dinosaurs which dominated the earth. They dominated the earth in the air, in the sea, the lakes, and on the land.

The last period, the one that corresponds to the period of scientific intrusion the present, is the Upper Cretaceous, The period of geologic revolution, the great swamps, warm climate change. The land became elevated, became drier. The dinosaurs could not adapt to that change. They disappeared.

Following the Upper Cretaceous, nothing was the same as it was before. From the Triassic to the Jurassic to the Lower Cretaceous, there had been a gradual change from one era into the other. Nothing fundamental had changed. But with the Upper Cretaceous, there was a fundamental change -- the dinosaurs disappeared. The reptiles no longer dominated the air, the land, the sea, or the lakes. Entirely new forms of life came in and became prominent. The old values, the old concepts, if we might use that analogy, disappeared. Entirely new ones came into being. So, we're living in the Cenozoic Era, the one that follows the

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

Mesozoic, dominated by the birds, mammals, the bony fishes, flowering plants, the insects. None of these were prominent during the Mesozoic. Now we have this period of scientific intrusion which is disrupting the old values, the old concepts, the old institutions. We're preparing to enter a new era in human history, and after we enter this new era, none of the values, none of the concepts, none of the things we considered important in the past are going to be worth anything in the new era. A few things will carry over, of course, a few things that are essential to human life and well-being; but none of the efflorescence or the bric-a-brac or gingerbread, as you might call it, will survive.

That's a rather frightening thing from the ordinary concepts of the human being. He likes most of what he has. He'd like to have something a little bit different but not very much different; but he's going to have to adjust to fundamental change. For example, throughout the first era, toil became an essential factor in human life. Human beings worked to produce their wealth and comfort and supplies, the necessities even. It was necessary that the human being toil in order to produce what he needed. In the new era, toil will be out. Human beings will be kept away from the job. There's nothing that he can do along that line that will help him to survive or help him to promote his welfare. The old era of human history was an era based upon scarcity. There was not enough to go around. There will be no conflicts as to who gets which and how much; therefore, all of the values based upon scarcity are thrown overboard. We'll have no use for them.

In the old era, society was governed by the political method -- by opinion. Various political theories came up and one worked just about as well as another. It didn't matter much which political philosophy you had. The physical operations of the area went on very much the same -- a little worse in some areas than in others, but that depended more upon the available resources than upon the brand of politics.

The political theories will not suffice in the new era. It's an era of precision control and objective control. The subjective values of the old era so far as human control is concerned -- social control -- will have no place. They will not fit in, because the factors which gave them validity in the old era no

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

longer hold true. They will be gone, too.

Technocracy Inc. is the organization, the only organization in the world, that is actively preparing human beings for the new era, for a change from the old into the new; therefore, we are a unique organization. Of course, we are preparing for that change only on this continent. That does not mean it will be limited to this continent eventually, but so far as this organization is concerned, this continent is all we can be bothered with at this time.

Technocracy is not like any revolutionary organization of the past. It does not seek to take over and gain power and control and regulate human beings like all other philosophies of human control or regulation, as all other revolutionary movements have been based upon the idea of a new clique getting in and gaining control.

The Russian Revolution, for example, represented a new political party getting into power and running things a little bit differently from the way they had been run before. Russia still has a political system. It still has a Price System. It still uses money. Only a minor change has taken place, that is, the government operates the enterprise instead of the private individual; otherwise, very much is the same.

Technocracy is an entirely different type of revolutionary organization than that. It is not seeking to gain control over the lives of human beings. We're merely the vehicle for carrying an idea. An idea cannot be destroyed by physical means. The only way you could destroy Technocracy -- the idea of Technocracy -- would be to destroy every member, every person who has heard of the idea, to destroy every piece of literature that in any way explains it. Well, that's a big order considering the number of people who have heard of Technocracy and the amount of literature that has been distributed. We're safe so far as the idea is concerned. It cannot be destroyed. But an idea must have a vehicle to carry it forward; otherwise, it languishes. This organization is that vehicle, and always carried it through at some tough times. We may have tough times ahead. We cannot predict exactly.

We know what the general trends are. We know what has to be

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

done to operate this continent efficiently and effectively, but we cannot say just what will develop this next week or next month. We cannot say exactly what the conditions will be a year from now. But we do know what's going to happen eventually. We know what the trends are, where they're leading, and what the eventual effect will be. We also know what the next most probable state of society must be if civilization is to survive on this continent, and we have projected that. But it is not our job to step in, take over control, and install the Technate. That's the job for the people of this continent. We're carrying the idea until they get ready for it.

This is a unique organization, as I said. It has certain characteristics that are distinctive, that is, one characteristic is its unity. It's the same organization throughout the continent. The Section here in Akron is no different in general from a Section in Los Angeles or in Saskatoon or in Warren, Rhode Island, or anywhere else on the continent where you might find one. It teaches the same lessons. It's made up of members who think the same, who have the same social objective. The only differences are in the minor details.

Technocracy is made up of a wide variety of human beings from many walks of life, indoctrinated with many varieties of philosophies, superstitions, and social concepts. They come together and within this organization they find unity. Outside of the organization, there is disunity, conflict, and confusion. Technocracy does not seek to change the individual very much. First, we have a social objective on this continent; that's all we're interested in. We are not concerned with what religious beliefs the individual has. Outside of the organization, he can go to any church he wants. We only ask that he do not discuss these religious beliefs within the organization. We're nonreligious. We're concerned with the physical operation of this continent and the factors which bear upon the physical process. Now if any church, for example, comes out and tries to specify the physical operations of this continent, then we are in conflict with that church on a clerical basis. We have no conflict, however, with its dogma or its religious teachings or its aspirations for the hereafter.

We're not concerned with what jobs the individual member has in the Price System. He can be in business or he can be a

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

mechanic or a doctor, schoolteacher. We don't care how they make their living. He has to play the game of the Price System in order to survive under the Price System. The only thing that we ask is that the individual do not let the conflicts that he runs into in the Price System, that he does not bring those into the Section, into the organization, and make them conflicts within the organization.

Individuals may have all kinds of different ideas about philosophies of various kinds: philosophy of the universe, philosophy of human conduct, and all that sort of thing. We're not concerned with that so long as he keeps it outside of the organization and does not use it as a means of disrupting Technocracy. Of course, we do not have politicians in the organization, which is one good thing. An individual may have political opinions outside of this organization and he may even go down and vote for candidates. We do not ask members of Technocracy to refrain from voting. We do advise them that it is rather foolish and point out they get more of the same no matter who they vote into office, but we do not tell them not to vote. The only thing we ask is that they keep their political opinions outside of Technocracy.

Well, I've given you a little basis here. I hope to have raised a few questions in your minds. If you have one or two questions you'd like to ask, I'll try to answer them before we have the Chief come on. Then we'll turn the meeting back to the Chairman and let him announce the rest of the program.

\* \* \* \*

HOWARD SCOTT:

Well, we've done Detroit, Toledo, and Cleveland. We're here in Akron this evening. It's a little warm.

Out in Detroit, it's somewhat similar in some senses to Akron; namely, Detroit is the big automobile center, and here, of course, it's rubber. But you can see the way it's slipping. What do they do out in the Hudson plant? They let them come to work a couple of hours a day, two hours, two-and-a-half hours a day, five days a week. In other words, they wouldn't fire them,

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

wouldn't close the plant; so, therefore, the automotive workers couldn't get compensation because they could still go to work every day. Isn't that beautiful? Of course, finally they had so many Hudsons they filled the fairgrounds out there in Detroit -- thousand of them. Then they finally closed down.

Now, of course, every automobile dealer, every newspaper, is still telling you the same thing: automobiles are hard to get. Just outside of the City of New York, north of Yonkers on the Sawmill River Parkway, the General Motors has around 500 to 600 acres of land. They have six thousand cars in one block alone -- brand new. These are not used cars. Then they have trucks running into a few thousand. They have night and day armed guards patrolling that farm to prevent photographs from being taken. Finally, a telephoto lens was used from the Sawmill River Parkway, and then they had the unmitigated gall to declare to the press that the cars they had parked there were for export. Of course, the General Motors Corporation of Michigan produced the cars and they did sell the cars to the General Motors Sales Corporation, which is financed by the General Motors Acceptance Corp. You know how it's done. So, therefore, as far as interstate commerce was concerned, it was technically an actual sale. Of course, they weren't going anyplace. They were just parked there.

Now in spite of the war production restrictions, automobiles are rolling off the production lines at approximately 6 million cars a year. The country is jammed with them. The highways are jammed. Besides that, there are all the cars in the used dealers' lots. This year down in Jersey, we have a famous throughway, you know. It goes down to Pennsville -- the ferry -- crosses over the lower Delaware. On the holiday, the Pennsville Ferry Line, the highway, was jammed for over 20 miles for 7-1/2 hours solid. People died, babies were born, other people fainted and succumbed, and they had to drive the ambulances over the front lawns and the flowerbeds.

Now they were all forthright Americans, not breaking the law, trying to get away for the holiday and the weekend, and the trouble was what? It was all right in this country of ours so long as a few people wanted to go in some direction at the same time, but you know our democracy. We all want to go the same way at the same time to the same place, and immediately that happens,

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

there's hell to pay. The density was so great that you simply couldn't move it. The same way on the route up New York State. The New York State Police had to put blocks out miles away from all the roads leading in there, all because a truck with a giant trailer with a lot of office stationery upset on the four-lane highway and blocked everything and the wreckers couldn't get in. It was blocked all day long -- the main north highway to the recreation field of North New York State.

Now you can see it happening. Technocracy has predicted that this would happen. Of course, the press and the powers-that-be came back at you and said, "Oh, no, not in our lifetime. Maybe our children or grandchildren will live to see it." But the irony of it is that you're living to see it right now.

Now back before World War I, our human toil-hand tool civilization was disappearing. World War I gave it a terrific impetus and put in technological equipment. In World War II, we jumped to new heights, and in the postwar boom since World War II, we've added a terrific installation. This year we're installing 8.7 million additional kW capacity in our public utilities. We have over 12 million kW on order for installation next year. Canada has similar rates of increase. We're going to jump the steel capacity to over 120,000 tons. The textile capacity has gone in the air. This year before the slump in textiles, the textile industry of United States was running at the rate of 13 billion square yards of cotton goods a year -- it's wonderful -- on 238,000 less employees than they had in 1944. Do you see what we're driving at?

Now, during World War II, we put in so much distilling capacity that the whiskey industry today, well, if they never made another drop of whiskey, the distillers of United States have sufficient whiskey in stock, exclusive of the distributor and the liquor store and the saloon -- exclusive of those -- the supply at the present rate of consumption of United States is 8 years and 4 months. Whiskey? Honey, we shore has. We're loaded with it.

You can go on down the line. Of course, I wouldn't talk about tires in Akron, but you know that capacity has increased.

The textile industry is due for an even greater revolution

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

than it's ever seen in the last 150 years. We've had the same type of looms since George Washington's day. Improved them slightly, yes, but you knock the shuttle back and forth like this. It's a terrific clatter, and you were limited in the width of cloth because you couldn't knock the shuttle any greater distance. Now these cockeyed technologists and engineers have come out with a new development, and it's a circular loom. It hasn't any shuttle bar and it stands vertically, but the other thread goes around here -- no mechanical connection but by magnetic rotation from a magnetic field above it. Six-foot diameter, of course, means 20-foot wide cloth. No vibration you could bring it in on this floor and plug it in. The only trouble is you'd need a conveyor belt to take away the product.

You have hydraulic presses in Akron and vicinity. One of the Continental Board of Governors has designed the world's greatest hydraulic press. It is on order for the United States Government -- 68,000 tons per square inch. It requires an extrusion press of 22,000 tons to feed it. Well, how did they arrive at 68,000 tons per square inch? They made a model of it. The model was exhibited in Washington and all the big brass said, "Yes, we've got to have something like that, but how big a one have the Russians got?" "Well, the Lowey in Germany designed one of 33,000 tons, and the Russians came in and took that one." "Well, if the Russians have one of 33,000 tons, by God, we've got to have one twice as big." Now that's just about how stupid it is -- not what you require, just let's multiply it. And to add fuel to the flames, they now want to build 14 of those gigantic presses. I don't know whether you realize what this means -- 68,000 tons per square inch. You can squeeze stainless steel out like spaghetti or you could do the whole side of a flatcar or boxcar. Whether you want it out of 1-inch or 1/2-inch or 1/4-inch steel doesn't make the slightest bit of difference with that pressure. She'll do it with 1-inch plate, an entire boxcar length, or a whole top half of a gigantic wing. It's seven and a fraction stories above ground and three and a fraction stories below ground. Twice as long either way to feed and take it away.

Now with these things, we've been trying to drive home a lesson. Here we're the first to bring out the cotton picker and the sugar cane harvester -- a lot of other things. If you'll look back in the copies of FORTUNE magazine, you will find -- I think in 1935 -- a photograph of the front cover of TECHNOCRACY

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

magazine, and below it the statement that, "the Techocrats are using the cotton picker to frighten the American bourgeoisie with." That was then. Today FORTUNE magazine is carrying full-page color ads advertising for sale the latest cotton picker. There are six firms making them. And, of course, the latest ads in FORTUNE or LIFE are two-row cotton pickers. Two-row cotton pickers will do between 38,000 and 40,000 pounds of cotton a day. You can see it in Akron, Cleveland, or any city in the north, because the negro is moving north.

Years ago, when I spoke in Mississippi and Louisiana, we advised them to mechanize it -- mechanize your cotton production. In other words, get it so cheap that even the cheap labor of the low-down white -- poor white -- and the negro will be too costly, and then they'll migrate, and the problems that are peculiar to south of the Mason and Dixon Line will no longer be peculiar to south of the Mason and Dixon Line but will be continental. Go down the streets of Chicago or Detroit or New York, Akron, or any other city, and your negro has moved north -- moved west -- and he's taking over the jobs. And, of course, you have a few housing projects around that are nice housing projects that are occupied by negroes -- better housing than these poor northern whites up here have right in the same district. It's hard for people to realize. This kind of transition is on. It's on in a dozen fields, and, of course, the rush is on.

United States Steel is building a 1.8 million-ton capacity steel plant at Morrisville on the Delaware -- the Pennsylvania side. Of course, Morrisville has no water supply and no sewerage system. By the way, neither has Lambertville -- no sewerage system in Lambertville. The same way as Morrisville -- the finest collection of cesspools on the Delaware River -- and we want to go out and lead the world, don't we? And tell the Koreans how to live. We better start on some of our smells. Lambertville or Morrisville have nice little lawns and little circular flower gardens, and there's a pipe comes up the middle of the flower garden here and there all down the block -- you can see them. If the wind is right, you don't have to see them. Comes one of those fogs, low fogs, and just as you come off the high land like that, you know where you "is" -- you is home!

We're moving up the capacity. Last year, the gross national product of United States was \$280 billion and there was a

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

deficiency in national purchasing power of 25 percent. Twenty-five percent of \$280 billion is what? Seventy billion. What was last year's national war budget -- \$71 billion, wasn't it?

Now we're in the expansion -- a greater industrial expansion than we were in World War II. It's only a few years ago that I was taken through the first continuous strip mill in this state of yours, the Armco. They were operating a strip mill around 480 feet a minute -- that's 20-odd years ago. Well today Jones & Laughlin are running 140 inches wide at 6,800 feet a minute. The new designs on the board call for 140- to 160-inch width steel at 10,000 feet a minute and 72,000 horsepower. How many men are there going to be? Only a few, and they will be several stories up in a nice fluorescent-lighted little terrace up there that will look down. They have to be that far away, because if anything happens at that speed, you just don't want to be near it.

Well, all of this is taking us as a nation somewhere. Go look on the highways out here and they're all bound somewhere down the road and the kids all have Hollywood mufflers on, you know, down to the next stop. And the entire nation is that way. We have reached a point where technology can produce anything in any capacity, but we cannot dispose of it. So we're going to inflict our nonsense on the rest of the world.

We've installed steel plants, power plants, textile plants, machine tool plants, oil refineries in Western Europe and other parts of the world. The oil refineries that will be completed this year in Western Europe by United States money and United States construction and materials outside of the Middle East -- understand, exclusive of that -- will exceed one million barrels-a-day refining capacity. We've built a brand new 3-million-ton plant for steel in Wales and built the giant Solac in France and the Associate de Nord, another one. One's got 800,000 metric tons of strip steel, the other one is around 1.6 million tons of straight steel. In other words, we're jumping up the capacity all over; and as you jump up the capacity, you increase the rate of flow of raw materials, which creates an ever-greater demand on the resources.

Well, where is Great Britain going to get the resources for 20 million tons of steel? Germany today -- West Germany, not all

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

of Germany -- is exceeding 12 million tons annually, approaching 14 million. France is doing the same thing. We send Mrs. Mesta over as Minister to Luxembourg, and little Luxembourg promptly gets a brand new steel plant of 480,000 tons' capacity. Of course, Mrs. Mesta and the Mesta Engineering of Pittsburgh wouldn't be related -- it's purely coincidental, isn't it? It's really "to laugh."

We build the giant Volta Redunda, 1.8 million-ton capacity, in Brazil. We build two more steel plants in Brazil. The Armco is just completing a giant one in Argentina. The one in Chile is completed and operating. There's a smaller one in Peru under construction. One in Venezuela is in part operation. The Arthur G. McKee Corporation of Cleveland has the \$6 million contract for the one in the Republic de Colombia. I mean it's marvelous the way we throw our largesse around the world to build the plants, bridges, power stations, ports, and everything else to manufacture what? To manufacture the very things that we thought we excelled in. Correct?

Now here comes a few of the jokers. Brazil has coal in the Rio Grande de Sul Province of South Brazil, but the coal of Rio Grande de Sul is not coking coal; so, therefore, someone has to ship 65 percent of the total coking coal requirements to Brazil. Sixty-five percent of the total coal required for coke in Brazil has to come from United States.

Japan has had scientists and technologists for years working on Japanese coal. The Japanese have two coal deposits. They're high cost but they're non-coking coal. The Japanese are a little bit better than the Brazilians. They only require 55 percent of United States coal to make coke; the Brazilians 65 percent.

Italy, of course, used to get coal from Germany and Britain, about 12-13 million tons from one and 7-8 million tons from the other. Not any more. Great Britain today has increased its energy consuming devices, its plants, to where it is a million tons of coal a month short, although it will probably mine around 219 to 220 million tons this year. It has increased its production per mine shift and per man-hour very noticeably. In other words, the efficiency of British coal mining has picked up, but still they can't lift it fast enough to meet the requirements of her peacetime industrial expansion, let alone the further burden

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

imposed by rearmament. This is a point to bear in mind.

Now, United States coal is bringing from \$22 to \$27 a ton -- that's soft coal, you understand -- delivered in Europe; and we are very much hurt and very much chagrined to find that the Swedes don't want it or the Danes don't want it or the Norwegians or the Swiss. Why? Because they can buy Polish coal for \$11. Very simple.

Japan had a steel capacity of 11.7 million tons when the war ended, but she hasn't any iron ore. She hasn't enough petroleum to talk about -- about 2+ million barrels out of their little tiny narrow strip on the north side of Honshu and Hokkaido, but she requires about 24 million more barrels of petroleum a year and about 28 million tons of iron ore a year, between 5 and 6 million bales of cotton a year and about 3 million tons of wood pulp and cellulose. Where is she going to get them? Well, her real resource area is Asia but we're temporarily holding the Japanese up. We fought the Japanese and we conquered them. Now we want to make peace with them and rearm them, because we're making a collection of probably the worst lot of bums, reactionaries, and fascists on the globe. That's what it amounts to. Syngman Rhee in Korea, Bao Dai in Indochina, Chiang Kaichek in Formosa, Salazar in Portugal, Franco in Spain -- a nice collection, isn't it? Not to mention Greece. Western Europe can't stomach it. Even Admiral Sherman. It was too much for him; it killed him.

Now what I'd like to get over to you is that the destiny of Japan is set today whether there's a single Russian on top of earth or not or a single communist. In other words, the existing geographical Japan -- her destiny is set. In other words, she can only be a manufacturing satellite and cooperative to the continent of Asia, because her resource area lies in Asia and her great consuming market lies there. Japan, with 84 million population on four islands, increasing at 1.6 million a year, there's no place for Japan to go except she operates as a cooperative producing and manufacturing for the Asian continent. Unless you're going to assume that the Japanese, with the aid of United States, will reconquer the Kurils, Sakhalin, Manchuria, Inner and Outer Mongolia, China, Korea, Formosa, Indochina, Siam, Burma, Malaya, and Indonesia -- yes, she can do that, but she fought in China from 1937 and she never got very far; and she was

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

getting licked on the mainland even without the atomic bomb. So the Japanese realize today that they have no stomach for it and don't want it. They're bursting at the seams with increasing population and depleted resources. Who is going to hold her up? Why, the American taxpayer. That's wonderful!

Try to understand what this process is. They raise your wages, they raise your salary, they raise your commissions, they raise your prices and profits. Here's the Chase Bank's report yesterday on the 50 biggest oil companies and their profits for this half year are 42 percent greater than they were last year. Nothing like having a big increase. So you shove up the cost of living; therefore, as it's on a percentage basis -- your withholding taxes -- and your sales taxes take an ever larger and larger amount, and that amount withdrawn from the public is used to uphold business, to uphold the system. In other words, every single American is making a weekly bite to hold up what? The most cockeyed system on earth. And what are we finding out? What are they admitting to everybody? That they're scared to death. They have hysteria because they have to have a war to hold it up a little bit longer.

It's a pretty sad and sorry situation when you have an economic system in this "land of the free and the home of the brave" that is dependent on war to maintain it. So, as the Technocrats out in British Columbia say, "We'd better get rid of this system before it gets rid of us." They're very frank about it.

Now you'll see more and more evidences of it. More and more people are working at two jobs. For the first time in the history of this country, there are more married women employed outside the home than there are single women, and there are more married couples holding two jobs than has ever been in history. And they're all complaining that they're making more money, yes, than they ever did before, but they never get a chance to see each other, and what the devil is the use of having a home? Besides that, your psychiatrists are overloaded with people with nervous breakdowns and other cases of psychiatric symptoms. They simply cannot take it.

Remember that it was advocated for years that when the woman got the electric stove, the electric washing machine, and all the

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

others that she would be relieved of the drudgery in the home and would have leisure to be beautiful and alluring and be charming to her husband. What happened? She's got them all in the kitchen now and she has to go out and work at two jobs to keep up with the machine. Check up on it. Isn't it so? And yet you haven't a single Protestant minister in United States that's taking exception to it. They all preach the same old malarkey every Sunday; namely, what? Well, this is a veil of tears and we should bear with it. Maybe in the hereafter everything will be all right.

Well, somebody said, "If you're not here hereafter what I'm here after for, you won't be here hereafter," So, if people in United States don't realize it pretty soon and get some sense about it, you're going in for one terrific situation; because abroad we're attempting to impose our get-rich-quick system on the others and they won't take it. We've hitched diesel trucks and bulldozers to the Iron Curtain and we're pulling it outwards all the time. Yes, stop and think. Jawaharial Nehru comes over and we snub him. We insult him -- intellectual and political leader of Asia, as well as of 400 million Indians. So we treat him as a subhuman being. And today, India isn't even going to attend the conference in San Francisco. It won't sign any peace treaty of ours with Japan; neither will Burma. So we promptly come out in the NEW YORK TIMES the day before yesterday and shriek our heads off, claiming that Nehru and the Indians are now our enemies. Well, that's a large order! We took on the Chinese. That wasn't big enough, so we have to take on 400 million more. How crazy can you be? And then you have some idiot, some four-star general, get up and say, "Why, we got the biggest stockpile of atomic bombs on earth. We can just go over there and drop atomic bombs on them and we'll show them." Well, we're showing them in Korea. Korea today is more devastated than anyplace in World War II. Our Air Corps has destroyed over 10 million homes, over 3-1/2 million Korean civilian casualties, and over 360,000 South Korean military casualties. We've napalmed it and bombed it from one end to the other for what? I mean, what are we going to do with it? And then we don't treat it on the level. We invite it to a truce on the basis of the 38th parallel, stated by Marshall and by Acheson, and then when the negotiations get under way, we refuse to accept the 38th. You're led to only one conclusion: that they don't want peace. They want war to continue, and that the Korean War isn't big enough, because now they're trying to

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

needle Britain to land troops in Egypt and in Iran; of course, to be followed by U.S. supporting units.

Well, how stupid can a country become? We're the wealthiest country on earth financially, but the pattern that we have evolved in the last 50 years isn't a matter of intelligence. It's a Cadillac car with a Fleetwood body, a large posterior, and a Corona-Corona cigar in his face. When you've arrived at that, you've arrived. If you have two Cadillacs, you're next door to Jesus. Yes. And just as those kids who were hit the other day -- they were insulted because they were hit by a Ford; and they said it would be all right if they'd been hit by a Cadillac. They could have stood it. Pretty sad commentary, isn't it?

The boys in the army in Korea want to know what they're fighting about. The army headquarters in Korea has forbidden the negroes and others to sing that song -- this is an actual communique posted in every army billet -- "Buggin' Out." They're not to sing it in Korea. Get hold of the words of it. It's interesting -- composed and written in Korea.

It's not a nice picture with \$70 billion of inventory. Inventories are climbing and sales are very peculiar. We have so many refrigerators, washing machines, and automobiles, and so much whiskey, furniture, cotton goods, and carpets, we don't know what do to with them. Well, and yet some of them are naive enough to think that a Republican or a Democrat elected to political office in United States is going to get them somewhere. All he's going to do is just some of the same old malarkey with a little bit of more margarine on it -- that's all.

Now you say that you have difficulty in reaching your public? Your public is boiling underneath. Just walk into any storekeeper of any good size and ask him whether his inventories are smaller than they were a year ago and see what happens. He'll talk to you. He'll talk your head off. He'll try to unload his troubles right then and there. What's he going to do with it? Walk into any small town scattered all over the country. They're loaded up with appliance stores. They're loaded up with liquor stores, grocery stores, furniture stores. One appliance dealer the other day, I said, "Well, you've got two nice stores here -- a great big double front, big display full of refrigerators, washing machines." "Yes," he said, "week before last, I took in

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

six dollars and some cents, and this week I've taken in four dollars." He said, "I think I'm going to close it up." "Well," I said, "why don't you?" He said, "You know what the trouble is? This isn't all I've got. I've got a great big warehouse back here six times the size of these two and I have them full. What can I do?" I said, "Did you pay for it?" He said, "Yes, I bought it." "Well, then, the bank can't call you." He said, "No, they can't call me, but how am I going to get rid of it?" That's what we're face-to-face with.

Now agricultural employment is 3 million less this year than it was in 1946 -- that's in total employment. Employment in agriculture has been continuously declining. So has the employment in mining. The employment in manufacturing, even with all of the war production, is less than the manufacturing employment in World War II, although the volume we're turning out is greater. Well, can you keep this up? For a little while.

We're now advocating, by Senator Cabot Lodge and others, a 180 group air force. That's wonderful. Wunderbar, the Germans would say. Because if the Air Corps gets that much money, the Navy and the Army have to have a similar amount. Do you know what that would mean? That would mean \$100 billion a year for just the Army, Navy, and the Air Corps. Isn't that lovely? Oh, that's wonderful. Do you know what that would mean to your taxes? Well, like the fellow that was caught in that unfortunate predicament in the wringer, "It wasn't bad so far." The other guy says, "But just wait until I jump on that handle!"

All right, a lot of you have homes. You bought them or built them a number of years ago. Well you can get approximately three times what you paid for it anymore. If you built it out of pretty good materials, you can sell it, and if you do, try to buy another one. Yes, you can buy another one, but will you get one half as good? No. Outside every city today, no matter where you drive, you've got square miles of these little two-by-four shacks that they want \$8,000-\$9,000 for. Why, I remember a few years back in the good old days when we used to have Chic Sales Emporiums down amongst the morning glories that were as substantial as they are -- especially those six and eight seaters. Yes, I've walked into some of them -- I can't get in the doorway -- well, I've got to go outside to take my coat off. It might be all right for some of these undersized people. Paint it

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

up, it looks nice, yes, but what's it going to be? Privacy? Why, if you stick your feet out the window, you'll stick your feet in the neighbor's dining room right next door. Levittown is that way. Levittown is \$9,900 and they've moved down to Morrisville and they're building 16 to 20 houses a day. It's going to be another Levittown down there. Marvelous.

I'm just trying to give you a few little rapid sketches. I'd like to hear from you. You must have questions on your minds. Come on -- you ask me some.

---

[Inaudible question] Reply: You see, what we do is provide the money through the Marshall Plan, the ECA, but the money is spent here in American industry and then you install the equipment overseas. We're really underwriting American business here to put new plants in over there. Now the foreigner is only getting a small percentage of that money, because most of it goes here to the American businessman. Am I making it clear? This is apart from bribing officials of the French and Italian Governments and Greece and bribing people and everything else we go in for apart from that. After all, if the British weren't making whiskey, we could give them whiskey; but then the British are exporting whiskey, too, so we can't give them whiskey.

We'll have so much cotton this year. You've seen Brannon's proposal -- senators and congressmen proposing to Brannon that we loan money or give foreign countries money so they can buy our surplus cotton off us. I mean, how crazy do we have to be? Then that makes cotton higher for Americans; so, we tax the Americans and make a free gift abroad so they can have our surplus cotton so we can have cotton at higher prices which we can't pay for. In the meantime, it piles up. How would you like to see a warehouse with 70-some thousand television sets in it? That's only one. There are lots of them. RCA in Trenton shuts down. It can't find any more warehouse space. GAP IN TAPE

.... in 1952. Now Holdridge came to CHQ. We took him to lunch and a dinner. He doesn't know what it's all about. He hasn't the slightest idea, but he has an ambition. Atwater and Briggs. Atwater was over at Wallace's headquarters on several

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

occasions, and he was openly advocating voting for Wallace; and he made the statement that Wallace would get 15 million votes. We tried to drill it into his head that that was nonsense. We weren't nasty to him. We made the statement that Wallace would be lucky if he got one million votes. Alice Langan and the other Langan out in Chicago advised that Section to vote for Wallace. Millikan spoke in Winnipeg and told Winnipeg they ought to vote for Wallace.

And Wallace hooks up with the Commies and the Progressive Party and the parlor pinks, and what happened? The Progressive Party was a right deviation -- political fingering of any progressive. It put the finger on them, didn't it? Because they came out in the open to support Wallace and the Commies. Now Wallace deserts the Commies and the Progressive Party, and what is it? It's as dead a dodo as Atwater and Langan and the CCP. That's the kind of hypocrisy lying that went on. They were what? All their professions were that they were going out to help expand Technocracy. They weren't out to help Technocracy; they were out to destroy it. They caused a lot of trouble, but get this clearly in your mind: the Communists and Fascists and others have had their purges from the top. This is the only organization on earth where they purge themselves. Now since the rats have been kicked out, it smells a damn sight sweeter and nicer. Pardon me saying so.

Now, you can pick yourself up here. They're doing it up in Ontario, They're doing it in other places. You can have house meetings. Get over that apathy and inertia, because conditions are going to move in this coming year. You sense it and everybody does. After all, Howard Scott can't do it. It takes the effort of every one of us. You had a good growing group here a few years ago. No reason why you shouldn't have one just as good and better. If you want to ask any questions on this, fire away. I'll be delighted.

[Inaudible question] Reply: Well, there are some, yes, but there's no use for them at the present time. While we're at it, I'd like to point out just another thing that happened here in Akron, It was totally unconstitutional and illegal according to the By-Laws of this organization for any officer holding a position or office in Technocracy to sell stock or anything else in any corporation in which he is a holder. I don't have to

HOWARD SCOTT  
WILTON IVIE  
AKRON, OHIO

8-30-51

mention any name, but it's totally out of order and never should have been permitted. If you want to buy stock outside on your own volition, that's another matter; but for anybody to hold an administrative office or on any committee in any Section in Technocracy and to promote the selling of stock, debentures, or partnerships or anything else inside of this organization is totally out of order. I don't care how good somebody thought it was or of how high moral standing the individual might think himself to be. It was unfortunate, and I think it's another thing that has left a dirty smell. Unfortunately the individual that did it was also in the CCP, and you had the fortitude to dismiss him from this Section without any action from CHQ. You know what I'm talking about. Atwater was kicked out of CHQ at the same time that Langan and the other crowd and was there before him and met them coming in.

[Several statements inaudible! .... legally they were liable. What is it? You expect CHQ to arrest them for this, that, and the other? We've been a little too nice, because when people came in and professed an interest and did show an interest, we didn't check up enough on them. It produced some sad reactions. The Director of Milwaukee that went CCP, he couldn't take the Section with him, so he shot himself in the head. Pretty pathetic. I don't mean to be hard on anybody.

You know the background; you know the principles. All it takes is a little cooperation. You can hold house meetings in various places. If some of you live out the other side, all right, start your house meetings out there. Gather people in in your own community. Have a discussion group. Quite a few of you here have automobiles -- is that correct? Should I say anything about them? I mean, we're grown up. You know what the problem is.

END OF TAPE

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO  
AUGUST 31, 1951

What I'd like to put over to you tonight is a perspective of our present national situation. All of you that read the papers, the periodicals, watch the events that are moving -- those of the last ten years -- there are certain events and trends that are rather frightening in this country. Similar trends and events occurred in Europe from 1919 to 1939. The same old story -- you had one little liberty after another taken away from them in Europe. The intelligentsia, the liberal, the leftist -- call them what you like -- were divided, finally crowded, backed up against the wall and Fascism took over.

In Germany, before Hitler, you had the Bruening Catholic Centrist Government, and the amazing thing about that was that it was held in power by the tacit agreement of the Social Democrats and the Communists. Before World War II, the City of Minsk had a Communist government held in power by the Catholic Centrist Party.

Of course, this is European politics. European politics have had more experience and more background for rackets than we have here. In United States, we have only had about 300 years to learn the angles, but in Italy, they've been doing it for 2,000 years, so they've gotten quite proficient. The only other place that's really better than Italy is China, where they've been doing it for 4,000 years.

Now don't start to develop the notion that Fascism was born and had a singular occurrence when Mussolini started it in 1919. Not at all. It has occurred before in history. What is the Fascist structure? It's a consolidation -- a triumvirate if you please -- of an ecclesiastical oligarchy, a political oligarchy, and an economic oligarchy -- a tripartite consolidation to preserve the status quo.

You had a Mohammedan Fascism under the Kharismian Empire. You had a Lamistic Fascism under the late Mongol Empire of the 1200s. In the one case, it was the Lamistic branch of the Buddhist, In the other case, it was the Mohammedanism. You had it in the Middle Ages, and from 1919 on, we had the European brand

of Fascism. Out in Japan, they had the same thing.

If there hadn't been a revolution in Russia, you would have had a Russian version, because the Czar of all Russia was the little father of the church, head of the Russian nobility, and chief of the Russian political state, which made it Fascistic in structure.

Now Mussolini and Hitler both started out simultaneously in 1919 -- one in Bavaria, the other in Italy. Adolph Hitler's first movement was not the Nationalist-Socialist movement but was a separatist movement. He was backed by the Banck Belz, the Banco de Roma, and the Muenchener, and that was for the separation of Bavaria, Wurttemberg, Baden, and the Lower Rhineland and Austria to combine with France to form the old Holy Roman Empire. Very interesting. That movement went down to defeat in the debacle of the Munich Putsch. Hitler went to jail along with a few others. Besides, it has had its martyrs in those that were shot. In jail, Hitler wrote his MEIN KAMPF. Coming out after 1923, the Nationalist-Socialist movement's name was changed. It went on its way, and it received the backing of large financial institutions and Bissen, a great steel magnate. Remember this was in Bavaria, and Bavaria was 96 percent Roman Catholic, and the Hitler movement was persona grata in Bavaria. Very interesting.

Well, World War II has been fought, and Fascist Germany and Italy have been defeated along with Fascist Japan, and there remain only Salazar of Portugal and Franco of Spain, a little remnant in Greece and some neo-propositions in Argentine and Brazil. Our policy since the war, that is, United States' policy, has been to subsidize and underwrite the formation of Centrist Parties in Italy, France, Belgium, Holland, and West Germany. The only reason that we didn't attempt to subsidize the creation of such a party in Britain, Denmark, and Norway is because there wasn't sufficient percentage of the population with that kind of background.

We shoved in millions -- billions -- and in Italy today, the de Gasperi Government is a Catholic Centrist Government. It's a residue for all the Fascist leftovers and precipitates from the Fascist movement. The same thing with the Adenauer Party in West Germany. In France you have two. You have the de Gaulle and the Movement Republique Populaire of Bidault and Schuman underwritten

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

by United States funds and political aid. Well, it's quite interesting.

We're repeating the same error all over again that happened during World War I; namely, in World War I, the idea developed that, because of the Bolshevik Revolution, the other nations of the world should erect a Cordon Sanitaire along the Russian frontier to prevent the spread of Bolshevism. It was conceived by the reactionaries and blessed by the Vatican.

Now Marshal Foch, generalissimo of the allied armies on the Western Front in World War I, didn't want a surrender of the German armies. You'll find this over his own signature. Why didn't he want a surrender of the German armies, and why did he insist on an armistice? Because -- he stated it -- he wanted the German armies intact with their general staffs to march into Russia alongside of the French, the British, the Canadian, and U.S. armies. That correspondence was written in 1918.

After United States entered World War I -- we entered it in April, 1917, and on December 23, 1917, after United States had been in the war, France and Great Britain held a meeting in Paris in which they formulated the "Agreement Particione de Rus." -- very interesting -- in which Poland was to have (the new Poland not yet born) the center, Britain was to have Esthonia and Latvia, Finland was to go over beyond Archangel, France was to have the Krivoi Rog and the Donetz and Odessa, and Great Britain was to have the Grozny, Maikop, and Baku oil fields. Well, in spite of that agreement, in spite of the fact that General Hoffman and other German marshals and generals played along with Foch and the German troops -- let's look at the picture a bit. The British landed troops in the early spring in March, 1918, in Narvik in Norway and they went overland via the electric railway to Karelo. They also brought their fleet in shortly afterwards into Archangel and Murmansk.

General Rudiger von der Goltz of the German Army landed at Hango in South Finland with 30,000 Germans accompanied by one Baron Mannerheim. The same time that General Poole of the British Army and 20,000 British and the British fleet moved into the north. Now remember, here's British and German fighting for the same objective on the same side while the British on the Western Front were fighting the Germans. Remember this was in March-

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

April-May, 1918.

The upshot was, of course, that Baron Mannerheim was made head of a separatist Finnish nation. Finland had been part of Russia since Peter the Great. Prior to that, it had been part of the Swedish Kingdom. There had never been a separate Finland in history up until 1917, when Finland, the autonomous Republic of Finland, was granted its independence.

These are all factual pictures of a background.

Now the Cordon Sanitaire created Estonia, Latvia, Lithuania, and, of course, a new Poland. After World War I, it chopped up the Austrian-Hungarian Empire and Czechoslovakia was formed right over here in Pittsburgh. And the Serbs, the Montenegrins, were combined into Yugoslavia, so that you had a new series of states forming a Cordon Sanitaire. The Cordon Sanitaire geographically provided a seedbed in which the anti-Communism of Fascism could take root. The result came out in World War II. What kind of a war was World War II? Well, let's take a look at it from a different historical perspective.

Great Britain declared war on Fascist Germany because of the invasion of Fascist Poland. I mean, how crooked can you be? And in 1939, the British sent a military mission to Poland and Russia, and they wanted Russian assistance. Well, the Polish Government wanted the Russian artillery, the

Russian tanks, and the Russian Air Corps but not to be manned by Russians. Just how the devil you do that is curious. So, finally they got to Moscow. Naturally the Russians -- quite naturally -- demanded a military alliance with Britain and the turning over of Latvia, Estonia, and Lithuania and the establishment of the Curzon Line as part of the military alliance. The military commission said that they had no power to do that, that that required a diplomatic mission. They said, "Very well, order a diplomatic mission. We'll sign it." But Britain declined to have an alliance with Russia in the early part of 1939.

The war broke out on September first and the German Army invaded Poland. Now remember United States was not at war with Germany; therefore, United States military naval and air attaches

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

accompanied the Wehrmacht -- the German armies -- into Poland. So did U. S . newsreel photographers, still photographers, and correspondents; and, of course, the propaganda was blared out about the destructiveness of the Stukas and the Luftwaffe. Remember we had an air hero -- one Lindberg -- who went over, and he was flown around by the German Air Corps and they gave him a beautiful lift, but when he went to Russia, they flew him around in a bunch of old crates. So Lindberg comes back and announces to the world that Germany had such a formidable air power that no country could resist her. You'll find it in the records, ladies and gentlemen, and it's a pretty sad, sorry record.

Well, across my desk in 1939, the photographs started to pour in from American photographers with the German Army on the Polish front. They met the Russian Army at Brest Litovsk. Nice, big shiny photographs by the hundreds, and we objected to the titles on those photographs. In 24 hours they came up from Washington to inquire why we objected to the titles. Very simple. We stated that the Russians had robbed every war museum in Russia, that they had equipped some Siberian troops with old uniforms, and here were Putleov 1917 trucks staggering along this way taking the Russian Army to the front. Putleov guns -- 1917. Well, we wanted to believe it. The Russians told us what we wanted to believe, and the joker is that the Germans swallowed it, the U.S. swallowed it, and so did the Vatican and so did Britain.

Do you mean that a country didn't produce a single gun, a single ammunition carrier, and a single truck since 1917? It's idiotic. A high official from Washington said, "Mr. Scott, but how can you tell the make of the equipment that are in these photographs? How is it that you people, you Technocrats, can point out all this equipment?" I said, "Sir, have you. any children?" He said, "I have, sir." I said, "What are they?" "Two boys, one's eight and the other is eleven." I said, "Very well. Let me ask you a very simple question. Can your two boys tell a Ford from a Chevrolet?" He said, "They certainly can, sir." I said, "Very well, go back and take lessons from your children."

Now all of this has a bearing, as you will see in a moment. We had one minister from Finland named Prokope in Washington. He was the idol of Washington's foreign society. We in United States were pro-Finnish -- the only ones that paid their war debts of

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

World War I, which is another damn lie, because there wasn't any Finland in World War I; therefore, it couldn't have any war debts. It did pay some interest on loans advanced afterwards.

Now in the winter of 1939-40, you will remember the Finnish-Russian war opened, and there again U.S. photographers and reporters and newsreel men were on the Finnish front. Well, it was the coldest winter in 125 years. One hundred twenty-five years previous, the Skagerrak between Norway and Denmark had frozen over. It was 47 degrees below zero with the guns firing. The photographs published in United States: the Russians had no arms, they had no uniforms, and the Finns -- with a little research you can check up on it in the NEW YORK TIMES and TRIBUNE -- the Finns captured more Russians according to the reports published in the NEW YORK TIMES than the total population of Finland. Amazing!

The photographs shown over here had one photograph of a truck train, diesel, big, giant caterpillar locomotive -- not like your little bulldozers over here but one you climbed up to. That truck train was ambushed by mines in central Finland. They photographed that from about seven different directions. The same thing occurred there. The destroyed tanks were labeled as Russian tanks. But, oh, no, how could a Renault tank, how could an Armstrong, be a Russian? They were quite obvious to anybody who knew equipment; so, we called their hand again.

And then we came out with the interesting proposition that the Russians had the largest long-range rifle in existence -- 240-mm., constant temperature barrel control, automatic loading, and remote firing. Now we had no photographs; we had no pipeline. How did we do it? From the evidence they inadvertently supplied to us by those damn smart jackasses, the American newspapermen. Because in trying to build up the propaganda of the terrific Russian wastefulness of throwing shells at the forts of the Mannerhaim Line -- why, it was just undreamed of, prodigality. They just poured shells, night and day, and the darned shells weren't hitting the forts; and, of course, that wasn't the way to attack forts anyway -- that you should attack forts by high-angle howitzer fire.

So, they gave the periodicity of the shells hitting, and we figured out the size of it that they were 240-mm. And then we

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

checked up and we found that the Russians had the second oldest artillery school in history. Well, with that background, they wouldn't be just throwing shells in there for the fun of it. There must be a reason. And if they were throwing shells in that volume, they must be beyond the range of the guns of the Mannerheim cupolas, correct? Certainly. Or the guns in the Mannerheim forts would have stopped the artillery fire. So, therefore, they must have been beyond the range of the Mannerheim guns.

The Mannerheim Fortification Line was constructed by the same military engineers -- French and British -- that constructed the Maginot; later, the Skoda Line in Czechoslovakia. So, the Mannerheim Line was the last word. It was the last word in more ways than one. And American photographers photographed, showed where the shells were hitting -- not at a high howitzer angle coming down but at a low rifle trajectory, and wrote very nice blurbs to show how stupid this all was. It wasn't stupid when you have 240-mm. rifles -- not howitzers -- automatically loaded firing at 37 degrees below zero. Get it? You have to have constant temperature barrel control, and you don't handle the metal with bare hands at that temperature. So, the shells came in with such rapidity. They weren't smart, no; they were just chess players, because with automatic loading and high periodicity of fire, they could throw sufficient big shells in front of each fort -- not hit them, oh, no, don't hit the fort -- in front of it, brother. They mined it out and what happened? The forts in the Mannerheim Line turned over and their guns went at high angle out of there and your photographs show it.

But months and months of lying; propaganda day after day. If you want to read a nice confession and apology, read the confession in U S CAMERA of five photographers -- U.S., not Russians, not Finns -- who were compelled to subscribe to that lousy nonsense in Finland. They could only write it and publish it when they got back here. It isn't all cakes and cookies, you know.

Now at the same time that this was happening, Great Britain and France, along with United States, remember, were very patriotic. They were going to rush to the aid of Finland. They had already shipped arms to Finland. They then proposed to send 40,000 French and 40,000 British troops and they asked permission

of the Swedish Government in official communiques to transport those French and British troops in closed trains across Swedish territory; and the Swedes, being perfectly fair and on the level, said, "Yes, you can, provided that you are a belligerent." So the Government of France and His Majesty's Government of Great Britain jointly guaranteed to the Government of Sweden that Great Britain and France would declare war on the U.S.S.R. on March 16, 1940. Why didn't they? For the simple reason that Finland surrendered two days before on March 14th.

Now if you want a complete nice volume on this, get the official publication of the Swedish Government, which reprints every single official communique of Great Britain, France, Germany, and Finland on the matter. Have you had it reported in your press? CHQ has a copy direct from the Swedish Government -- anybody can buy it; namely, that they were guaranteeing to declare war on March 16, 1940, that the declaration of war would be forthcoming before noon of March 16, 1940. Finland surrendered March 14th.

Now isn't that an amazing situation, that Great Britain and France already at war with Germany are guaranteeing to a neutral country that they would declare war on the U.S.S.R. along with Germany before Germany attacked it? I mean, how crooked can you get? The answer is you can get so crooked you can sleep comfortably on a corkscrew.

Naturally United States comes into the picture. We were so pro-Finnish that we couldn't see straight. We falsified the reports, and then when Finland surrendered, we couldn't understand it. I don't think that any of you here have ever seen the photographs of the Mannerheim Line after its capture with the guns out of line, the cupolas turned over -- the impregnable Mannerheim Line. According to our propaganda, the Russians didn't have any guns, big or little. They didn't have any generalship, and yet somehow the darned Line went to pieces.

On June 22, 1941, of course, the Wehrmacht attacked Russia. The war in Europe up until then had been a kind of very peculiar war. The bombing, the blitz over London, stopped in September before. The number of German bombers over the Balkans was several times the number of German bombers used over Britain, and the number of German bombers used on the Eastern Front was several

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

times the number used in the Balkans. Now it's very interesting. Just bear in mind that the only action that was on was in North Africa, where the British -- it was a succession of British commanders, Wavell, Auchinloch, and so on, and they chased the Italians first back beyond Bengasi, then they retreated. They didn't destroy Bengasi or its supplies, and finally Rommel and his Afrika Korps come in and he chases them into Egypt. And the El Alemain Line -- that wasn't far from Alexandria, but the El Alemain Line is only 25 miles from the Mediterranean water line to the Quatterra Depression, but the last 7 miles are swamps; so, the actual battle line of El Alemain was only 18 miles.

Now if the Germans had had any intention of making the Rommel campaign a major factor, if they had thrown six or seven more divisions in back of Rommel, he would have gone through to the Persian Gulf. There never was that intention. He didn't have the artillery or the corps. There were only six German divisions at El Alemain, that's all. And when Rommel was pushed back from El Alemain, he retreated, and he retreated where? Along the coast of the Mediterranean. There's only one single road, no more, and Rommel retreated 1,400 miles on a single road and did we stop it with bombs? We had command of the air and the sea. What kind of a stinkeroo is this?

Of course, when he gets back to Bizerte and Tunis, he goes to Europe, and in surrendering, the German and Italian forces had a beautiful defensive terrain of high hills -- one of the great naval bases of the world with more underground equipment than Pearl Harbor: guns, ammunition, food, cigarettes, liquor -- they had 'em all. Did they want to surrender to the French Army? Oh, no. Why? Why didn't they want to surrender to the French Army? Well, what's the pay of the French soldier or the French officer? That's too low. Well, who paid the highest? The United States. Because what? The foreign officer gets the same pay of the officer of the army he surrenders to, n'est-ce pas? You surrender to those lousy French? Oh, no.

Now to make matters nicer and finer, the German commander-in-chief after Rommel took a runout powder to Europe. Very interesting. His mother was living in Pasadena, California; had been living there for some time previous to his surrender. In fact, she had been living there for several years and owned a home there. You know how friends can get together?

So, here's an army, a German army -- only six divisions, that's all -- is permitted to retreat 1,400 miles on a single road. We catch up with him once just beyond Bengasi and he stops at the end of a nice long incline and then he pounds hell out of it for two days, and we had enough of it and they go on. Well, there's a lot of funny things.

General Eisenhower accepted the surrender of the Italian Government in Spain prior to the invasion of the United States forces into Italy. Did you know that? Oh, yes. But have you ever seen the text of the Italian Armistice? No, they haven't published that yet. That's one of those secret documents. But it was accepted by Eisenhower and the British in Spain before we landed a single U.S. soldier on Italian territory. We go through all the nonsense of Salerno, Rapido, Cassin, and we permit the Germans to retreat to the most defensive position in all Europe outside of the Alps -- the Appenines, with the result that the Germans with 10 to 12 divisions hold the allied forces at bay from the defensive positions of the Appenines for over 20 months. Well, how many divisions were engaged? Practically nothing by the Germans. Where were all the German divisions, for God's sake? They had 240 to 260 divisions besides that in action; so, all the divisions we engaged, the first was the six in North Africa, then the ten or twelve in Italy, and Kesselring held those positions to the end of the war.

When we invaded West Europe, there are some interesting figures. Eisenhower and Schaef issued a report of D-Day plus 34 or 35, and what was it? Well, there were 5,000 German dead on 80 miles of front and 34,000 prisoners after one of the greatest air and naval bombardments in history; and they shipped some of the prisoners over to the United States, and what were they? They all had Polish names. Very interesting.

When the Russians and Germans marched into Poland, you had the surrender of the main Polish Army in Central Poland of 380,000 Poles and 2,600 cannon, plus trucks, equipment, planes. You had 170,000 Poles in the southern army surrender. Well, that's half a million. Somehow or other, it seems that there were a lot of Poles in the German Army on the front. There were over 140,000 Spanish fighting on the Eastern Front in the Blue Division. There was the Waloun Division from Belgium -- 280,000

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

French; in fact, plus Austrians, plus 1,500,000 Italians, and all of the Romanians -- of course, the Bulgarians weren't fighting; so, you had practically all of Europe -- at least representative contingents fighting in the German Fascist Army.

In the last of July, 1941, CHQ made the statement that the German Wehrmacht, in order to win, would have to have a continuous advance of 20 miles a day. If the Russians could hold the retreat below that and limit it to an average of less than 8, they could lose every battle and win the war. Roosevelt sends Hopkins to London and then to Moscow. Churchill promptly declares Britain a military ally of the U.S.S.R., you'll remember, although they refused to sign an alliance in 1939. Well, Hopkins goes to Moscow. You can look back in COLLIER'S MAGAZINE and see the facsimile handwriting; they wanted to know what the Russians wanted from the United States in the way of material aid. The Russians wanted 1.5 million to 2 million rifles and a billion or two rounds of ammunition, provided that the rifles didn't fit their ammunition, but if the rifles did, they had sufficient ammunition. They wanted some machine guns, and they would like to have tanks made over here and they would send the Russian engineers over to show us how to make them. Now remember this is on the start of the war. You want 2 million rifles. Well, the Russians were only using rifles for guard duty. Who in the hell was kidded? Ever see a Russian unit with rifles in action? They gave that up, brother. So, they ask us for rifles! We believed it. We rushed to the aid.

Hanson Baldwin, General Fuqua, and Major Fielding-Elliott looked back in the NEW YORK TIMES and the other papers, and what? The Wehrmacht was advancing every day. There was no generalship, no strategy, nothing. Roosevelt, Admiral Leahy, Admiral King, and others in Washington made the statement on the first part of August, 1941 -- repeated by Drew Pearson over the air of this country: that the Wehrmacht would be in Leningrad by September 15th and would be in Moscow before the first of the year. And one of the top flight brass in Washington came up and said, "How about it?" We said, "They won't be in Leningrad, and we're quoting them, the grass won't grow in the streets of Leningrad, and they won't be in Moscow by the first of any new year you want to name. We haven't much money, but we'll place it on an even bet." -- August 14, 1941.

Our propaganda again misleads us, because the great battles on the Eastern Front were fought in October and November of 1941 before Stalingrad. And don't accept the figures of Goebbels, but the German high command was fairly accurate, and in the battle before Smolensk and Riga, the German Army lost 619 tanks in 4 days, 704 in one day. The whole Deutsche Wehrmacht was slowed to a standstill for over a month, and remember when the Deutsche Wehrmacht got to Tula south of Moscow and cut the Moscow-Leningrad Railroad to the north, that's as far as they ever got; and when the Russian offensive hit them, they never came back.

And yet, what was touted up? That the tremendous efficiency of the Deutsche Wehrmacht and the wonderful training and discipline -- why, they were going right on through to Lake Baikal. What the hell stopped them? Well, from our press you would think that what stopped the German Army, say, at Stalingrad, was just the tremendous patriotism of the loyal Russian. He really didn't have anything but himself. Do you stop tanks, artillery, and planes with the human body? You do not. Well, all of this is very interesting.

The Poles who stayed in Russia were all trained and equipped and were due to go into the line at Stalingrad and they refused. Why did they refuse? Because they thought that the Russians were going to be defeated and they would be in the same position as the Czechoslovak-released prisoners after World War I in Russia to be the great power in the East. The Russians disarmed them and kicked them over into Iran. So we take them in -- the British -- and we scatter them all around, and on the Polish front -- you remember the episode of General Bor? General Bor and his Poles start an insurrection inside the German lines on this side of the river, the Vistula -- armed battle with the German Army. We tried to send in arms, supplies, but it was costing us 35-45 bombers a night every time we tried it. The casualties were too high and we gave it up. The complaint, of course, is, why didn't the Russians come over and help them? Well, why didn't the Poles go across the river to the Russians?

Now comes the finale. Under any such situation as that in international law, you would be shot out of hand when captured. General Bor and his staff were captured. They surrendered, and when the U.S. Army trucks get into Bavaria, why, there he is, he and his staff, in a beautiful schloss -- of course, under arrest,

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

in quarters. I mean, just how big damn fools do we Americans have to be? If anybody would try that with us, we'd shoot them out of hand. So, there must have been something peculiar. Remember this was a year or so after the event in Warsaw. And it goes on and on.

Well, just to bring this thing to a little summation: The only agreement on Germany that was made or still exists is the agreement of division into zones. There is no signed agreement on the City of Berlin, but the division of Germany into zones, yes. That's a matter of signed treaty, and United States signed that treaty. And what's the fundamental of it; namely, that the commander of the occupying troops has the sole and absolute authority. United States signed it, but we have no agreement to be in Berlin or to stay there.

Now, while the fighting was still on, we agreed to the Elbe, and the maps were published and in the hands of every American division and unit that our forces were to stop at the Elbe. When we arrived at the Elbe, someone had conceived the magnificent idea of how wonderful it would be if we marched right into Berlin and captured Berlin and the 1.5 to 3 million Germans that were fighting the Russians and took it over. Well, we did cross the Elbe in force -- our armed units -- and we did reach Potsdam. Let's get this clear: We reached Potsdam, and U.S. planes did shoot down Russian planes over the City of Berlin; and then by some queer stroke of fortune, Air Marshal Tedder of the RCF ordered his Hurricanes, Spitfires, and Bullfighters over onto the Russian side and they flew wing-to-wing with the Russians and shot down U.S. planes. You'll find it published in little bits. It's one of the nice dirty smells we still have down there. Our forces got out of Potsdam in one hell of a hurry, because General Zhukov issued his famous order of the day that the area between the Red Armies and the Elbe was the area of operations of the Red Army; therefore, anything in that area was enemy.

What was the scheme? Well, the scheme was cooked up and there were a lot of people involved in it, a lot of people in high places. It's very interesting to observe that Ambassador Wynam committed suicide, that Dugan of the State Department jumped out a window, that another one in a jail in Miami under arrest by the FBI shoots himself, Forrestal jumps out a window, Sumner Welles takes a walk for a slow freeze, another one has his

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

throat cut and floats in the Potomac. What is worrying them? A lot of things didn't go over. How much does the public know about it? Double zero. Now don't forget I've said all of this before on the public platform with a good many more facts, but we haven't got time here tonight to give you the complete details on any picture. We're trying to show you how distorted and misrepresented something is. Now don't misunderstand us, we're not stating this from any Russian point of view. We're not pro-Russian; we're pro-American. We hate like hell to see our own countrymen deceived, distorted, misinformed; in other words, let's have the facts whether they're pleasant or unpleasant, and let's face it.

Now you have Dewey come back from the Far East, and he speaks before the VFW, and you have McCarthy and a lot more. They want U.S. troops in Indochina, U.S. troops in Burma, U.S. troops to invade China. We want to contain all of Asia. We preach about the Iron Curtain, but we hitch tractors and trucks onto the Iron Curtain and drag it out to take in more territory.

What are we doing to India? We give free arms to Pakistan and free supplies and we instigate or assist in instigation in the Pakistan attack on Kashmir. What's so valuable about Kashmir? One, the control of waterpower; two, the control of Karakoram and other passes to Sinkiang, China, and to Afghanistan and to Russia; third, air bases, only a few miles; fourth -- last but not least -- oil. So now we're declaring the entire 400 million Indians enemies. We insist on having an outlook on the world where there is only two colors: black and white. All the rest of the spectrum or any shade of grey, uh uh. If it isn't white, it's black; therefore, they are our enemies. We permitted our hysteria of anti-Communism to carry us to such a point, a psychotic point of a Fascist outlook. So we'll be persona non grata in India and Burma next. Well, how far do you want to pull the Iron Curtain out? We're doing it.

Now before we get so tough, just let's go over a few things.

This continental United States of ours is running out of resources. We are no longer an oil exporting nation. True, we're doing 6.2 million barrels a day in our production, but we're importing over a million. The biggest oil field today since Iran has shut down is Saudi Arabia. It has passed 820,000 barrels a

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

day. The new Indar field is on its way to being a big one in Saudi Arabia. But in spite of all that, it only took 56 gallons to fly a fighter plane in Europe in World War II. The same type of a jet plane today takes 260 gallons an hour or five times the amount. Well, we haven't got the same amount we had, let alone five times. We haven't sufficient hematite ore in the Mesabi to fight World War III if the steel consumption is as great as it was in World War II. We are also deficient in cobalt and tungsten.

Yet we have the fallacious nonsense that we're going to uphold Japan with 84 million population on 4 islands, increasing at 1.6 million a year. Japan, that has no iron ore, no oil outside of a little narrow strip on Honshu and Hokkaido. She has excellent copper. Her coking coal -- no, she hasn't got it. You have to add 55 percent American coal if you want to coke Japanese coal.

Well, we're going to make Japan our ally now. We're going to make the Fascist Franco our ally; Salazar of Portugal. Well, if there was any greater collection of S.O.B.s on the face of the globe, we'd make them our allies, too. That's how low we've sunk. We've got down so damn low that we can reach up and touch the bottom.

Who's going to hold up Japan? It hasn't got the resources. Neither have we to hold it up, and yet we're proposing a worldwide containment of an area that's ever increasing. Russia has a contiguous continentalism by accident. We have over ten million square miles of land area on this continent. Before we get so damn fresh, we had better consolidate this continent into a contiguous continentalism of our own. Then we'll have something to stand on; but now we have no base except the planned anarchy of "me first and the devil take the hindmost."

Our production capacity? Yes, we've greater production capacity than we've ever had in history. The automotive industry has a capacity of ten million cars a year on a single-shift basis of 48 weeks, 40 hours to the week. Distilleries? Alcohol plants? Yes, we have so much capacity today that the whiskey in storage held by the distilleries alone -- not including the saloons, the distributors, or the liquor stores -- is sufficient if they never made another drop tonight to continue the present rate of

consumption of United States for 8 years and 4 months.

The same way with refrigerators. You have warehouses not so far from here where you have 30,000 TV sets in storage. You shut down your TV plants. Well, remember here a few weeks ago -- what happened to the Hudson automobile? They would make a little layoff and then reduce them and then they would bring them back to work for two hours or 2-1/2 hours a day for four days, and they kept that up for a couple of months. So the employees what? They couldn't even get compensation. They'd have been better off if they'd been thrown out completely and gotten compensation. But no, the employees were just as dumb as the management -- and that's pretty dumb. So, finally they had so many Hudsons pile up -- go on up to Detroit today and look at the fairgrounds -- and the fairgrounds are packed solid just like sardines. Go on up the Sunner River Parkway beyond Yonkers and you'll find about 400 and some acres held by the General Motors, and there are over 6,000 cars in one block, let alone trucks. They have night-and-day armed guards to prevent you from photographing it, but it was photographed with a telephoto lens from the Parkway; and then what did the General Motors say? Oh, yes, we have the cars but they're only for export. And your dealer says what? "Well, it's hard to get a car even now."

The textile industry -- the cotton goods especially -- sloughed off here late spring. Why? Because cotton goods was being produced in excess of 13 billion square yards a year. Well, what's the matter with that? What's the matter with it is there's just too much cotton goods. Most of you have sheets, pillowcases. You just have to go out and get another planet in this solar system with the same population. That's the only hope to save this system a little bit longer; but if you do, you'll exhaust the resources if we continue to handle it this way.

Britain hasn't got it; neither has Italy. They don't feed themselves. Where is Europe going to get its market from -- or its resources? The destiny of Japan is set regardless of whether there's a single Russian or Communist in existence, because she hasn't the resources. Only the Continent of Asia has them close enough to be feasible and only Asia provides the market; and Japan is never going to be anything else except a manufacturing cooperative satellite of the Greater Asia, unless you're going to assume that Japan, with the help of United States, is going to

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

retake the Kurils, Sakhalin, Manchuria, Inner and Outer Mongolia, Korea, China, Indochina, Formosa, Siam, Burma, Mayala, and Indonesia. That's some assumption.

So, there's Dewey preaching what? More war, more Americans spread out. Well, who is paying for all of this? Let's take a quick look before we have the intermission. In 1950, we had a gross national product in United States of \$280 billion, but there was a deficiency of national purchasing power of 25 percent. Well, the budget last year was what? \$71 billion, wasn't it? Twenty-five percent of \$280 is? They figured it pretty close, didn't they? The equipment we're putting in now in the new plants this year, we have 8.7 million kW of new generating capacity going into the utility system. There is under construction over 12 million kW to be added next year. We're going to shove our steel plants to 120 million tons or greater -- similar increases, and remember that equipment will be brand new, more automatic, faster, and employ less human beings. Wonderful! But that equipment running at anything like capacity can produce next year a gross national product of \$340 to \$360 billion instead of \$280 billion; and if it reaches \$360 billion, the deficiency in national purchasing power will be 29 percent or greater. Therefore, you'll have to have more and more taxes, bigger and bigger war armaments to hold up the most cockeyed economic structure on the face of the globe. You and I and every other American pay for it. Your withholding tax goes where? When you spend money abroad for steel plants, oil refineries, power plants, where is it spent -- over there? No, it's spent here to American business so we can build a plant over there and compete with the workers over here; and on top of that, they insult you by bringing in the DPs from abroad by airplane, if you please, and giving them a job right alongside of you.

Thank you.

---

GAP IN TAPE

.... in United States or Canada, assemble it all, set it up and test it, and we take it apart and we ship it halfway around the world. We don't have to go there to know it will work. It

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

works.

DOES SOCIAL CHANGE COME FROM THE TOP OR FROM THE BOTTOM?

No, social change doesn't come from the top or necessarily from the bottom either. It doesn't come from intelligence or cogitation or from any philosophic group. Social change only comes about in proportion to the approach of the front of the stomach to the spine of a large segment of the population; in other words, when it becomes intolerable and impossible to operate anymore. When something is superseded, then it has to go out. If this system can't work, you can't talk about having no system. You'll have to have one that will work, and all this nonsense about anybody masterminding something or that social change comes about because somebody wrote a book -- that's hooey. Let me ask you if you can have 15 million more passenger automobiles on the highways of United States.

Last holiday, the main Jersey Highway to Pennsville Ferry was jammed for over 20 miles for 7-1/2 hours solid. The ambulances had to come in over the flowerbeds and the lawns. Babies were born, people died, and people passed out. What? Was there anything immoral in the behavior of those citizens? Was it illegal? Oh, no, they were forthright citizens driving their own property trying to go a distance to get out for a holiday. The only trouble was that there were so many Americans going the same direction at the same time, wasn't it? And it wouldn't work. Now, all Americans economically are all going in the same direction at the same time. You want security, you want assurance, you want stability, and science and technology and the resources of this continent can produce those, but if we're going to have an economic system that necessitates war to support it, then we had better get rid of that business and economic system before it gets rid of us.

HOW LONG BEFORE THE PRICE SYSTEM COLLAPSES?

I'm sorry -- maybe you intended to compliment me, but I'm not God. I don't intend to usurp any of His powers of omniscience. The only thing that is safe to say is that our productive capacity is so great that you'll run less time than we did in World War II until we arrive at saturation. Remember in World War II, we didn't open our productive capacity wide open

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

until 1942. We reached the peak in November, 1943, and we sloughed off from then on. Now we've got such a capacity we're running into saturation all over.

Here in Ohio you have the home of one of the famous things that are symbolic of United States the world over -- the cash register. The National Cash Register and other cash registers have been with us a long time, but we have one cash register in United States today for every 32 Americans, men, women, children, and babies; and she's done saturated because the major percentage of the income of the Cash Register Corporation today doesn't come from United States and Canada. Fifty-six percent comes from abroad.

We're being saturated with refrigerators, automobiles, radio sets, liquor. Well, how long do we have to go on, no matter what it is? Our political and economic system isn't geared to distribute technological abundance, because we inherited it from the covered wagon and the ox cart, and we have progressed historically from the covered wagon to the melting pot to the snake pit, and it's pretty tough.

WHEN ONE READS "AMERICAN FREEDOM" AND "CATHOLIC POWER", AND "THE VATICAN IN WORLD POLITICS," HE FEELS BELLIGERENT TOWARD ROMAN CATHOLICISM. WHAT SHOULD WE DO?

No citizen has to be belligerent towards any religious dogma. That's simply giving vent to a frustration. It's when the ecclesiasticism of any religious dogma develops as a political power. Technocracy is not anti-Roman Catholic or anti-Baptist or Mormon or Mohammedan or anything else, but the Roman Catholic Church is a political state as the Vatican, and as the Vatican is an entirely different thing than its dogma. So is the Mohammedan church. Pakistan today is a religious state. You only have citizenship as a Mohammedan. If you want to go to Argentine or Brazil, if you are a nurse or a doctor or a lawyer or an engineer, you can't operate unless you're Roman Catholic, and you cannot hold public office.

Well, a similar thing holds in the Mohammedan countries. But when any religious ecclesiasticism proposes as a political power to interfere in the operation of a state, then Technocracy is opposed to them, whether they're Catholic, Baptist, Hebrew,

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

Shinto, Mohammedan or what. We're anti-clerical, not anti-religious. And there's no sense of any individual being antagonistic towards any other religion. Our position is that religion is solely a matter of the individual between his own conscience and his God -- nothing to be forced on any other individual.

Are there any more questions on that? If I haven't explained it fully enough, let me hear from you.

INAUDIBLE QUESTION -- APPARENTLY ABOUT THE MONAD.

SATURDAY REVIEW OF LITERATURE? Well, that's all right. You see, this is a generic symbol. It's as old and older than the swastika in the primitive symbols of the world. It's also the symbol in biology for the basic cell. The Koreans have it with three rings around it and an eye in each part as their flag -- their national flag. The Chinese have another one in the same form, and they have rings around and eyes in each part; and, of course, it's the yin and the yang. The yin -- you know what a yin is -- at least I hope you do. The male and female of all living things. What this one's doing with it here, I don't know. Oh, it's part of an article or a policy for the Western Asia, Carlos P. Romulo; of course, he's foreign secretary, as it were, for the Republic of the Philippines. I don't think he'll go very far.

As far as the Monad is concerned, you'll find it in the 29th Division of the U.S. Army in blue and grey. The Northern Pacific in red and black. One of the fraternities has it. The general headquarters air corps copies this color. We've had it for a good many years. It's distinctive. It has this advantage, that painted on a vehicle, it doesn't fade out at 10,000 feet, but the Union Jack or the Stars and Stripes does.

WHAT CAN ONE DO TO HELP THIS THING ALONG?

There's only one thing you can do. You're entitled as an American to join with us as an educational-research organization to put forth a plan of design and operation of this continent for the production and distribution of abundance. We're not a political party. We do not run candidates for political office. We're non-sectarian, non-profit, and non-political. Now Technocracy isn't going to install a Technate. Let's get that

HOWARD SCOTT  
PUBLIC LECTURE  
KENT, OHIO

8-31-51

clear. When this won't operate, it will be the populace of Canada and United States. If any of you here are non-members -- how many here tonight are non-members -- will you raise your hands? Well, what do you want to do about it? Are you interested or do you want to join the Republican Party?

Now if you've got any illusions about the Republicans, Democrats, or the Holy Rollers, then you don't belong in here. We want you to make up your own mind. We want you tough enough so that when we shove you out the window, you hang on with your fingernails? because if you don't hang on with your fingernails and fall out, you're no good to us or yourself. We're not trying to persuade you. Move in under your own power. You can't get a political job out of it, and you'll damn soon find out who your friends are.

NEW YORK BIRTHDAY TALK  
HOWARD SCOTT  
MARCH 29, 1952

Of course, tonight nationally we're suffering some unfair competition -- Hazardous Harry is addressing the Jackson Day Dinner at precisely this same hour. Well, there's one thing to be said nationally, that we have as a nation succeeded in putting into the highest offices of our country the thick cream of mediocrity very much curdled.

This organization of ours, back in the winter of 1918, when those of us -- scientists, technologists, and engineers of the War Industries Board of United States in World War I -- formed an informal organization. We have been through two major depressions and two wars and we're headed into another situation the like of which has no parallel either in the history of this country or of any other.

Our organization is unique in the fact that we've borrowed nothing in the way of background from anything abroad. We do not spring from Karl Marx or Engels, Adam Smith, Sorel or Proudhon. We spring from American thinking in the technical field. Willard Gibbs, the thermodynamicist and mathematician of Yale, you might say, is the intellectual forefather of this movement and this type of thinking.

Now when you study, read, and review the political and economic philosophies that have been propagandized for the last 150 years, they're interesting as a matter of social protest, yes, whether of the right, the left or the center; but none of them, no matter how sincere or well-intentioned, ever devised a modulus or calculus of the mechanics of continental operation. None of them ever proposed or ever substituted a general schematic blueprint of operations. They dealt in such things as value, socialist emulation, cooperation, theories of dictatorship of the proletariat or production for use. They're very nice terms, yes.

This organization, on the other hand, had an entirely different beginning, and we view things as an organizational problem on a continental basis, and our methods of analysis do not proceed from any class hatred, prejudice or antagonism or antipathy. We have been accused of being too cold-blooded and without feeling. Well, the interesting part of it is that the

march of events is proving us damnably correct. When you read the Senate examination of Lattimore and others and the wishy-washy weasel words statements that were made over the last twelve years regarding conditions in Asia, Europe or the Far East and then compare them to our categorical definitive statements, it's amazing that they haven't called on us; because there isn't any doubt about what we said, but every other statement that's been made on it, you could interpret in 46 different ways.

The Truman Doctrine, if you will remember, was enunciated just two days after General Marshall arrived in Moscow. Harry didn't know what he was doing when he enunciated it -- not that he does now -- but it pulled the bottom out of Marshall, pulled the rug clean out from under him. Whatever he might have accomplished there -- that's something; and, of course, the Truman Doctrine has been a very fine platform, a very fine base, on which fear has been augmented and propagandized nationwide. But at the same time it provided the excellent leverage to provide the billions for the stimulation of private enterprise in these United States of ours under the guise that we were carrying on a worldwide crusade to fight communism. Well, considering that there were only 55,000 communists in this country in 1945, we've spent a terrific number of billions to fight windmills. That really wasn't what it was all about at all.

Technocracy has been warning this country and the world that as any nation continues to install energy consuming devices, the day will arrive when all of the political thinking of the past becomes totally obsolescent and worthless. Now it's hard to realize that. I'd like to draw the parallel that the aptitude and genius of a chess player is demonstrable, whether with the little ivory minute chessmen on the traveling chessboard or with the gigantic pieces over lifesize on wheels with lights on an area floor. You can still demonstrate that aptitude and genius. Why? Because the relative value of the pieces remains constant. Now all that has to be done to render the greatest chess geniuses of all history less accurate than the dumbest moron who picks them up blindfolded is simply to throw the squares in motion, and what happens?

For thousands of years, in all the bygone dynasties, kingdoms, and social systems, the squares were stationary; namely, the rate of doing work was constant. And while you had

had changes in the structure -- you had wars and famine -- there was no change in substance, only in the facade. You chiseled the name of one off the facade and substituted a new one for over 6,000 years.

Now if you try to visualize for a moment that in the year 1800 the population of the globe did not exceed 800 million, and back in the Middle Ages, it didn't exceed 400 million, and it is only with the advent of discovery of the beginnings of technology in this hemisphere that food and transportation begin to come up, and the population of the world rose with it. Today, with a population of 2.4 billion on this globe, you cannot look for new spaces to dump the organic energy consuming devices that are surplus in your area. There are no more surplus areas worth consideration of man. Antarctic and the Arctic, yes, but they are not habitable areas from the standpoint .... The north temperate zone and the south temperate zone have been occupied. The Medesian Persians, in the great climatic change of 400 and some BC, advanced northwest in an attempt geographically to get water and feed. True, they were defeated, and that, historically, of course, has given rise to the great valor of the Greeks, and they turned back the so-called Asiatic invasion.

Eight hundred years later, under Attila the Hun, it comes up again, and 800 years later, it turns up again with Ghengis Khan moving west -- primarily a geographic food compulsion. Well, now there's not the arable land on the surface of the globe to provide food production for the world's existing population.

India is going up, that is, total India -- political Republic of India and Pakistan -- at the rate of 50 million additional growth every ten years -- five million a year. Japan is 85 million population and going up between 1.6 and 2 million a year. Britain is 51 million population and going up at half a million a year. Italy is in excess of 47 million, increasing at the rate of half a million a year. France has had the first change in its birthrate in over 50 years. South America also has a high birthrate. So, there aren't any geographical voids that we can have the population migrate to.

Well, it's been a long time in coming, but it's here. The politician, the statesman, the writer or the philosopher of the last 5,000-6,000 years could always point to those great spaces

and to the latitude that the human race had. That latitude has ceased. It does not exist anymore.

And, very interesting, let's compare two types of civilizations: The Egyptian civilization, of course, was similar to all human toil-hand tool civilizations; namely, it was a matter of soil, water, human toil, and hand tools. Nothing grew in Egypt without water, and the ancient Egyptians were dependent on flood tide irrigation for production of their sustenance. If the Nile failed them, then they had famine and disaster.

You go back and plot the rise and fall of the Nile on the geographical area from the delta to Aswan and taking the Egyptian data, which by the way is the longest recorded record in history -- the Egyptian record of the rise and fall of the Nile -- plot that against your area and of time and the amazing thing is that it falls into a sine wave curve which accurately fits the chronology of Egyptian history. A double failure of the Nile and every dynasty fell. We do not know exactly what it meant in the 4th Dynasty, but in the Mohammedan era, a double failure of the Nile meant 900,000 dead in the City of Cairo, to give you some idea.

Under human toil and hand tools and simple agriculture, whether it was the Euphrates, the Nile, the Ganges or the Yangtse, it is the same mathematics -- a sine wave curve; namely, it takes the same angle of inclination and the same angle of declination. The time: 1,250 years for one cycle to 1,300. In other words, 600 years up and 600 years down. Therefore, it was never apparent to anyone in those civilizations in their lifetime. They could not see the almost imperceptible change. It wasn't visible to them until they landed in famine.

On the other hand, this civilization of ours is one of energy consuming devices and extraneous energy. In United States, population is going up as the second power, production as the power of three, and debt; and topping all is the rate of growth of energy, which is practically the power of nine.

Malthus, of course, in his doctrines, pointed out that the rate of growth of population tended to outstrip the rate of growth of sustenance, but in this type of civilization, long before we're in trouble with the rate of growth of population,

we'll be in trouble -- very desperate trouble -- with resources and energy.

Now there is a lot of propaganda being turned out -- volumes of it, terrific. American Petroleum Association and many other technical bodies regarding our oil reserves say that we have greater reserves today after taking billions of barrels out of the ground than when we started. It is magnificent, wonderful reasoning; in other words, the more you take out, the more you have. Well, if any person would stop and think for a moment, there must be something fallacious about it. And you find articles in our magazines, our press, almost every day, that there is nothing to worry about, that the Japanese have a little problem in population but that will be all right; we'll fix that. That out in India they have a little problem in population. Well, if you send them American seeds and American missions to introduce some steel equipment that there's hopes for that. It's not imminent.

You can see how they fell into that reasoning, because for thousands of years nothing was imminent. Never in human history up until now has anything ever been imminent on what? A macrocosmic scale. Microcosmic, yes, but never before in history have events been imminent on a macrocosmic scale. Microcosmic in the sense that someone or individuals or groups lived or died or starved to death or were defeated in battle. Those were of minor importance. This is on a macrocosmic scale.

Now kindly bear in mind that all the knowledge that the human race has gathered in the microcosmic field, infinite and terrific as its volume and detail is, it's totally worthless to determine a single thing in a macrocosmic field. You can conduct your photographs of Brownian movements of molecules via laboratories of skilled scientists and they can take millions of photographs and comparisons, but all of that data tells you not a single thing about the probable state -- next state -- of that gas as a whole, although you've photographed every Brownian movement -- molecular -- in that gas for months or for years. I refer you to a beautiful mathematical statement on that by Henri Poincare -- not the politician but the mathematician -- who said, "I am able to determine the next most probable state because I know nothing of it," meaning in the microcosmic sense.

That kind of knowledge could preclude an answer. What is stranger still is the answer will be correct because it is unique.

Now it's very difficult to follow this type of reasoning. If all of the population of the Mediterranean civilization at the time of Christ had been 100 percent Christian, it would not have altered the standard of living 0.1 percent, or if all the inhabitants of the area under Mohammendan control had been devout Mohammedans, it would not have altered the standard of living in their area 0.1 percent. The same can be said of Buddhism, Shintoism or of any other theologic movement or philosophy. We've had them with us a longtime, and they afford millions of people a certain compensation, but dealing with the physical world in which we live -- while they may prepare you for some future state beyond this earth -- they haven't done anything on this globe to the physical operation, and that is one of the reasons today why a world revolution is sweeping around the globe. Because the teeming millions of Asia or Africa are instinctively realizing that there is something that can bring that change in the here-and-now and not in the hereafter. And who is responsible for most of that? The average American. The only trouble is, the damn jackass doesn't know it.

GAP IN TAPE .... in the personal transportation to and from work. They may never have heard of any revolutionary doctrine; but shut the oil off and fuel transportation and they become what overnight? Here's the aspirations of the bourgeois never before has so great a percentage of any population in history ridden on four wheels in luxury, and never before are they so close.

Now don't come back at me and tell me, "Well, we're discovering new oil fields and that they just brought in one up at Williston." Yes, they have, and the new oil fields in Canada. Do you know how long the entire Canadian oil production -- entire, Turner Valley, Clearwater, Leduc -- all of them put together from the beginning -- how long it would last United States? Do you think it would last a month? The entire production of oil in Canadian history, the entire production of the great East Texas Field from its beginning to date -- how long would it supply us? Would it be more than a year?

Here's orders of magnitude. Here's the macrocosm coming in

with a bang. You can't talk about oil fields in the multiple, and we're running out of oil fields in spite of the number that we're discovering, because we exhaust them. Statesmanship? There hasn't been any, because statesmanship of the order that's required today is a knowledge of the rates of growth of all energy consuming devices on this area in time and the ability to design a mechanics of operation that's inclusive of all the probabilities and all the factors of the physical mechanism -- and that is beyond the comprehension of any elected political leader, not only in this country but the world. There are men, yes, but those men have never been elected to political office and probably couldn't.

So, we're facing a more fundamental revolution here. Remember that the Russian -- there were less Bolsheviks in Russia in 1917 than there are Technocrats in United States. Lenin didn't know where he was going. He only had the historical sense as he stated, "Well," he said, "if we hold it for ten days, we'll make history." And when they held it for 72 days or 73 -- longer than the Decembrists -- they gave a party in the Kremlin and all got drunk. In that he was correct.

But here you face something -- a physical reorientation of a continent. The Russians went on. Ninety-six percent of their population wasn't affected except for the actual civil war battle. They had 4,004 students of music at the Conservatory of Music at Petrograd in 1917. They didn't have that many tool and die makers in all Russia. And the civil war went on, and the majority of the great geography were unaffected. And what put in the Bolsheviks and Lenin was not the sagacity and planning of the Bolsheviks and Lenin, but the stupidity of the allied nations of the world: they invaded Russia from 14 different places and compelled Russian cohesion, and the only thing that was out in the open in the leadership was it.

Just the same as today -- the Russian note and the allied reply to it. You read it lately in the papers. Well, it's an entirely different viewpoint; namely, that the economic and physical development of one side of the curtain with its new strategic geographical importance has at last reached a point -- armament, give them everything -- noblesse oblige. We don't care which you do. We're no longer interested because we can beat you any way you want it, anytime you like it. Did you ever stop to

think of that?

In other words, something is happening that we're not being told. So we rearm the Japanese or rearm the Germans, too, and the more they rearm, the faster they'll beat themselves, as Britain and France and all these countries are finding out. Where are you going to get the resources from to maintain Japan? Where are you going to get 26-27 million tons of iron ore, 24-25 million barrels of petroleum, 5 to 6 million bales of cotton, 3 million tons of cellulose a year for Japan? Where are you going to get the same thing for Germany or Italy? Send it to them from United States out of the gratitude of our hearts?

Well, Dulles can be awfully dull. Smart as an attorney, yes, but only under these rules. The long distance thing is totally different, and the destiny of Japan is set, unless you're going to reconquer all of Asia. And who's going to reconquer it -- the Japanese? Well, they don't quite feel like it. They're like the Germans -- they don't want to go to war for the simple reason those great number of divisions lie buried in Russia. Eighty-five percent of all the casualties of the European Fascist armies were in Russia. Let's be frank about it and admit it, and the Russians are better equipped today -- are in a better geographic-strategic position -- than they were then. As they chewed them to pieces once, they can chew them to pieces quicker this time. Only this time they will move the surplus population farther west and farther south, and the Italians south of Bologna can have spaghetti on a meatball, because that's all they'll be as they crowd them south.

This country is short of oil, copper, lead, zinc, bauxite, and sulphur, let alone pulp and a few other things. Where is it going to get them to maintain this production? Coal? Yes, lignite. We have vast amounts, but we can no longer afford to dump it the world over. We'll have to conserve it and devise an entirely different economic dispensation from now on out.

I've tried to just give you a slight picture of it, and I'd like you to ask me some questions.

---

GAP IN TAPE PROGRAM INTO A PUSH-BACK RUSSIA PROGRAM, ITS

3-29-52

OBJECTIVE TO BE ACHIEVED BY WAR IF NECESSARY WITHIN PERHAPS  
THE NEXT FEW YEARS?

Well, some of the facts are correct but the emphasis is wrong. Let's go back a way to answer your question. What was the Fascist objective in Europe to begin with? It was the reestablishment of the Holy Roman Empire. Now let's go back in history beyond that. The Romans, in their march of conquest, how far east did they go on the map? They reached Vienna; they did not go beyond that. Did they reach the Elbe? They did not. In other words, Portugal, Spain, France, Belgium, The Lowlands, The Rhine, Wurttemberg, Baden, Bavaria, Austria, Italy, a little bit of Croatia. Now, if Hitler and his Fascism had won, they would have bumped off Mussolini and Franco and Salazar in Spain and Portugal.

The dream is an old one. It was the objective what? In the Crusades, vraitment? The Crusades was one of the most senseless slaughters of human beings in history. The object back of the Crusades was to recapture the Holy Sepulchre from the infidel. Well, they tried for several centuries, didn't they -- and what was the result? They reduced the population of Western Europe; the Holy Sepulchre remained in the hands of the infidel. Very interesting. In fact, the last Crusade that was authorized wasn't carried out, and that was in 1560. His Holiness the Pope died, although it was issued -- the edict.

Now this is another series of Crusades and what? I'd like to recall that Eisenhower -- I've described him many times as an excellent public relations officer -- as no general, no strategist -- but one of the most adroit men in the western world in the use of weasel words. He's a smoothie, and a smoothie, you know, in definition, is one who always shaves a posterior before he kisses it and uses after shave.

Eisenhower and Bedell Smith as his chief-of-staff in SHAEF, and Gruenther -- well, all you have to do is know Bedell Smith's background and Gruenther's background, and you have an excellent Fascist setup. I've said this before in public. I've said it and printed it, and the move on in United States today is to have Eisenhower made a coalition candidate of both parties by unanimous nomination. And we'd like to see it happen, because then you'd eliminate the two parties and have a ground swell of

the people's choice, and what a stink!

Of course, then the next move would be to put Gruenther as Chief-of-Staff of the United States Army, wouldn't it? Bedell Smith as Chief of Intelligence. You've got all the elements. The conspiracy that was pulled in the last days of the war: Wynan blew his brains out, Sumner Welles did a slow freeze in a Maryland ditch in winter; what's-his-name jumped out of the 16th story window -- oh, Forrestal jumped out of Bethesda Hospital, the only barred window, he was under guard. Of course, the Navy is always supposed to serve the rules better than that. The question was, did he jump? The only unbarred window on the floor was in the diet kitchen. And how did he get inside the diet kitchen while under guard? Well, what's-his-name was found in the Potomac with his throat cut, another one in Chicago. Bedoe, brought back under arrest from North Africa, commits suicide in a jail cell in Florida under arrest by the FBI. Well, what is this? Why, even the Russians aren't as stinking as that. Let's be frank -- are they?

So, one of the hush-hush things, you see. Take the March 10th issue of LIFE by what's the author of that article? Wilmont -- correct? Go look up that article in the March 10th issue of LIFE, and here's some more weasel explanation of a conspiracy that flopped. The conspiracy was for the United States troops and the British to take Prague and Berlin, and our division got to Potsdam in the suburbs of Berlin -- you all know that, don't you? How many people know that? They got to Potsdam, a suburb of Berlin, and U.S. planes were shooting down Russian planes over Berlin in the Battle of Berlin; and the tide of battle turned because somehow or other for some strange reason, Air Marshal Tedder, Commander of the RAF, placed his squadrons of Mosquitoes, Hurricanes, and Spitfires under Russian command and they shot down the American planes. It's the hushest-hush top secret of the war. And our troops retreated from Potsdam and got the hell back across the Elbe, and they built pontoon bridges to permit the Germans to cross the Elbe.

Why didn't it succeed? What were we up to? Our intelligence officers were briefed with what? That when they entered Germany, they would find that the Catholic priests in West Germany were the greatest anti-Nazis and they wouldn't find any Nazis in Bavaria, but they'd find them all up on the Elbe in North

3-29-52

Germany. Did you ever hear of such unmitigated treasonable tripe in your life? That was a briefing for our intelligence officers before they crossed the Rhine. I know whereof I speak. What prevented it? In other words, Patton could have taken Prague. Well, what was Patton doing in Czechoslovakia at all? He wasn't supposed to be there. After all, the zoning agreement of Germany was agreed on by the Council of Ministers in Yalta, the maps were in the hands of every British and U.S. division commander, the lines were on the maps. What was all this about? Oh, they were going to be smart guys. They were going to take Berlin and have the German army fighting the Russians surrender to U.S. Nice idea. It's good work if you can get it, you know, as they say.

Well, that was that interim period -- ten days before Roosevelt died. The famous communique from the Russian Government, jointly sent by Moscow to the United States and to London, accusing both the United States Government and the British Government of complicity with the enemy throughout the war. That has been printed, ladies and gentlemen. It's an official communique. Maybe it was one of the reasons that gave Roosevelt his last stroke.

And in the interim period of Roosevelt's death or when he went down to Warm Springs -- that's when most of this started to happen, The boys in the know knew he had two strokes before the Convention, that he was a gone proposition anyway, so here was the master time to pull it. And it fell flatter than the proverbial pancake, because when they pulled the first thing, Zhukov issued his famous order of the day declaring that anything between the Red Army and the Elbe was the area of operations of the Red Army, and anything in there, what? You could have it. The Russians got up to the Elbe days before they announced it. They had their guns in place, and we even contemplated then when our intelligence was asked for a report as to what the casualty cost would be if we had to have war with Russia on the Elbe, The answer was that 2,500,000 American dead, and it even came so pointed that at the dinner to our high command given on the Elbe, Marshal Zhukov very politely said, "Of course, it could happen, and if you wish it, gentlemen, you can have it 15 minutes after you return to your headquarters." With 3,600 guns to the mile of front, we just didn't have that firepower on the Elbe.

What is it? We send over a bunch of pinochle players to play

3-29-52

chess. And this thing that you asked, I'm giving you another background; so that here are the same components coming up that it was before in the Fascist setup -- exactly the same. Only now United States is being dragged in to provide what? The facade for what failed in Europe. The trouble in United States today is the people can't realize that you can be intelligently anti-Communist but you don't have to be damn fools enough to be Fascist in order to prove you're anti-communist. That's taking on syphilis to cure your TB -- and that's the game that's perpetrated.

Who pulled the fake surrender? Bedell Smith pulled the fake surrender. The real surrender wasn't until Berlin, and I'm speaking legally under international law. When the civil government of any nation is gone, then the only valid surrender when there is no civil government is the surrender signed by the heads of the armed forces of that nation. The heads of the armed forces were not present at the fake surrender at Rheims arranged by Bedell Smith.

And when we're at it, let's be quite frank and candid about it, who is Major General Donovan of the OSS? Made a papal chamberlain by a foreign political state for his services to United States. General Bedell Smith, General Gruenther, Major General Donovan -- we can go on -- they belong to the same tribe.

Now in San Francisco, when I was questioned by the G-2, ONI, FBI, and the State Department because I had given the plane numbers on Hess's plane, and I had given the names of the British nobility that were members of the Link and the Anglo-German Fellowship in Britain, in which I had coined the phrase about Lord Halifax that he was really Lord "Holyfox," and one of our chief intelligence then at that meeting, said, "Mr. Scott, as a native-born American, won't you disclose your sources of information?" I said, "I'm very sorry, but I will not disclose them because they involve a national of another country, for one thing. Secondly, I shall not disclose them for another, because if I did, you'd close the avenues of information." "Well, if it's the British, we're in close cooperation with the British. For instance, the Chief of the British Naval Intelligence we would like to get." I said, "That's enough. Is it Barry Donville, the one you're speaking of?" "Yes, sir." I said, "Well, he won't be at large for very long." "What do you mean by that?" I said, "Simply put it down. I'll sign my name to it." He spent the rest

NEW YORK BIRTHDAY TALK  
HOWARD SCOTT

3-29-52

of the war in the Tower of London. Who was he? One of the outstanding Fascists, Chief of the British Naval Intelligence and arrested for treason.

It's the same thing when the Admiral out here on the Pacific Coast had me to his famous house for dinner and I declined to stay because he had 27 Japanese servants. And his major domo said, "I'm so sorry, Mr. Scott, that you won't stay." I said, "I beg your pardon, cut the nonsense and give Takio Oharo in Tokyo my regards, your superior officer." Four months after Pearl Harbor, the whole bunch of them were arrested, and the major domo was only a colonel. Takio Oharo, who was he? Chief of Strategic Intelligence in Japan.

What's the matter with us? We're going off at all these wrong angles. What's Eisenhower going to do? Eisenhower is one of the most reactionary individuals -- he's smooth, he's charming. Let's get that right -- but who's been back of Eisenhower? The Bedell Smith-Gruenther combination, correct? Watch it. I don't know whether I've answered your question.

WHAT I HAD IN MIND WAS THIS: YOU SPOKE A LITTLE WHILE AGO ABOUT THE CRUSADES BEING THE MOST SENSELESS SLAUGHTER OF HUMAN BEINGS IN RECORDED HISTORY. I AGREE WITH YOUR STATEMENT. BUT BEHIND IT IS THE FACT THAT THE EUROPEAN POPULATION THAT PARTICIPATED IN THE CRUSADES WERE CARRIED AWAY BY AN ILLUSION THAT HAD NO PARTICULAR RELATIONSHIP TO THE ACTUAL REALITY AND THE POINT I WANTED YOU TO COMMENT ON -- NOT JUST THE QUESTION -- IS THE EXTENT TO WHICH THE AMERICAN POPULATION WILL CONTINUE TO OPERATE UNDER AN ILLUSION INSTEAD OF THE KNOWLEDGE OF THE REALITIES OF THE SITUATION WHAT THE CONSEQUENCES OF THAT MAY BE IN VIEW OF THE ALLEGED STATEMENT AS TO THE REPORTED AIMS OF THE EISENHOWER-DULLES COMBINE, NOT ONLY THE BEDELL SMITH-GRUENTHER GROUP BUT ALSO THE LARGE EASTERN HIGH FINANCE.

Dulles's son is in a Jesuit seminary. He came out of the Navy into a Jesuit seminary.

WHAT CONSEQUENCE CAN WE EXPECT IF, AS, AND WHEN THIS EISENHOWER BECOMES PRESIDENT BY ACCLAMATION OF THESE UNITED STATES?

That's wonderful, and he's still got to run, and that's where the trouble is. No, as far as human beings are concerned, collectively they always operate under illusions. Christopher Columbus, when he made his agreement with Ferdinand and Isabella, when they would bring back the gold of the Indies, what does the agreement say? That they will buy back the Holy Sepulchre from the infidel, but the largest sum will go to praying all the souls of all those who have died before out of purgatory, and Columbus and the crew would get a minute percentage. It's an excellent agreement; look it up. Illusion? They've always operated that way.

After all, Lenin preached Marxism and Marxian revolution. He committed every Marxian heresy in actuality.

THAT COULD BE, BUT THE POINT I'M MAKING IS THAT ILLUSIONS CAN SOMETIMES LEAD TO VERY EXTRAORDINARY AND UNFORTUNATE CONSEQUENCES.

Oh, they can lead to unfortunate consequences, but then we're running into consequences that are more than unfortunate.

I DIDN'T KNOW THIS WAS GOING TO GET INTO THE FOREIGN POLICY ISSUE, BUT TO RAISE A POINT IN YOUR SPEECH A WHILE BACK THAT DULLES WAS VERY SHORT-RANGED AND HIS VIEWPOINTS WERE BASED ON MERELY THE STRICT LETTER OF THE LAW -- IN OTHER WORDS, HE DIDN'T HAVE A LONG-RANGE -- HE COULDN'T SEE THE CONSEQUENCES, MAYBE HE COULD SEE BUT HE DID NOTHING ABOUT IT, CONSEQUENTLY HIS ACTIONS. I WONDER WHAT WOULD BE THE FOREIGN POLICY OF A TECHNOCRACY OR AN ORGANIZATION LIKE TECHNOCRACY, WHAT THEIR POLICY WOULD BE IN RELATIONSHIP TO .... ?

.... because of our imagination and our swollen ego that American dollars and American free enterprise can go in and fix anything. Well, it can't. Now if you attempt to carry out .... you'd have to go back to the Roman days and set up a series of proconsulships -- a MacArthur as a Mikado, a proconsul of Korea, and another proconsulship in Indochina and another one in Malaya. One in Greece. Well, the world is a little bit too large to imitate the Pax Romana of the Mediterranean -- slightly, isn't it? Besides, there aren't enough Americans.

Now we can have a foreign policy as a technologically operated contiguous continentalism, yes, to where we don't have to involve ourselves in hatred of any place, and we don't have to stick our neck out, and we don't have to walk into any untenable position; but we'd have an economic mechanism, a physical mechanism, that the rest of the world what? Couldn't apply any pressure to us.

Now when you manufacture American automobiles, American machine tools, that's all right to manufacture that lousy bastard equipment for export, but, by God, not to manufacture it for use on this continent. Let's manufacture all the various types for the other boys, standardized to it here -- don't export that. Oh, no, export the junk. What do they have? Then they have the problem of logistics that strangles them, correct? Now, if you want to ruin Russia, all you have to do is to get the Russians over here and put them into American private enterprise, and that will sink the Russians. All they have to do is have American business training and that'll sink 'em.

We've developed a schizophrenia -- a national schizophrenia -- with delusions of grandeur, haven't we? That we can take in the whole globe, go anywhere, throw our money around, and we can change the geologic conformation and structure of any part of the globe. Only somehow it doesn't work.

Now you don't have to send troops abroad if you have a contiguous continentalism. Why? You're major one force on the globe. Are we that now? No, we're not. We're in a very delicate resource position. We have an air corps, yes. Our jet fighters, what are they in comparison to theirs? The Mustang that used to use 56 gallons an hour -- our Saber Jet does what an hour? Two hundred sixty. You're going to have as many planes in the air as you had in World War II? Well, then, brother, you'd better get a whole new continent of oil fields.

I mean, let's get over this nonsense that we can stick out our chest and parade it around the globe when we haven't got it behind us. We haven't the physical organization on this continent. Oh, yes, we can organize it by drafting an army -- maybe. And what are you going to fight for? A navy is no good blockading a contiguous continentalism. Am I making myself clear? You can blockade an island, but a contiguous continentalism of 10

million square miles? Admiral Mahan was correct in his time in a microcosmic sense. Von Clausewitz, Schlegel, John Horn, all the rest of them, their strategies. Where did it come from? Dates back to Epaminondas, a Theban school teacher who devised a single and double encircling to break the Athenian phalanx. A strategy and tactics that only worked in a limited geography where it was a short distance between the sea and the mountains. A great geography? Useless, because you can retreat with your armed forces, and you can lose every battle and win the war.

In other words, this continent organized as a Technocracy and a contiguous continentalism, we could take a quarter of a million students a year in from the world, free, as guests of the continent, and God help their part of the world when they went back! Just give them four years free -- 250,000 a year -- and it doesn't cost you a cent. Just pass the examinations. That's our foreign policy. We'll send you scientists, we'll send you technologists and engineers, but businessmen, salesmen, and smoothies, no. Sum it up for you? Technocracy is applicable all over the globe, but let's bear this in mind: the social resultants are totally different for each continent. Why? Because your soil, your climate, resources are different. Couldn't get the same results out of Australia, because it hasn't the water or the soil. It's a peripheral continent. You would get totally different results out of Africa.

I don't know whether that answers your question.

BUT WHEN YOU COME BACK FROM WAR YOU GET MEDALS, THAT'S GOOD.  
[THIS WAS A COMMENT REPEATED THIRD-HAND.]

Well, the awarding of medals and honors is not something that every citizen is granted an opportunity to do every day in the year, is it? It's only an opportunity that occurs spasmodic and irregular for a minute percentage of citizens in any social system, correct? And, of course, it's quite possible to generate a greater social competition to get rid of honors and medals than has ever been recorded in history for their attainment, because all you have to do is award a full complement of ribbons and honors to every student on the day they enter high school, and they have to wear them from here up all their life. Now every time they do anything of social achievement, you take one away from them, and on your chief boulevards of your major cities,

only those who have no decorations can walk. All those that have decorations must ride. Brother, you're going to have some competition to get rid of medals! Very simple.

No, you see in the matter of conditioning, remember the old railway coaches that had the metal sign on them? They're still running around. "Passengers are prohibited from standing on the platform of this coach. It's contrary to law." Well, that's your legalistic, moral approach. It forbids people. That isn't the scientific, technological approach. You design a car without a platform and say stand on it if you can. Very simple.

Now transfer that type of thinking over into a macrocosmic sense and you begin to see something. This country can't go on pulling itself up by its bootstraps with installment buying and credit and everything else -- more cars, more refrigerators, what? Every time a new vital statistic comes out in this country with more babies, why these manufacturers and businessmen just drool -- two million babies, they slobber. Look at all the diapers, baby carriages, all the future customers for everything. Just wonderful! Where are they going to get it? Ah, of course they come back and say, "Oh, we'll get by some way. We've always managed to get by." Well, if the larder isn't there, no money will buy it. If the oil isn't there, you'd better start walking.

And the election of an Eisenhower or a Taft or a Truman or any other political entity, what does it do? You want to change the ones in political office and it affords you any satisfaction, by all means do it; but for God's sakes get paid for it. It's the only thing you'll get for it.

A FEW YEARS AGO, IT WAS SAID THAT WHEN THE CONSUMPTION OF ENERGY APPROACHED 200,000 KILOGRAM CALORIES PER INDIVIDUAL PER DAY THAT THE PRICE SYSTEM WOULD BE ....

It isn't there yet, if that's what you mean.

THE LAST FIGURES I HEARD WERE FOR A COUPLE OF YEARS AGO ABOUT 185,000.

But that's total -- that's not used in production. That's total exportable and everything else. Well, we're talking about what is used for production and distribution. Now your total

horsepower today is running over 4 billion, isn't it? How much of it is in automobiles? [REPLY; OVER 90 PERCENT] Right. The greatest horsepower accumulation on the globe, and what is it? Sitting around -- use it one hour in 24. [REPLY: SOMETIMES]

Now we have 75 million kW in our power stations. We have approximately 12.7 million kW on order for this year, and we only need two years more -- this year and another one. That's all. If you can't get the work week much over 37 hours a week right now at 100 million kW, what are you going to do with the work week?

WATSON DAVIS THIS AFTERNOON AT 3:15 .... "THAT BY 1965 THEY CLAIM THEY WILL HAVE INSTALLED HORSEPOWER IN CENTRAL STATIONS AT 170 MILLION.

You don't need 170 million. You see what's holding the thing up right now in Cleveland, Akron, and all the industrial areas -- you don't need unemployment in great numbers, just cut the overtime. The average working family is getting by on its overtime. Cut that overtime and you're up against it. Twenty percent of the population of United States -- the top 20 percent -- have 53 percent of the income and the savings. The bottom 20 percent have less than 35 percent. So, here's around 80 percent that's being squeezed by your taxes, your high cost of living, what? You even have these Republicans going anarchist. They're screaming wild over taxes and Truman.

Well, you're going to have to support the whole private enterprise of this Price System. Where do you have to support it from? You have to drag it from the individual; so, therefore, you inflate the price percentage-wise. You also increase the take percentage-wise of taxes, don't you? And the profits, correct? Very simple. Do you want to control prices downward? Oh, no, you want to control prices upward and hold them.

IS THIS THE SAME PROCESS THAT HAS HAPPENED IN THE .... I KNOW YEARS AGO WE USED TO TALK ABOUT THE TREND OF LONG-TERM GOVERNMENT BONDS AND INTEREST. HAS THE REVALUATION CHANGED THAT OR HAS IT CHANGED?

Well, just figure your government bonds in the dollar that you paid for them before the war or at the start of the war, 1942 and 1943. Now, all right, what do you get for the bond when you

NEW YORK BIRTHDAY TALK  
HOWARD SCOTT

3-29-52

cash it in, even with its interest? (SIX PERCENT] They're paying you in a devaluated dollar, correct? [REPLY: THERE IS ABOUT A TEN PERCENT LOSS IN PURCHASING POWER.] More than that. Out there in Shanghai on this currency inflation, you know, you had the Electric Bond & Share's big Shanghai station shoveling bundled paper money under the boiler, because there were more BTUs in the bundled Chinese paper money than there was in the fuel it would buy.

Now this is a different type of inflation from the inflation of Germany, of Austria, and of China. It's a credit inflation -- not a direct monetary. There's no direct monetary inflation, because you can't have direct monetary inflation and have an abundance of goods. The country is loaded with goods; it's saturated. They don't want to admit it.

ISN'T IT POSSIBLE THAT PRETTY SOON WE WILL HAVE A REPEAT OF THE '29 AFFAIR?

No, it's not '29 that's coming. This is sweeter. For instance, your '29 to your '37, this country doesn't need 17-18 million unemployed today -- 7 million will be worse. It will cost more than 20 did in 1934.

What's Greenville, South Carolina, and High Point, North Carolina, doing, and what are they doing up in Rhode Island right now? Are the compensation payments in the State of Rhode Island equal or greater or less than their outgo? And is the total the same as they did two years ago? I mean, what's happening to the state funds? Over in New Jersey, the pension fund of your school teachers, police, and so on is 262 million dollars in the red. You're going to have security under this system?

CHIEF, I WAS DOWN IN FLORIDA NOT TOO LONG AGO AND I MET THE SOCIAL SECURITY ADMINISTRATOR FOR THE NEW ENGLAND STATES, AND WE WERE DISCUSSING THAT, AND HE SAID THAT TWENTY BILLION DOLLARS HAVE BEEN PAID IN AND SIX BILLION DOLLARS PAID OUT, AND THEORETICALLY THERE'S FOURTEEN BILLION, BUT THERE'S NOTHING THERE; AND WHEN THE RATE OF OUTGO IS MORE THAN THE INCOMING, THEY WILL RAISE THE RATES TO THE FEW GUYS THAT ARE STILL PAYING.

Rhode Island's payments exceed her income, and the total

that she has is only a fraction of what she had before. They've reduced their total. Michigan is in a precarious situation. Why? Because your unemployment in Detroit alone is approaching 400,000.

Now, don't think this situation is only occurring here. The textile situation in Britain is running on part-time. In Belgium, France, and Australia, they're begging the government to subsidize it to give employment to the textile workers in Australia. It's all over the world in textiles. There's one thing about technology when you get enough of it: there are no exceptions. You're all in the same boat, whether you're black, white, brown, green, or whether you're tall or short or what.

In France, you have 463,000 manufacturing establishments. Average employment per establishment? 5.3 persons. Now there's been a change over there. Remember that you had hand operated looms, what? Scattered in the little pension system all over. Well, the St. Etienne District alone, what? You've come in with power lines, and there are 12,000-odd new automatic power looms that run on a piece of paper, and what's the result? They're drowned in textiles.

The greatest lace plant in United States shut down last night. The Visco shut down last night. But they're also shut down in Belgium, France, Britain, and in Italy. What is this? Well, when you made textiles by hand or you made brick by hand, you employed what? A terrific number of people. And when you have a loom with your Jacquard mechanism, it runs whether you're there or not; and, of course, if a thread breaks, it stops. So what? The pension can install it instead of the hand loom, and he goes out and feeds his pigs or works in the garden. And what's the production over there in the St. Etienne District? They're drowned -- 26 times what it has ever been known in that district, Wunderbar! You know the story: you've got the man in the certain advantage and a certain part of his anatomy in the wringer, and you said, "What, you don't feel it? Oh, wait until I jump on the crank!"

CHIEF, IF WE WENT INTO A TECHNATE, WOULD IT HELP THOSE COUNTRIES?

Would it help them in what way?

WOULD THEY OVERCOME THEIR OVERPRODUCTIVENESS TO BE SELF-SUFFICING? WOULD THEY BE ABLE TO ....?

Well, in Britain, if it processed its coal and put in long wall mining and put in two pipe lines on either side of Britain with cross-connections, you'd have no coal transport in the British Isles. You'd have 3 million who wouldn't work there any more. Now the mistake the British Labor Party made was a semi-revolutionary concept, because they date from what? A combination of John Wesley it doesn't come from Marx or Proudhon -- it comes from John Wesley and Ruskin. It's a reformist attitude.

Now if you did away with your shopkeepers and your transport workers, coal miners, then you have a surplus social labor army which you've got to have in any social transition. Do you recognize that? In other words, you have to have an organized army of labor to clean out the debris to make way for the new set of tracks, etc.

Britain couldn't go on supporting 50 million; she can't now. India can't go on. Of course, the tests on this new scientific compound that you can put in the drinking water -- and it has very interesting effects -- it's non-toxic; but it dissolves the fetus upon conception without any injury to the fertility. So for the first time in history, we possess the means to invest the water supply of any country and limit the conception and gestation of human beings. [THE CHURCH WILL STOP THAT.] There's no injury to future conception, but you can load the drinking water and that stops the rabbits, right then and there, on a mass scale.

Margaret Sanger was a sincere woman. Her cotton balls for the poor was a nice suggestion, but it's too individualistic; it's too microcosmic. You have to do it on a macrocosmic basis.

Yes, you have to limit Britain's population. You'd have to use its production, but you've got to eliminate so much in Britain. In France, 42 percent of the population are peasants, and they pay only 2 percent of the taxes. When you combine the 42-percent peasant with the storekeepers, you have 54 percent of the total population. The storekeepers do not keep accounts, so how can you collect taxes? Who do the taxes fall on? The worker

and the professional man and so on. There's no help for them under their present setup. They can accept Yogaism or anything else, but that doesn't help. It takes a physical redesign and reconstruction of their operating mechanism.

DO YOU THINK THAT WILL BECOME A PROBLEM WITH A TECHNATE IN NORTH AMERICA TO CHANGE THEM OVER TO MODERN METHODS?

Change who?

TO CHANGE OVER THESE VARIOUS COUNTRIES.

It's not our business. We say, here's an example. In other words, we'll make it work here and if you wish to, copy it, but we can't violate your sovereignty. We have no wish to. Here it is -- a free gift if you want it.

HOW DO WE INTRODUCE TECHNOCRACY HERE? DO WE HAVE TO WAIT FOR CHAOS OR IS IT GOING TO BE A GRADUAL TRANSITION?

Well, what's forcing these ideas now? After all, I and others have been like John the Baptist crying in the wilderness from 1918 on.

BUT THERE ARE OTHER PEOPLE CRYING AND THE MASSES ARE LISTENING TO THEM. HOW DO YOU GET THEM TO LISTEN TO YOU?

They didn't get very far. We went down south and you had all the sentimentalists -- both black and white. The negro was this, the poor white was that. Yes, that's so. But you can sob about it and rave about the injustice until you're black in the face.

We took the cotton picker in there and what happened? What did I say in Memphis years ago? You've never done any thinking. Now until you mechanize in here, the problems that are peculiar to south of the Mason-Dixon Line for which you have been blamed and which you claim there is no solution for -- do it and do it this way, and those problems become problems of the continent.

Now it didn't matter whether they were negroes or whites. If they're going to be in that depressed condition, you can't do a damned thing for them no matter what their color is. You can organize them into labor unions -- so what? The sugar cane

harvester and cotton picker -- why, I had 250 men with guns sticking out of their belts while I was talking. "No, sir, you can't come down here and introduce no contraption like that. No, sir, not over our dead bodies." Well, I was down there last November and I asked an audience, "How many of you were here years ago?" The hands went up. I said, "Well (I started to laugh), it's sure happened." Here's your waitresses in your hotels, what are they? All married white women. They said, "You can't help it. The negro goes north. Can't do nothing about it." "Well, you're going to have to wake up, sucker." People don't see it.

You could have introduced long wall automatic coal mining years ago; and while we're at it, rock drilling by steel bits -- let's forget it; it's passe. You can drill a 7-inch hole down in what? A couple of minutes today in the hardest granite you've got. A drill bit? No. There are two methods of doing it: one is like the jet you have on a jet engine and the other is a high frequency arc blown out by hydrogen. Bam, it goes down so darn fast, you had better get a shield. No bits -- high frequency arc. It's 10,000 degrees and you go through 60 feet of granite in a few minutes. There's two of them, ladies and gentlemen, in operation on the taconite up there.

Do you want to eliminate the situation in coal mines? You have to eliminate the coal miner, don't you. He's no damn good as long as he's underground. Did you ever hear of coal miners ever getting to be anything? Not until somebody used the coal miners to get elected politically or made a racket out of it.

You never heard of a woman ever getting anywhere over a hot stove in a kitchen, did you? Come on, be honest.

Here's California. It's gone wild this year. One of the greatest Californians that ever lived -- I asked audience after audience out there, "Who is your greatest Californian?" They'd mention a few names, I said, "No, they don't amount to anything. The name is George Harrison." And 2,500 faces .... "Yes, his name is George Harrison. He lives right out here. Go on out and see him." Finally somebody gets up on his feet and says, "Who's George Harrison?" I said, "Where do you come from?" "So and so." "You have any land out there?" "Yeah, I've got 600 acres." "You have? What have you got in it?" He says cotton, and I said, "You

NEW YORK BIRTHDAY TALK

don't ... [END OF TAPE]

MEMBERSHIP MEETING  
HOWARD SCOTT  
DETROIT, MICHIGAN  
DECEMBER 10, 1952

Just make it purely informal and you ask what you feel like.

Well, how was the meeting last night? Give me your reaction. Anybody feel insulted? [REPLY FROM AUDIENCE: I SAW A FEW FAINT HEARTS ABOUT HALFWAY THROUGH.] Well, the only thing to do with human beings is to push them out the window. If they hang on with their fingernails and climb back in, they're all right. If they fall out, the hell with them; they're no good anyway because if they can't hang onto the windowsill, they can't hang onto this. That's just what it boils down to.

COULD YOU CLARIFY CREDIT AMPLIFICATION?

Well, I thought I made that clear enough the other night. Under monetary inflation, you print money -- the government prints money or prints additional zeroes on the money. Under credit amplification, the government does not print money in the sense of monetary inflation. It imposes additional taxes on the taxpayer. It collects the taxes in cash -- you pay it every payday, you know, the part you don't get -- that goes into the treasury; and the treasury, with that huge sum in cash, merely extends the credit to your corporate enterprise and, say, it extends a credit of \$500 million to build a war plant or a peace plant or any other kind of plant or develop a low-grade copper mine or what-have-you. It advances \$500 million. I don't know whether it advances it to them all in cash or in material or equipment. It's irrelevant, incompetent, and immaterial.

After that is done, it grants that particular corporation a certificate of necessity for \$500 million; therefore, they can amortize it out at \$100 million a year. Here's all your costs of labor, material, transportation, haulage, storage, and everything else -- insurance -- that's all put in there, and when they get all the costs collected, your accountants slam in \$100 million extra. That's 20 percent of the total amount. Now then, the profit is calculated on top of all the costs, plus the \$100 million; therefore, that increases the sales price of the article or service or commodity to be sold.

The taxpayer had it collected from him in the first place --

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

he paid into the treasury. This time the consumer pays for it a second time, only the damn consumer doesn't know he's a taxpayer and has paid for it in the first place.

I HAVE A QUESTION REGARDING THE ORGANIZATION'S POLICY REGARDING THE COLORED. I UNDERSTAND THE POLICY OF THE ORGANIZATION IS TO GET THE COLORED AS A MEMBER OF OUR STAFF WITHOUT MEMBERS OF A NATIONAL GROUPING

Oh, you could bring them in -- I'm just giving you our experience with them. We have negro members, but here's a funny thing about the negro member that's intelligent enough to go to work on Technocracy's material. We have a number of graduates of Ohio State University and others. Yes, they worked in Sections. I've had big public dinners when I've had 20 or 30 negroes and their wives. They weren't segregated. They were spread throughout the dinner tables in the audience. But here's the interesting thing. We've had and sent speakers out to negro homes where they have had 20, 25, 30 and more people -- not once but a number of times. Yes, they're interested, but when you want them to go to work to organize the negro, no. You say, "Well, who is going to do it? We got you into it from some kind of .... Now that you're in it, you can go through the Study Course, but you don't want to organize the negro." Do you understand what I'm driving at? It's a peculiar proposition.

Now they will form organizations amongst their own for religious and other reasons and collect the money and have officers and everything else, and they'll have units all over. The Communists, of course, around New York ruined a lot of it because they got a number of white females to sleep with the negroes, and that set a bad precedent. Now socially they'll come in, participate in the Section activities, and they go so far. Well, it boils down to this: that the American negro that is on the economic up-and-up doesn't want any change in this economic order. Let's get that clear. Why? Because he's risen above the mass of the negroes and what he wants in United States is a continuation of the same. He aspires to a black bourgeoisie just two layers better than the white bourgeoisie. So he's content to have the mass of the American negro remain where it is, provided he can ride it.

If he's illiterate and can't read, we can't do much with

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

them anyway. Only the negro can do it for that type as a mass organization. So here's the so-called literate educated negro -- he's got enough to where he's got a profession, business, or a standing and so on, and he's never had it so good.

Millions of his fellowmen, well, they're down there, but he's up here. Now you take Easter Sunday in New York -- Fifth Avenue used to be the big dress parade and it's still photographed to some extent; but if you really want to see the smart clothes, don't go to Fifth Avenue. More morning coats, top hats, spats, striped trousers, canes -- yes, sir. No, it's amazing. Now you take Sweet's, up in Harlem, a huge night club. They were originally started by negro band leaders and so on for the slumming whites to go and see negro night life. Now they're huge places -- oh, you'd almost get lost in them -- one of the big dance places. Besides that, they have dining rooms and what-do-you-call places up the side, and they're two floors high. If you don't like it down here, you can go upstairs.

Now they were smaller when they were making the money on the whites. You go up there today, what do you see? It's black. I'm talking of the audience now, not the entertainers, and they have a debutante coming-out ball in Harlem at which the Mayor of New York and other top flight figures (whites) are invited. They bring out over 4,000 young chocolate drops. Evening clothes? You can't get in there without them. And you say, "What in heaven's name is happening?" The average working white around hasn't got it. They have. They have the top political figures there on the stage, and remember that each debutante is brought out and introduced -- bunches of orchids. New York's Four Hundred never did any better as far as the .... Now what is it indicative of? [REPLY: THEY'RE EMULATING THE WHITE PEOPLE.] Right, and going them four better. Sharp? Now they'll tell you that; they'll admit it. Well, after all, they remember when their older brother or their father or so and so -- now they've got a business and they're making money and they've got a big Cadillac car. They don't want any change. And as far as the blacks in Africa, why, they're savages. Now that's an interesting phenomenon that's come about in the last 15 years in United States and mostly in the last 8 or 9.

The question of the color stigmata? No, they've got money in the bank, they've got clothes, and the whole hundreds of

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

thousands of other negroes that got money and got jobs and the negro business has become the dominant thing, and they're not purveying or catering to whites at all. Is that a different picture?

Now, I just want to add this to it: you have the same difficulty of going out with a man with a \$500,000 income annually and asking him to become interested in this organization. You approach that type of negro -- well, he is respectively in a similar position to this white over here. Now there may be a difference in the color of their skin, but they're brothers, and they don't consider themselves brothers to the negro that's in your position nor do they consider themselves brothers to you. You're a po' white.

Now here are social distinctions and class lines. They have taken on the bourgeois concepts of the white and gone them four better. The white wants to crawl five layers higher up the social manure pile, and he thinks if he gets five layers higher, it won't stink -- it'll be perfume. The black wants to go eight layers. He wants to go up where it's really rarified where he can get those nice mauve morning coats. I'm just giving you this as a perspective of something totally different.

On top of that, you have certain of your liberal radical negroes like Paul Robeson and others, and they are continually screaming about the Afro-Asiatic culture as the identification of the American negro as the Asiatic, which in the first place is a bad proposition. Now they're trying to hook up the Asiatic and the African as being interrelated against the whites.

You have the negro "LIFE" magazine EBONY. You get hold of the copies of EBONY and what does it show? Their photographs show that they want to photograph the light ones, and if they're not light enough, they'll coat them in talcum powder or something else. That's the elite. The real black ones -- well, no. Now there is the same feeling and prejudice in the negroes of the real black negroes against the light-colored mulatto as there is in the Jewish thing between the orthodox and the sephardic German Jew and these Romanian-Polish kikes. Same social snobbishness. And you have places you'll notice mostly at the real black, there'll not be a mulatto of any size organization; and if it's mulatto, there won't be any real blacks in there. I mean, the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

whites have their prejudice, but don't forget that others have their prejudices, too.

WOULD YOU GO INTO THE POLITICAL-LABOR SELLOUT ON THIS 3 MILLION CHANGEOVER?

I thought I covered it fairly well last night. [I THINK I MISSED IT.] You see your Democratic Party machines in Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Ohio, and Illinois are Irish Roman Catholic or Italian Roman Catholic controlled -- no doubt about that. Even TIME MAGAZINE had this same statement if you look it up, didn't it? Now you had commentators come out with the same thing on the air. Sevaried did it three times on the air. The union members and ordinary workers in the Democratic Party machine went out and conscientiously did a job to try and bring in the vote, and the machine bosses that had made the deal sold them out, and at the same time the priests were telling the women to vote for Eisenhower. I've had any number of Irish Catholics in New York sore as hell at the church because their wives had voted for Eisenhower, and they had been working their heads off for Stevenson for months. Now they were devout Irish Roman Catholics -- same way with Italian members at the unions. Here they find out in the other way.

THE FEMALE VOTE ON THAT BASIS WOULD ....?

No, only part of it. It was a contributing factor. In that number of votes, you only had to swing 3 million votes. That isn't much, is it? Plus the fact they didn't collect the money and that they didn't do any leg work. And the big Democratic bosses knew which way it was going to go. Fitzpatrick in New York and Jake Arvey in Chicago concede the thing without even consulting Stevenson. The signs were so visible.

Now this is not a Republican victory. Let's get that clear. The deal was made to put Eisenhower in there because he was leader of the crusade, and under him in Europe were General Bedell Smith, General Gruenther, Major-General Howley, Robert Murphy, McCloy, all those. Now here's Aldridge, Chairman of the Board of Chase National Bank, was made U. S. Ambassador to the Court of St. James, and right away you move McCloy from Berlin into Aldridge's position of the Chairmanship of the Board of

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Chase National Bank. Well, McCloy is the brother-in-law of Adenauer, Chancellor of West Germany. There were millions of sincere Roman Catholics in the Democratic Party who did a conscientious job. I'm not deprecating the Roman Catholic -- don't misunderstand me. They went out and did a sincere, conscientious job, and here they were sold out. Your Italian-dominated machine functioned the same way. They wouldn't support Stevenson.

WHAT CAN WE EXPECT OF JOHN FOSTER DULLES?

Well, John Foster Dulles is a -- you see, his grandfather was Secretary of State under Harrison, I think it was. His uncle was Lansing and was also Secretary of State. John Foster Dulles was valedictorian of his class -- I mean, he is, as a lawyer, a student, bright. If you grant his assumptions, that's one thing, but if you don't grant his assumptions and premises, why, that's an entirely different thing; and John Foster Dulles thinks and acts in a reactionary way -- always has and always will. It's a little late for him to change.

DIDN'T HE ADVOCATE TAKING BACK THE SAKHALIN ISLANDS?

Oh, yes. He's advocating right now that we abolish the containment policy and substitute a policy of liberation -- that we're going to liberate the satellite countries from Russia and we're going to pursue counterrevolution in Russia until we finally liberate the Russian people. We're all for the Russian people,

ISN'T THAT A DECLARATION OF WAR?

Why certainly it is. It's just like on the air tonight. They come out with the fact that who recommended Alger Hiss to be Chairman of the Carnegie Foundation -- John Foster Dulles! It's on the air tonight.

ON THAT NEGRO QUESTION, I ANSWERED ONE OF THE NEGROES THAT IF YOU CAN'T DO ANYTHING WITH 150 MILLION WHITES TO GET THEM INTO THE SECTION, TO GET THEM ACTIVE, WHY, YOU CAN'T DO MUCH WITH 12 MILLION NEGROES, BUT IF HE CAN COME INTO THIS SECTION, I TOLD HIM TO ORGANIZE ONE OF THEIR OWN.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Well, he can come in here. You can train him, but the point is that in training them, what are you going to do with the other negroes? We've sent Organizers into negro homes and had meeting after meeting -- 25, 35, 45 people every meeting we had, and we've had a dozen highly-trained university graduates -- negroes -- who were looked upon by the negroes as leaders who use the King's English and were respected by them. They could form negro organizations for negro objectives, but they didn't want to organize the negroes for anything beyond the negro objective.

THESE NEGROES THAT COME IN, THEY WEREN'T MEMBERS OF ACTIVE SECTIONS, WERE THEY? THE REASON I BRING THIS UP, WE ALMOST SIGNED A NEGRO UP AND HE DIDN'T LIKE THE IDEA OF BEING SEGREGATED AS FAR AS MEMBERSHIP WAS CONCERNED.

Oh, you mean that Abyssinian four-flusher you had here?

No.

Another one?

THIS WAS A CLEAN-CUT BOY, HE ASKED ME TO MENTION THE SEGREGATION POLICY IN OUR MEMBERSHIP.

Well, there isn't any segregation policy. We'll let them in. After you had them here for a year or so, what are you going to do with them?

WHAT STATUS WOULD HE COME IN UNDER. IS THERE A REASON FOR GIVING HIM A SPECIAL STATUS IN THE GROUP?

No, you can take them in if you want, but I'm merely telling you this is what happens if you have them in. All right, what is he going to do? Bring in more negroes to this Section or to any other Section, or are you going to train him to do what? The ultimate thing: who is going to organize the negroes -- the whites? What I'm trying to get at, who's going to organize the negroes? Is the white going to do all the work and the negro just ... We've signed up a number of them,

IN CANADA, AS YOU PROBABLY ARE AWARE, THERE ARE ONLY 22,000. THAT IS 19 NEGROES PER 1,000 POPULATION. IN WINDSOR, THERE'S ABOUT 2,500 IN A POPULATION OF PROBABLY 150,000 AND ....

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Oh, we've had them in public dinners, as I've told you before. We didn't segregate them.

They were sitting at tables with whites.

AM I CORRECT IN ASSUMING THEN THAT THEY CAN COME IN AS MEMBERS OF THE SECTION?

Yes, but you've still got to answer this question: What are you going to do after you've had them a year?

WELL, THAT'S UP TO THEM.

Oh, no, it isn't. It's up to us.

IT'S A VOLUNTARY GROUP. YOU CAN'T TELL THE NEGRO HOW TO .... YOU'VE GOT TO CONFORM TO THE BY-LAWS AND ....

I'm not concerned with that. In other words, if he's here a year or five years, there are other negroes out there. What's he propose to do? Does he know the other negroes or is he isolated?

Here's a question of the negro psychology that's coming up. After all, to join this organization just to join it and be here, whether he's white or black. Try to make my point clear.

Any Section, if they want to take them in, all they've got to do is arrive at that conclusion at their own Board Meeting in their own membership. There's nothing in the By-Laws of Technocracy that prevents them from doing so. Do you see what I mean?

WELL, THE QUESTION IS THIS, CHIEF. WHEN WE BRING THEM IN, WE DO NOT BRING THEM IN AS A MEMBER OF A PARTICULAR SECTION. WE BRING THEM IN AS A MEMBER-AT-LARGE.

In most places you've done that; in some places, you have not. Now if the Section decides to bring them in -- but you don't know negroes. You had some educated negroes here who knew these negroes. In other words, you don't know who in the hell they are -- like this one that was in here.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

IN OTHER WORDS, IT'S A SECTION DECISION AS TO WHERE THEY STAND?

Yes, plus it's a general overall policy. What CHQ wants to know is what the devil are they going to do here after you've trained them. [CAN THEY DO ANY GOOD] Now, this isn't discrimination.

PHYSICAL FORCES WILL MAKE THEM ACT LIKE ANY OTHER GROUP.

No. I'm trying to point out certain forces that are important.

THEY'RE MISSING YOUR POINT.

Yes, exactly.

IT BOILS DOWN TO THIS, CHIEF. NO MATTER HOW LONG YOU'VE HAD THEM IN THERE, THEY TURN OUT TO BE OF NO VALUE IN ORGANIZING THE NEGRO. THAT'S WHAT YOU BROUGHT THEM IN THERE FOR IN THE FIRST PLACE. IS THAT RIGHT? THEY JUST DON'T GO ANYPLACE.

Yes. Listen, we have American and Mexican Indians that are members, and, my God, they come all the way from down near Lower Mexico and have painted cars and bring them in. Oh, we have some that can't even speak Spanish. Their people never spoke Spanish. But they have this understanding about it -- that they're going to organize their people; and, after all, there are very few people on this continent that speak Nahuatl -- very few outside of the Nahuas themselves.

The last time I was in Los Angeles, there was a whole bunch turned up. Well, they were in the dance. There was no segregation. Now you had this type of thing; You had a negro orchestra and you have 500-600 hundred or more at the dance. Well, all right, the orchestra boys asked if they could bring their women and friends. All right, they did for a while. Then you don't know who is coming to the dance. Now who is not a question of socializing. That's a very peculiar distinction, and when you start to find marijuana and liquor in the cars, we don't give a damn whether they're white or black -- that's out; because all the police would have to do is land on one car.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Now, if you can't distinguish .... If you know who it is and you know what they are; in other words, if he's working with you in the plant, he's a member of your union and you know who he is, well and good. You've got some track of him. And the same applies to whites.

THE FACT IS, CHIEF, THAT AFTER YOU TRAIN JUST ONE COLORED GUY, YOU DON'T KNOW WHO HE MIGHT BRING IN.

Well, you've got to take a chance on that if you'll do it. I'm merely trying to tell you of our experience of over 20 years, in damn near 90 percent of all the cases where you put them through the Study Course and get them the literature. Now these, remember, are above high school educational ratings -- university graduates -- and they start making money out here, and if you think that the American public around you that goes in for TV sets and goes in for the plus stuff, they go in for it ten better. And then what? Well, in the past, I can think offhand of 15 to 20 cases where technically they were holding superior positions in a good sized corporation. Now they did not want to have their association with Technocracy known, because as negroes they might possibly be picked on because of the negroes and if they were Technocrats, too. So they left the whites in the plant to take the rap for Technocracy and they were going to ride the coattails of the whites. Peculiar, isn't it? Now don't think I'm deprecating the negro. There are negroes, yes, that will take a position, but this is a social phenomenon of the new bourgeoisie coming up in this country.

Now you have the same thing in Mexico, where a new bourgeoisie has come up with a rush. You're talking about modern villas of the picture windows and everything else. There's more of that kind of modern fancy housing that's been built outside of Mexico City than there is outside of any two American cities -- not the \$24,000. Oh, that's rubbish -- they wouldn't have that. These are really good. A new bourgeoisie has come up. Now you try and interest that type of Mexican. What? Does he want the social system to change? It's the same thing with the Mexicans. Let's view it -- never has he had it so good. He's the scientifico, the bourgeoisie, he doesn't want the ....

Now the Tarascan out here and the other, what are they? Are they related to him? Oh, they're Mexican, understand. They're

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

more entitled to the Mexican than he is, because, after all, they didn't come from Europe. But, no, they're third-class citizens down here, and he doesn't know about him. Now that's the same thing exactly that you have to fight with the negro. You've got the religious bible belt negro who's superstitious and illiterate the same as the white. Now when you get somebody who has been educated with a different viewpoint, then you can put some backing into him. You or any other Section want to try it, bring him in here and I'll make you a bet that this is what you find out. Fair enough?

IS THERE ANY PARTICULAR GROUP THAT IS MORE RECEPTIVE TO  
TECHNOCRACY THAT WE COULD MORE EASILY DO A JOB ON?

You've got millions of people in this country who are interested, but they're not pertaining to any group -- any social group. [INDIVIDUALS] You'll find them, yes, all across the country. You'll find them in desert corners, mining camps, universities -- not the big percentage, no. You'll find them in overalls and you'll find them in ordinary clothes; but you can't say that they're any particular social stratification as the leading percentage.

HAS IT BEEN FOUND CONTINENTALLY THAT THE RCs BROUGHT INTO  
THE SECTION ARE OFFENDED TO ANY GREAT EXTENT MORE SO THAN,  
SAY, OTHER VARIOUS RELIGIONS?

No. Now look. Your Scotch Roman Catholic is the worst. He's similar to a certain type of high Episcopal or high Lutheran. They're the worst. Now other types of Catholics -- in Europe they know what the [Otremand] had. You know that term? Well now, if you're an educated Roman Catholic in Europe, you'd know that term immediately. When he talks about the political church, it's the Otremand. The educated French family, the bourgeois I'm talking about -- up here -- not the lower. If they've got a good looking daughter, does she go to confession? Come on. Oh, after she's married. Down in South America in confession, no, they've had so much trouble, what? He sits in here back of a wall. Now wait a minute. The Mohammedan is in just the same category, let's not discriminate in the sense of one -- they're in a similar boat.

Now Murray of your CIO was a Scotch Catholic, strait laced. He's the same thing as the Presbyterian who wouldn't eat

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

strawberries on Sunday on the fact that there's a difference of so-called label, The same thing as you have atheists who are just as Catholic in their atheism as they were in their previous Roman Catholicism or their Orthodox Catholicism. Am I making it clear? They changed the nominal label, but what? Their superstitious, prejudicial, narrow minded parochial viewpoint was just the same.

Dulles, what? He's a protestant, one of the great protestant laymen. Well, his son has just graduated from the Jesuit Academy. Well, now, the difference between John Foster Dulles and his high church Episcopalianism and his son graduating from the Jesuit Academy is double zero. I'm saying this without any religious prejudice. As far as Technocracy is concerned, any Roman Catholic, any Mohammedan, any religion is welcome. We're not anti-Catholic, let's get it clear. We are anti-clerical. We will oppose the interference of the Mohammedan, the Buddhist, Shinto, Catholic, Lutheran, Episcopal or any other religious institutionalism into the political instrumentalities of our national affairs.

In other words, that's their spiritual world. Now your religion, that's strictly a relationship between the individual's conscience and his god. Now if you want to worship that way, that's your privilege, but when you come in and insist that that manner of religious worship be made a mode of conduct to be politically administered to the nation as a whole, that's when we say wait a minute, that's where you're going to start trouble. And the Roman Catholic who is so stupid as to try this, he is not a good Roman Catholic, because he is going to encourage what? And he's going to create the cohesion of all the non-Catholics against him.

WE'D JUST AS SOON THEY WOULD BEHAVE THAT WAY, THOUGH, WOULDN'T WE?

Well, if they're going to be that stupid, all right. Then it's to our benefit.

IT APPEARS THAT THE CLIMATE IS GETTING FAVORABLE FOR EXPANSION AGAIN, WHAT IS YOUR ATTITUDE TOWARDS AREA TOURS -- AREA SPEAKING TOURS?

Oh, we're trying to put on tours wherever we can. We're

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

assisting them. Who got Briggs through here? Now Operations Hamilton -- don't think that was the only operation. You had Operations San Diego, Operations Fresno, Operations Chief Joseph Dam, and Operations Trail -- different parts of the continent. Those of you that were in Hamilton saw that. Well, he put on an equally good thing out in the rest of the places. Now you've got a new class of speakers, of which Briggs is the type, remember. When he joined, he couldn't speak. Never spoke in his life on anything. But they're coming up.

So, if any area feels it could put on a series of meetings, let us know. How about opening up Sarnia? O.K., St. Catherines is opening up -- Welland. We'll soon get this Lake Erie, you know, like this.

If I haven't covered any of these things that we're talking about or if there are other questions about them, come on, you say what you feel like. In other words, you come back at me with what you think, with what you understood that I said, and then we'll see whether you understand. I think that's fair enough,

WOULD YOU CARE TO GO INTO A LITTLE BIT OF THAT WARTIME BACKGROUND OF EISENHOWER FOR THE BENEFIT OF THE GROUP, CHIEF?

Well, I don't know if enough of them here are interested in it.

DEFINITELY. EISENHOWER HAD A CONFERENCE THAT HE WAS GOING TO TAKE IN MacARTHUR TO SETTLE THE WAR. THE NEWS MADE MENTION OF WHAT COULD HAVE BEEN DONE IN THE FIRST PLACE ON THE WAR.

But Eisenhower accepted the Italian surrender in Spain before a single United States soldier ever landed in Italy and invaded Italy. Do you begin to smell something?

COULD YOU REPEAT THAT?

Eisenhower and the top British received the envoys from the Italian Government and, bang, the Italians surrendered in Spain before the invasion of Italy by United States troops.

THEY WERE SENT OVER IN AIRPLANES, WEREN'T THEY, AND LANDED

MEMBERSHIP MEETING  
WITH HOWARD SCOTT

12-10-52

IN ?

Now look, let's go back a little while. Hess, before U.S. got into the struggle, was accidentally shot down leaving the Duke of Southerland's estate in Scotland.

WAS HE LAID DOWN FROM HITLER?

Oh, if you want to use that term. I don't like that term myself. Now he also tried to go to Gilbraltar. He went to Sweden, Hess did -- Rudolf Hess, Deputy Fuehrer. What was he going there for? What were all these arrangements? In the first place, the beginning of the war was rather ironic and idiotic, because you have Britain and France declaring war on Fascist Germany because of Fascist Poland. How come? How screwy can you get?

Now before the war, that is, in 1939, Great Britain sends a military mission to Moscow by way of Poland. It takes nine weeks to reach Moscow. Well, they went to Poland first. And what does the hangover of the Pilsudski Government want? It wants Russian tanks, Russian artillery, and Russian planes, Russian ammunition, but not the Red Army.

Now when the military mission got to Moscow, which was May-June -- somewhere in there -- 1939, the Russians wanted a treaty with Great Britain, an offensive and defensive treaty, and they insisted on reoccupying Estonia, Latvia, and Lithuania and up to the Curzon Line. The British military mission said, "But we are not empowered to sign a treaty." "Well, notify your home government to send a diplomatic mission then." So Russia -- the British turned down the proposition.

You had Romania objecting with an official communique to Great Britain about Poland accepting aid from the U.S.S.R. -- Romania. There's another funny quirk to it. Well, the British didn't have the vision and couldn't see it, so finally the thing blew up around the first of July or the middle of July. Well, then, the Germans offered von Ribbentrop the non-aggression pact. The Russians grabbed it; so the fracas was on the first of September, 1939, check?

Now Hess had not yet gone over there, had he? And the Russians in their non-aggression pact said, "We don't sign a non-

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

aggression pact unless we get Estonia, Latvia, Lithuania, and Poland to the Brest-Litovsk Line and Bessarabia from Romania." Bessarabia had been a part of Russia, you see. So had Estonia, Latvia, and Lithuania.

Well, the German troops advanced, and, of course, the Stukas -- all the rest of them -- had German films made of it and the Stukas roared in and bombed the hell out of everything in Poland. Bear in mind that United States military observers -- naval, air and army, plus photographers, newsreel men, and reporters -- accompanied the German Army into Poland. We were not at war with Germany on September 1, 1939, were we? So they got full coverage and full photography.

They met the Russian Army at Brest-Litovsk, Now there were two armies in Poland: one was your northern army and that was around 390,000 men and officers and 2,700 heavy artillery, and thousands of trucks. The other one was 180,000 in Southern Poland, with 1,900 guns and thousands of trucks, or over half a million of the Polish Army surrendered to Germany in two blocs.

Now according to the German Wehrmacht's own figures, whether they were the same Poles or not, there were over half a million Poles in German Army uniform throughout the war; in fact, most of the surrender on the American and British invasion of France -- those were Poles in German uniforms that surrendered at D-Day on the Normandy Beach, and for a number of days thereafter, and they brought them over here.

Well, the Finnish War, the Finns and Russia had a falling-out. The winter of 1939 was the coldest winter in 125 years. One hundred twenty-five years before, in 1815, the Skagerrak had frozen over completely. It froze over again that winter, the first time in 125 years. Now United States, Great Britain, and France were very sympathetic to Finland and our press here was pro-Finnish. So was Roosevelt and Prokopie, the Finnish Ambassador, and Mannerheim in Washington was the idol of the diplomatic circles. Great Britain and France started shipping material to Finland, and they addressed official communiques to the Swedish Government asking for the permission and transportation for 40,000 British and 40,000 French troops to be landed at Narvik, Norway, to be transported over the electric railroad from Narvik, Norway, to Karelo -- the electric railroad

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

across the top end of Sweden into Finland. Sweden, being strictly according to the law, said, "Yes, they would grant permission but they could only grant permission under international law, provided that there was a declaration of war and that Great Britain and France and Finland were belligerents."

So you had express guarantees of the foreign minister of France, the foreign secretary of Britain, and all the exchange of letters guaranteeing to His Majesty's Swedish Government that His Majesty's Government of Great Britain and the Republic of France do hereby undertake and guarantee that they will declare war on the U.S.S.R. on or before March 16, 1940. My authority for it: you can buy it from the Swedish Legation -- the entire white papers published by the Swedish Government, We have it in our files. One of the most enlightening, dirty .... ; in other words, here was Great Britain and France ostensibly in the "sitzkrieg" war against Germany, sitting down on the western front entering into agreement to declare war on the U.S.S.R. to help Finland out and guaranteeing to the Swedish Government that the passage of 80,000 troops -- that they'd get permission if they would declare war; and guaranteeing that the declaration of war would occur on or before midnight of March 16, 1940. What happened? Why didn't they declare war? Because the Finns surrendered March 14, 1940 that close. Why did the Finns surrender? Because Finland was cut in two. The Russians had gone clean through central Finland to the top end of the Gulf of Bothnia. They were up here in the Arctic and they smashed the Mannerheim Line before down at the bottom.

THE NEW YORK TIMES and the NEW YORK HERALD TRIBUNE kept eulogizing that the Russians had no shoes, the Russians had no uniforms, no generals, and the Finns were taking this enormous number of prisoners. And lo and behold, they took so many prisoners that the Russian prisoners equalled the population of Finland. That's history as you have not known. Did you know that before? Now, if you wish to verify it, get a copy for your Section.

WHAT WAS THE FALLING OUT BETWEEN FINLAND AND RUSSIA THERE?

Well, of course, you have to go back to World War I. You see, there never was a separate Finland. When was the first time that Finland was independent? When Lenin declared Finland to be

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

an autonomous Soviet Republic, Now Finland had been a part of Russia for a couple of centuries, and prior to that it was a part of Sweden. There had never been an independent Finland in history. I'm not deprecating the Finnish people -- don't misunderstand me, but I'm giving you the historical chronology.

The Russians started to take Finland after Peter the Great defeated Charles XII at Prokhalve down on the Don in 1709, So the dirty work came after the Bolshevik Revolution, and you had this autonomous Finnish Soviet Republic. The British landed General Poole and 22,000 British at Narvik, plus the British Fleet at Murmansk, When? In April, 1918 -- March. So, naturally, that's the background of that, and General Baron Mannerheim -- the autonomous Soviet Republic of Finland is shoved back and some thousands of Finns are slaughtered because they belonged to the Bolshevik Government of Finland. So the Finnish Republic under Mannerheim is set up by British and German troops.

WOULD YOU MIND AN EXPLANATION ON THE JAPANESE PACT ON PEARL HARBOR? WHERE WAS THE INSTIGATION AND WHAT WAS THE ACQUIESCENCE OF OUR MILITARY COMMAND OVER THERE IN PERMITTING SUCH A THING?

I'll give you my analysis of it. If you stop and think for a moment -- remember that Italy, Germany, and Japan were members of the Anti-Comintern Pact -- they were allies. Therefore, they all had military staffs, observers in on their military staffs. Now here are the Japanese -- had ambassadors at the Vatican, ambassadors at Rome in the Italian Government, and ambassadors in Berlin, as well as in Moscow. And they also had staff liaison officers with the Italian and German headquarters staff.

Now the only country outside of Germany and Russia that knew how many German divisions entered Russia on June 22, 1941, was Japan, The only country outside of Germany and Russia that knew the number of German divisions that entered Russia in the invasion on June 22, 1941 -- because their observers were with the Germany Army.

ITALY WASN'T IN ON THAT?

Oh, yes, Italy sent a million-and-a-half troops in there. So they had them with the Italian Army, and they had them at the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Italian headquarters, plus their ambassador in Rome, plus their ambassador in Berlin, plus their staff officers; and they also had ambassadors in Moscow, but they didn't have military observers with the Russian forces.

Now they were the only country in the world that had the exact reliable information on the total number of German divisions in the German invasion of Russia on June 22, 1941. That was the biggest number of divisions and the largest army. It was a European army, let's get that clear -- not just a German Army, as I'll explain to you.

The greatest battles of the Russo-German war were fought in the last of October and November, 1941. Put that down. Let's get that clear -- the greatest battles ever fought in history were fought in the last of October and November, 1941. Is that clear? Is my statement clear that the greatest military battles ever fought in history -- meaning the greatest amount of artillery firepower and manpower on each side -- were fought on the Riga-Drena Line up to Smolensk; and in the four days of fighting, according to the German High Command -- not according to Goebbels, the German Army lost 1,730 tanks in four days of fighting. They lost 700 and something in one day's fighting. The giant German advance ground to a halt and was stalled there for six weeks.

Now that's the Gulf of Riga. You go back in history and you'll find that the old road that Napoleon traveled over -- do you have a map of Europe here? Your road crosses the -- they named it from Tilsa to .... and Memel. It's the old Smolensk-Tilsit-Neiman Highway to Moscow. Napoleon traveled the same road. So did the Poles that started out under King Jagello. Do you know your Polish history, any of you? Jagello married what's-her-name of Lithuania, and they combined Poland and Lithuania, and later under Casimir IV they reached the Don and captured Moscow, and the Russians took it back, I think, in 1609, and that's when the Russians had six divisions of ski troops clothed in white.

THAT'S AN OLD TECHNIQUE WITH THEM. YOU CAN'T BEAT THEM ON THEIR OWN HABITAT.

No. Now I'll explain that. So there's the greatest battles in history are fought there -- so great that the giant German

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

advance is brought to a halt for six weeks. Now the Germans rush in more divisions, and they cross the railroad between Moscow and Leningrad. In other words, they encircle Moscow to the north. They come around like this to Moscow to the south, to Tula, and they stop. The Russians come around Leningrad and they stop. The Russians counterattack and they never came back. Now remember that's 1941. In 1941, United States exported to Russia 500 planes. They were the Air Cobra, Bell Aircraft in Buffalo. [STRICTLY BUSINESS.] Strictly baloney, because you had to fight them at 5,000 feet because they only had a ceiling of 12 to 14 thousand. [NOT BECAUSE WE WERE SYMPATHETIC WITH RUSSIA POLITICALLY.] No.

HADN'T THE RUSSIANS DEVELOPED A FAR SUPERIOR TECHNIQUE IN THEIR TRIANGLE OF ARTILLERY?

Well, I'll explain a lot of that. I'll explain the Russian strategy versus the other schools of strategy, but they have some of the best artillery in the world. Well, they never took Leningrad. Remember they were 16 miles from the heart of Moscow and they had more planes -- six times as many planes as they flung over the Balkans, and the number they flung over t h e Balkans was several times what they flung over London in the blitz on London. And, yet, they never bombed Moscow worth a hoot in hell compared to what they bombed London. Was it because they didn't throw the planes over? Oh, no. It was because the Russians had elliptical ovals. Their long-barreled anti-aircraft like that in circles around Moscow, they could cone up every oval, they could cone off every circle of ovals like that, and they dropped them in the suburbs like that and the backyards. American observers pointed out that at 3:00 on a black winter morning in Moscow, when the anti-aircraft fire started, you could read a newspaper; and these same men had been in the blitz in London and the anti-aircraft was nothing in comparison. And, of course, they built up the stuff that the Russians just flung up this terrific mass of metal in the sky and they didn't care about efficiency or waste or anything else -- but the point is the Germans didn't get through.

Field Marshal von Paulus in 1942 started that with over a million and some men, the last desperate gasp of going through to Stalingrad. They got to the banks of the Volga, von Paulus did not surrender and the German armies didn't; they were captured,

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

actually, right in their own headquarters. They were surrounded, cut off. Their wounded didn't have the medicine, they were out of ammunition, it was down below zero. They were freezing, they were dying, and, yet, the Germans fought on, while at Bizerte in North Africa in a beautiful climate with terrific stores, ammunition galore, chocolate, cigars, champagne, wine, and everything, they walk up and surrender. You smell anything? In one place they're beaten, they're sick, they're starved, they're frozen, and they fight until they're captured. In the other place they're not sick, they're not wounded, they've got the ammunition, and the food and the most defensive terrain -- nice high coned sugar loaf. In Stalingrad not a thing to hide behind. Bizerte terrain is a beautiful defensive terrain.

The Russians fought them off their feet, and even the attempted relief -- that was your Polish Army under Anders, 250,000 trained and equipped in Russia -- they were due to come into the lines at Stalingrad and they refused. So the Russians disarmed them and dumped them over into Iran. They went around and joined the other side. The less said about them, the better.

Now there are two types of military strategy -- two general types. There is the classical school of Germany exemplified by Schlieffen, Scharnhorst, Bleucher, von Clausewitz, and others. We have it here. Washington has always desired to emulate the [secrelea] of discipline of the Deutsche Wehrmacht. We've always worshipped at the shrine of the classical militarist of that type; namely, single and double breakthrough and single and double encircling movements. That was the classic military maneuver.

Well, now, that classical military theory originated when and in what kind of a terrain? It originated only in the terrain where there was a very short distance between sea and sea or the mountain and the sea. Little minor geography gave birth to that. Who was the first and the father of it? Epaminondas, the Theban schoolmaster who devised the single and double encircling breakthrough movement to defeat the Athenian phalanx. That was BC. And in Greece, what? You have a very short distance between the sea and the mountains. You can't go very far any place before you run into the sea or the mountains. It's a tactical maneuver that comes out of that kind of geography and terrain.

12-10-52

Now the Russians by history developed something quite different. You go back to April 14, 1242, and Prince Alexander Nevsky was leading the Russians. Well, he didn't have the forces and equipment or training compared to the enemy, because they were the great Teutonic Knights, the best trained, the best equipped, and the best led military force in North Europe at its time; but he did the same thing as Andrew Jackson did years ago, yet centuries later. When the heavily armed Teutonic Knights, beautifully equipped, crashed into his center, he caved in his center like this, contrary to usual military -- hold the line, boys -- caved in his center. And his center was where? The center was on the edge of the ice of Lake Peipus; so, when he caved in his center, the heavily armed troops of the Teutonic Knights went out on the ice of Lake Peipus, the ice couldn't take it, and the Teutonic Knights went down with the ice in the water.

The Russians did it. They were driven back by the Poles in Lithuania and Ghengis Khan the other way, and Charles XII won every battle -- he licked hell out of them -- all the way up and down. He got his comeuppance, as the boys would say it, at Potow. Napoleon won, yes, Tilsen, Neiman, Borodino, and the other battle. He entered Russia with half a million of the Grand Armee of Europe, the conquering army. And Napoleon writing to -- what was his girl friend's name -- Josephine? -- the letter is on record, "Ma Cherie," (he is describing September 12, 1812), "it is as warm here in Moscow as a day in Fontainbleau, no snow." In fact, on the retreat of Napoleon where he crosses the Borosino River in Poland -- that's quite a way from Moscow -- was it frozen over? Oh, no, his engineer corps stood in the river and held the pontoon bridges while he passed over it with this carriage. The paintings of [Messinque] and all the thing about the snows of Europe decimating the great Napoleonic French Army are utter falsehood, utter nonsense. What decimated them? He lost 150,000 in one battle. He beat them, but he lost. It was a phyrtric victory and a succession of phyrtric victories like King Phyrthus fighting alone. Fight one more -- you're licked.

Now let's get something clear: the statistical record of armies fighting in history. The Portuguese Army breaks on the losses of 12 to 15 percent; so does the Spanish or the Italian. The north French, the German, the Swedes, the Russians can stand 25 to 30 percent -- just one of those things. Now remember that's the statistics of the battles of Europe for over 600 years. So,

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Napoleon was licked by his casualties and he wasn't licked at Waterloo. He was licked in Russia because he lost the trained fighting cadre of veterans and noncommissioned officers and officers. The army that he reassembled after coming back from Elbe -- that wasn't the Grand Armée. He put on a little one last autumnal flowering, if you like to put it that way, at Waterloo. That wasn't the real thing. If he'd had the half million that he entered Russia with, Wellington would never have stood a chance.

The Germans in 1918 traveled the same road. Hitler traveled the same road. Now remember this organization made the statement that the Germans would have to advance so many miles average a day in Russia every day, and if the Russians held them to 4 miles a day, they could lose all the battles and win the war. The Russians did. The German Wehrmacht would send out its tanks like this, its weapons carriers -- double and single breakthrough. The Russians would cave in the front. Russia has made mistakes, don't misunderstand me. Their allocation of tanks at the front line in combat was all wrong when they began. The Germans were better, but the Russians improved their tanks, so that the Russian tank became more mobile, faster than the German tank. And the Russians won their part, their war, with Russian equipment. We didn't supply any equipment worth talking about -- materials, yes, food, copper wire, cables, sheet metal, trucks -- that's the one big thing we did. We supplied 2,500 planes in 1942 but they did not start to be delivered to Russia until after September 19th, when the first plane left from Alaska for Siberia. And what? Stalingrad was already gone.

Eighty-five percent of the casualties of the German Wehrmacht -- or better -- were on the Russian front. Now besides the German Army, what else did you have? You had 1.5 million Italians, 2.6 million Romanians, you had 500,000 Poles, you had 280,000 French, and you had 140,000 in the original unit and replaced practically twice of the Spanish, a Walloon division. Where's Walloon? Belgium. Now, besides that, you had Austrian, you even had Danes. This is the original units. Add those up and what does it amount to? [ABOUT 5 MILLION] Quite a sizable force.

The war on the west -- how many tanks did the German Army have in 1940 when they invaded France? Do any of you know? Less than 2,400. How many mechanized divisions did they have? Less than 6. This gets quite interesting. How many tanks did the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

French have at the same times 1940? Four thousand, and the French tanks were bigger and better than the German tanks, and the French had more big guns than the Germans. General Korab of the French Army had 250,000 French veterans -- not fresh conscripts, French veterans -- at the end of the Maginot Line, That's the Sedan Gap between Sedan and Marmeleis. He surrendered. He and all his artillery supplies and everything else surrendered to Hitler. And the German troops that came into Paris came in on foot and horsedrawn vehicles. They weren't mechanized. Does that give you a little different idea of it.

Now the Japanese, as I pointed out before, had their men in all this. They were the only ones that knew the total number of divisions with Germany that went in, and these divisions, the greatest number that ever invaded any country, were stopped. They knew they were stopped. They didn't want any part of that.

For some weeks -- some six or seven -- before December 7th, the intelligence in Hawaii, G-2, had plotted the positions of every Japanese boat, whether merchant marine or naval, ever since the war began. Remember we had decoded the Japanese commercial, diplomatic, naval, maritime, and other codes, and we put the pins in the map every day with the position of every Japanese vessel. They were ordered to stop plotting the position of those Japanese vessels some weeks before Pearl Harbor.

Now Rome, London, Berlin, and Washington all firmly believed that the Japanese code message that would come through would come through, "North wind rain." I'm giving you the code interpretation -- the Japanese code -- which would have meant a Japanese attack on Russia. Instead of that, it came through, "East wind rain," and Hawaii was attacked. It was attacked why? Because the Japanese were the only ones who knew the total number of divisions that entered Russia, and if you could stop that number of divisions with a separate army in Siberia that still wasn't used, then don't burn yourself up on that when there was all this that could be taken for less cost.

DID THEY ACTUALLY BELIEVE THAT? THAT WE COULD BE TAKEN AT LESS ?

No, not we, Asia. We believed that we felt that the Japanese were going to attack Siberia, but they saw the finest army in the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

world and the biggest army stopped; and they were military advisers advancing with those armies -- do you understand me? They saw that gigantic army brought to a halt and stopped, and they knew that there was a Far Eastern Russian army. If the Germans couldn't go through with that gigantic number, the Kuontung Fifth Army, which was the crack Japanese army with the greatest firepower, the greatest artillery, with underground bunkers, fuel, machine shops, and everything else up there in Manchuria -- a million and a half of them -- they didn't want any part of that kind of war because they could take the rest of China in a walkover.

WHY INVOLVE US AT ALL?

Well, we had gotten very snotty about the , so they misjudged that. They followed Homer Lea on the question of the invasion of the Philippines, but they didn't follow Homer Lea -- if they had followed up and attacked Prince Rupert in Canada and landed there, they could have cut the railway lines through to the Pacific Coast, the Canadian National, the Canadian Pacific, the Northern Pacific, the Great Northern, the Chicago, Milwaukee & Pacific. If they had cut those, the whole Pacific Northwest would have been a mess.

If they had landed in Hawaii even, but no, they thought if they knocked out the Pacific fleet, that's about all they would have to do. Well, you never got that explanation before.

THEY FEEL THAT EVENTUALLY WE WOULD HAVE SUPPLIED RUSSIA WITH  
HELP ANYWAY. WE WOULD HAVE BEEN THEIR

Oh, no, no, no. You see, we firmly believed -- so did Britain, so did Germany, so did Italy that Japan would strike at Siberia. Now I spoke in Los Angeles on Friday night in the big Shrine Auditorium in Los Angeles. I spoke at a giant membership meeting Saturday night. The Japs struck Sunday morning. I spoke on the fifth and the sixth -- Sunday was the seventh -- and Upton Close -- you remember the radio commentator? -- was broadcasting that week that the U.S. Navy and our State Department would prefer Siberia to be in the hands of the Japanese. How wrong he was. They would have preferred it. They were openly stating it that the Japanese were practically going to take Siberia. They believed it.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT

12-10-52

DID RUSSIA HAVE ITS DEFENSE IN DEPTH UP TO ABOUT 52 MILES  
AROUND MOSCOW?

Oh, no. There was one point where the Germans were only 16  
miles from Moscow.

BUT DID THEY DEVELOP A DEFENSE IN DEPTH?

Well, they did afterwards, but the counteroffensive hit at  
Tula and hit to the north of Moscow and drove the Germans back in  
the snow at 40 degrees below zero. Below zero, if you can't walk  
out, brother, you don't come out. Any wound which incapacitates  
you and you can't walk out -- at other temperatures, it could be  
minor wounds, but below zero, if you can't walk out -- tout  
finis!

The German losses were greater than the Russians. German  
firepower -- the great tactical genius of World War II was  
General Vatutin. We used to call him "you're damn tootin'," at  
CHQ just for fun. He was the one that, when he started going, he  
went clean across and landed right in Romania. V A T U T I N .  
Unfortunately, he died of wounds received from a bomb splinter.  
Too bad, because he was a magnificent genius there. He was the  
one that built the first bridges 2-1/2 feet underwater and then  
built the other bridges a couple of miles down and ran the decoy  
trucks across the other bridges with the anti-aircraft guns and  
fight like hell with these empty trucks while the real trucks  
went across the underwater bridges in the dark. His armies moved  
at night -- never in daytime. Tanks would pull the artillery  
behind them. You know what a stone boat is? Well, he just made  
them a little smoother on the bottom, that's all. Dragged them in  
the mud and away they go. He was the first one ever to mass 3,700  
guns to a mile of front. But you can't get that many guns in a  
single line. You've got to put them back of each other like this  
-- your smaller ones in front and then your next larger and your  
next larger. You can't get 3,700 guns on a mile of front. A mile  
isn't big enough to take 3,700 guns. He used that technique.

Now to put it another way -- the battle of the Berlin-Niese  
Line -- the Russians flung 460,000 large-sized shells in 2-1/2  
hours. They did it at night. They had 7,000 planes attack and  
4,800 Stalin tanks in a massed attack. The Stalin tanks have a

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

122-mm. gun in the turret. They threw rockets to such an extent and star shells and searchlights that it was like daylight.

In 11 to 13 days of fighting, they killed more Germans in that time than the Allies did from Normandy Beach to the surrender. When you stop and think what it means to throw 460,000 large-sized shells in 2-1/2 hours, you have to have guns. You don't do it with peanuts or .... You have to have a terrific amount of artillery. It's a little different framework then, isn't it?

Somebody ought to write this history.

HOW DID WE GET HOOKED IN ON THE BATTLE OF THE BULGE?

Well, we put 3 green divisions up in the snow of the Ardennes Forest that had never fired a shot and had never seen a minute of action. I don't know whether any of you were there or not. We have members -- quite a few of them -- who were in it, and we have relatives of those members who died over there. One of the reasons down south in Greenville, Carolina, was because so many of them were in the Battle of the Bulge -- that's why they became Technocrats. They're all young men -- comparatively young men. They're all veterans. Their wives are in it, too, and their brothers and their wives have dead over there. Now don't talk to them about it. They're bitter.

We moved up the three green divisions, and G-2 had presented G-1 with all of the reconnaissance photographs of the massing of tanks and the German Sixth Army Corps. G-1 interpreted that the Germans were massing them to retreat. Now the German Sixth Army Corps and 7th Panzer group -- and they hit. There were only two large-scale German tank attacks on the Western front; that was one of them, the other was on the British left flank at Caen. Other times we sent out 8 or 10 tanks at a time with platoons of infantry. We didn't use any large-scale tank .... The same time we were doing that kind of fighting on the Western Front, the Germans in one day -- I'll give you one day's operations -- threw over 600 massed tanks in one attack, over 400 in another attack in another section, and 200 in another sector miles apart -- not within seeing distance -- miles and miles, hundreds of miles apart. That's 1,200 tanks. These were massed tank attacks. That never happened on the Western Front except on the two

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

occasions when the British tried to close them off on the left flank -- the Panzer Corps at Caen and close that gap and the Germans sent in the Panzers.

The other was at the Bulge in the Ardennes Forest. They went through in the Ardennes and hit the three green American divisions in the snow, and the Bulge broke out like that, and what was in the Bulge? The largest fuel dump and ammunition and storage dumps on the Western Front. Who got them? The Germans did. And what happened? The Bulge was gradually pinched off and the German Panzer Corps went east -- probably they didn't use the fuel. They merely sprinkled that on the highway. But they went east to stage the counteroffensive against the Russians at Lake Balaton and Budapest. The Russians captured some of it.

Now, I'm not pro-Russian -- get that straight -- but I am disgusted at the treachery and the hypocrisy that we have played. Not the man in the ranks, no. He conscientiously tried to do a good job. Just like in Italy at the Rapido. Mark Clark, who is now in Korea -- here were your German machine guns and artillery bunkers and emplacements across the other side of the Rapido -- he orders the American troops to attack without any artillery barrage, without any , and the Rapido River ran red with American blood. Well, I'll tell you where Mark Clark can't go -- right in the United States. He can't go to that area of Texas where the what-do-you-call-them division fought at the Rapido. Officers and men to a man will spit in his eye.

They take a nasty dirty oath every annual convention. It refers to Mark Clark and his ancestors.

HOW IS U.S. GOING TO MAKE OUT IN KOREA?

Well, how is she making out?

HOW LONG ARE WE GOING TO STAY THERE?

As long as you want to stay there. I'll give you the answer to that. Remember if you aren't going anyplace, you can stay there a long time. Isn't that correct? Any place you're in, if you're not going anyplace, you can stay there a long time (that's the answer). Interesting answer, isn't it?

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

AT THE SAME TIME WE'RE BEING LIBERATED FROM OUR RESOURCES,  
TOO.

Oh, yes.

WE'LL NEVER APPRECIATE WHAT THE RUSSIANS DID.

No, no Americans would. The Germans don't either. The Germans and the French and the Italians have been liberated. They know what it is. They'd rather be captured by the Russians than be liberated by the Americans. Now that's the statement that's being made in Europe.

THEY HAVE MORE TO GAIN BILATERALLY.

Yes. Just as India said, "We had two million troops in the war. We were your allies. Do we get any aid? Do we get what France gets or Britain? Or Italy? No. You'll loan us \$20 million. We would have been far better off if we had fought on the enemy's side." It's ironic but that's their attitude and it's correct. They make that statement in public and print it.

INDIA IS MORE OR LESS ON THE FENCE, THOUGH, AREN'T THEY?

They're not on our fence.

THEIR SALVATION LIES IN ASIA. THEY'RE IN ASIA.

That's correct. They're one of the leading Asiatic powers. Now what we could get over here is that Pandit Nehru is not only Premier of India but he's an outstanding Asian in the matter of social thinking in Asia -- not just in India. He is considered by Asians to be an outstanding Asian.

HE HAS STATURE IN ASIA.

Yes, definitely.

THAT DOES NOT NECESSARILY MEAN THAT INDIA WILL BE THE DOMINANT  
FACTOR IN ASIATIC INFLUENCE?

No, but he's a leading Asian thinker with social stature. In

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

other words, he has the respect of hundreds of millions of people apart from his being Premier of India.

IN NEWSWEEK, ABOUT MARCH OR APRIL, THERE WAS AN ARTICLE THAT SAID THAT IF THE GOLD RESERVES LEFT BRITAIN AT THE SAME RATE THAT THEY WERE AT THAT TIME, THEN BRITAIN WOULD BE BROKE BY CHRISTMAS.

Oh, Britain's broke anyway.

BUT THEY HAVEN'T FILED BANKRUPTCY YET, THOUGH, HAVE THEY?

No, but then we're holding her up. So is the Commonwealth.

WHY SHOULD SHE IF SHE HAS RUSSIA TO DRAW NATURAL RESOURCES FROM?

Who?

BRITAIN.

But then Russia has just turned her down.

YOU MEAN THEY DON'T NEED THE FINISHED PRODUCTS?

Come on, come on. This is where it gets interesting.

THEIR TECHNOLOGY ISN'T ADVANCED TO THAT EXTENT, IS IT?

Oh, isn't it? I thought you'd finally get to this.

WELL, YEAH, BUT I MEAN THEY NEED THE CIVILIAN GOODS AS WELL. THEY'RE DEVOTED BASICALLY TOWARDS WAR PRODUCTION, AREN'T THEY?

Not necessarily, no. They're building new aluminum, new chemical plants, new power plants, new canals; but they're placing their emphasis on capital goods. Some months ago, the Machinoexport was announced -- Machinoexport Corp., with offices in Stockholm, London, Copenhagen, and various other, and then long pages of chemical industry equipment, textile industry equipment, power equipment, machine tools -- lists.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

THEN EUROPE CAN'T AFFORD TO KICK US OUT OF THERE.

With Russia publishing this that they are prepared to export. Now look at the list.

THEY NEVER COULD HAVE BEEN SO BAD WHEN THEY HELD GERMANY BACK IN '41.

Oh, that was a different matter. See, they are producing 100,000-kW turbogenerator sets -- have been. They're on a single shaft. They're 1875 psi and 975 heat, 3,600 rpm, and hydrogen cooled, 40 percent overload.

YOU WOULD THINK THAT ANYTHING TO-ENHANCE THEIR TECHNOLOGY, THEY CERTAINLY HAVE THE RAW MATERIALS TO WORK BRITAIN FOR A WHILE ANYWAY UNTIL THEY REALLY GET GOING.

Well, here's another tipoff: your big concerns in Sweden and Switzerland today are running on Russian-made alloys, and they're supplied at a price that the western firms simply cannot sell them to Switzerland and Sweden. Furthermore, the specifications are accurate. Now you're not fooling the Swedes or the Swiss on metallurgy. Nobody does that. And they're buying this as the bulk of their supplies -- not only ordinary alloys but rare metals, columbium, tantalum.

WE HAVE 45 PERCENT. WHAT PERCENTAGE DOES RUSSIA HAVE OF NATURAL RESOURCES ROUGHLY?

Well, that's a question. This continent has resources taken in sedimentary formations of the series in which petroleum is found. Russia has 3-1/2 times the surface area of sedimentary formations that United States does.

.... THAT RUSSIA DIDN'T HAVE OIL.

Well, she's got a fair amount of oil. Russia was the world's leading oil producer before.

ON ONE POOL THEY DON'T DIG A THOUSAND WELLS. THEY DIG ONE, DON'T THEY?

No, they ....

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

EVEN ON A NATIONALIZED PROJECT?

Yeah, but you haven't got all your companies competing, but their new oil field -- you've got oil in Sakhalin, you've got oil in Kamchatka, you've got oil at the Great Permian Basin north of the Caspian and east of the Caspian.

IRON AGE SAID THAT RUSSIA HAD VERY LITTLE IRON.

I wouldn't say that.

DO YOU THINK THAT PERCENTAGE-WISE THEY MIGHT HAVE THE ABUNDANCE OF RAW MATERIALS THAT WE DO WHEN EXPLOITED?

They probably haven't got as much coal. We've got the greatest coal deposits of the world known, and they haven't the extensive iron deposits of Brazil, which are the world's greatest, but they have considerable. Manchuria has the largest open pit coal mine in the world. The open pit at Pushan. The coal, seam is 500-feet thick at one end and runs for miles and goes down to about 20-odd feet before it peters out.

RUSSIA MIGHT BE INTERESTED IN THE RUHR THEN FOR THE COKING COAL THERE?

What's in the Ruhr? Overpopulation and only coal.

EXTERMINATE THE POPULATION.

No. What were the tactics of the Chinese Reds against Chiang Kai-shek and against the Americans in China? Did they try to capture it by frontal assault? No, they keep shoving in the Chinese. At Singkao they kept shoving in the Chinese, driving them in there, until the Americans had a million-and-a-half Chinese in Singkao. Who licked the Americans in China, the Chinese Reds? No, just Chinese "chop-chop." What are they doing in Berlin? What are they doing in West Germany? You kick them over every day, so many, don't you?

THE RUSSIANS DON'T WANT WESTERN EUROPE. IT'S JUST A DEFICIT AREA ANYWAY. AREN'T THEY HAPPY THAT WE ARE PLAYING AROUND WITH THE DEAL IN ?

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
DETROIT, MICHIGAN

12-10-52

Well, it's just like in the first Finnish war. You see the big nickel mines, nickel smelter and refinery at Petsamo right up there in the north -- the Russians could have taken it, but it was uncompleted and it wasn't running. So the Russians stop and don't take the .... Then in the second Finnish war, the allies and the Canadian Nickel and the International, they come in and complete the smelter and refinery and run it for Hitler. So when the time gets good and ready, the Russian troops move in and take over the completed mines, smelter, and refinery; and then to make the gesture nice, they settle the International Nickel or the Canadian, and they pay the Canadian \$20 million in gold.

Sure they got gold. They probably have around \$10 billion or more in gold. They've got one of the great gold producing areas of the world, the Lena River; in other words, they could loan gold out to these nations. They don't want dollars.

THEY WANT MACHINE TOOLS?

They did. They don't. The Machinoexport Corporation .... Your allied intelligence has set up bargains in Berlin and Austria and Vienna, regular set up bargains. The Russians would look at it -- not good enough. What we were doing was setting up bargains to see if the Russians would buy the stuff. The Russians come in and look at it -- not good enough.

[INAUDIBLE QUESTION] SOUNDS LIKE: WHAT EFFECT HAS THIS HAD ON THE NEW BUDGET?

Well, you've got to liquidate a lot of these Democrats that are in office in order to get enough offices to pay off to the Republican spoils boys. You've got to get these Democrats out of there before there's enough payoff for the Republicans.

YOU DON'T GET ANY PAYOFFS IF YOU CUT THE BUDGET.

Well, then you drop a lot of people. Then you can always reverse it the other way. You abolish the office, you abolish the division, the unit. Well, your customs in the post off ice ....

CLEVELAND, OHIO  
DECEMBER 12, 1952

[TAPE DID NOT BEGIN WITH START OF MEETING . IT APPARENTLY PICKS UP DURING A QUESTION PERIOD.]

[INAUDIBLE QUESTION]

But they only burned part of it down. Yes, but in Ohio they only burned part of the prison down. Isn't that correct? They didn't burn it all down. Am I correct? YES. Well, that's the mistake they made. After all, what? The prison system we have in this country is punitive, and in the attempt to fight the economic force majeure, the one that transgresses the law is placed in one of these penal institutions, and he comes out worse than when he went in. And your female -- if she transgresses and she happens to be good looking and young, do you know what happens to her? All right, I'll give it to you: The female attendants draw lots as to which two are going to rape her first. You don't like it? Kind of tough, isn't it?

You have enough prisoners in United States to build decent roads in Ohio and 24 other states. Why don't you put them to good healthy work and recuperate them? No, business won't let you.

AREN'T THERE NATURAL RESOURCES IN KOREA IN WHICH WE ARE INTERESTED?

Yes. If we'd stopped at the 38th parallel, but, no, the fighting line goes north on the east end of the line, and between the 38th parallel and our fighting front is the second largest tungsten mine of the world. What's that dirty word the Italians .... ? And if you want to know how much it produces, look up THE IRON AGE. It will give you the tonnage production of that mine. We don't draw our stuff from Russian publications.

Come on, who has another one for me? You've got to make it hotter than this.

CHIEF, WHAT PERCENTAGE OF OUR WAR PRODUCTION OR RATHER PRODUCTION OF UNITED STATES TODAY IS IN WAR MATERIALS AND FIGHTING EQUIPMENT? WHAT WOULD HAPPEN TO OUR ECONOMY IF PEACE WERE AN ACTUALITY?

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

Well, you need your war materiel to hold it up, and if you haven't got it, well, you don't have to look forward, you know, to the depression days of '33. Some estimates in '33 were 17 million -- some were 20 million unemployed. You only need 7-1/2 today in United States, and that cost at today's prices will exceed 20-some million in '33. And what would you do with all those 25-year home mortgages, TV sets, automobiles, and everything else? Oh, my God! Where would you put them? Just think of your having to leave all those things there and not getting paid for them.

I've raised some questions here on our policy abroad and internally. What is it? Are you frightened of it or don't you want to touch on it?

THERE IS A LOT OF TALK ABOUT BOMBING THE MAINLAND OF CHINA.  
WOULD THAT START WORLD WAR III?

Well, it doesn't make any difference. We can declare war on China and we'd have our hands full. We're only fighting on 155 miles of front today, and we're only occupying a portion of that front. Approximately 60 percent of that front is occupied by Republic of Korea troops and others. So, figure out how much fighting front we have.

Now we're talking about -- we're contemplating -- making a push over to the throat where the front -- the front of Korea -- is only 100 miles wide, but suppose the Chinese get nasty and retreat and lengthen the front out to 500 miles? Suppose they give it to us? What are the stipulations of the Geneva Convention to which we were a party and the other sixty nations? Didn't they print them in Cleveland papers? Now it might be interesting to go to your public library and ask for a copy of the 1949 Geneva Convention. Go ahead and see if you can get it.

When a soldier is in the army, he's under orders. He can't take a holiday or go fishing. He can't do anything voluntarily, can he? And his instructions are, if captured he must only divulge what? His name, dog tag number and rank, and if he divulges anything more, he's going to be held liable by his country -- check? And if he's captured, he's still a member of the armed forces of his country. Well, am I correct or incorrect?

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

CORRECT.

And the Geneva Convention specifically states that they are to be returned and that no coercion of any kind .... So, we use this as an excuse to continue war business.

HOW AND WHEN WILL THE 80 PERCENT NON-ELITE OF THE U.S. WAKE UP AND DO SOMETHING ABOUT THE CURRENT SITUATION?

Social change, you know, never came any time in history because of cogitation, intelligence, or rational realization. It only comes about when physical force majeure is so great that a considerable portion of the population is compelled to do that; and so long as the gravy trough in United States is the deepest, the widest, and the thickest, you'll have the damndest apathy any country has ever seen. Who cares? Why, you don't care about the neighbor next door, in the next apartment, the next block, the next street, the next township, the next county, and, hell, the next state is too far away. You know that.

You come out of a church -- for six days a week and 22 hours more, you're one thing. For two hours, you're another. Now somebody sees you on the church step, they may recognize you, but two blocks away, they can't tell you a Christian from a Republican. They can't and you know it.

Now you've been brought up to believe certain things. Do you want to be your brother's keeper? Oh, boy, you don't want anything to do with your brother. The only thing you want to do with your brother is to see if there isn't some way you can think up, devise, or finagle to trim him before he trims you.

Now, when your capacity reaches a point to where the production is a portion of the capacity and the consumption is a portion of the production, then it "ain't goin' to be long, honey." And we're headed o that very shortly.

ISN'T IT TRUE THAT THE COUNTRIES WE HAVE SUBSIDIZED IN EUROPE HAVE PAID US FOR IT?

Well, why not -- why shouldn't they? We have 60,000 troops in Great Britain. The American can walk in and buy the British car right off the sales floor. He's got the cash. The British

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

have to wait 3 to 4 years. He can walk in and buy the luxury goods, food, the best apartments, and he can buy the British women. Why in the hell shouldn't they be sore at us? And they are. American troops are out of bounds in several cities. They've assaulted our military police and overturned their jeeps and beat hell out of them. I mean, who in the hell do we think we are -- Jesus Christ on wheels? We are in U.S.A. -- not abroad.

The same thing is happening in France and other countries. We get spit on in the Middle East. They burn our information centers, burn our automobiles. Now what is it the Arab leaders in the Middle East and in Indonesia and other places -- what is their statement? What is their statement in Europe and West Germany?

The West German says, "We can afford Russian occupation; we cannot afford American liberation." The Asiatic says we want what? "Your technological equipment, your technological know-how, but we don't want your social customs, your private enterprise, your religion, your manners, or any other thing." Well, why not? Haven't they got some national entity? Haven't they got rights? Are we going to shove it down their throats? Yes. To show you how stupid it is. Here's that great firm, the Kimberly-Clark, I believe, whose subsidiary, the International Cellulose Products, trains a sales force, speaks perfect French or Arabic, gets literature all printed, sends over two boatloads of their famous product to Algiers and sets up offices, distributes it, and what happens? Do they succeed in educating the female citizen of Morocco and Algiers? Why, honeychile, they never even get to see the female. The product winds up around the head of the Arabs or a turban around his neck as a sweatcloth. And then they have the audacity to tell me, "Mr. Scott, it'll take years of an educational campaign to bring them up to our cultural level." And I said, "Sir, your mistake is that you're looking down your nose at the Arabs, and when you go back to your Board of Directors, you should make a motion that your Board of Directors should wear your product as a hatband." Spend a million-and-a-half to be that dizzy?

HOW IS CHIANG KAI-SHEK MAKING OUT IN FORMOSA?

Well, Chiang Kai-shek is receiving American aid on Formosa -- American arms. He's got American

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

advisers there. We have American advisers and military aides in Burma, in Indochina, Greece, and Turkey.

ISN'T OUR FOREIGN POLICY TO RESTORE NATIONALIST CHINA?

Well, "Duller-than-Dulles" will be it. They want Chiang Kai-shek's army -- the remnants of the once 6 to 7 million troops he had -- to get to Formosa, Where did they come from? Did they come from Formosa? They did not. Now they've been three years away from their homeland, haven't they? And if Chiang Kai-shek's troops in any considerable number land back on their homeland, what do you suppose "they's" going to do? "They's" going right on down that stompdown road -- you know down south, the hard road is the stompdown one. Fight? What should they fight for? I mean, why this nonsense? Chiang Kai-shek's got plenty of money out of that \$500 million we gave him.

Well, ladies and gentlemen, you haven't even made me work.

DO CARTELS HAVE ANYTHING TO DO WITH THE KOREAN WAR OVER THERE?

Cartels? Oh, well, cartels are just a more efficient combination of private enterprise. Naturally they want the tungsten. By the way, one of the largest gold mines in the world is in Korea. It's been paying dividends for years and years and years. Of course, I wouldn't imply that we had any intentions. It does occur as purely coincidental. It's like Mrs. Mesta being made Minister of Luxembourg. Now that Mesta is the same name as the Mesta Engineering and Foundry, of course, and that Luxembourg gets a brand new steel plant of 460,000 tons after she arrives there -- I would say that's purely coincidental.

INAUDIBLE QUESTION.

No, you're talking of Continental United States. After all, Mexico, Central America, Colombia, Venezuela, French, Dutch and British Guiana, and Canada are also in the map of the Technate, and they won't let us do what we've done to our own country. They've seen that, so they're not going to allow us to repeat the error on their country. So they're going to save us in spite of ourselves. Is that clear?

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

WOULDN'T IT BE MUCH EASIER TO EXPLOIT SOUTH AMERICA THAN KOREA?

Well, we have. We've been exploiting South America for a good many years. Have you ever been in Sierra del Pasco or the Bolivian tin mines or in Chile? Yes, they're working in copper and tin mines at 11 to 12 thousand feet altitude. We've been exploiting it for years. We've been exploiting the oil -- Venezuela, Colombia, Peru, Trinidad, and the only reason we've thrown up several concessions in the Republic of Colombia is because something has happened to the oil. Venezuela is passing its peak and they're drilling more wells like mad. The Maricaibo Basin is sinking, and unless we discover a second Venezuela oil field in South America, it isn't going to be so nice. Bolivia has nationalized its tin mines. Chile is talking of nationalizing its copper and nitrates, and here is Venezuela saved from nationalizing its oil only by the coup d'état of the military junta that is subsidized by United States.

WHAT IS TECHNOCRACY? HAS IT BEEN EXPLAINED TO THE AVERAGE PERSON?

Well, you'll have to be more specific than that. That's a five-year course.

AS AN OUTSIDER, I DON'T QUITE UNDERSTAND IT ALL, BUT MY QUESTION IS THIS: IN THE EVENT THAT DEMOCRACY FAILS -- AND YOU SAY IT WILL -- WHAT WILL BE TECHNOCRACY'S STAND THEN? HOW WILL WE GO OVER THE LINE?

Well, it's up to the public of this country to organize themselves.

I UNDERSTAND, BUT SOMEBODY'S GOT TO BE THE KEY, THE HEAD. WE'VE GOT TO HAVE A LIMITED NUMBER OF SOMEONE TO CARRY

This organization has Sections across the United States and Canada. We're not new. We've been carrying on for years. We print literature, we print maps.

LIKE I SAY, RIGHT NOW THEY'RE OVERCOME IN WHAT THEY CALL THE HUMAN ELEMENT, REFERRING THE PEOPLE TO THE LOGIC OF THINKING

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

SCIENTIFICALLY.

Well, we try to do our part, but the ....

IF WE FAIL SCIENTIFICALLY TO MAKE THE HUMAN COME AROUND TO  
THINKING LOGICALLY BEFORE CHAOS HITS THE COUNTRY ITSELF.

Well, the march of events is always the great educator. After all, Technocracy can't do it by itself. The reason that we've been correct down the years is that we were correct in determining the timing of the conditions. Our foreign policy would be a reflection of our internal national policy. Is that clear? Our internal national policy would be the consolidation and integration of this continent for the maximum conservation of its resources and the maximum use with the minimum of human effort, human toil, and the maximum of physical income accruing to each citizen. We wouldn't have to carry on propaganda abroad, because we would invite the world to send us 250,000 students a year as guests. We would train them free. That's one million four-year course. And it would be the dirtiest thing that mankind ever visited on mankind when we sent them back after four years. A free gift to the world. We wouldn't call them names, but we would train them here for four years and they would go back and call them names.

I mean, you see we walk into one untenable position after another. In Germany and Austria, there is no agreement to be in Berlin or Vienna. The only treaty agreements which exist are those of the zoning of Germany. Those are signed by United States, Great Britain, and Russia. We proposed that France participate. The Russians come back and say, "Very well, if you wish France to have a portion, cut up your own portion and let the French in." Now we signed those agreements, and those agreements specifically state what? That the final ruling authority in any zone will be the commandant of the occupying forces. We signed that. So did the others.

Now if we'd had any sense, we would have marched into Berlin, paid our tribute, troop the colors, and thank them for their cooperation as allies, and gotten the hell out of there. Never put your army in an untenable position. Well, it's in enemy territory, isn't it? So is Austria.

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

What do you do if you stay there ten years? What were the tactics of the enemy in China at Singtao and other places -- attack with arms? No, you shove in Chinese every day. Shove them in like that. Finally it gets to be a million-and-a-half and what happens? You give up. What happens in Berlin? They shove them in every day, don't they? Am I correct?

Now it's just the same in Italy. Here's your Monarchist Party -- a Roman Catholic, your Fascist Party -- a Roman Catholic, your radical socialists are Roman Catholic, your Christian Centerists are Roman Catholic, and your Communist Party are Roman Catholic; and it there weren't any Communists the Vatican would order them to be, because how in hell would it get American aid if there weren't any Communists? I mean, it's so funny it's laughable. Now the money that we've collected since the war in taxes could have rebuilt this continent of ours. You could have had a continental hydrology system, a continental power system, roadways -- and what have you got? You're dumping your sewage into the streams; you're running short of water. You haven't any adequate system. Your transportation system costs are rising all the time. You've got to redesign it. You've got to start sometime, but have you got a minister, a priest, a rabbi, or an elected official in United States that takes up the problem of continental water or continental costs? Oh, no, no political party touches it. It's dynamite. They just hope to heaven they'll get theirs in office before something happens. Now don't think that a Republican or a Democrat put into office is going to help it. You've got to do something else.

You leave this room just like you leave the church on Sunday, and if you're not in grey, two blocks from here they can't tell you from the rest of the morons.

INAUDIBLE QUESTION

No, I decided it was the height of futility to speak to Chambers of Commerce. Just as I think there are some of you who remember once upon a time in this city I addressed the Quadrennial Convention of 21 Railroad Brotherhoods, did I not? They only adjourned it 20 minutes for the President of United States; but they adjourned it for me how much? and they couldn't get it back in session. They'll never invite me to speak again.

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

IF CONDITIONS IN THE U.S. BECOME CHAOTIC AND THE PEOPLE CLAMORED FOR TECHNOCRACY'S PROGRAM, HOW WOULD THE LEADERS BE SELECTED?

Well, that's one of those hypothetical questions. You can elect them, you can get them any way, but the point is: you have a breakdown in your system, you'll have to get them no matter how you get them; and always in any social cataclysm, the first three, four, half dozen who attempt to modify the system won't last very long. You will not have to worry about getting them out of office; in fact, if they can't run this system, you won't even take them down in the elevator. You'll just open the window and say, "Look out below." You can't fool with it. This thing has got to run. This is the most tenuous interdependent system on the face of the earth. There are more telephones in New York City than there are in one half of the world -- Russia, China, and India.

The so-called Communist radical that was going to build barricades in Union Square, why, he's cuckoo. Food comes a thousand miles into the City of New York every day. How long can the City of New York run without power? How many fires -- what's the record of fires, the periodicity of fires? Could they run 30 days? No. 20? No. 10? No. Well, all right, it's down to hours, isn't it?

We're not the same as London or Paris. The tenuousness of this civilization is unknown anyplace else. This is not mathematically -- it is not any relationship to the human toil-hand tool civilization. The hand tool-human toil civilization of Egypt, for instance, took 600 to 650 years to climb from the bottom to its zenith. It's a sine wave curve civilization. The angle of inclination was identical to the angle of declination. A sine wave curve -- 650 years up and 600 to 650 years down. Now this one, no, it's not a sine wave curve at all. It starts flat like that and accelerates. What's its end point? Infinity and zero. And when it reverses, it isn't 600 years to go to the bottom -- oh, no. You'll be lucky if you have 30 days.

A lot of you have questions here. Don't be afraid to ask them.

WHAT WOULD TECHNOCRACY DO WITH THE GOLD IN FORT KNOX?

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

Might as well leave it there -- you dug it out of the ground in the first place. It's no damn good for anything anyway. I mean, you wouldn't want to go in for that bourgeois demonstration of having gold leaf on the ceiling of your living room, would you? Well, if you did, then you might just as well have fur-lined toilets -- pure mink.

ABOUT THOSE 250,000 THAT YOU WOULD INVITE OVER HERE FOR FOUR-YEAR COURSES AND SEND BACK. THESE DPs THAT THEY'RE BRINGING OVER HERE UNDER THE PRESENT SYSTEM ....

Oh, but the DPs you're bringing over here, you're going to keep here. These guests that we propose, you bring them over to the university, put them through for four years, and send them back. The DPs we transport over here take the job away from Americans and then we keep them here. Yeah, sucker, how dumb do we have to be?

INAUDIBLE QUESTION

A plant just completed a couple of months ago, and it's something you all know. You all have flashlights -- and you buy them in the store for about two for a quarter, flashlight batteries. Well, this plant is completely automatic even to putting them in the little cartons and putting the little cartons into the big shipping cartons. Its production is one million flashlight batteries per shift. Its cost is 6 mils per battery. Employment -- 18 for the entire set of shifts. I told you we scientists and technologists would get you!

Now while you're at it, many of us Americans are still great believers in free will and voluntary action. We love to feel, you know, that we can just -- well, if we decide to do it, it's .... Now the female organism has from time immeasurable been able under certain extraordinary conditions to dissolve the fetus without any deleterious effect on the female or any toxic effect and without injurious result to the mechanism of reproduction. After 16 years of research, the boys in the laboratories have found the trigger and the mechanism. It's colorless, it's tasteless, it's odorless, and it's cheap. All you have to do is put it in the reservoir of the water system of any big city and there is no female, two-legged, four-legged, or six-legged, that

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

can deliver the fetus; and there'll be no harm. Brother, are we going to give it to you! You can have pleasure unlimited without the consequences. I told you we'd get you.

I BELIEVE THAT YOU STATED IN THE FIRST PART OF YOUR ADDRESS THAT WE PUT \$24 BILLION INTO CAPITAL GOODS LAST YEAR AND IT WOULD REQUIRE THE ANNUAL INDUSTRIAL EXPANSION OF ABOUT 7 PERCENT. WOULD YOU CARE TO ELABORATE ON WHAT THAT WOULD DO?

Well, that's to make up the deficiency, you see. You'd have to keep it going and expand the capital goods each year -- that's new capital goods. You see, I was trying to give you ....

I'M TRYING TO ASK YOU THAT QUESTION TO HAVE YOU BRING OUT OUR POSSIBILITY OR PROBABILITY OF BEING ABLE TO CONSUME WHAT WILL BE PRODUCED.

No, you can run production into such heights that you can't do it. You're already there now. You're there with plywood, with ethyl alcohol, thallic anhydride, and nylon stockings, whiskey, and wine. Even the broilers are too many in the chicken industry. What are you going to do with them all? Do you want four cars in every garage just to look at? I mean, what virtue is there in more automobiles any more than what virtue is there in more human beings cluttering up the earth unless you can have conditions which can maintain them in security, health, and psychological equilibrium as long as they live? You're going to have a social situation where disequilibrium -- the imbalance -- is going to become predominant. You don't have to get much more before you're going to have 70-some percent of your beds in hospitals with mental cases, because the delusions of grandeur are magnificent. We're loaded with it.

Just think of the speeches of our candidates, that if they got in what they were going to do? and the astounding part is that the boob public believes them until they're disappointed. The promises prior to election -- that's open season on promises. After the election, it's open season on alibis, and you know it.

The technological capacity can be jumped up so fast today. Take TV -- it took decades to bring your radio up -- it isn't even a decade and your TV is running at a speed and production that you don't know what in the devil to do with it -- and every

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

other field.

You're bringing in your new rotary loom, six feet in diameter. If it's six feet in diameter, the diameter times pi would make it how wide when it's opened up? About 20 feet, isn't it? It has no bobbin, no shuttle. You don't even have to fasten it down to the floor, and it doesn't make any noise, but you need a conveyor belt to take away the cloth.

Technological development is really just coming up. We can make shells and guns and other war materiel so fast today and we can also produce an abundance of consumer goods; and the irony and the joke of it all is that we can have guns and butter in abundance, and we don't know what in hell to do with either one of them.

We can't fight a war big enough to run our capacity wide open more than 16 months. Well, what the hell's the use of starting a war if you're only getting 16 months out of it?

ASSUMING THAT A STATE OF NATIONAL CHAOS PREVAILS IN THIS COUNTRY, WHAT COURSE IS LIKELY TO ENSUE?

I'm afraid there are people in this audience that are worrying about their own personal salvation; in other words, when's the roof going to cave in for me? If chaos sets in, what's the use of talking to me? You and I will all be in it. Now if the American public is going to be so apathetic and so lethargic that it's just going to sit on that magnificent collection of posteriors, well, we Technocrats can't do it; but when the country starts to scream, don't come running to us and say, "Well, Howard Scott, what do I do now?" After all, I've got my job cut out for me, and I have preempted that job for years. I don't want anybody else trying to shove their nose in it either. My job is to be custodian of the bears in Yellowstone Park, because in the wintertime they hibernate. In the summertime, the guests feed them. It's an ideal job for a Virginian.

Now disabuse your mind that you can elect me, and I'm talking of the people of United States, that you can elect me to any public office. If nominated, I would not run. Who was it that said it -- yeah, Sherman. If elected, I would not serve. I'll go better than that and say both the nomination and the election

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

would be a downright insult, and I'd resent it. Is that tough enough for you? You don't expect me to be comfortable in that institution of Americana called The White House, do you, with all those antiques? I'm no longer young, but I haven't joined the antiques yet or the collection of antique pendants. I can't help throwing things at you, you know.

IS JUVENILE DELINQUENCY GOING ON ALL OVER THE WORLD? WHAT ARE THE RESULTS ON THIS?

Well, no, you have different situations. Take, for instance, in physical diseases -- scarlet fever, pneumonia, diphtheria, things like that -- the incidence in those has declined what? Terrific. Well now, coronary thrombosis, cancer, they have climbed. Let me ask you, do the Chinese in the interior of China or the Zulu in Africa have coronary thrombosis, gastric ulcers or chronic colitis? Do they? No. Now, after all, remember all the worrying we're doing about all the mammas. Will the soldier boys write home? And if you don't write to them, they're going to have a mental breakdown on the front. Well, how about armies that can't even write? They must be all broken down. I mean, something's wrong with our thinking. Then the army that's completely broken down psychologically cannot fight. These heathen Chinese -- they can't even read, and they can't even write, but unless our boys get letters, pictures .... Well, what kind of pictures do they have up there? What do you suppose? What's your conversation in your army camps, navy or any other depot? What's their reading? A collection of four-letter words and the funnies -- the spaceman and Buck Rogers, and what's the other one? Captain Video? Those are the heroes.

When you have a nation reading literature like that, what? They see the way the bourgeois in this country have climbed up, and for the first time in the history of man, here is the bourgeois that have come to the top with less ability than any bourgeois in history and with less social responsibility. So why shouldn't the youth be juvenile and delinquent? Why shouldn't they? After all, what did you tell them -- what did your father .... ? They told you to work hard, be honest, be industrious, and if you obeyed it, you damn fool, look what happened to you. It took you 40 years to find out that your parents were liars, and then you're too old to start over.

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

A man successful in business, what? And then he wants to know from Technocracy shall he send his son to Cal Tech or MIT. We ask him, what do you want your son to be -- what does he want to be? Well, I want him to come into the business. Oh, you want him to come into the business? Then, for heaven's sakes, quit kidding yourself. Put him over here under a gangster. Right here in Cleveland, they'll put him over under Mickey. You don't know who I'm talking about?

What's the matter -- you don't like me? Don't you think I'm a representative American? Or am I one of these foreigners? Nobody else will talk to you like this. It doesn't matter what you pay for the admission. You won't find any political candidate will dare permit his audience to ask questions. Am I correct? And we do it clean across the continent whether the audience is 200, whether it's 2,000 or 10,000. We've done it for years.

You have enough people in this room tonight that if you had any cohesion at all, you could organize this city and your state in very short time. You know it. Technocracy can't compel you.

Now I'll entertain three more questions. Come on, let somebody dig up a good one.

HOW CAN AN IDEOLOGY FLOURISH IN THIS SO-CALLED PERIOD OF COMPLACENT ABUNDANCE, BEING THAT THIS SITUATION IS WITHOUT PRECEDENT?

Well, I think your question is well taken. In other words, this ideology of Technocracy didn't originate in this era of complacency. It started in World War I, when the scientists, engineers, and technologists got together, and it's been going ever since. Now, you can't defeat Communism or Fascism with bombs, bullets, and bayonets. The only thing that defeats an ideology is a superior ideology, and this continent only has one superior ideology and THIS is it. Unless you're going to use it, let's quit kidding ourselves that we're going out on any crusade to oppose Fascism or Communism anyplace in the world -- even here. Let's just crawl in our hole and pull the hole in after us, because you're not going to win fighting an ideology with physical force. You've got to entertain a superior ideology, and there's no greater ideology than that of a militant Technocracy, because it's the only ideology today that's in accord with the

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

science and technology of our age. It's revolutionary, yes. We do not consider -- we Technocrats -- Communism revolutionary. Both the Republicans and Democrats treat the Communists as equals. We do not. We know that ideologically they're inferior. We consider Communism quite radical for the Old World, but over on this continent, it's so damn far to the right that it's bourgeois. Try and realize it.

In Russia, if you had a collective farm of 2,500 acres -- why, our agrotechnological units are half a million acres. Don't we always have things bigger and better? Well, let's have them. What the hell is holding us back?

After all, the Marxian Doctrine still worships toil. They've got a hammer and sickle, haven't they? They think everybody should work. Well, we scientists and technologists, you know, you give us a little time and there won't be many of you working.

In the next four years, the estimates are for the installation of 41 million kW in United States in the public central stations -- 41 million additional kW over and above the 78 we have now. Now if you think that abundance is a problem at this moment, what are you going to do with 41 million extra kW capacity, let alone all the extras that are installed in plants? Where is this country heading to? Very simple. We shall shortly be able to produce and distribute abundance in United States with a minority of the healthy, able adult population. We will not require the services of the majority. Then what are you going to do with the majority? You'll have to issue them ration tickets for the mink coats, the champagne, the Coca-Cola, the Chevrolets, the Cadillacs, so that the unproductive majority can consume the abundance produced by the minority. Oh-o-o baby! And you're going to vote that in, are you, from sheriff to mayor to so on across the country?

You'll have to have an entirely new process of social arrivation of decision. When you count noses, whether it's the one nose of the dictator or 100 million noses, there's no difference in the process -- it's a multiplication of opinion; and opinion in a continental technological mechanism is just as stupid whether it's one or 200 million. Unless you can compile the probabilities of your physical operating data, that will determine what the decision of the mechanism will be -- not the

MEMBERSHIP MEETING  
CLEVELAND, OHIO  
HOWARD SCOTT

12-12-52

noses you count. You have to have some accuracy. You can't depend on this. You get up in a caucus, you're going to have your political candidate. What do they do, the political candidates? They take them out -- he kisses the babies, he strokes the horse on the business end, he's shown with the farmer, he's shown with the Indians, isn't he? In other words, you have to make a jackass out of him in order to make out that he's just like you are, and the powers-that-be spend all this time and millions making him out to be a man on a white horse. Well, that's all right, but they have to know one thing that the public doesn't know: they have to know that he isn't a man before they'll elevate him on a white horse, because they have to be assured that he is not the man of the hour and not the man on horseback, but he's only a moron and a jackass like themselves, because otherwise things would change.

DO YOU FEEL THAT IT IS WASTED EFFORT TO ATTEMPT TO ESTABLISH AN INTERNATIONAL ARMY OF SUFFICIENT STRENGTH TO ENFORCE THE UN OR WORLD COURT DECISIONS, OR IT IS STILL PIPEDREAMING TO EXPECT THIS MEASURE OF UNIFICATION IN OUR DISCORDANT TIMES? IF NOT, WHAT GROUNDWORK MUST BE LAID BEFORE WORLD PEACE CAN BE ASSURED?

That's very simple. What are the two entities on the face of this globe that in the question of manpower, area, and technology can say no and you don't even sneeze without their permission? All you have to do is have a fait accompli between the U.S.S.R. and the United States. Does anything start in the other 60 nations? Give them their marbles and tell them to go play in the back yard. That combination would control the world's resources, wouldn't it?

Now I'm not contending that the Russians are to be trusted or that we're in favor of the Russians. Sure, they're unmitigated bastards. We know that, but we don't have to be worse than that. Quit kidding ourselves that the United Nations is going to be anything else than what it has been. Away back before the first meeting of the United Nations in San Francisco, I wrote that nice little article called, "The Vultures of the Peace," and it still applies. The greatest lot of useless nonsense, the UN, that ever happened. You're not going to enforce anything, because you've got a collection of deficit nations trying to make rulings to prevent social change from happening, and you can't do it.

INAUDIBLE QUESTION FOLLOWED BY A GAP IN THE TAPE

.... but it is not near our figure for the internal consumption in the production and distribution of physical goods.

Well, have I said enough to you? Do you think you have enough to last until next time?

If you're a union member, just realize that if your entire union dressed your children all alike and painted your cars all alike, you'd have more power in your community than if you had a complete closed shop in every plant, correct? You're right you would. Now until you get that kind of cohesion, you've got to have enough of it scattered across the country. It doesn't have to dominate anything. It only has to have enough to create a certain climate continent-wide. So, if those of you here tonight that have been attending Technocracy lectures and Study Courses for months -- well, come in and make it unanimous or get out. Fair enough?

We want those that you can push out the window and he grabs the windowsill with his fingernails and comes back in. If he falls out, he's no good to us and he's no good to himself. That's the end.

PUBLIC LECTURE  
HOWARD SCOTT  
CLEVELAND, OHIO  
DECEMBER 13, 1952

What I would like to bring out tonight is that in the history of human society there have been many changes, many conflicts, but for the present situation there is no precedent. It never happened before in the history of man.

We have, in the last fifty years in United States, graduated more third-grade morons into multimillionaires than all human society has done in history. On top of that, we have raised millions to the upper levels of the bourgeoisie, a bourgeoisie that has more economic power than all the nobility of all the feudal empires.

Now remember that back in 1880 the only occupations open to women were either marriage, domestic service, or that oldest of professions -- not the second oldest, the oldest. Until technology developed 10,000 various avenues, the female was limited, and it is only since the exploitation of technology by private enterprise that it has multiplied the avenues of endeavor that are open to the female. Now, of course, she has many avenues open, and there are more married women in United States gainfully employed outside the home than has ever been in any human society previous to this. There are more married women employed outside the home than there are single women, and for the first time in the history of U.S.A., there is a preponderance of adult females over males. There are 1,400,000 females of adult age more than there are males. It brings up some interesting speculation, because regardless of your religious background, your morals, your mores or your conditioning, if the preponderance of females increases to where it is in excess of the adult males of 15 percent, you have polygamy. We'll go into that later. The reason that polygamy will exist under such conditions is that the female is the aggressor, and she's going out to get hers while the getting is good.

Now let's review a few things. In fifty years of our history, we have climbed up from where there were no automobiles worth mentioning or any of the other developments that we see around us. Back in those days, in the 80s and 90s, the early 1900s, the cigarmakers were a powerful union. They were so powerful that they used to employ the top flight actors, opera

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

stars, etc. to read to them and to sing to them. Samuel Gompers rose to be president of the International Cigarmakers Union of America, and from there he became president of the American Federation of Labor. Well, those days have gone. Nobody can ever rise to become president of the American Federation of Labor -- or any other labor federation -- on the backs of cigarmakers. They don't have opera stars sing to the Washington machine. The Washington machine does 4 million cigars a year with a couple of girls, and all the girls are worried about is when it's time to go home where their boyfriends are. So the machines turn them out and the cigarmaker has gone to limbo.

The glassblowers' union was the tops in union labor in this country. Leon Henderson's father was a glassblower in Bayonne, New Jersey. The glassblowers of those days used to die young, although they made a lot of money for their time. They were the aristocrats of the labor world and they developed a union so tight and so strong that the only way you could get into it was by the chromosome route. If your papa wasn't in it and didn't have the chromosomes, you couldn't get in there. Well, the glassblowers' union is gone -- gone to join the cigarmakers. And the Higgins bottle, the Colburn strip, the Corning bulb, and other processes now run where the glassblower used to work twelve hours a day on piecework with two helpers and do 1,000 bulbs. Where the old Edison carbon filament lamp -- the new Corning does 1,100 bulbs per minute without the human being.

We could go on with a long list of these proprietary rights, these proprietary organizations of human endeavor that have vanished from the scene. Well, there's going to be a lot more.

Agriculture in United States, even in the time of the British colonies -- from the 1700s down to the '80s, the farms of United States were increasing in number and decreasing in acreage. After the '80s, the trend was reversed and technological equipment began to come in. Well, what is the case today? If the technological equipment had not been developed and applied to American agriculture, we would have been today in the same status of agricultural development and operation as Europe or Japan. Japan today has 6 million farms or over 600,000 more farms than United States. Japan's 6 million farms average 2.3 acres per farm. Japan has two million acres of farms one quarter acre in size. United States has 5,300,000 farms whose average size is 218

acres each.

Now back in the days of the 13 original colonies, 95 percent and more of the population of that time lived on the soil. Today less than 16 percent derive their livelihood as farmers. Tomorrow there will be even a greater acceleration, because farms will grow still larger, equipment will be better, and there will be fewer of the population of this country on the soil in the next five years than there is now.

Back in the days of our founding fathers, they had certain concepts. George Washington could have sat down at the breakfast table or the dinner table with Plato of ancient Athens. They would have understood each other perfectly, because their concepts and their values were the same. Today, we are farther removed from George Washington than George Washington was removed from Plato and the Athenians. It's hard to comprehend that. Well, after all, George Washington never was a general -- he was a land surveyor, if you like to give him that title, and he was the husband of the richest woman in North America. That, of course, is where it really counts. Jefferson, the father of our so-called democracy, advocated 50 acres for everyone. How nice of Thomas when he had 10,000 of his own I

Those early Americans really had no concept of a separate political entity nor did they have in mind a separate country. George Washington, Jefferson, the Adamases, Hancock, and all the others, they were engaged in nice polite maneuvers known as smart operations. Several of them who signed the Declaration of Independence, if you remember, were under indictment for smuggling. To refer to it politely, they were the top-class chiselers of their day. They had no idea of forming a separate country. They got involved over their heads, so they proposed to hide out in the wilds of what was then Virginia, but what is now West Virginia -- to hide out until it all blew over and quieted down. And, as Benjamin Franklin said, "Gentlemen, if we don't hang together, we'll all hang separately,"

Tom Paine, an English printer, wrote a book, and that became the first printed or spoken ideological concept of a new nation. Washington didn't have it; neither did Jefferson; neither did any of the others, but it became -- in other words, it took the movement out from under them. The Declaration of Independence

resulted, you might say, from a conglomeration of equalitarians. Those equalitarians had ideas. The trouble was that the equalitarians and their ideas as expressed in the Declaration of Independence were sabotaged to death by the Constitutionlists. That has started a conflict which has never been resolved, in spite of the War of 1812-1814, of the Texas Republic, the Mexican War, the war between the states -- that conflict is still on and we have it here and now. We've never resolved the conflict fundamental in the origin of these United States because, in the first place, the founding fathers never knew where they wanted to go and had no concept of what they wanted anyway.

So, out of all this conglomeration of political confusion in our origins has arisen this confederation of 48 sovereign powers, with a constitutions of course, that is a contractual agreement in which each and every one, separately and collectively, of the 48 sovereign powers agree that the exploitation and the economic channelization of the resources of each and every one of the 48 sovereign powers shall be conducted in perpetuity for the prime holders of debt; that is, the first-class citizens of their time. And if you'll kindly bear in mind that the first-class citizens of United States in 1776 or 1780 or '90 or thereabouts, there were only a few of them. As your first constitution held forth, you could only vote if you had a certain amount of property; and the majority of citizens were either indentured servants, apprentice mechanics, or slaves. Now all this has a bearing, because remember that our political and social concepts come out of this background -- a background of human toil and hand tools for thousands of years. Our institutions were no different than that of any other country whose background was human toil and hand tools.

We had two distinct types of civilizations. One type has been prevalent down the history of mankind -- a civilization that produces its physical wealth with human toil and hand tools. Now, no matter how sincere or how efficient you manage that kind of a civilization, they're limited. It never can produce an abundance no matter how good the intentions, morals, or spiritual beliefs of its citizens are. If all of the citizens of the Mediterranean Littoral at the time of Christ had been 100 percent Christian and had been fully behind a sincere effort to operate their economy, they would not have been able to increase the standard of living 0.1 percent. The same thing can be said of the Mohammedan, the

Buddhist, or the Shinto.

There is another type of civilization that is new, and we and Canada are the chief proponents of it. In your human toil-hand tool civilizations, the only way you can get a little bit more is to have more human beings work longer hours; but even if you do, the increment is so slight that over a long period of time, it is relatively insignificant. That's why for thousands of years the amortizable time of any principal debt and interest or any bond issue was 100 years, because it took that great long period to pay it off. Human toil and hand tools could not possibly produce a great enough increment annually to pay it off much shorter than that.

Under your technological civilization, it produces its physical wealth by a degradation of extraneous energy through technological equipment, and the only way that that civilization produces more is by having less human beings work less -- the exact antithesis of all other civilizations in history.

Remember that our social and political institutions and our very mores and our concepts are derived from centuries of human toil and hand tools -- the oxcart, the hoe, the shovel, and such things as "the poor you always have with you" and "its right to work."

Now remember under one type of civilization, it was considered the height of virtue to be diligent and to be earnest and to employ yourself. Under this other type of civilization, it merely goes to prove what every girl learns some time or later in her life -- that virtue has its own reward and all she's been is a good-for-nothing.

It's very difficult for people to find things out. Now this conflict, remember, has come up simultaneously with the political and social conflict which I have just enumerated as being peculiar to the formation of United States and our background -- two conflicts, one a conflict, a tactical one, within our own institutional background, and the other the conflict of a technological process of producing and distributing physical wealth. We've arrived at this state.

People will say, "Well, you've got 62 million employed."

Yeah, holding jobs. Let's see where it takes us. What kind of a process is this? A process that the average American is beguiled and fooled and bribed all the way down the line. He thinks if he gets twice as much in wages or higher salary in a pay envelope or more dividends from his stocks or bonds that he's really going someplace. Is he? He is, but not where he thinks he is; and, brother, he's going there fast.

Now the process under which this is being accelerated today is a unique kind of process. The present situation in United States is not monetary inflation. They beguile you with the fact that it's inflationary. Yes, but monetary inflation is a definite process. Monetary inflation has occurred in various countries in history, more recently in France, Germany, Austria, Russia, and the latest, of course, was China.

Now monetary inflation can only occur when there's a scarcity of goods; therefore, the government of that economy resorts to either printing extra money or printing more zeros on the currency already being issued. Under monetary inflation, a continuance of monetary inflation, it can go on to 40, 50 or 100 additional zeros, and no matter how many zeros are printed, it does not in any way change the physical processes of that economy one iota. Try and understand that. It does not and cannot, no matter how great the monetary inflation is. It may cause some temporary embarrassment by liquidating those with fixed incomes and a few other things like that, but the only things that happen are that you change the codes or the indices on the inventory tags, you change the enumeration on the pricetags, and that's all that happens.

The situation in United States and Canada today is not monetary inflation. Its correct name is credit amplification. Now credit amplification as pursued in United States and Canada has an entirely different end point than all the monetary inflation that's ever occurred in history. Under credit amplification, you tax the individual citizen. That tax is collected, goes into the federal treasury of that country, and then that federal treasury can advance credit to the larger corporate enterprises. The larger corporate enterprises go out to liquidate and eliminate the obsolescence in their internal mechanism; in other words, to install and create more and greater capital goods.

Now the capital goods today calls for more technology, more science, more engineering, and therein comes the interesting part of it. Now remember that under this economy of ours, we can achieve an apparent equilibrium of purchasing power provided that in the U.S.A. we can create sufficient new debt each year to install new capital goods to such an extent that we will pay out in the installation of that new capital goods a sum of salaries and wages equal to or greater than the capital dragdown in the consumer goods field. Consumer goods is one thing and your capital goods is another. Now if you can create sufficient new debt a year to install capital goods great enough in volume to pay out an annual sum of salaries and wages equal to or greater than the capital dragdown in the consumer goods industry, you can create an apparent equilibrium of purchasing power for a very little while. It requires an annual expansion of over 7 percent to do that.

The United States has been having a wonderful time. We've been slamming in \$20-24 billion -- \$26 billion last year -- of capital goods, and Technocracy hopes they put in \$27 or \$30 billion in 1953. We're a little bit worried that they probably won't succeed, but we'd like to see them succeed in getting that much in.

Now, therefore, the process is one of collecting the taxes from the individual citizens into your treasury and extending the credit to install these capital goods. Is that clear? Well, there's another nice little "nigger in the woodpile," because they make you pay for it in the first place by collecting it from you with withholding tax and other taxes; then after they extend the credit and the capital goods installation gets under way, the corporation applies for a Certificate of Necessity, and, oh, magnifique -- wunderbar! What happens? Well, now let's take a case in point, naming names. The Westinghouse Corporation, manufacturing in Pittsburgh, and the Carbide and Chemical both applied for \$300,000,000 loans each and got them from the insurance companies, time unlimited, unless it is converted in the next five years -- no maturity date. They had \$200 million each of their own. So you combine that; they put in a program of \$500 million of expansion of capital goods; therefore, they can apply for a Certificate of Necessity for \$500 million, and each year on top of the cost of their material, labor, insurance,

depreciation, and everything, they put in \$100 million. Then they calculate the profit on top of all of it, and that adds to the price, does it not? And the consumer -- no relation, of course, to the taxpayer -- he pays it again. "We's smart peoples, isn't we?" Individually we're smart, yes, but collectively, we're pretty damn dumb! Not only do we own it in the first place but they make us pay for it a second time. You'd scream bloody murder if anybody tried it individually with you, but when it's done to you collectively, you sit back and beam. Oh, marvellous!

Just what does it amount to? Let's see. In the 156 years of United States Government collection of taxes up until 1946 -- 156 years -- the United States Government has collected from its citizens slightly in excess of \$150 billion in taxes. Remember that is in 156 years. In the subsequent six years -- 1946 down to date -- the Government of United States has collected \$12 billion more than it did in 156 years, or \$162 billion. Marvelous, Who owns all of the equipment and everything in United States? You do. The public does and the public is so damn dumb, it doesn't know it. Here it is -- they paid for it in taxes; now they're going to pay for it again in Certificates of Necessity. But there's a rub to all of this, because to use that terrific amount of money, that terrific amount of credit, you put in new plants which are bigger, better, and faster than anything before in history, and they have less human beings even walking around in them. There comes a day, sonny boy, and that day is not far away.

Now the National Cash Register -- everyone knows the cash register even around the world -- the term "cash register" is synonymous with American and the word "Yankee." They've had a wonderful growth, and Patterson's School of Salesmanship has been copied by all the other successful concerns. Now the Annual Report shows that approximately 56 percent of their annual business doesn't come any longer from Canada and United States. What's happened? Well, what is coming up and coming to the fore because of its technological acceleration is that naughty dirty word, "saturation." No businessman or economist or banker likes to hear it. They always think in terms of unlimited blue sky. What's wrong with it? Nothing is wrong with it -- just that the technological capacity is so great that they've reached a point in United States where there's one cash register for every 32 Americans, men, women, and babies. A market? Well, you could have a slight increase in the market: put a cash register in every

"john." I've no doubt you could knock up a lot of "scents."

Now whiskey, wine, broilers, nylon stockings, plywood -- go on down the line in practically anything -- ethyl alcohol, thallic anhydride -- what's happened? We have brand new distilleries in United States; they're lovely, but the distilleries aren't working full-time right now. Some of them are shut down and others are working part-time. What's wrong with them? Nothing. The equipment is excellent, the best that's ever been known, but the whiskey companies -- corporations in U.S.A. -- have 768 million gallons of whiskey plus 115 million gallons of proof spirits. Now remember that that whiskey does not include a single bottle or drop in any saloon, bar, liquor store, wholesaler, or importer. Those are all outside of the stock we're talking about. This stock is totally in the hands of the distilling corporations themselves.

Well, that's wonderful. For the first time in history, the citizens of an economy have all the spiritual sustenance that they can handle. How much-is it? Well, if they never made another drop starting tonight, they could supply the present annual consumption for the next nine years.

Now remember nylon isn't very old -- only a few years old -- but the nylon capacity in United States is 1.2 billion pairs. What's wrong with it? Very simple. There aren't enough gams in U.S.A. and even if the females had four legs, it still wouldn't help -- even if it would make it damn inconvenient for the male. What are you going to do with it?

Plywood -- back in 1928, there were 10 plants in United States with a capacity slightly in excess of 100 million feet. Today there's 80 and a couple more in the process of completion, so we will reach a capacity on or before the first of April of 4 billion square feet. Can you use it? Rather difficult. Well, isn't there a market? You might dispose of it by quantity production of outdoor privies for the Chinese, and even then you'd run into trouble inside of three years. A charming thought--all of this -- isn't it?

In the U.S.A. today, there are 103 million radios operating, and there's 21 million television sets. The radio industry has a capacity of 32 million sets a year. Can you get outlets for it?

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

No solution even if you give them away. This is awful, isn't it? It's really sad. Just think of all these nice, kind Christian American businessmen, and they're going to hell because they can't even get a market for it. They won't even be able to give it away. You never heard of them being that generous, of course.

Steel in United States will be in excess supply very shortly. It would have been in excess supply right now except they pulled a strike to stop it. Don't blame the Steelworkers Union for trying to pull it. Steel corporations in United States only had 12 million tons in their yards, and "General Electric" Wilson tried to negotiate the deal with the War Production Board to get \$12 a ton price increase. That would have been \$144 million dollars clear profit on that 12 million tons over and above the profit they already made in making it. So the strike is maneuvered by a combination of Washington, the steel industry, and the upper echelon of the steel unions. One of the reasons for maneuvering strikes of that kind today is not the industry directly involved but the industries indirectly involved. You don't want to shut down the automotive industry or the stove or any other industry because there's too much. So you start a strike over here to shut it down over here a long distance away, so the particular industry won't bear the onus of the situation. We've gotten so lousy, you know, that we'll even plant carrots on our grandmother's grave. Pretty sad state to be in.

Now all of these production lines are mounting -- moving up, and yet we have the smartest, self-satisfied lot of bourgeois that human civilization has ever seen. You're going to keep it up? Well, we hope you do for just a little while longer, because the longer you keep it up, the funnier it's going to be.

The automotive industry in United States estimates that it will produce 5.5 million automobiles in 1953. If it does and it disposes of them by any kind of legerdemain of installment buying whatsoever, there will be 50 million passenger cars on the road in these United States sometime or other; and, of course, naturally you ask, "What's wrong with that?" Well, some very interesting things. In the State of New York, if you push all the cars with New York State licenses out on the highways bumper-to-bumper, there's not enough miles of highway in the State of New York to take the cars, and they will overflow into the other states. Who's cuckoo?

Now the wonderful thing about this democracy of ours -- it's all right and never comes under any undue strain so long as there's only a minor percentage of the total population that want to go in the same direction at the same time, but modern technology is producing the means to where, theoretically anyway, it becomes possible for more and more people to have the facilities to go in the same direction at the same time; but when they try to exercise that -- like the Jersey Thruway down to Pennsville this last holiday, it jammed, and it jammed for 25 miles -- 7-1/2 hours and they didn't move. Babies were born, people died. Were they doing anything illegal? No. It was their own car, they paid for the gasoline. They were trying to simply go out someplace for a holiday. They were all bound out. They all had the same idea and they all wanted to go the same way at the same time, and when they tried it, they came to a stop. Now "we's" that way, "Isn't we?" So, look out.

Last week, United States produced 6,880,000 barrels of petroleum a day. That's quite a jump up from 1945 or 1944. Considerably greater than in 1939. And we also imported in excess of one million barrels of petroleum a day. Well, with 50 million cars .... Naturally, there will be more trucks, more buses, more tractors, and more planes. Half of the oil of United States practically comes from the State of Texas. We're drilling more wells and we're drilling them faster than has ever been done at any time before. We're sinking the wells deeper and are using more millions of feet of casing than any country or at any time has ever used.

The average depth of all wells is in excess of 4,000 feet and increasing. Nine out of every ten wildcats is dry, and 36 percent of all wells -- new ones drilled -- are dry. What are the odds, in spite of all the geophysics, geology, and exploratory methods, of discovering a new oil pool great enough in production to equal one year's consumption of United States? What are the odds? The odds, ladies and gentlemen, are in excess of 1,000:1. You say, "Well, it doesn't bother me. I can get gasoline at a gas station." O.K., 74 percent of all passenger cars in United States that are used every day are used to take the American citizen to and from his work, and if it goes, you would have 18 million Americans overnight that couldn't go to work.

Do you think that any Republicans are going to be Republicans long if they tell them they can't have it or Democrats would be Democrats long? No, you're going to have a unique situation and it isn't going to be solvable by electing another set of jackasses into public office.

Now we are in the interesting position that our iron ore -- our hematite -- is running out. Our copper is running out; our lead and our zinc. We're subsidizing by government credit today vast developments in low-grade copper in Nevada, Arizona, New Mexico, Michigan, Montana, and other places. Of all the copper mined in United States, bear this in mind: the average percentage of the total ore does not exceed 0.8 percent. Can you add 2 and 2? You've gone to school. Put it down and see what it means: 0.8 percent is the average of all copper ore, and it's going to go lower. Zinc and lead are worse.

We've had a fine time. We've mined more copper, more lead, more zinc, more iron ore, and more petroleum than any other people, and we're up on top here with the greatest collection of gadgets that any human society has ever seen. We've had more millions of population in this economy of ours climb six layers higher up the social manure pile to where it has become perfumed and to where they could no longer smell the stink. You know what I'm talking about. Why, if you're hit with a Ford, you're insulted; if you're hit with a Cadillac, you're honored. These are our values, and we're up there.

Now we've never had any long-range planning. We've never had any national policy that lay beyond the next hamburger sandwich. It was always one of expediency, one of compromise. We could always cover last year's mistakes with this year's expansion. We had an expanding economy and we whooped it up and the devil take the hindmost. Well, that era is coming to a close and a lot of us aren't going to like it.

The Democratic Party in United States has been in power for 20 years and is just going out. In that 20 years, it made first-class citizens out of the farmer and it put a floor under labor and built up the labor and labor organizations.

The Republican Party has never been out of power before since Lincoln for 20 years. The longest it was ever out of power

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

was 8 years and that was under Wilson. True, Grover Cleveland was president twice but not consecutively. So here the Republican incoming regime -- never having been out of power for 20 years in its history -- will be the most bloodthirsty bunch of sharks that ever came into political office.

Now labor in this last election went out and conscientiously and sincerely did a good job of bringing out the vote. They did bring it out, as your vote here for Stevenson in Cleveland and Akron, Canton, Youngstown, and so on will show. It exceeded the vote for Truman in '48, correct? Now it only took a switch of 3 million votes, and Technocracy pointed out in June, before there was a political convention this year, that Eisenhower would be nominated. If you read our publications, that's correct. We stated it in print, because we could smell it a couple of years ago.

Now in spite of all the good work the labor party did to elect the Democratic nominee, they were sold down the river by the Democratic Party Machine of Massachusetts, Rhode Island, New Jersey, New York, Ohio, and Illinois. Your Irish Roman Catholic Democratic Machine and your Italian Roman Catholic -- let's have it clear -- they did. In Massachusetts they delivered the state for Eisenhower, and then, just to show they could -- after having come through with the agreement they could deliver it the other way -- Kennedy defeats Eisenhower's right hand bower. In Rhode Island they delivered the state for Eisenhower and then to show it can be done the other way, you elect Pastore.

Of course, here in Ohio, the state went for Eisenhower, didn't it? But you elect Lausche and you defeat Mr. Republican's brother, don't you? Very interesting the way this is. Now Flynn, one of the great political bosses in New York, was at the racetrack, and the Democratic clubs in New York City and greater New York, Jersey, and so on, didn't send out any mail, didn't collect any money, and didn't do any legwork. We know it.

In Chicago, Jack Arby, whose political machine put in Stevenson two years before with over 500,000 majority, doesn't even go to work. He doesn't carry Cook County or Chicago. Now don't try and kid us that it was time for a change, because 85 percent of the people don't want any change. All they wanted was more of the same. They're scared to death of change. They wanted

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

two snoots and four feet to get in the gravy trough -- that's what they wanted, and they thought Harry was slipping on the job. Well, he was, but don't blame Harry.

It was a nice frame-up and a nice buildup. It cost more millions to elect this individual -- I wouldn't call him a general, but he is the best public relations officer the armed forces of United States ever had. Good army experience. He was deputy to MacArthur in the Bonus March eviction and he was deputy commander to MacArthur in the Philippines. He never voted in his life until 1946. Not quite as good as General George Catlett Marshall, who never registered and never voted -- at least we have somebody in Virginia we're proud of.

Now Eisenhower, what? He's ballyhooed up. As an individual, he's quite all right; so is Harry. Harry only got to be Captain in the artillery, didn't he? And a haberdasher. Now the campaign played up the stuff that the mess in Washington was the Truman mess. Well, we're glad you can call it that name. Our name for Harry was "Hazardous Harry." We named him that years ago.

What are we headed into? The most reactionary cabinet and administration this country has ever known. We're going to have an administration and a government by a military junta of generals: General Motors, General Rubber, General Petroleum, General Eisenhower, General Mess, and General Confusion. Do you think they're going to do any different than the Democrats? Why, no, they're not even going to do as good. Well, why aren't they? A very simple reason. Now you know the story of the conductor on the main line railroad that for 20 years had been scalping the fares, and he built himself a very nice house and he also built one on the two lots next to him for his son, and finally they put in the spotters -- catch him at it, pull him in -- and said, "Blankety-blank-blank. Do you realize what you've been doing for over 20 years? You've been robbing the railway company. We ought to fire you." He says, "Well, if you fire me, the next one will have to do the same thing as I've done for 20 years. Now I've got mine. I can stay in the clear and save you money."

I've just hastily sketched a problem -- a problem internally; namely, a problem of technological capacity and resource consumption, but we also are running into that problem abroad. United States in 1918 was able to export 10 percent of

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

its total production. It has never equalled that figure since. In World War II, due to our increased capacity, in spite of the fact of Lend-Lease, give and forget, and all the other means, we did not succeed in exporting 10 percent of our total production.

Now Eisenhower carried out a crusade abroad and, of course, the press has carried on a crusade here. Of course, Eisenhower is going to lead the parade for that crusade here. Harry was trying to do it, but he really couldn't catch up. What are we going to do?

Here's Japan -- Japan at 84 million population today, a population that's going up at between 1.6 to 1.8 million net increase a year. Japan has no iron ore. She has excellent copper and high-cost, low-grade non-coking coal. It takes 55 percent of Manchurian or American coal to make Japanese coal coke. They have seed pearls, fisheries, an excellent pine forestry, and their hydroelectric power is 99 percent developed. They have a steel capacity of 11.7 million tons; therefore, they will require 26 million tons annually of iron ore, 24 to 28 million barrels of petroleum in excess of the 2-1/2 to 3 million barrels it produces on that narrow little strip of the north shore of Honshu and Hokkaido, 5 to 6 million bales of cotton, and 3 million tons of cellulose. You can go on with all the rest of the grand array of resources they will require. The destiny of Japan is set regardless of whether there's a Russian or a Communist alive. Japan has no other course.

Great Britain has coal but, of course, she's going down deeper all the time, and her coal mines are going out and under the sea; but it will take a lot of equipment, and even then it will be difficult to rectify the mistakes of 150 years of profitable practices of private enterprise mining British coal; in other words, the traitors in Britain were all those who engaged in mining coal for the past 150 years, plus other things, because under that system of mining you would expose more roof and more floor the more coal you took out. Therefore, the more roof and the more floor you expose, the greater the hydrostatic pressure and the incoming amount of water; therefore, the greater amount of coal you had to devote to pumping.

So, when they become a deficit headache, then Britain proposes to nationalize the deficit headaches like the coal

industry. There's still 22,000 pit ponies underground in the British mines ponies, little Shetland ones -- that haul it out. They're still hauling coal in British mines underground in little tubs, but the British have developed some excellent continuous long wall coal mining machines. And the same thing will happen in Britain that's happening here. John L. Lewis has 100,000 less coal miners mining bituminous coal in United States today than he had when World War II ended, and in the next couple of years, he'll lose over 100,000 more. So, it won't be long, if John L. Lewis lives this next decade or less, to where, if the royalty per ton that's being paid now is still being paid, it will amount to more than one year's wages for the coal miners remaining mining coal per employee.

Now Britain is in that sad state and it doesn't produce its food and it hasn't the resources.

Italy? What's Italy got? Forty-seven million plus population and going up at over half a million a year. An agricultural surplus in the Po River Valley, yes. Rock sulfur, some zinc, hydroelectric power, and, of course, one little heat station from subterranean hot water; but Italy will be 50 million population pretty soon. It doesn't grow sufficient food; it doesn't have the resources to operate. Neither has Britain.

Now India. India's population is going up 50 million in 10 years. Geographical India -- that includes Pakistan -- is over 430 million right now. It hasn't long to go.

Holland -- there isn't any hope for it, because Holland has lost its great colonial possessions and its income. Holland today is so densely populated that the density is over 200 per square mile greater than the British Isles. Do you realize that? Yes, it's very interesting.

Now remember that there's 2.4 billion population on this globe today. In the year 1800, there was only slightly over 800 million. In the Middle Ages, there was just over 400 million. Now there are 800-year climatic cycles. In the days of the Medesian Persians, when they made the famous attack across into Greece and you had the battle of Thermopylae and the first marathon run was made, they were only going north and west for water, pasture, and food. They tried 10 years later at Salamis and went down to

defeat again.

Well, 800 years later, Attila the Hun came west and he got as far as France in spite of everything he was able to hold. And 800 years later, what? In 1100 you had fruit growing in Iceland and Greenland was cut in two, because you'll undoubtedly find there's quite a nice channel and that Greenland is two islands, because if you go back in the Viking records, you'll find they sailed between the two islands of Greenland. Fruit in Iceland. And Genghis Khan came west and his marshalls -- one reached south of Berlin and the other reached the Adriatic. Those were great climatic movements, but remember there were spaces in which to move, there was latitude. You only had a few hundred million -- 400 million at the most. Today there's 2.4 billion and there isn't anyplace

Now remember there's a peculiar thing about order of magnitude -- that when you have a little spring on the hillside or out on the farm, a little trickle of water as large around as a pencil, there's thousands of ways that you can control or regulate it; in other words, there's thousands of choices of decisions that may be made regarding that microcosm. You can step in it, you can throw in a bag, sod or rocks, a stick of wood or the body of a dead skunk, and in the long run, it doesn't make any difference whether you exercise any or all of the 2,000 decisions that may be made regarding it or whether you exercise none in the long run, because the order of magnitude is so small it will settle itself.

Now you take the same water under 600 pounds pressure and down come the number of decisions that may be made regarding its regulation and its use. You have to have metal pipes strong enough to hold it, and you have to have gate valves to turn it on and shut it off.

Now let's step it up beyond that to the potential head of San Joaquin where one whiskey glass full of water falling that distance will produce one horsepower. Can you use gate valves? Huh, uh. No, sir, you can't use "nothin'" like that. You try to shut that head off just once, she'll whip the penstocks off that mountainside and the generators out of the powerhouse and you wouldn't be around to try it a second time. There's only one way you can handle that -- not 2,000 and not 50 in the second case.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Why? Because it is a unique situation resolvable only by a unique solution.

We in United States and Canada on this continent are arriving at a unique situation which is only resolvable by a unique solution, and you haven't got 2,000 choices or alternatives and you haven't got 50.

Now this economy -- fictitious as it is and it's the most fictitious in history -- requires a war. At the present time, it has proven that a limited war of indefinite duration isn't great enough to support the economy. Why not? Because in 1950-51, our gross national product rose to \$280 billion, and at \$280 billion gross national product, the national deficiency in purchasing power was 25 percent or \$70 billion, and our government promptly put in a budget of \$71 billion -- threw in one for good measure.

The installation of capital goods that's occurring year after year under this credit amplification process that I've pointed out to you is producing the situation where by spring we will have the technological capacity in United States for a gross national product of \$380 billion, and \$380 billions, ladies and gentlemen, will require \$100 billion a year. How do you like it?

To extend the war, who are you going to have for allies -- the deficit nations of Italy, Great Britain, Holland, Norway, Denmark, Japan? They're all deficit areas. Have you got any allies? The vote in the United Nations today is quite interesting, where United States was the only nation left defending private enterprise against nationalization in the entire world. Thirty-one nations voted that their countries should favor nationalization of the resources and a minimum of compensation for foreign investors. Isn't this lovely? Nineteen abstained and only United States voted no. We've told you for years that the day would come, that it wouldn't be long -- just as we've told every commentator on the air -- you've had a wonderful time, kid, but the number of places from which you speak are going to become less and less and less, and the day is going to come when the only place you can be able to broadcast will be from our own backyard here in U.S.A., and it will be so damn full of international dead cats that the stink will knock you over -- and that is what's happening.

We're going to fight a larger war with that kind of allies? Let's quit kidding ourselves. We're short of water across the country. We're in desperate straits with our petroleum, our copper, our lead, our zinc, and our hematite ore. The U.S.S.R. is a contiguous continentalism geographically by historical accident. It occurred before Lenin and Stalin. We on this continent will have to create a contiguous continentalism by intention, will, and design, because only a contiguous continentalism equal to or greater than can compete with any other contiguous continentalism that has the area, the resources, and the manpower; and until you do that, you're not in a position to try walking around the globe with four chips on each shoulder. You not only have no allies but you'll soon have no friends. There's something that you have to remember in history: that the Bourbon bourgeoisie never forget and they never learn; and we're in that position. Thank you.

---

You can make this an interesting period. I'd just like to remark that I happen to be one of these biologic accidents. Now, if you push down the proper keys in this machine, you'll get an answer. I'm that way. But if you're so apathetic that you don't want to make me work, I'll give up, too.

Now I'd like to take three questions at a time. Your question was, "What are we coming to?" Well, now who else has .... ? Take two more. WHERE ARE WE GOING? Those are all questions of the "who done it?" order, aren't they? Don't let's worry about how it will end. After all, it isn't going to take much longer in this productive capacity of this technological mechanism to where the inventories are going to be higher and higher.

Now kindly bear in mind that labor is going to get the most beautiful squeeze that's ever happened to it, because most corporations in United States that are any size are overstaffed in personnel; and with your new equipment, they can slough them off like that, and who will they slough off? Why, the ones that are going to come in for their pensions. Sucker, you were wide open for it! Your labor unions' leadership sold you the non-transferable, non-negotiable pensions. It was marvelous. So now you can abolish whole departments, and when you're no longer

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

employed by that corporation, you can't carry your pension benefits with you, can you? Or is it a new one?

Now there's another interesting thing, that in the last year-and-a-half there's been a terrific wave of the sons, nephews or the sons and nephews of friends of the vice presidents of corporations who are put in the training course, and in six weeks they're an assistant to the head of some division. In six weeks more, they're assistant to the head of another division, and in six months, they're assistant to an operating vice president -- hundreds of them -- they never had any experience in the corporation, they never had the training, but daddy holds the stock. So they shove them in and out go any orderly promotions based on experience of record and ability. Now this is becoming widespread across U.S.A. So if any of you had dreams that you were going to get somewhere in this corporate structure, you're deluded by the delusions that are coming; namely, that you were going to get rich by working or you're going to get someplace. Quit kidding yourself because you aren't going there.

Now if where we're going, nationally, we're going to have more of the same. Can you reduce the budget very much? Can you pare down the federal employment? Well, if you do, then the fun will be on. Which is worse, war or recession? And the American businessman will tell you a recession. Let's have war.

It's come to one hell of a pass in the history of our country when this kind of an economy requires war and the bloodshed of American men to hold the damn thing up.

INAUDIBLE QUESTION.

I can give you an idea. Remember in Korea -- we entered Korea as a police action to prevent aggression, did we not? Now if we'd had any vision in the Pentagon or Wall Street or Washington generally, we'd have stopped at the 38th Parallel and that would have terminated armed aggression in the Republic of Korea, would it not? We then could have dumped the entire problem in the lap of the United Nations. But oh, no, we had delusions of grandeur, and MacArthur was only one of the exponents of that delusion. The Peoples Republic of China sent communiques to other governments, notifying them that they would not tolerate the crossing of the 38th Parallel by foreign troops. MacArthur stated

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

that he knew nothing about it. He's a cockeyed, lousy liar. Tell him so to his face and prove it to him because it was printed in Korea and Japan, as well as in United States. Now do you have to stoop to that kind of nonsense?

Remember that just north of where the fighting line is now, the fighting front is 150 miles long, and just north of that is the throat in Korea where it narrows down to 100 miles wide. The mountain ridges where we are now run laterally across the front. North of the throat, they run this way, so that MacArthur got grandiose -- remember he was going to have the boys home for Christmas?

Well, when you go up those troughs, you can't transfer laterally. So the enemy got on the ridges and there was hell to pay. The only reason that we had forces left in Korea was a very simple one: that the Chinese didn't have the gasoline or the trucks to catch up to the retreating Americans or you wouldn't have had anything left.

Now what? China today is the third military power of the world. We have demonstrated that both American firepower per mile of front is greater than World War II and the Chinese have equalled it and exceeded it. The Chinese are situated from the standpoint of manpower and economics to where they could maintain 6 million combat troops in action and lose 25 percent a year and do it for 25 years and be better off at the end than when they started. I'd like to put it up to you: can we?

HOW IS THE BANKING SITUATION IN UNITED STATES AND CANADA?

Never been so good. Maybe some of you are around who heard me speak on December 4th -- or 6th, was it? -- 1932 at the combined meeting of the Engineers and City Clubs, in which I pointed out that the banks of United States would probably close -- that was in '32, remember -- by April, 1933? Remember that your leading financiers of Cleveland came out and called me a wolf in sheep's clothing and a lot of other not-so-nice names. I was speaking on the last of February to 22,000 people in the Arena in Minneapolis -- I was the first speaker -- and when I finished speaking, they went out of the exits so fast that the rest of the session really didn't matter; because I told them if they had any deposits in the bank that they better go out and

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

wire their relatives to withdraw, and they were lucky if they had their return passage.

When I got back to the Curtis Hotel in Minneapolis, the Governor, the District Attorney, the Mayor, and the Attorney-General were waiting there for me. They had a very grievous duty to perform; namely, that I had been making statements inimical to the safety of public institutions in these United States and they regretted to inform me that they had a piece of paper -- of course, none of you were ever served with one of them, were you? Well, that is very interesting, because the telephone rang up in the suite and the desk downstairs said, "Mr. Scott, the extras have just hit the streets. The Governor of Ohio has just closed all the banks!"

Now bear in mind that the difference in time between Ohio and Minneapolis is one hour, correct? But I was speaking at the same time that the Governor was closing the banks down here. The warrant was no good. And then the Governor and the Attorney-General of Minnesota had the temerity to ask my advice on what they would do with the funds of the State of Minnesota! My reply was, "Far be it from me, sir, to advise an elected official of this republic on how to conserve or dispose of their fiscal funds."

Now the analysis that we made -- and we presented it in July, 1932 -- was that the banks of United States would close because frigidity would set in and become national, and they would only be rescued by the extensive use of federal signatory currency of the United States Treasury. That would unfreeze the banks, and it would be a situation that would never happen again -- never again would the banks of United States be in danger of freezing to death, but they would be in danger of drowning in their own liquidity. Now they have so much money, they'll even scratch the back of your ear if you'll take out a loan. I don't want to go into whatever part of the anatomy that they .... That statement, sir, finishes your question on the state of the banks in United States.

HOW DOES TECHNOCRACY PROPOSE TO INCREASE OUR STANDARD OF LIVING AND AT THE SAME TIME CUT OUR WORKING HOURS?

Technocracy doesn't propose to do a damn thing under this

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

system. Let's be frank about it. We're not running this system, and we don't propose to help cure its ills at all. [I MEAN UNDER TECHNOCRACY.] Oh, wait a minute. You haven't got Technocracy. Now Technocracy Inc. is an educational, research organization, and it stated years ago when it first started out that it wasn't going to appeal to the public of United States or Canada to use either bullets or ballots, didn't it? And how! We're social consultants. We'll give the schematic design from the best approximation of available data rendered. When better and more approximate data are available, we'll render a better one; but we're consultants, the same way as consultant engineers draw up the designs for a bridge. But the consulting engineers do not fabricate the materials for the bridge; neither do they erect it, and the bridge construction is only initiated by the fiat power of the political and economic state, correct?

Now we Technocrats aren't going to do it. We're telling what is going to happen, and the public of United States will have to do it. We are not seeking political office, so we're not going to do anything under this system. Our designs are applicable. The more energy consuming devices that are installed and the more extraneous energy consumed, the closer this country and this continent comes to our conclusion. How far away are we? Permit me to put it this way: the next five years in the history of this country and this continent will be the most decisive in the social history of man and the next ten the most conclusive. So, if you have a life expectancy of at least ten years, you'll be in it.

ARE THERE ANY SMALL COUNTRIES MAKING ANY HEADWAY IN ATOMIC RESEARCH AND DEVELOPMENT?

Oh, Norway and Denmark -- and Britain you could call a small country today -- that are in it. But atomic research -- what kind of ore are you working on? You're working on one percent ore, are you not? And one percent of U-238; but in order to go anywhere, you have to convert the U-238 to U-235, and it takes 140 of one to produce one of the second. You find that it is going to take an awful lot of ore. And atomic bombs -- well, ordinary bombs in Korea -- we send out eight Fortresses escorted by 112 Sabrejets to deliver bombs over target. The cost? \$140,000 per ton of bombs delivered over target. Accuracy? Have we reached a greater accuracy of bombing than 20%?

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Now you drop the bombs and what happens? Four of them don't come back and the other four that come back are all riddled, and the amount of damage done -- 5,000 Chinese and \$1,000 repairs the damage.

The North Koreans and the Chinese even have movable bomb craters -- bomb craters! They put them out on the airfield for the incoming raid. When the raid is over, they take them off the airfield. When you photograph -- "Oh, these Chinese smart peoples!" Who's screwy?

You stay in Korea for 5 years or for 10 years or for any number of years you want to name. What do we do there? The same thing comes up with Berlin and Vienna. Now it's been good business, this cold war, up until now -- good business; but from now on, it "hain't gonna" be so good.

MOSTLY INAUDIBLE QUESTION REGARDING THE SELLOUT OF LABOR.

Well, I'm just trying to point out that the deal was made before any convention occurred. Now remember the so-called voting public in United States can vote for the electors. You do not have any choice in selecting the delegates to a convention, do you? Not a bit. And when you finally do vote, do you vote for the candidate? No, you do not. You vote for the electors -- one of the most antiquated, God-awful messes of a political structure.

We're the only major country in history that has undergone no fundamental revision of its political structure in the last 160 years. It's about time. We've introduced automobiles. We've introduced almost everything and we improve on them -- but our political structure, no.

IT IS MY UNDERSTANDING THAT THE REASON GENERAL GEORGE MARSHALL NEVER VOTED IN ALL THESE YEARS WAS THAT PROFESSIONAL SOLDIERS WERE NOT GRANTED THE PRIVILEGE.

Permit me, madam, as another Virginian -- I have never registered and never voted, and I'm not subject to any military code; and I know lots more. My father never registered and voted before me -- just another rebel Virginian. No, I don't think that holds, because the soldier can vote and is propagandized by the

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

army to vote. Is that not correct? [INAUDIBLE REPLY FROM AUDIENCE] They're permitted to vote if they're here. I don't want to contradict you. [FURTHER INAUDIBLE REPLY FROM AUDIENCE] It has nothing to do with any military code of United States, because as a private or a general, they are citizens and are entitled to vote. And if he doesn't exercise that privilege, that's a matter of his intelligence and discretion. Somebody else back there? Come on, you haven't given me a good one yet.

[A QUESTION ABOUT EISENHOWER]

Eisenhower is just an officer of the line, but he is a good relations man -- not a general; but he's one of the best public relations officers the armed forces have ever had. He's a smoothie, and Technocracy defines a smoothie as "one who always shaves a posterior before he kisses it." For heaven's sakes, realize what you are up against.

CAN YOU SUGGEST ANY AID OR PANACEA FOR THE FUTURE?

No, let's have more of the same. That's what the public wants, isn't it? Well, give it to them -- and they're going to get it this time,

A QUESTION ABOUT SOMEONE PREDICTING WHAT IS GOING TO HAPPEN TO MONEY.

Somebody predicts that something is going to happen to the money? There's something going to happen next week, too, but there isn't going to be anything phenomenal happen, no cataclysm. The banks are going to have money; the government is going to have money. There may not be the number of people working, but, after all, what are you worrying about? The people with money -- the top 20 percent of the families in United States receive 53 percent of the national income; 80 percent receive only 47 percent, and the bottom 20 percent only receive 3 percent. After all, the elite are the top 20 percent, and if you're not in that top 20 percent, quit kidding yourself. You're going to buy security, are you, with your little pittance? Your little insurance policy? You're going to escape gastric ulcers and chronic colitis and all the rest of it? The hell you are! [WHO ARE THE 20 PERCENT?] The 20 percent? Well, they're the elite.

After all, anybody that's worth \$30 million is entitled to have American citizens under this system die for him. Let's get it clear. And if you're not worth that much money, you're common prey; you're second-class citizens, and you're not entitled to that consideration.

A QUESTION ABOUT CARS COMING OUT FIRST.

No, there's no cars come out; after all, it's piling up. I don't know whether you realize it or not, but the technological equipment around the world -- we've been dumping it abroad for 50 years. We, the United States of America, which owes its origins to revolution, and for 50 years we've been exporting the most revolutionary things that the human animal has ever seen. Our technological equipment is a million times more revolutionary than a million declarations of independence or constitution. It's gone around the globe, and in Africa, Asia, South America, and all over, the natives instinctively know that that equipment can bring within his own time and his own kind what all the dreams of all the priests, philosophers, and medicine men have always promised him in the hereafter -- that he can have it here and now, and he damn well is going to get it.

In Kenya Territory in Africa, there are 5,500,000 blacks in that territory. There are 108,000 Indians and there is only 29,000 whites. In South Africa, there are 9 million and almost another half million blacks, 2-1/2 million whites, and several hundred thousand Indians. You can go on and on. And the ferment is on in Africa -- not in one place. It's on in the Union of South Africa, North and South Rhodesia, Tanganyika, Nyassaland, Kenya Territory, British West Africa, French West Africa, and Belgian Congo, Morocco, Algiers, Tunisia, and Egypt.

In other words, here are the people of Africa on the move. Kindly bear in mind that the European of the Mediterranean civilization has been in contact with Africa for over 5,000 years, and all he ever penetrated was just that Mediterranean Littoral along the coast; and here's the black coming up. The black is running circular looms in Africa today and we haven't got a plant in United States with a circular loom in it. They're assembling adding machines, typewriters. They're building boats, barges, tugs, mining equipment. That's this "smokie," you know -- those smokes down there are doing this.

Now we looked down our nose at them and we treated it as a colonial proposition. Africa has 160 million blacks and only 5 million whites. You'd better be damn polite and get out while the going's good, before you're forced to get out with burnt cork on your face, some lampblack, in the dead of night under high gear.

You will not recognize the physical factors that face you. Mine the diamonds and the gold and the other minerals, yes, and you burn up the blacks doing it. Just as in South America, you're burning up the Araucanian and other Indians mining the tin, the copper, and the rest; and then you wonder why they blow up. Whether it's Bolivia, Chile, Ecuador, Peru, Colombia or Venezuela, it's only a question of time.

We have a foreign policy? Don't make me laugh. We've stumbled into one rathole after another, but so long as it was good business at home, we have this complacent reaction. Labor was trying to have this to continue, and it did a job and was sold out. Labor has to learn what? Not what it believed in the last 25 years; namely, that if it was a good boy it would get an ever-larger piece of pie, and if it was a really good, good boy, it would get the biggest piece of pie with whipped cream on it. Now labor has nothing in common with the present policy of this Price System -- not that the rank and file are stupid, but its leadership has been too complacent. In other words, when you have stock tickers at your labor convention and your attorneys play golf .... my God, what do you expect to be except sold down the river.

IN CASE OF A DEPRESSION, WITHOUT THE EMPLOYERS' INCOME TAX,  
WHAT HAPPENS TO THE NATIONAL DEBT?

Well, if you have to make up a national deficiency in purchasing power, do you expect the national debt to be reduced? There are more people working at two jobs than there has ever been in history. More wives are working. Changes? For instance, during World War II, there were 2,200,000 employed in the aircraft industry of United States, of which there were 45 percent female. Today there are 640,000 employed but only 14 percent are female. Why? Because we are producing planes by a different process.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Now every city you go to .... Is Akron, the rubber industry, working full time? Oh, no. They've got tires, they've got rubber goods and also those unmentionable things, galore -- stocked to the eaves. In the rubber industry, they're not working enough hours for a man to support his family, so he has to have two jobs.

You go out across this country -- no matter where you are -- and the wives are working and the husband is working. Right in United States Steel Corporation's general office in New York -- junior executives -- their wife working 7 days a week, and they work nights and Saturdays in Macy's. What's it come to? It's come to that sad pass where you have to have two jobs or more to keep up with the gadgets you have in the kitchen. A man can't afford to marry one woman today -- he's got to have three, because it will take four jobs. Come on, figure it out. And, of course, the women are waking up. If they've got to do all this work, this matrimony isn't so damn legitimate after all, is it? In other words, where's that male meal ticket that used to be? I see somebody has a sense of humor here.

Come on, anybody else? There are a lot of things you haven't asked me questions on at all. I've flung a lot of stuff at you for that purpose.

DO YOU THINK CREDIT IS OVEREXTENDED IN OUR ECONOMY TODAY?

Well, credit is something that is very hard to determine whether it is overextended. Your inventories are up to \$74.4 billion. You can go on. It won't hurt anybody. The only difficulty we have right now with a lot of manufactured goods and with war materiel especially is where in the devil are you going to store it? We're turning it out so fast that there isn't enough buildings to store it in. It's like Canadian wheat. We pour it down the church steeple and chimney, and we pour it down the school chimney. Fill them up. There are not enough buildings.

Down in Lambertville, where we had our office, the Diamond Silver has the biggest employment there. It was, I should say -- 600 employees. Well, they produced so much that it finally reached the point that there was so much manufactured products, there wasn't any room for the employees. So they sold the thing to the Aero Products of Chicago and now there "hain't" no Diamond

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Silver; and the Mayor of Lambertville, who was elected this year after 19 years' public relations in the Diamond Silver, has to go to Trenton to get a job. Isn't that wonderful?

Now credit -- there isn't any limit to that. That isn't what stops you. It's the physical thing that stops you.

WHAT PROGRESS HAS RUSSIA MADE WITH THE A- AND H-BOMBS?

I am not an authority on Russia, and I'm not interested in being one. Now we, of course, just as Technocracy predicted, have not only worked A-bombs out to larger size but the hydrogen bomb. Well what? Greater instrumentalities of destruction, but there is this to say about the hydrogen bomb that differs quite greatly from the atom bomb: you can't store it very long and it has a terrific consumption of power and minerals in order to produce it. Deuterium and tritium are not very stable. So one way of consuming our power and mineral surpluses is to make it and have it deteriorate and keep on making it forever.

COULD YOU GIVE US SOME EXPLANATION WHAT THE DISSENSION WAS IN THE UNITED NATIONS A WHILE AGO WHEN ONE MAN JUMPED OUT A 12-STORY WINDOW AND TRYGVE LIE WAS GOING TO QUIT AND ALL THIS? WHAT HAPPENED?

Well, after all, that's the person's privilege to jump out a 12-story window. [I MEAN WHY DID HE DO IT?] Well, you can't tell why anybody does it. "Why" is one of those imponderables; but after all, that isn't any tragedy, no. He hit the pavement and that was the end. That's no tragedy. It's when the damn fool breaks his leg under this system and has to keep on living that's the tragedy. If he'd jumped out the building, he would have settled it.

WHAT KIND OF A PATTERN DO YOU EXPECT; THE EISENHOWER GOVERNMENT TO FOLLOW?

Well, you have the most reactionary collection of individuals. I've given you a good name for it, haven't I? If you had Fascism in United States, it will always come in under the guise of Democracy and better and bigger business -- fair enough?

HOW BIG IS THAT THREAT?

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

The biggest you ever had. You can't come any closer to it unless you get the man on the white horse to be Der Fuehrer.

GAP IN TAPE

.... No, it depends on what war you're talking about. [MOSTLY INAUDIBLE QUESTION REGARDING USE OF OUR TROOPS IN FOREIGN COUNTRIES] We have over 600 officers in Turkey. We have officers in Greece, advisors. We have them in Burma and Indochina and materiel. If you expand the war, what? You expand it on what front -- in China? The present front is 155 miles long.

One school of thought in the Pentagon is they want to go slightly north of the existing battlefront. That's where Korea narrows down to the throat and it would be only 100 miles wide. On that theory they could reduce the number of American troops and have more of the Republic of Korea and other troops take a larger section of the front. If you're going to go beyond that throat, then even in Korea you could lengthen the war front out to 500 to 600 miles. The Chinese have the manpower and the artillery; so, the longer the front, the funnier it would be.

Now as you go north from the throat in Korea, your mountain ridges run north and south rather than east and west the way they do down on the present front. You have no lateral crossover along the front. Now you can go this way along the front, but if you go north of the throat, then you can only go forward or retreat. You can't go crosswise laterally, which is the difficulty that MacArthur got into. He advanced up the troughs, and they held onto the ridges and then came in and cut them off. Well, they play the same thing over again.

Your Chinese have trenches right up on these ridges where they run jeeps right along the bottom of the trench, the trenches are so wide. Have any of you seen photographs of it? Well, of course, the news we're getting, you'll find better photographs, more detailed news, in Canadian papers, British, Dutch, and French than you do in United States. Peculiar, isn't it? I mean from correspondents on the front.

For instance, I touched upon it there -- I think last night, didn't I -- about its costing \$140,000 per ton to deliver a ton

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

of bombs over target?' Well, B-26s escorted by 112 Sabrejets -- four do not come back of the B-26s, and the four that do come back are shot up. Some of them have to make forced landings. So your fuel costs -- I'm not talking about the cost of bombs now, just the cost of delivery from our base to over target -- is \$140,000 per ton.

You see the propeller plane in World War II, the Mustang and all the others, consumed 56 gallons an hour. These F-86 Sabrejets do 264 gallons an hour. So if you were to have as many planes in our total armed forces as we did in World War II, they would now be jets; but they would be consuming five times the total volume you see. Well, have you got it? Where are you going to get it?

HOW DOES THE EFFICIENCY OF THE JET DIFFER FROM THE INTERNAL COMBUSTION ENGINE?

The jet is not as efficient. The jet could be efficient if you could get the  $T_2$ . You see, in other words, your chart is  $T_1$  and  $T_2$ . Your incoming temperature regarding the other. Well, if you could operate around 1800-2000 in there, you could get more efficiency and then put an afterburner in the tail. Now your MIG is around 9,000 pounds lighter than our F-86.

INAUDIBLE QUESTION

The MIG climbs from ground to 30,000 feet in 7 minutes, 42 seconds, but it can go on beyond that. The F-86 doesn't do very well at 40,000 feet and over. The MIG will go on over 40,000 feet. [INAUDIBLE COMMENT] Well, only partly. They've got an afterburner in the tail. Now your Russians have come out with two jet light bombers -- two jet engines in it -- and they also are building the big six jet ones that carry two jet fighter planes under their wings.

At least it becomes obvious that they somehow or other have metallurgists. There was a published report in THE UNITED STATES TECHNICAL JOURNAL of the Caterpillar engines captured in Korea, which were secondhand equipment, you see; in other words, World War II equipment. They bring it back here and they have the ordnance laboratories and the Caterpillar Corporation check on it, and there's a complete report on the construction and the metallurgical analysis and finish and everything else. The

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

metallurgy in some cases is better than the original Caterpillar turned out by the Caterpillar, but the finish in some places isn't as good. Well, what the devil difference is the finish if the metallurgy won't stand up?

The reason I'm bringing this up is because of this hypocritical nonsense that the enemy hasn't got any metallurgists or any scientists or engineers or anything else. Well, how does the MIG run -- the Russian pilots take breaths of air? I mean, this kind of nonsense. Of course, your Russian MIGs have a 31-mm. machine gun cannon. Our planes have your 50 caliber machine guns. Interesting?

THE MIGs HAVE OUTSHOT OUR FIGHTERS, HAVEN'T THEY, IN THE WAR SO FAR?

Well, we have lost over twice the number of planes they have. That is as reported by our military forces. But besides that, the British and the other aircraft carriers. Now the British report that they do not have a single plane coming back that isn't shot up. That's signed by the Admiral.

WERE THEY SHOT UP BY ENEMY AIRCRAFT?

Partly. Now the difference between the 50 caliber machine gun and the 31-mm. machine gun cannot is that the machine gun cannon is about that long -- the shell -- and it explodes -- an explosive shell. So if they hit a B-26, what the trouble is over there now is a burst from that and there's dead men inside the B-26, you see. You could puncture a lot of holes with your 50 caliber and they either go right through, but the other explodes, and if anybody is near that, they're wounded men. The other could hit part of it and it would be a clean miss.

WHAT ABOUT THE REPORTS OF WHEN 3 OR 4 OF OUR PLANES GO UP AND KNOCK DOWN 30 OR 40 OF THEIRS?

Well, it's the same kind of hypocrisy and lying that's gone on about everything in the last six years, you see. Not that the Russians are handing out anything of particular aid. They're turning out propaganda, too, but they're turning out propaganda for their side. Well, we come along and try to counter that propaganda. The point to remember is this, that propaganda is the

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

enemy's lies and truth is our lies -- very simply put; because it's reached such a ludicrous situation where newspaper reports and the official documents -- you read them and if you know anything about it, it's utter nonsense.

Well, you don't have to go into that kind of lying. Even Goebbels and his propaganda machine under Hitler did have about 2 or 3 actual factual things on which to base his, but we've reached the point where we don't have anything but the blue sky.

Now to expand the war -- there's fighting in Malaya, there's fighting in Indochina. What most of you don't know is there's fighting in the Republic of Colombia -- practically civil war. That's been four years -- people killed every week. Malaya is going this way and going that way. Now, of course, it's Tunisia, Morocco, Algiers, Kenya; so when you start and list the so-called wars that are around the globe, there are quite a few of them. That's what I'm trying to bring out.

#### THE ARMS BUSINESS MUST BE GOOD.

Well, it's good from our sense, but it has reached a point like the federal government did under the WPA in New York City. They handed New York City the gratuities of building nice big swimming pools and playgrounds, buildings, chlorinating apparatus, pumps, and everything else, and dressing rooms. The federal government put up the money. The city would have to expropriate the property, and they built so many of them that the City of New York said, "For God's sakes, stop or we'll go broke." You see because the city had to pay the employees -- half a dozen or more employees per shift -- plus the electric power plus the chlorine.

So our arms program abroad is in a similar category. The more you unload on France and Britain, Denmark, Norway, Holland, Belgium -- wait a minute! How much land have you got, for instance, in Holland to store tanks and trucks and military? They have to use every square inch they can grab hold of. The same is true of Denmark. In other words, their economy is strictly up against it as a matter of land. Well, but you haven't got the spaces that you have here, you know. Go on, dump it out down here. So it costs.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Now the other thing they're up against is they have to export in order to live; therefore, every available man-hour that they can grab has to go into producing an export surplus to ship abroad in order to get raw materials or food. Therefore, the more manpower you put in the armed forces, the less manpower is available to create a manufacturing export surplus, correct? And the more materiel -- remember you can't store tanks in chicken coops or trucks or airfields -- you have to take large areas of land. Well, they even cultivate the fence corners over there. So they're objecting, because if they take -- just like the swimming pools, the playgrounds -- if they take more than a certain number, they go broke faster than they, ever did in history. So they resent our programs.

Now what's coming up? In West Germany, the West Germans are flatly -- they say it out in the open in their press, "We can stand Russian occupation but we cannot stand American liberation." Now, of course, the trouble in saying these things is that a lot of people would try to make out that we are pro-Russian, which we aren't. We're interpreting events as they occur. It's not our doing, but, of course, your so-called hysteria that you have if you come up with any idea that's different from the conformity -- well, they're scared of you.

[A COMMENT REGARDING THE THREAT OF COMMUNISM IN OTHER COUNTRIES IN ORDER TO RECEIVE ECONOMIC AID FROM THE U.S.]

It's the same way in Italy, you see. The Monarchists in Italy are Roman Catholic. The Fascist Party in Italy are Roman Catholic. The Socialists are Roman Catholic. The Radical Socialists are Roman Catholic. The Christian Centerist Party are Roman Catholic, and the Communist Party are Roman Catholic. Hell, if there weren't any Communists in Italy, the Vatican would order them to be! Why? Otherwise, they wouldn't get any aid from United States.

IF THERE WEREN'T ANY COMMUNISTS, THEY PROBABLY

No, the moment that the public of this country realizes that 90 percent of this stuff is not to fight something abroad but to hold up this cockeyed system at home, that's where the thing comes in.

IN OTHER WORDS .... WE CAN'T AFFORD IT.

Exactly. We're the only economy in the world, that is, big economy ... [THEY ADMIT IT] Yes, The Wall Street Journal comes out with it flat; so do others.

THE REASON I ASKED YOU WHAT THE CHANCES ARE OF EXPANDING THE WAR -- I WAS REFERRING TO CORPORATE ENTERPRISE -- IS THAT THE ONLY THOUGHT THEY HAVE IN MIND IS IF THEY CAN EXPAND THE WAR OR CAN'T EXPAND THE WAR. IF THEY CAN'T EXPAND IT, THEY WOULD BE WASHED UP TOMORROW. IF THEY CAN EXPAND THE WAR, THEY'LL KEEP ON FINDING PLACES. WHAT IS THEIR MOVE? THEY'VE GOT TO FIND SOME MOVE TO KEEP IT GOING, DON'T THEY? THEY WILL FIND SOME WAY. WHAT WILL BE THEIR MOVE?

Well, that's questionable, you see. The world isn't the same as it was in 1929. Back in 1929, when you had the collapse, you had the British worldwide mercantile system and the French and the Dutch, German, Japanese. Where are they? Yes, they've gone. Now in the thirties the world financial setup could disperse the risk -- load -- all over the globe. You can't do it today. We're top dog and we're all by ourselves. No, and we have less and less friends.

Now, of course, Dulles and that crowd, they want to abandon Kennan's policy of containment and go in for a policy of liberation. Well, that, of course, is what Europe is all upset about. They don't like Dulles. They've no use for him because a policy of liberation would mean that the French and Italians and Germans and so on would have to do the fighting.

WHY DO YOU THINK THAT THE REST OF THE UNITED NATIONS DOESN'T COOPERATE WITH THE UNITED STATES IN THE PEACE ACTION? WHY ARE THEY HOLDING BACK?

Well, they don't want to. You see, it's the United States' war. This is the hypocrisy that we've pulled the stuff that it's the United Nations' ....

IN OTHER WORDS, THE UNITED NATIONS IS DONE.

Kaput.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

YOU MENTIONED LAST NIGHT, "THE VULTURES OF THE PEACE."

Yeah, kaput. We called the turn before it ever started, before they ever had their first meeting, and it's going to wind up that way.

What's Dulles proposing now? A new type of organization to supplant the United Nations -- without Russia. He's come out with it. Without Russia and without these other countries; in other words, we're only going to include those countries that come along with us and say yes.

BUT IF THEY KEEP SAYING YES ALL THE TIME, WHY DO THEY KEEP GOING ALONG WITH IT?

You see what the interesting thing is is that China and North Korea are fighting all these European troops, aren't they? Canadian, British, French, Turkish, Greek, plus a few South American; and as far as Asia is concerned, here is China holding the great United States, Britain, and all the other powers to a stalemate in Korea. The Asian says, "Hm-m-m, pretty interesting!" [WE'VE LOST OUR FACE] We've lost it already. We're shortly going to lose the other end.

Now that is not brought out. We tried to make out in the press here that amity and so on in Asia and the Far East -- that we're progressing. Well, who have we got? We've got the Philippines. The Philippines have to go along with us because their economic situation is really bankrupt -- the Philippine Government. Outside of that, what have we got in the Far East? [WE'VE GOT CHIANG KAI-SHEK.] Oh, certainly, we've got Chiang Kai Shek on Formosa, [WE'VE GOT SYNGMAN RHEE, TOO.] Well, you see, Syngman Rhee -- let's get this clear: The Russian troops invaded Korea by air, by sea, and by land, and they were south of Seoul. There were no American troops in Korea at that time. The Japanese armies in Korea surrendered to the Russians. Interesting? [WHEN WAS THAT, CHIEF, 1945?] At the end of the war. The Russians were the ones who ended it in Korea. They invaded by sea and by air and by land and were south of the 38th, were in Seoul, and south of Seoul, and there still wasn't an American soldier in Korea.

Now, then, there was the Korean partisans. They set up the government in Seoul and the American military in negotiations

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

with the Russians agreed on the 38th parallel. So the Russian Army retreats north of the 38th, leaving the so-called partisan government in Seoul. Syngman Rhee was not in Korea -- hadn't been in Korea for 35 years. He could hardly speak Korean. The Koreans couldn't understand him when he came back. He had been living in Austria, married to an Austrian Roman Catholic. [IS SHE STILL WITH HIM?] Oh, yes, photographed with him. She is not Korean -- Austrian. You see, we have a lot of peculiar things.

Just like McCloy. McCloy was what in Western Germany? What was his official title? Top Civilian Administrator of Western Germany for United States, was he not? Well, now Aldrich was Chairman of the Board of the Chase National Bank and has been made -- nominated, at least, by President-elect Eisenhower -- as United States Ambassador to Great Britain. Now it is announced that McCloy is going to take Aldrich's post as Chairman of the Board of the Chase National Bank. Well, it's very interesting. You see, McCloy is a brother-in-law of Adenauer of West Germany, [CARTEL, ISN'T IT?] Ah-h, what? This is the kind of dealing that's going on back of the scene.

IN OTHER WORDS, WE'RE JUST PULLING THE CHESTNUTS OUT OF THE FIRE FOR THE VATICAN -- A TASK FORCE FOR THE VATICAN?

Well, not only the Vatican. The Vatican happens to side one way. The Vatican has large investments, but so do these other interests have large investments. What we're doing all over the world is we're siding with all the reactionaries. You see the fundamental error in our policy is that we are assuming that social change is something vicious and wrong and should be opposed and stopped; so, we have taken it upon ourselves (United States) to oppose social change wherever it occurs all over the globe.

Now if it occurs, we scream that the Communists are to blame. You can't blame the Communists if the social change starts to come and they see the thing, but after the parade has started if they're jumping in to lead the parade, why shouldn't they? Now the conditions in Africa -- the Russians aren't there. It isn't Communism or it isn't Communism in the Middle East. It is a nationalism. It is an anti-European colonialism. Well, so what? We start in to oppose it all over the globe. That is the fundamental error, the fallacy, in our policy. We, whose country

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

was founded by revolution, are denying social change everywhere else, and we propose to put down social change by the force of arms; and, if necessary, atom bomb them, and if that isn't good enough, hydrogen bomb them.

ACTUALLY, THEN, IN CHINA IT'S NATIONALISM RATHER THAN COMMUNISM?

Well, that battle has been going on for a good many years. You see, to understand the thing fully, Sun Yat-sen was the great revolutionary leader in China. He proposed a new China and to overthrow the old emperors and the Manchus. Well, that agitation went on and it succeeded. He appointed an American to be his military strategist, a Californian who never went to West Point or Annapolis, by the name of Homer Lea, author of "The Valor of Ignorance," and Homer Lea directed the general strategy of the Chinese armies. Well, now, Sun Yat-sen was hailed as the great Asiatic leader. He wasn't a Communist. And this is where the fun begins. He came over to United States to Washington. He wanted aid of advisors, everything else, trained experts. No, we turned him down because he had taken to armed force. He went to 10 Downing Street in London and appealed to them. He got turned down there. And there was only one other place to go in 1920: Moscow. And Lenin sent him General Borodin and about 240 trained officers and advisors and experts, etc., and they set up the Military Academy at Wampoa. Chiang Kai-shek was over in Japan at the Japanese Military Academy, along with several other Chinese, and they came back. Well, Chiang Kai-shek -- you see, Sun Yat-sen had married the most beautiful and the most intelligent one of the Soong sisters; so, Chiang Kai-shek comes back and joins the Kuomintang and goes to the Wampoa Military Academy and marries Mei-ling, the sister of Sun Yat-sen's wife.

Well, the fun was on, and the trained armies went north, upsetting the warlords and all the rest of it. After Sun Yat-sen dies, then Chiang Kai-shek double-crosses the Sun Yat-sen revolutionary program, makes the deal with the Shanghai gangsters, the bankers, the landlords, and the warlords, and the moment that he does he becomes persona grata to United States, although up until that time he was persona non grata.

Now the double cross began in 1927, and the Fourth Route Army made its 6,000-mile retreat in China from South China way up

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

around Yen-an. Well, they had been fighting steadily ever since 1926 in China -- actual fighting -- and Chiang Kai-shek's two biggest armies during the war weren't fighting the Japanese -- they were out to blockade the famous Route Armies in Yen-an, and Yen-an was the most bombed place in Asia, because the Japanese bombed it and Chiang Kai-shek would bomb it, too.

Well, what happened? To survive they had to create a generalship. If they hadn't created a generalship and tough hard-boiled cadres with an esprit de corps, it would have been extinct long ago. So the very repression and the very terrorism that Chiang Kai-shek and his police instigated -- you see; they chopped the heads off of about 600,000 of the Chinese youth -- it brought the opposite result; but it took 20 years and more to bring it to fruition.

Now as far as Mao and the Chinese Communists, for years they were advocating the Marxian Doctrine of Revolution, and they weren't doing so very good. They were only just surviving. Then suddenly somebody gets some sense and they make it a peasant land program and drop the Marxianism, and the thing was on the road to a real war. Then, of course, we step in in World War II and we equip over 100 divisions of Chiang Kai-shek's army with American uniforms, shoes, rifles, machine guns, artillery, trucks, everything else. We train them with officers.

Well, now, we have men in Technocracy who served in Merrill's Marauders, correct? Did you ever hear of Merrill's Marauders? Well, over 4,000 officers and men -- Australian, British, Canadian, U.S., and all -- they were fighting in Burma. They were a special corps. They captured Mittagong about 5 or 6 times from the Japanese, and each time that they captured it from the Japanese, they were ordered by our headquarters -- the Allied headquarters -- to turn it over to Chiang Kai-shek's troops and the Chiang Kai-shek army would sell it back to the Japanese. The last time was too damn much and the whole Merrill's Marauders mutinied.

I'd like to ask you a question and see if you can think up something about it. Why didn't Eisenhower and Montgomery sign the surrender of the German Army? Come on, it's very interesting. You come back to me. [ARE WE AT PEACE WITH GERMANY TODAY? TECHNICALLY, WE'RE STILL AT WAR WITH GERMANY.] Well, in a way,

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

yes, but then this so-called agreement had not been ratified by the Bonn Parliament in Germany, but that isn't what I'm getting at. I want to get back to this other thing. [WAS THE SURRENDER FORMAL?] Oh, yes. What date was it signed on? May 9th was the only real surrender. The other one at Rheims was not a correct surrender. [WELL, SHOULD THEY HAVE BEEN THE ONES TO ACCEPT A SURRENDER TO GERMANY?] They should have been a party to it. Who signed the final surrender for the United States and Great Britain? Maybe this will give you a clue. [WAS IT McCLOY?] Oh, no, McCloy wasn't in on this. Air Marshal Tedder of the RAF signed for the surrender for the United States and His Majesty's Government of Great Britain, Air Marshal Tedder was not even a deputy officer of SHAEF. [WHO GAVE HIM THE AUTHORITY TO SIGN?] It's getting interesting. Come on.

Now remember that when the heads of the civil government disappear, the only surrender that is valid and recognizable under international law, once there is no civil government, has to be signed by the commanding officers of the military forces in the field: the head of the Air Corps, the Navy, the Army, etc. [IS THAT VALID?] Oh, yes, but Were those heads at Rheims -- this is the fake one that Bedell Smith and Eisenhower pulled in France -- no, they were not. The final surrender came in Berlin under the Russians. Well, now, the German Army that was fighting still on the coast of France and over in Bordeaux in the Channel Islands didn't recognize the Rheims surrender. They only surrendered after the one in Berlin had been signed. Very curious. [THEY PROBABLY PREFERRED TO SIGN WITH THE RUSSIANS RATHER THAN WITH THE ALLIED FORCES.] No, that wasn't it.

Now if you see the motion pictures of the fake thing at Rheims, Bedell Smith pulled it, and afterwards Eisenhower comes out to meet the so-called German officers. You see, the one in Berlin, the moment they put their signatures on the paper, "March!" There wasn't any "how-are-you boys?" stuff. Well, but why did Air Marshal Tedder -- why was he the one who signed for United States and Britain? The biggest hush-hush thing of the war. [MAYBE TO KEEP THE RUSSIANS FROM THE ENGLISH CHANNEL?] No, it's much more smelly than that.

CHIEF, WASN'T THERE A RUSSIAN ENVOY THAT CAME HERE TO THIS COUNTRY BEFORE ROOSEVELT WAS NOMINATED FOR PRESIDENT AND INTERVIEWED ROOSEVELT AND MET AT ONE OF THE HOTELS AND SAID

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

TO HIM, "YOU ARE GOING TO BE ELECTED PRESIDENT OF THE UNITED STATES PROVIDED YOU SIGN THIS PAPER"?

No, that's utter nonsense. That comes out of that Nazi propaganda stuff. That's as bad as the Jewish protocol stuff. It stinks. No, that's the Nazi proposition.

Now this is interesting. I want you to dig into this. Well, maybe the only one that was invited to sign it. This brings up something very interesting. [THEY PROBABLY SIGNED IT BEFORE THE RUSSIANS WENT ANY FARTHER TO DO MORE DAMAGE.] No, that wasn't it.

You see, the Council of Ministers, Foreign Ministers, in London in September '44, made up the agreement on the zonal division of Germany and that the army stop at the Elbe. That was ratified again at Yalta. The only treaty agreements that exist regarding Germany and Austria are the agreements on the zoned division of Germany and Austria, and those are signed by-United States, Great Britain, and Russia. Now United States and Great Britain started to insist that France be brought into it, and the Russians said, "Very well, if you want France in it, you divvy up your zone to the French, but as far as we're concerned, the French didn't fight in it." Which is correct.

So we create a zone for the French in Austria and a zone for the French in Germany, but we created them out of the British and U.S. zones. We didn't grab anything off the Russian zone, because that had already been signed, you see. Now the Elbe was where the troops were to stop. Those agreements were signed. The maps with the red lines on them with the zone and the Elbe River were in the headquarters of every division commander. That was top treaty, understand? Now, therefore, any commander of armed forces that attempted to violate that treaty was guilty of what?

WASN'T GENERAL PATTON IN CZECHOSLOVAKIA BEFORE THIS THING WAS GOING ON IN RHEIMS AND HE WAS ORDERED TO WITHDRAW?

No. Wait a minute. They were supposed to stop. Every division commander had these maps. So when our forces arrived at the Elbe where they were supposed to stop, did they stop? They crossed the Elbe and they reached Berlin. Come on, Potsdam is a suburb of Berlin, and they got to Potsdam. [THIS IS THE THING THEY WERE FIGHTING ABOUT, EISENHOWER AND MONTGOMERY, THAT WAS THE

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

ARGUMENT THAT THE RULES OF THE GAME THAT WERE SET UP?] The rules of the game were that they were to stop at the Elbe. That was the treaty. No officer of any army has the right to abrogate a treaty of his country. [MacARTHUR DID THAT, TOO, IN .... ] Never mind MacArthur; let's stick to this.

Our troops reached Potsdam, and our planes started in to shoot down the Russian planes fighting the Germans. This is admitted in the U.S. press. [THEY WANTED TO GO ON FIGHTING.] Who? (THE AMERICANS AND THE RUSSIANS.) No, the conspiracy was that they were going to go in there and accept the surrender of the German Armies fighting the Russians. Very cute if you can do it.

And then something happened for which we do not know the entire explanation, but Air Marshal Tedder placed his squadrons of Hurricanes, Spitfires, and Mosquitoes under Russian command. They flew shoulder-to-shoulder with the Russian planes and shot down the American planes over the City of Berlin, the battle line of Berlin, and our troops evacuated Potsdam and got the hell back across the Elbe. [WAS THAT AFTER TEDDER SIGNED?] Oh, no, this was before the surrender. I'm giving you the reason for Tedder, do you understand?

Now just stop and think a moment. [Wynendan?], our Ambassador to Britain, who was in on this, blows his brains out. Sumner Welles takes a walk in the winter in a dressing gown and does a slow freeze in a ditch outside of his Maryland home. Dugan jumps out a window on Fifth Avenue and misses the snowbank and hits the sidewalk. [Biddauit?] down in Miami is under arrest in a jail cell and he commits suicide with a gun. [INAUDIBLE COMMENT] Well, the FBI arrested him and brought him back from France. Another one died in Chicago. They found another one with his throat cut in the Potomac.

Forrestal runs out of Harriman's Florida residence in the afternoon in his pajamas screaming, "The Russians are coming." So they fly him up to the Naval Hospital at Bethesda, Maryland, and they place him under guard. Somehow or other he finds the only window on the floor -- the diet kitchen -- that hasn't got bars on it. I think it's 16 or 17 floors up. As to whether he jumped or whether he was pushed is irrelevant, incompetent, and immaterial.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Now all this occurred just prior to Roosevelt going to Warm Springs, Georgia. The Russian Government came out with a communique addressed to Washington and to London accusing both the United States Government and the British Government of complicity with the enemy throughout the war, and Roosevelt went to Warm Springs. When this incident occurred, Zhukov issued his order of the day declaring the area between the Red Army and the Elbe to be the area of operations of the Red Army -- anything in that area is enemy. Get it? So we got back out of there. Therefore, Air Marshal Tedder became the sole one of the Allies to sign for the United States and Great Britain. [HE WAS THE ONLY ONE ACCEPTABLE TO THE RUSSIANS.] Check.

CHIEF, WHO WAS RESPONSIBLE FOR CROSSING THE ELBE?

I am not interested in the details. It's not a question of whom. It happened. Don't let's get into that kind of detail, except they all seem to be involved in it.

YOU MENTIONED THE CHURCH CONNIVING WITH THEM WHEN THE GERMAN ARMY CAME INTO FRANCE. IN EIGHT DAYS, WEYGAND WAS THE HEAD OF THEM, AND HE KEPT TELLING THEM TO RETREAT, RETREAT, RETREAT.

That's the German Army, you mean -- Weygand? [YES] Of course, that was the sellout. Well, Weygand was raised by the Jesuits, and the story is that he is the illegitimate child of ex-Empress Carlotta or Eugenia, I've forgotten which. [INAUDIBLE COMMENT] I'm trying to point out to you that there was a nice lousy conspiracy in which our armed forces and our leading politicals were involved.

CHIEF, WHAT PART DID VON PAPEN PLAY IN THIS?

Von Papen was a Papal Chamberlain. He was one of the slipperiest of the Nazis.

A PARTLY INAUDIBLE QUESTION ABOUT HOW TO PREVENT TECHNICAL PEOPLE FROM MAKING THE SAME KIND OF PRICE SYSTEM DEALS AND RACKETS IN THE NEW AMERICA.

That's simple. You see, you have a system now where you place a premium on skullduggery. It pays off. You try and beat

the system we've devised -- can you counterfeit it? What good is your currency? Can you bribe any citizen with it? [I'M THINKING IN TERMS OF POWER, THE PLACE WHERE A LEADER GETS WHEN HE GETS SO FAR DOWN THE LINE AND HE FORGETS WHERE HE STARTED AND HOW HE GOT ON THE LINE.] You always have that, but then they don't have power in the sense in a Technocracy that they have in a Price System. [ISN'T THE POTENTIAL STILL THERE?] Not in the same sense whatsoever; in other words, you haven't the punitive power. For instance, no matter what you do -- short of treason -- you can't take any citizen's income away from him. Well, if you can't take his income away from him, you can never put him at a disadvantage, because his income is the same as yours. Very peculiar, isn't it? Now, after all, your judiciary, your legal profession, and your entire courts and police force are all operating on the trouble of mankind. It has to pay off; they have to collect. Well, if they couldn't collect it off the individual, they cannot place any individual at a disadvantage then, could they?

MENTION MADE OF THE MOVIE, "LOST HORIZONS," AND THAT IN WATCHING IT, ALL OF SUDDEN ONE AWAKES AND REALIZES THAT MONEY DOESN'T MEAN A THING.

Well, you'll have this occur: you'll have individuals conditioned under this system still participating living under that system. It's like my being in Mexico and the official showing me a brand new modern school -- reinforced concrete, cantilevered, slabs, beautiful dining room, nursery, swimming pool -- just down the road was some of the old adobe and everything else. I asked some of the young officials, "You've done a job here; how about the others?" "The others?" I said, "Yes, the little .... over there?" "Oh, at their age, what can you do? The only thing to do is shoot them." And they were quite nice about it. "They're no good," he said. "They are no help to this generation. So long as they leave it and don't try to sabotage it, we will ...."

Now in any system when you have a revolutionary change, you're going to carry over people with all these action patterns that have been created under this system, and they're not going to be satisfied no matter what position they get, because they still have the ambitions that this system has. Just as they're not satisfied with one Cadillac today, if they can get four

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

easier than they got the first one.

What ruined the gangsters in the later days of prohibition? They couldn't keep their women from wearing the mink coats and the diamonds. That advertised their income to the Internal Revenue, didn't it? Couldn't keep their women .... No, that problem is a psychological, emotional conditioning, and you have to deal with people as they are; and, of course, they have this dream of power.

Wallace, for instance, was the only millionaire running in 1948. Wallace had ambitions -- definite. Just like we had it in this organization. Atwater was over at Wallace's headquarters on several occasions in May and June, 1948, and he and .... Wallace was going to poll 17-18 million votes. Well, Wallace deliberately sold out, informing on the Progressive Party and dragging in the Commies and all the rest, the liberals and the progressives. He put his finger on every liberal and progressive that joined him, didn't he? Well, we knew that. That's what Atwater and this thing gained as far as Technocracy was concerned. [HE WANTED TO SELL OUT TECHNOCRACY SOMEHOW?] Certainly. Now this we didn't learn until afterwards.

WE HAVE A LARGE INFLUX OF DPs WHO ARE REFUGEES FROM COMMUNISM. WHAT IMPACT DOES YOUR OBSERVATION SHOW THAT THAT WILL HAVE AS WE HEAD MORE AND MORE INTO FASCISM?

That's half a million you have over here practically. [IT WOULD BE QUITE A FACTOR, WOULDN'T IT?] It's quite a factor in Europe. The Russians keep shoving them across every day. [THEIR BACKGROUND IS FASCIST, ISN'T IT?] Most of them, yes. Your reactionary elements over there and the church and big business even fly them over, [THEY WILL BE A FORCE, WON'T THEY?] Oh, yes. You've got General Anders over here, the Polish King. You've got Kerensky still living over here. You have Baron What's-his-name -- just died out here in Michigan a year ago -- from the Black Sea, leader of the .... Kolchak was one. A whole bunch were outside of Michigan there near Dearborn, Ann Arbor. You see, Ford supported that kind of thing. Who was the other? Denekin. And still another one from the Black Sea. Yudenich was on the Baltic. Kolchak was from the east. Your Ford cars and Ford trucks -- and the doctors and nurses from Michigan were operating the base hospital at Sevastopol, and in the dead of winter when Budenny's

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

calvary cut through, they abandoned the 6,000 wounded and all the hospital supplies; and the Red Army executed 67 American doctors and nurses from Michigan and sent their bodies back to Detroit by boat. In other words, it's not international law to abandon a hospital even if you are captured by the enemy, but it becomes the thing to do to abandon a hospital and the wounded if your enemy is so-and-so. In other words, you throw your code down the sewer, which is what we've been doing. Baron Wrangel, that's the one I've been trying to think of. Denekin and Wrangel were from the Black Sea. [THEY WERE WHITE RUSSIANS?] Yes.

You see, the French Fleet mutinied, you know, at Odessa. That's when General Wavell at the same time marched in from India and built that railroad about 70 miles from Baluchistan into Iran; and he marched up through Iran and started shooting everybody up when they captured Baku and Tiflis and the Russian oil.

Well, what do you think of it? The reason I'm bringing this thing out about this war is to show that some of our military command were involved in this. You get the significance, don't you?

IS THAT THE REASON WE DROPPED THE ATOMIC BOMB ON HIROSHIMA BECAUSE THE RUSSIANS WERE COMING TOO FAST?

Not necessarily, no -- I mean whatever the reasons were, tactically. As a matter of strategy, you would be far better off if you didn't drop them at all, but if you were going to drop them, if you dropped a hundred on Japan, it would have reduced the population, you see? Then you'd have had less of a problem.

CHIEF, I READ AN ARTICLE THAT FOR THE FIRST TIME SINCE 1870, THE MERCHANT MARINE WILL FLY THE VATICAN FLAG.

The Vatican will have a merchant marine? [YES], The Vatican is a political state, entitled to print its currency, to have its own police and its own army, its own wireless station; so, why shouldn't it have a merchant marine or a navy if it wants it? After all, you Americans are going to pay for most of it. The wealthiest diocese in the Catholic Church today is in United States, and the wealthiest archdiocese in the world is in New York. [THE CLEVELAND CATHOLIC CHURCHES ARE GROWING JUST LIKE

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

MUSHROOMS.] So are the Protestant Churches, and the Protestants are dumber than the Catholics. Sure they are. The individual Protestant has a higher general level of education than the average Roman Catholic -- that's generally admitted. Individually, the Protestant has more training. The Catholic has a collective authoritarian organization and therefore acts as one bloc; but the so-called higher educated Protestants are so damn dumb they an't act as one organization. Not that we're holding a brief for any of them.

Bear in mind that Technocracy is not anti-Catholic. It is anti-clerical and will take the same position regarding the Mohammedan Church, the Shinto, Hindu, Lutheran, Episcopal, or anything else that steps outside of its spiritual field and attempts to coerce or impose its mode on the political operations of this country and this continent.

Now we'll welcome the Roman Catholic as a member, but the Roman Catholic political machine, to us, is in the same category as the Mohammedan political machine and the Shinto.

Your Orthodox Catholic in Russia before the Czar went out -- the Czar was the Czar of all Russia, the political head. He was also Little Father of the Orthodox Church. Then he was also their capacity at the end of the war was greater -- in spite of all the bombing -- than when they started, in the whole German steel industry. [THE FORD PLANT WASN'T TOUCHED, THE RUBBER PLANTS WEREN'T TOUCHED. THE FORD PLANT WAS RUNNING WHEN THE AMERICAN BOYS GOT THERE. THEY TOOK THE NEW TRUCKS OFF THE LINE AND RAN THEM UNTIL 3 Oh, yeah, lots of things. You had the big boats in Trieste Harbor, the IMPERADA and the REX, COUNTESS DE SAVOY, and all the big ocean liners were sitting in the Harbor of Trieste used as officers' clubs and hospital ships throughout the war. They were not bombed. But the Yugoslav troops marching down into Trieste, they plastered the Harbor of Trieste and sank them.

Now what in the last ten days, two weeks? Dresden and Leipzig were open cities and had never been bombed throughout the war by the British or Americans, and they used to fly over them -- no anti-aircraft, so on, but on the advance of the Russian troops, the biggest slaughter of civilians in Germany was in Dresden and Leipzig in the last two weeks of the war. The Skoda Works in Czechoslovakia was the same way. They didn't bomb it,

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

but then they found out that the Czech army coming in with the Russians were going to have it -- they bombed the Skoda Works. So the Skoda Works today -- four times larger than it was then -- has big signs along it, "This is what was bombed on such-and-such date." And they have the date on it.

DID WE BOMB MUCH PROPERTY OVER THERE OWNED BY THYSSSEN?

You bombed some of it but you repaired it. Thyssen was one of Hitler's supporters.

I WONDER IF THERE IS ANY SIGNIFICANCE THAT HIS PROPERTY WAS NOT BOMBED INASMUCH AS HE HAD CONNECTIONS WITH A CERTAIN CHURCH?

Well, the Stahlwerke de Bochurn was the same thing. I'm trying to get it over to you.

IT WAS THE SAME WAY WITH THE PLOESTI OIL FIELDS. WE WEREN'T BOMBING THEM UNTIL WE KNEW THE RUSSIANS WERE COMING IN. THEN WE WENT AHEAD AND BOMBED IT.

Well, you see the foreign oil companies were in on the Hungarian and Austrian oil fields -- the Thyssen oil fields in Austria and they plugged in that field up until Hitler took over. Then they opened the field up for production under Hitler -- the American oil companies. Do you get the significance? They plugged it in for years. It was discovered before that.

AN ARTICLE IN THE OCTOBER Iron Age Magazine SAID THAT ONLY 15 PERCENT OF THE CRITICAL BUSINESS OF GERMANY WAS BOMBED. I THINK THERE WAS ONE OR TWO BLAST FURNACES AND ALL THE REST WERE RUNNING ALL DURING THE WAR.

Let's take a case in point. From Switzerland to the sea on a line, there were a number of bridges, weren't there? Big railway and highway bridges. The Rhine is a little bit too wide to walk across. You can't wade across it. Now I think there were around 30 some bridges -- big ones. Those bridges were never bombed by the Allies. Even after we landed in Normandy, they didn't bomb them. After all, you have to leave the bridges intact to allow the Germans to retreat, didn't you? Patton, you know, wasn't stopped by the enemy in his tank advance. He ran out of gasoline.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

There wasn't any opposition. [THEY TURNED THE SPIGOT OFF.] No, the problem of running that many tanks through on this beautiful gallop -- they just figured wrong on their logistics, that's all; in spite of the fact that they had pipe lines laid across the English Channel.

THIS INFORMATION IS GENERALLY KNOWN IN EUROPE. WE DON'T GET THAT HERE.

Well, take another little item. Take the report of SHAEF, "D-Day plus 34." They landed on the Normandy Beach, and D-Day plus 34, the attack was on 80 miles of that beach. Now it was preceded by the greatest aerial bombardment in history and the greatest naval bombardment of all the great capital ships of the world practically. Correct? What is SHAEF's Report, D-Day plus 34?

That is in 35 days, the report on the Germans was 5,400 dead and 55,000 captured.

Now if you go back and study the statistics of battles, figure out what 5,400 dead is for 35 days for 80 miles of front. Will you do that for me right there. How many dead is it per mile of front per day? [VARIOUS ANSWERS: LESS THAN TWO. TWENTY PER MILE. TWO HUNDRED PER DAY.] Is that war? [ANOTHER ANSWER: 2-1/2] That's better. Come on, somebody, figure it out accurately and see what you get. Is it two? [A LITTLE OVER ONE.] Yeah, check it out.

Now the statistics of battles for the last 500 years -- you can't find a battle that is that low. You'd kill that many in maneuvers on that mileage of front with millions without any enemy. What are you talking about? [SOME ANSWERS: "NO SHOOTING." "THEY WENT UNDERGROUND."] No. Now remember the enemy is retreating. It has to leave its dead and you get ten times as many captured as you do dead. [HOW MANY SURRENDERED?] About 55-56,000. What is this? [THEY MUST HAVE BEEN ON THE RUSSIAN FRONT.] Practically all of those were Poles in German uniform and they brought them over to United States.

THE BATTLE OF THE BULGE -- THAT WAS A PHONY, TOO, WASN'T IT?

In the Battle of the Bulge, we put three green American

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Divisions up in the snow on the front in the Ardennes Forest. They had never fired a shot; they had never been in action. The G-2 collected the photographs of aerial reconnaissance showing the massing of the 7th Panzer Corps and the German Sixth Army. G-1 interpreted that they were massing to retreat and they struck the three green U.S. Divisions in the snow in the Ardennes Forest with the 7th Panzer Corps. They went through. And where they went through was what? The biggest ammunition and fuel dumps of the Allied Army, and they took it. Then it was squeezed off and what do you find? You find that those same Panzer Corps shortly afterwards staging a counteroffensive on the Russian front between Lake Balaton Budapest. [THEY USED THE AMMUNITION?] Well, I wouldn't know.

[A QUERY ABOUT AN OFFICER IN THE OSS.] Who, Major Donovan? [NO] Major General Donovan was in command of the OSS. Major General Donovan was made a Papal Chamberlain by the Vatican for his services to the United States Government during World War II. He joins the ranks of Von Papen et al.

THIS FELLOW'S NAME WAS BRUSH AND HE FLEW OVER BEHIND THE LINES IN FRANCE, THE GERMAN LINES, AND HE WAS GIVEN ALL KINDS OF DIRECTIONS. HE WENT TO A CERTAIN ADDRESS AND MARRIED A WOMAN THERE AND STAYED WITH HER, BECAME A GERMAN ARMY OFFICER, AND WAS BROADCASTING BACK TO LONDON ALL THE TIME THAT THIS THING WAS GOING ON, AND HE SHOWED THE CONCENTRATION OF GERMAN EQUIPMENT, BROADCAST IT OVER, AND THE AMERICANS PULLED OUT ALL THEIR EXPERIENCED DIVISIONS AND PUT IN THE GREEN TROOPS. AND WHEN THE WAR WAS OVER, HE HAD TO TURN IN HIS BROADCASTING OUTFIT -- HE WANTED TO KEEP IT -- AND HE WENT OVER AND CHECKED UP IN LONDON AND THEY HAD ALL -- A COMPLETE FILE OF HIS REPORTS. HE SAYS, "WHY DID YOU PULL OUT THE EXPERIENCED TROOPS AND PUT IN GREEN TROOPS SO THAT THE PANZERS COULD GO RIGHT THROUGH?"

Well, I wouldn't know about that. I'm always suspicious of counterespionage. For instance, during the war, the OSS were landing supplies from submarines in the Adriatic for Mikhilovitch -- arms in broad daylight within plain sight of the German-Italian Military Headquarters.

Now remember the United States still has some of the greatest cryptographers of the world. They cracked all the codes.

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

We were in possession of the entire collection of Japanese codes, and the intelligence every day was plotting the position of every Japanese ship -- naval and maritime -- every day. So, the cloak-and-dagger boys over in Lisbon, in order to make a showing, get a good safecracker and they break into the Japanese Embassy and crack the safe -- this is after we were at war -- and take the code book. So the Japanese Government changes all its codes. How dumb do we have to be? We had them. Why go and create the extra work by doing a little cloak-and-dagger stuff -- breaking into a second story?

The man who broke the codes was Colonel Yardley. They sunk him in Chunking in the war. It's just the same as in Technocracy. We have members who were born in China, Americans who became fluent speakers of Cantonese, of Mandarin, Shanghai, and Malay. They're put through what? Over here during the war, they go through the intelligence school, become officers, graduate with what you call honors, and what do they do? What are they assigned to? Remember, they can write and speak. Why, they were assigned to building telephone lines!

One member of Technocracy was Surgeon-in-Chief in the Shanghai Hospital to Chiang Kai-shek. Out on the coast, occasionally they put on a celebration. That family gets up playing musical instruments and sings, "Comin' Round the Mountain," in Chinese. Other songs just for fun, you know.

HOW FAR CAN DULLES GET WITH HIS ?

You see, Dulles is trying to play Asia. That's why he's placing the emphasis on Asia. [THEN EUROPE WILL GET MAD.] The whole question is how many unemployed did we have at the end of the war here before the Korean thing? It went up over 3,800,000 even with the war boom still on. So we had to create a new boom, and that boom is running out, isn't it? (NOW WHAT CAN WE CREATE?) Don't expect us to tell them; we're not going to. They haven't got much chance. You see, time is running out. As I tried to point out to you, there isn't anyplace left on the globe where you can migrate any great population to. You could in past centuries. There were great vacant spaces you could migrate to. There was latitude for any entity to expand in. There's no latitude left except on the polar ice cap, and then you're going to run into trouble. Antarctica? Oh, yes, but even then there'd

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

be .... but seals don't even live down there. [PENGUINS DO.]  
Penguins, yes, but not seals.

Now there are a whole lot of other things you can bring up. I just wanted to take a dig at you on this war thing. I'm trying to get over a significance that the military leadership of this country, as well as the political, was involved in this peculiar conspiracy.

Of course, in 1944, you see, when the Democratic Convention was held, Roosevelt had had two strokes before that convention. That was known. That's why they shoved Wallace out of there and put in Stogie Harry, but the great conspiracy didn't go over. It collapsed like a house of cards.

DID ANY OF THOSE OFFICERS THAT WENT OVER TO EUROPE IN THE AMERICAN ARMY AS SALESMEN FOR VARIOUS INDUSTRIES GET FIRED BECAUSE THEY DIDN'T SUCCEED AS SALESMEN?

You don't fire top officers. You don't fire top generals either. [THEY DIDN'T SUCCEED AS SALESMEN VERY WELL, DID THEY?] They succeeded very well. After all, you collected \$162 billion in taxes in six years or \$12 billion more than they collected in the previous 156 years. I think it's the greatest success that the world has ever seen.

WHY IS THE AMERICAN PRESS INCONSISTENT WHEN THEY TALK ABOUT PEACE, GETTING THE PEOPLE TO BACK A PEACE MOVEMENT, LOOKING FOR PEACE, ETC., YET KNOWING THAT PEACE WOULD RUIN THE ECONOMY?

All right, let's go back to World War I. Do you remember when Woodrow Wilson -- 1916 -- was elected because he was out of the war. That was in the fall of 1916, November. Now the inauguration was later in the year, wasn't it, in those days -- March 4th -- come on -- April 6, 1917, he declared war; in other words, within less than 40 days after he's inaugurated, we have war.

In other words, that was peace. He kept us out of war and that was the propaganda and the papers were full of it. What's the propaganda now? Peace. [I STILL HAVE THE HEADLINES WHERE ROOSEVELT SAID, "NO MOTHER'S SON WILL FIGHT ON FOREIGN SOIL." "I

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

PROMISE YOU AGAIN AND AGAIN AND AGAIN." "I KNOW WHAT WAR IS."]  
Yeah. Hooey. He didn't know what war was.

It's just that I object to hypocrisy, especially hypocrisy amongst Americans. [THAT'S THE WAY IT'S BEEN GOING FOR 160 YEARS.] Sure. [IN THE TIME OF ALEXANDER HAMILTON, THE REVOLUTION .... ] The only thing wrong with Hamilton was that he got fresh with Burr and Burr shot him in a duel. Over where the Stevens Institution of Technology is now in Jersey -- Aaron Burr. For years in New York, I lived in a house that Aaron Burr used to live in. I wouldn't say there was any significance.

CHIEF, YOU MENTIONED LAST NIGHT ABOUT PRODUCING A HORSEPOWER FROM A WINE GLASS FULL OF WATER?

A whiskey glass, 4,000-foot head. [WHERE IS THAT?] California. They split it up in several divisions, but if you let it run from the original head, 4,000 feet, one whiskey glass will produce one horsepower falling 4,000 feet.

THE ILLUMINATING COMPANY IS BUILDING A PLANT OUT IN CHAGRIN HARBOR. THEY ARE GOING TO USE 1800 POUNDS PRESSURE AT 1050 DEGREES SUPERHEAT.

That's possible, yes. That will be your entire radiant boiler tubes -- no convection. Your steam generator is nothing but tubes. Now if you design that correctly -- but you're still fooling with water. Water hasn't a high latent heat. If you really want to do a job, go into diphenol oxide and use a binary system and run the diphenol oxide through your turbogenerator and come out and run it through a waste heat boiler as a condenser and generate steam on the water side for a second turbine. [THEY'RE TAKING IT OUT OF THE HIGH-TEMPERATURE TURBINE AND REHEATING IT BEFORE IT GOES BACK .... ] Oh, well, they can do that, but a binary system is even simpler, and you get a higher thermal efficiency out of it.

I proposed binary systems -- this is '52 -- in 1921 to be fired from the top down, not from the bottom. Fired from the top down and bring it up here like that and put your superheater in here and additional jets in there; but use a diphenol oxide, and when you come in that's under high pressure, and the bottom of each tube has a nozzle, you see. You have no liquid, no drums, no

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

liquid in there. You atomize it right into the hot tube. It's a high circulation system.

Of course, your Russians, you know, are building standardized turbogenerator steam generator sets. We tailor-make ours for the plant. They standardize theirs. Now they have 100,000-kW units. They are 1875 psi, 975 heat, 3600 rpm hydrogen cooled, and they're on a single shaft, high and low pressure -- one shaft. We have under construction in United States right now 245,000-kW unit. [ONE?] One -- maybe another one; in other words, we're going to have the biggest one, by God, if we bust our britches.

THIS DIPHENOL OXIDE YOU'RE TELLING US ABOUT .... ?

But there are other compounds. There are some of the fluorinated compounds. [YOU USE THAT WITH ORDINARY STEEL?] Oh, yes. You see, mercury is a terrific high cost. You've seen the plans on your mercury. Well, but mercury is also toxic when you get it gasified, and it's corrosive; besides, it's high cost per pound. Diphenol oxide only costs a few cents a pound.

Now there are other compounds -- fluorinated compounds -- and some of the hydrocarbon compounds that have a high latent heat, you see, way higher than water; therefore, it will hold more heat, absorb more energy. So in a binary system, now if you went into atomic with molten cadmium, for instance, then you could go molten cadmium to diphenol oxide to water, you see, or to another tertiary system. Is that clear? In each case you'd run it through your turbines and then run it through another boiler as a condenser. [AND IN THAT CONDENSER YOU'D MAKE STEAM FOR ANOTHER TURBINE?] Yes. That makes it a binary or tertiary system. A tertiary would be three; a binary would be two. [BUT WE WOULDN'T NEED ANY OF THAT FOR A CONTINENTAL HYDROLOGY?] Yes, you would, but under our system, you can hook in generation of power from gas, from oil, from lignite, from coal, from atomic, hydroelectric, or solar energy, but you would have some efficiency.

Kindly realize that over 30 percent of the total energy consumed in United States is in house heating -- space heating. It could be reduced to 1/20 instead of 1/3. That would be an enormous saving. It would be simple to reduce it to 1/11, but you

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

could reduce it to 1/20 instead of 1/3. Your air conditioning is all cockeyed, you see, because your buildings are not designed for it.

Instead of chilling down your surface, we chill down the air. Leave the surface -- get the air down so .... The other way, you'd use the ordinary air but reduce the temperature of the surface. What do you radiate from? The human body has to radiate to a surface, doesn't it? So we're doing it the wrong way. We're doing it the right way as far as the gadget manufacturers and the public utilities are concerned.

The same way in your sewerage. Your sewer system is an open sewer, manholes. Your garbage? You're burning it here on the lakefront, aren't you? You can take your garbage and macerate it by simple aerobic bacterial column, wetting it and then drying it. Starting a process, you can produce all of that into a beautiful fertilized compost. We're doing it right now in several places. Yes, but then you're still operating what? And you have sewage disposal systems; in other words, the whole question of waste has to be combined whether it's garbage, sewage disposal or what. That has to be combined.

Now you can run your sewer system. Right here in Ohio you have a city that had low taxes for a number of years -- they boasted of it -- because it didn't have to be concerned about a sewage disposal. They pumped it down into the limestone formations; and now, of course, the cholera and botulini and other bacteria count has risen 60 to 70 miles away in the water, and so has the diphtheria. [THEY'VE POLLUTED OUR DRINKING WATER.]

New York is grabbing water; so are these other cities. New York is even proposing to come up and put giant penstocks into Lake Erie, take a billion or so gallons a day; but then if the other cities do it, Lake Erie will be out a way from the beach out here, won't it? And it will smell worse. [HERE IN BELLEVUE, OHIO, ALL THEY HAVE TO DO IS DRILL 8 OR 10 FEET AND THEN ] Yeah, porous limestone, but Bellevue isn't the only one. No, there's a larger one than that.

ARE THEY STILL USING THAT ACTIVATED SLUDGE SYSTEM TO CREATE METHANE GAS?

Oh, yes, but then to do a beautiful thing -- if you had a closed sewer system where in your buildings your downpipe comes on down and then you run into a sump where you pump out of that by pressure over into your system -- now that's closed from there to the disposal plant. If you had gas generation, it goes up every manhole. Occasionally it collects a pocket of gas and blows a manhole cover up in the air, and sometimes whatever is on top of it goes up with it. But under this system, no. The pressure would go on, and, of course, there is a very simple thing: an addition of corn flour, corn meal -- only about 4 percent is required -- to your bread, your pies, cakes, and pastries and other things -- you wouldn't notice it, but it would increase the methane gas generation in human excreta and sewerage about 150 to 200 percent. Very simple.

So, if your system were properly designed, you face a very interesting proposition: that the citizen would contribute more socially from his waste product than he would from his human effort.

We have sewage disposal systems at this moment operating on the sloppy old system where they're generating the power to operate the entire sewerage disposal and turning 55 percent of the power generated back into the city lines. That would be nothing in power generation compared to what you'd do if you handled it the other way. Then all your garbage and so on would all be fertilizer compost.

You see, you've gotten into an order of magnitude these days that is terrific. Tin containers are up to what? Around 30 billion. Tin containers, tin cans. Glass is way up in the billions. Fruit crates and vegetable crates -- well but that takes chips and it takes trees to make them. Well, when they were down around a million or so, it was no problem, but 500 million a year and you don't grow trees in Brooklyn -- even if there was a "tree in Brooklyn." Do you see what I am trying to point out?

You see, if you plot the acceleration of our consumption and our use -- KDKA went on the air first as a radio station, didn't it, back when? [1920] That's right. All right, that's 32 years. In those 32 years you have come from nothing to where you have 103 million radio sets operating in U.S.A. with the radio capacity of the industry at 32 million sets a year. Well what?

PUBLIC LECTURE BY  
HOWARD SCOTT  
CLEVELAND, OHIO

12-13-52

Can you run it wide open? No.

Television has only been going a couple of years, hasn't it -- television sets? And you are already reaching the acceleration that radio only succeeded after 20 years. Do you see what I'm driving at? [WHAT ABOUT COLOR TELEVISION?] Well, same thing comes up there. It won't make any difference whether it's color.

The only trouble with our television is the number of lines. We're on what -- 550 is it? [500] Now you can't do a good job under 1,500, and you do a better job at 2,000. Your French are at 1,500 and your Russians are broadcasting at 1,500 and 2,000. At 2,500, it's magnifique -- yes, really.

Same thing has occurred in a camera when you try to get definition. You can only blow it up so far. But others, you get .... Wow! Then you could put it up on the wall -- project it. [THAT'S WHAT I'M WAITING FOR.] If you did that, the American public -- all they'd do is sit on their fannies and look at it. They're bribing their kids now. They buy them a television set.

CHIEF, YOU MENTIONED SOMETHING ABOUT THIS 500,000 AGRICULTURAL UNIT.

No, it's 25 miles by 25 miles. It's over 400,000 acres; in other words, it's the only way you can handle the country. You eliminate how many miles of roads? It isn't only roads. Look at the way you're scattering your housing all over. Somebody buys a lot with a couple of acres -- well, he and his brother-in-law or somebody else -- 30 to 40 miles out. Now it's the same all over -- Massachusetts ....

END OF TAPE

MEMBERSHIP MEETING  
WITH HOWARD SCOTT

DECEMBER 14, 1952

What I'd like to review for you today is a process, an economic process, of our economy and of our civilization. If you'll try and visualize -- if you recall your knowledge of history -- for thousands of years mankind had only one approach to the production of physical wealth; namely, the application of human effort, human toil to hand tools. No other process was known. Any economy operating under human toil and hand tools is limited to the division of scarcity for 95 percent of its population and slight luxuries for 5 percent.

Now remember that's the only type of economy that the human animal has ever known up until lately. Under human toil and hand tools, the only way they could produce just a little bit more was to work more human beings longer hours. Even then the increment was so slight that you never could get beyond a scarcity. Now that process was imperative and dominant in all human societies up until now. Kindly bear in mind that If all the human beings in the Mediterranean civilization at the time of Christ had been 100 percent Christian, they could not have altered the standard of livelihood of the Mediterranean so-called Christian civilization 0.1 percent. The same thing applies to Mohammedan, Hindu, or Shinto. The dominant factor was the operation of this earth and its various sectors by human toil and hand tools.

If you will go back to Hammurabi's time in 1350 BC, you'll find exactly the same rent laws, mortgages, interest, and the amortization of principal and interest of any large-sized debt; so that for thousands of years, any bond issue or large debt was only amortizable on the basis of a century. It took a century to pay it off. Why did it take a century? Because the annual increment of production under human toil and hand tools was so slight that you couldn't reduce it and you couldn't pay it off in less than a century; so, therefore, the holder of capital could only reinvest his principal once in a century.

Now modern technology, science, and engineering have brought in something new in the entire history of mankind. It's a different kind of civilization -- a totally different economy, although our political and social institutions remain the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

hangovers from the human toil and hand tools preceding 6,000 years.

Remember that under human toil and hand tools, you could not produce abundance for any large-sized economy. It's scarcity for 95 percent of the population, with only slight luxuries for the remaining 5 percent. The technological production of physical wealth is the antithesis of the process of producing physical wealth by human toil and hand tools.

The technological process produces physical wealth by the degradation of extraneous energy, that is, energy other than human -- through technological equipment. Now, therefore, it has a particular significance; namely, that in a technological civilization, you produce more only by having less human beings work less -- exactly the opposite of human toil and hand tools. Only through the degradation of extraneous energy and technological equipment is abundance possible for mankind on certain sectors of this globe. It is not possible, has not been, and never will be possible under human toil and hand tools.

We are therefore at the end of an era in human civilization, because technological civilizations of this country and of Canada and a few other little places are having their impact. Of course, it's disturbing to a lot of people, because their press and their pulpits and their other avenues of public information keep on continually misinforming the public of this country and of this continent as to the direction and the end result.

War prosperity and the postwar prosperity of United States have given a false horizon to things. Papers tell you it's inflation; so do the prominent figures on the radio. That is incorrect. Monetary inflation does not exist in United States and Canada, and it is not a process of monetary inflation in our internal economy. Under monetary inflation, there's always a dearth and scarcity of goods, and the economy in its administration always resorts to the printing of money or what is equivalent to the printing of money -- the adding of zeros to the bills already printed.

Under monetary inflation, such as occurred in France, Germany, Austria, and other countries of the past 30-some years, the zeros could be printed, more money could be printed --

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

theoretically you could put 50 or 100 zeros in addition and the physical processes of any economy would have remained unaltered. True, it would have liquidated certain fixed income groups, but that was only a passing inconvenience. All that actually happened under monetary inflation to the physical processes was that you changed the prices on the price tags and the same on the inventory tags and you put more zeros on the money; but the physical processes remained exactly the same.

Now we have not monetary inflation in United States and Canada. There is no dearth of goods. There is no scarcity of them; in fact, we're drowning under them. We don't know exactly what to do with them.

We have, instead, credit amplification, which has entirely different end results than monetary inflation. Under credit amplification, we collect taxes from the citizens, the taxes are paid into the federal treasury, and the federal treasury underwrites and advances the credit for the liquidation and retirement of the obsolescent equipment of the country and the replacement of it with brand new technological equipment far better, far faster, and more efficient than what it had yesterday; so, therefore, the more capital goods that are installed under our system or process of credit amplification, the greater will be the end result. And the end result will be totally different from what any citizen with the orthodox and conventional viewpoint expects to see. Now we've had a marvelous time under this credit amplification. Let's see what we can give you a little picture of.

The United States Government in 156 years -- up until 1946 -- collected in total taxes in all that 156 years, slightly over \$140 billion; and in the next 6 years -- 1946 to 1952 -- it has collected \$12 billion more in 6 years than it collected in 156, or \$162 billion. Remember that's cash. They take it away from you before you see it -- besides, of course, all the hidden taxes. Now that's \$162 billion in 6 years compared to \$140 billion in 156 years. It's an insidious process because it creates the false illusion that you have a permanent prosperity and security. Of course, it's kind of painless at first that you take the taxes away from the taxpayer, you extend the credit amplification, and you install capital goods at the rate of \$26 to \$27 billion a year. Well, that is, as the German would say, "Wunderbar!" That's

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

wonderful. If you could only keep it up. The longer you keep it up, the more interesting becomes the denouement, but you can't keep it up very long.

Remember that under our Price System economy we're operating under today in United States and Canada that we can obtain an apparent equilibrium of purchasing power provided the system can create sufficient new debt each year to install an amount of capital goods great enough to pay out in salaries and wages an annual sum equal to or greater than the capital dragdown in the consumer goods field. If it can do that, it can obtain temporarily an apparent equilibrium of purchasing power. The only difficulty with that is that it requires a per annum expansion of the entire economy greater than 7 percent per annum. Well, that's very nice.

Now where monetary inflation did not alter the basic fundamental processes of any national economy that had it, credit amplification as conducted by United States and Canada is going to completely alter the processes; and the more capital goods that are installed and the more taxes that are collected to extend further credit amplification, the faster and the more complete will be the economic and eventually the psychological and spiritual denouement of the American public.

Well, then, there's another little dirty twist to it. The public of United States today owns every plant in United States. They paid for it, but the suckers don't know it. Not only have they paid for it, but they're going to pay twice. Once, they collect it from you as a taxpayer. Now then what do they do? Let's take the Westinghouse Manufacturing Co. of Pittsburgh and Carbide & Chemical. Both of those corporations have borrowed \$300 million each. They have five years to convert. If they don't convert, the debt goes on for perpetuity; there's no time limit. They have a couple of hundred million dollars of their own, and they're going to embark on an expansion program of \$500 million of new plant. The \$500 million -- all right, they will get a Certificate of Necessity. That Certificate of Necessity will enable them to amortize out the \$500 million at \$100 million a year. How do they do it? Well, they add up all the labor costs, all the material costs, depreciation, every other kind of a cost that an accountant can think of, and he can think of more than the average citizen ever dreamed of, and then on top of that you

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

slam in \$100 million. Then and only then do you calculate the profit. They pass that accumulation of price on to the consumer, so that while the taxpayer paid for it in the first place by taxes -- there's no relationship, of course, between the taxpayer and the consumer, is there? The trouble is the sap doesn't know that he's the same person; so insult is added to injury and you pay for it a second time.

Now Hitler did it in a very small way in Germany. We've gone Hitler a hundred better. Why shouldn't we? We're bigger, aren't we? Nothing succeeds like us in United States, so while Hitler shoved it down their throats, we've devised a dual process. I won't go into it anatomically. It's a very interesting process, and, as I've stated before, the end result socially, economically, and psychologically has an entirely different end result.

Well, let's see. Are there any Cigarmakers Unions around anymore? They don't exist. Samuel Gompers, you know, who rose to head the American Federation of Labor, only got to be head of the American Federation of Labor because first he became president of the International Cigarmakers Union. They were a big union. They were so big, their dues were so many, that they could afford to pay the leading opera stars, actors, and so on to come and read to the workers while they made cigars -- sat up in a tower up here where every cigarmaker could see them in the giant plants. Are there any more giant plants like that with hundreds and thousands of cigarmakers in them? No, they've "done gone, honey." They don't work here any more. The Washington machine doesn't have to be read to or sung to. It merely has time limit load switches and does 4 million cigars a year with a couple of girls, and all the girls are thinking of is where do they go when the shift ends.

The wrought iron puddler, the glassblower -- you can go on down the list; they're all gone.

It's only a few years ago that John L. Lewis had 600-some thousand coal miners. John L. Lewis and his United Mine Workers have lost 100,000 coal miners in the bituminous fields since the war, and he's due to lose another 100,000 or more in the next couple of years, because your new processes of coal mining are just coming in with a rush. So, in another few years, if the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

present royalty payments on coal are maintained as by agreement with the United Mine Workers and the coal operators, then the total royalty payments per year will equal per employed coal miner an additional one year's wages.

Well, there never was any sense in coal mining for the individual. You never heard of anybody, any coal miner, ever acquiring any education and culture and anything else, did you? Not so long as he stayed in the coal mine. But don't forget that your mores of your culture condoned for the human toil and hand tools and was only just and meet that you should work, because the "poor will always be with you," and if you didn't work, idle hands would find evil for idle hands to do -- the devil would get you.

Well, that kind of nonsense is only an excuse for stupidity and moronity, because if you can't design a better system, then you're stupid enough to fall for that kind of nonsense, and the world has.

Now here comes another one. Remember it's only a few years ago -- right in this state that I was invited to view the first strip mill. Would the United States Steel take it up? Oh, no, it was too big. They didn't have to bother with anything like that. United States Steel is like every other large corporation, and it's interesting to observe in passing that the United States Steel Corporation since 1901 in its formation has yet to make a single contribution to the technology of ferrous metallurgy -- a single one -- although its production of steel has passed its billionth ton. Correct? It's paid dividends, yes, but it's never made a single contribution.

Now that first strip plant down here in Ohio staggered along at 380-420 feet per minute. Then from there they put it in Otis and a couple more. Then they got it up around 600 to 700. Well, you had steel plants here with thousands working in the strip mill, where they lugged that hot strip around by hand. It's a long way, isn't it? Only a few years back, your Jones & Laughlin was operating at 6,800 feet per minute. New steel plants on the design boards are designed to operate at 10,000 feet per minute. Honeychile, you aren't going to be on the same floor with it. There aren't going to be any men around it, because if anything happens at 10,000 feet per minute, you'd just better not be

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

there. You had better be somewhere else. So, they're going to be up in a nice air conditioned, fluorescent-tube lighted, all remote controlled, and it will go through automatically. Why not?

In other words, the steel worker, the steel process, is still antiquated. As soon as you get your high frequency reduction of ore and your continuous ingot which is coming in, no more pouring it out of the open hearth and your ingot mold. Stripping the mold? No, it comes out in one continuous ingot and you chop it off the length you want. These are all coming in.

Paper -- it's only a few years ago up in Wisconsin we told them what was going to happen up there -- that the paper plants along the Fox River with their 120-inch drums were antique and that the banks and the RFC were going to loan them money to retire their industrial bonds and to buy equipment for new plants, and that the old plants would be left and they would be sold to a salvage company. The salvage company would take everything out of the old plants worth taking and then forget to pay the taxes, and the obsolete junk would be left on the hands of the community. It's happened.

Well, the plants have moved south and other places. You have 300-inch drums today, and instead of 400 to 600 feet per minute, the 300-inch drums are doing 1,400 to 1,600 feet per minute; and you say, "Well, that's just about as far as they can go." Oh, is it? The new process for handling pulp is a high frequency electronic segregation of the pulp fibers without water. The gigantic volume of water handled by a pulp and paper plant where you'd hydrate it first, dehydrate it second -- you won't need it. And what happened? Why, you'll have to hunt for a human being around that kind of plant. You'll need a microscope to find him. Then you up the production. What speed is capable? 2,500 to 3,000 feet per minute with that process. You'll have less men in the plant and less plants to produce more., correct?

Take your plywood plant. In 1928-9, you had 10 plants in United States. They produced slightly over 100 million feet. Today we have bigger and better plants and better processes and we only have 80, but the capacity is 4 billion feet. What are you going to do with all that 4 billion feet if you run it continuously? Can you use it up in the U.S.A.? Huh-uh. Are you going to give it away? Well, that's the problem. Who are you

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

going to give it to? Well, of course, you can build prefabricated outdoor privies for the Chinese, and that won't help you much because it will only probably give you a year-and-a-half run and then you're sunk.

Remember the first broadcast of KDKA -- 1920, wasn't it -- out of Pittsburgh? And the radio industry staggered along for a number of years. Now the radio industry in United States has a capacity of 32 million sets a year and there are 103 million radio sets installed and operating in the U.S.A. Can you have many more? Well, it would be kind of difficult. Somebody suggested that you put one in every "john." Well, the only trouble with that is that there aren't enough "johns" in U.S.A. to make it worthwhile.

Now television has accelerated away beyond that. It took 20-some years for the radio, remember, before it actually got going. The television hasn't been going ten years, and its acceleration today is greater than radio ever was. You've got television sets -- yes, we can show you warehouses where there are 30,000 of them, and not the little ones either -- 20 inch or better. You've got television sets, honey, plenty.

Now this is moving up. Nylon stockings? Nylon is only a few years old. In nylon stockings, we now have a capacity in U.S.A. of one billion, 200 million pairs. It's just reached that point where it's wonderful. There are not enough women, there are not enough female gams, and it wouldn't cure it if every female had four legs, even if it would make it inconvenient for the male. It's getting difficult.

The more technology that is thrown into operation in our economy, the more and more we approach the production of abundance in United States and Canada.

In tin containers, what are we hitting? You don't realize it. We're hitting around 30 billion tin containers a year. Campbell's soup consumes 500 million cans a year for tomato soup alone. It doesn't include the other soups. Glass containers are up in the billions, too. Those crates for fruit and vegetables -- it was all right when they were only running a million of them, but when they're up in the hundreds of millions, it chews up forest to make crates, and you can't grow the forest fast enough

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

to meet the increased consumption of crates.

Frozen orange juice -- the consumption has jumped into the blue, but the capacity has jumped way out beyond the blue; and in spite of the increase in consumption of frozen orange juice, there are more cases -- millions -- in inventory of orange juice than they ever had in history. Isn't that wonderful? They don't know what the devil to do with it.

Your National Cash Register -- cash registers are known all over the world as being synonymous with the word "Yankee" or "American," and now the major portion of the National Cash Register's income doesn't come from United States or Canada. It comes from abroad. Well, are people not using cash registers anymore? Oh, yes, but then there's one cash register in United States for every 32 Americans -- men, women, and babies. Can you have any more? Well, I could make a nasty suggestion, but it wouldn't help very much.

Saturation is something that's coming up with this technological system of production and it's coming fast; and on top of this, we have been exporting technological equipment around the world. We've had a grand time of it for the last forty-some years. Now technological equipment, remember, is more revolutionary in its impact on human society -- remember, it's the antithesis to human toil and hand tools, and we of the United States have been exporting this most revolutionary concept that ever occupied human minds and human time, a concept a million times more revolutionary than the Declaration of Independence or the Constitution of U.S.A. They are obsolete compared to the revolutionary concept of technological equipment. We've been dumping that around the world and installing it, with the result that the rest of the world has intuitively grasped the concept that went with the technological equipment, and they have decided that they want their tomorrow here and now and not hereafter.

So, you've got a wave of social change all over the globe and they're going to get it. They want our know-how and our technological equipment, but they don't want our religion, our social concepts, our political institutions, or our businessmen or our salesmen. They're frank enough to publish it and say so, and we who have exported this terrific revolutionary proposition deny its revolutionary impact. We, whose origins go back to

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

political revolution, we wish to suppress social change around the globe. Really amazing -- amazing social irony that the U.S.A., founded on political revolution, exporter of the greatest revolutionary thing in all mankind's history, are internally in our thinking denying the greatest thing that ever happened to mankind, because we have become in the last 15 years the greatest Bourbon bourgeoisie of any human society known through history. Change internally in U.S.A.? The Republicans were wrong. It wasn't time for a change. What is the matter with the public was that they were scared to death there would be change, and Hazardous Harry wasn't giving enough assurance, so we shove him out. The only thing that's bothering the public is they wish they had two snoots and four feet so they could get them all in the gravy trough at the same time.

Well, it's coming to an end, not because the American public became immoral or degenerate or anything else. It's coming to an end because the technological equipment is going to force it around the world. Now there are so many points to this that I'm trying to get you to respond to it. Britain, France, Germany, Italy, and India, and all of the world -- they're not the same as they were in World War II or in 1929. It's a different world just like ourselves. Remember we introduced and publicized the sugar cane harvester and the cotton picker years ago in the South. I stood in front of audiences ten times larger than you have here and more in various cities in the South, when there would be 200 people sitting in the front rows with guns stuck in their belts. "No, suh, you aren't going to introduce that contraption down here -- not over our dead bodies."

Well, last fall I was speaking down there again. You have the white woman of 25 years ago and more in the South -- would she condescend to running an elevator in a hotel? "Why, sir, you insult me!" They're running the elevators in the hotels, they're serving the food, they're doing everything else, because the black boys have done moved, and the cotton picker goes down the row just as the sugar cane harvester goes down the row, and 100,000 will never cut that sweet grass again.

Remember FORTUNE MAGAZINE, back in 1935, republished the front cover of TECHNOCRACY MAGAZINE, on which was a full page photograph of the cotton picker, and under it FORTUNE MAGAZINE stated that Howard Scott and the Technocrats were using the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

cotton picker to frighten the American bourgeoisie; and they go on to explain that there had been numerous attempts to develop the cotton picker but the bourgeoisie really didn't have to worry about it because it wouldn't happen. Now they print color photographs and they interview John Rusk. Well, I had dinner at John Rusk and Mack Rusk's house in Memphis, Tennessee, years ago. We battled with them about it, and they published full page advertisements in color of the six firms that are making cotton pickers today. That is only coming into its own, because the new two-row cotton picker will pick 39,000 pounds of cotton in 7-1/2 hours; but, brother, you've got to straighten those rows of cotton out to give the machine a run, And when you do, the little farm goes overboard.

I'm just giving you a little of this. We could load you up with it. It's not our object to drown you in it. We're trying to throw enough at you to arouse your consciousness of where in the devil you are today and where you're going. Thank you.

---

In Europe, Russia is only 20 miles from her boundary line to Hamburg -- 30 miles -- 30 minutes, that's all. A little over 70 miles to the Rhine, and yet the nonsense is, of course, that somehow or other we think that the Russians are stupid enough to take Italy. What in heaven's name is in Italy? Italy has a population close to 48 million going up at a 500,000 net increase a year. Britain has over 50 million going up at half a million a year. France has had the first change in its birthrate in 50 years. West Germany, that used to produce half its foodstuffs -- 50 percent -- before the war, now has 9 million more population than it did before the war and is only producing half as much.

Before you get into any idea about resources, West Germany only has one -- coal. No iron ore in the Ruhr. The French have coal mines, yes, but it's thin seam, high angle, and poor coking, they have iron ore, an ilmenite ore, but it's not like our Mesabi used to be. The Fe content is under 40 percent, and the steel capacity of Western Europe today is 72 million tons.

Great Britain is mining iron ore of 23 percent Fe. That means it takes five tons of iron ore to produce a ton of steel, and that means consequently more coal. Great Britain has under

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

purchase contract today 2 million tons of iron ore from Wabana, Newfoundland, a million from Kirkonnes in Norway, and another million from North Africa. It tried to buy several million tons from Russia the same as it tried to increase its food allotment to 2 million tons of fodder grain, and the Russians got dirty just a little while ago and cut them back to 200,000. What's the answer? The Russians do not need Western Europe. They have the resources, and all they have to do is sit where they are.

Now if anything arises in your mind, just speak up.

GIVE US A BRIEF RUNDOWN OF THE EISENHOWER CABINET.

I think I've done that.

HOW MUCH ARE THE PRESENT AND FUTURE ADMINISTRATIONS INFLUENCED BY THE VATICAN OR ANY OTHER FOREIGN POWER?

Well, very simple. If we had 4 million Mohammedan votes in United States, Mecca and Medina and Arabia would have an influence in U.S.A., wouldn't it? We'll do anything for a vote at election time -- anything. In our system, of course, the powers-that-be always seek to build up a man on a white horse. The advertising and propaganda machines will go to work, the radio, the television, and everything else will spew it forth, and the buildup occurs -- the man on the white horse; but the powers-that-be have to be assured of one thing before they'll create a man on a white horse; namely, they have to know that the man on the white horse isn't a man on the white horse but a moron and a jackass exactly like themselves. Otherwise, he'd never stand a chance of getting there.

Eisenhower, remember, is nothing -- nothing particular as a general. He was deputy to MacArthur when the Bonus Veterans were pushed out of Washington. You'll find his photograph right alongside of MacArthur when they were slewing the veterans. He was also deputy to MacArthur in the Philippines. But he is the best public relations officer the United States Armed Forces has had in a good many years, if not in its entirety. He's a smoothie, and a smoothie is "one who always shaves a posterior before he kisses it." We know Ikie.

ARE OUR ALLIES HOPING FOR MORE TITOS BEHIND THE IRON

CURTAIN?

Well, they can hope, but, after all, that's a pretty slim proposition. We'd like to have more war, but the trouble is who have we got for allies? Britain is a deficit nation; so is Italy; so is West Germany; so is France. And Japan? That's even worse. Japan is 84 million population. Her population is increasing at a net rate of 1.6 million a year to 1.8 million a year. Japan has not got the resources. It cannot maintain itself. True, it has excellent copper; that's about all. Two low-grade, high-cost coal deposits that will not coke. It hasn't the iron ore. It hasn't the oil, although it does produce 2-1/2 million barrels of oil a year on that little thin strip offshore of Honshu and Hokkaido. It has to get huge volumes of iron ore or cotton, petroleum, cellulose, and other metals. Where can it get them from? Its resource base is the Continent of Asia.

Japan, before World War II, had a textile industry, and it exported 2.3 billion square yards of cotton goods, and it was the world's largest exporter of rayon. It's coming back now, and if its spindles are fully operated, it can export 3 billion square yards of cotton goods. What happens to Europe's exports to the Far East? But where is Japan to get the cotton from? It would take 5-6 million and more bales of cotton a year. It will take 26 to 28 million tons of iron ore a year, 25 million and more barrels of petroleum a year, 3 million tons of cellulose. Is United States going to supply it?

The destiny of Japan is set regardless of whether there is a single Russian or Communist alive on top of the earth, because from now on out it can only be a manufacturing satellite of the Continent of Asia unless you're going to assume that the armed forces of United States are going to be mobilized great enough to reconquer the Kuril Islands, Sakhalin, Manchuria, China, Korea, Formosa, Indochina, Siam, Burma, Malaya, and Indonesia. If you can do that, then you can make it a free gift to Japan and it might be different. What chance have you of doing it with complete mobilization? About as much chance as a celluloid dog has of catching an asbestos cat in hell.

There are some questions here on Africa and other places in the world. Social change is on the march; there is trouble. Korea isn't the only war. You practically had civil war for the last

MEMBERSHIP MEETING  
WITH HOWARD SCOTT

12-14-52

six years in the Republic of Colombia. Bolivia, of course, just had another revolutionary upset, Bolivia, since it broke away from the Spanish Crown, has had 169 revolutions or one every nine months. Really interesting.

Your two great Indian nations of South America have been suppressed in Ecuador, Peru, Bolivia, Chile by the church, the Spanish grandees, and your modern economic colonial royalists of your mining and oil companies mining copper in the Sierra del Pasco at 11,000 feet or the tin ore of Bolivia at around 12,000 feet. You still have the old-time hacienda with the stone walls. They still have their own church, that is, the owner has, right inside the residence, and the school; so, the Indian is kept ignorant. He lives in a mud and stone hut with a mud floor. That's the way it's been. Well, they are breaking loose.

So Bolivia nationalizes the mines. Chile is proposing to nationalize the great copper mines and the nitrates. Venezuela is proposing to nationalize the oil. What happened this week in United Nations? The United States attempted to get through the United Nations a resolution that private enterprise would be favored by all the nations in the development and exploitation of resources in their country. The resolution went down, and the resolution that went through supported nationalization and development of resources in their country, and that if there were foreign investors, they would be given a minimum of compensation and that no guarantee would be made to foreign investors. The vote? Thirty-one to one. Who was the one? The United States.

We've told you before the day is coming you "hain't gonna have no friends, honeychile, on the other side of the street." That not only are they going to spit in your eye but they're going to kick you in the pants. Oh, yes, we have friends. In Woodrow Wilson's day, the League of Nations, open covenants openly arrived at. Americans were eulogized around the globe and the father of this Henry Cabot Lodge, you know, and John Lodge was the one who pulled the political rug out from under Woodrow Wilson, correct? Pulled it out here at home, but America and Americans were still eulogized around the globe. Today? Huh-uh.

As I told some of our top commentators -- radio men in New York -- a couple of years ago, the day would come when they would have less and less places to broadcast in abroad and finally they

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

would only have their own back yard from which to broadcast, and that would be so full of international dead cats that the stink would be terrific. Well, it's coming home to roost.

It's a tough one. Africa is what? A great continent, and there are over 160 million blacks in Africa and slightly over 5 million whites. In South Africa, there are 9-1/2 million blacks and 2-1/2 million whites, several hundred thousand Indians. In Kenya Territory, where the Mau Mau is raising the fuss right now, there are 5-1/2 million blacks, 108,000 Indians, and 29,000 whites. Now don't think that the trouble is only in one spot. The Union of South Africa and the Malan government is only one place. You've got it in North and South Rhodesia, you have it in Tanganyika Territory, Nyasa, and Kenya Territory. You have it in British West Africa, French West Africa, Belgian Congo, and you have it in Morrocco, Algiers, Tunisia, Egypt, and the Sudan. How in the devil much more -- it's stupid! You can't run Africa without the blacks, and we've looked down our noses at them, and for thousands of years the European never penetrated Africa beyond the Littoral of the Mediterranean. Africa can be developed but it can only be developed with concepts far greater than the white man has ever entered Africa with before. It will take a consortium of power.

Yes, you can throw a dam across the Congo not far from Leopoldville. Its length? The concrete part of the structure would be 14,000 some-odd hundred feet in length. It would be 400 feet high in round figures. It will back up one of the biggest lakes, and when it did, it would go north through a glacial trough and overpour into Lake Chad, and you would have water connection across Africa. You dam the Nile at Mugalla and put up your barrage dams on Lake Victoria. Lake Victoria, which is shallow, could become one of the most gigantic storage reservoirs on earth, and the water pouring out of there would be diverted by the dam at Mugalla northeast into another tributary.

You could have deep water transportation from the Mediterranean to the Victoria, and Sudan and Egypt would have 60 percent more water for use than it has ever had in its history, because in doing that, you would avoid the terrific evaporation of the giant swamps of Central Africa. We know. We have the maps. We know what the problems are, and they're not going to be done by missionaries or American salesmen or beautiful resort hotels

MEMBERSHIP MEETING  
WITH HOWARD SCOTT

12-14-52

or American dollars.

Don't blame the situation in Africa on the Russians -- not that the Russians wouldn't step in and utilize it if they could, but our position has been fallacious all over the world. Here's social change occurring because of the technological impact of modern equipment, and we, in our reactionary Bourbonism, are conducting a crusade to prevent social change all over the globe.

Well, the moment that you start on that kind of worldwide repression, you're taking in too much territory and too many human beings, and it doesn't bode well for us. After all the money that we have dumped abroad and the materials we have dumped abroad, the taxes that were collected in the last six years -- as I have pointed out -- if we had spent them here on this continent, we could have rebuilt this continent; but, no, we poured it down every rathole from hell to breakfast, and now they don't even know what they want to do with Korea, let alone all the other places.

I HAVE BEEN THINKING -- SINCE I KNOW THE CHAMBER OF COMMERCE WANTS NOW TO PRESENT A BILL TO THE EISENHOWER ADMINISTRATION TO TAKE BACK (I DON'T KNOW WHETHER IT IS TO TAKE BACK OR TAKE OVER) BUT ANYWAY, THEY WANT TO TAKE THE THINGS THAT ARE ALREADY OWNED BY THE FEDERAL GOVERNMENT BACK TO THE PRIVATE ENTERPRISE SYSTEM. IS IT POSSIBLE FOR A GROUP OF MEN OR ONE MAN AS A TAXPAYER OF THE U.S. TO ENTER INTO WITH WHOEVER PRESENTS A BILL LIKE THAT TO THE GOVERNMENT, BEFORE IT IS SIGNED BY THE PRESIDENT -- IS IT POSSIBLE TO BRING SUIT AND TAKE IT TO THE SUPREME COURT TO GET A DECISION BEFORE THE PEOPLE'S PROPERTY CAN BE TAKEN AWAY FROM THEM?

Well, it's possible to bring suit, but, after all, the Supreme Court is appointed for: the express purpose of adjudicating what? Adjudicating the process of economic channelization for the benefit of the prime holders of debt and the proprietary rights of those prime holders. Now the proposition you're talking about is Charles "Electric" Wilson's, not Charles "Engine" Wilson's. One is Detroit, the other is General Electric. What you're talking about is Charles "Electric" Wilson's proposal that the post office, all the dams -- Shasta, Coulee, Hoover, and all the rest, all the reclamation projects -- that we cancel out government bonds and issue equities and we

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

sell all these projects to private enterprise.

What did Hitler do in Germany? The Deutsches Reich owned all the railroads and it owned a considerable portion of the Deutschebank of German industry, but under Hitler, Hitler enabled the corporations to buy the government property from the government with the money they took from the people of Germany. Is it any different? No, it's just bigger than Hitler ever tried.

ON SATURDAY, I HEARD A RADIO ADDRESS BY A PROFESSOR-ECONOMIST WHO WAS ADDRESSING THE MEN'S CITY CLUB OF CLEVELAND. HE TOLD THEM THAT ALL WE HAD TO DO TO HAVE A SOUND ECONOMY WAS TO GO BACK TO "THE GOLD STANDARD. WHAT IS YOUR COMMENT ON THAT?

Well, of course, that's always come up -- they always want us to go back someplace. Apparently they're scared to death that something lies ahead of us that isn't going to be nice. Go back to the gold standard? We had to get off it. We're not on the gold standard. Gold is on the dollar standard. Try to realize it. One of the greatest and most magnificent of political deals that has ever occurred in history was the movement of United States gold certificates out of United States to Great Britain under the Roosevelt Administration, and American bank deposits in Great Britain rose over 460 million pounds sterling, when pounds, remember, were pounds.

Gold at the time of the movement was \$20.62 an ounce. In a short time it was revaluated, and, of course, those certificates that had moved from the U.S. to the British banks at \$20.62 per ounce came back to U.S. at \$35, did it not? Now all the political payoff boys in history were shysters. The little black bags or the little collections were nothing, because you figure this out and it was a \$2 billion difference. Magnifique!

Go back to the gold? What do we do with gold? From the standpoint of metallurgy in the national economy, it's one of the most useless things. We dig it out of the ground, we mill it, we transport it distances, then we dig a hole in the ground and put it back in the ground. How dumb do we have to be? After all, we've got billions of it down there. Well, so have the Russians. South Africa isn't the only great gold producer. They can dump gold in these foreign countries because they're big gold

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

producers themselves.

The Lena gold field concession -- one of the great gold fields, once managed by the Lena Gold Field Combinac controlled by Urquhart, Talbot, Baker, and Hoover -- you never heard of them before? Urquhart, Talbot, Baker and Hoover of London. Remember I've referred occasionally that Leslie Urquhart had a lot of friends -- remember that line? Well, Herbert Clark Hoover is the Hoover I'm talking about. So, going back to gold, there's no sense in it. Going back to anything, there's no sense in it. You can't go back even if you wanted to. You've got to go on. Today with this nostalgia of the good old days, you know, the shanty Irish wanting to go back to the lace curtain Irish -- it won't work. You've got to go on.

MY SECOND QUESTION IS: I AM A CHARTER MEMBER OF TECHNOCRACY. I EXPECTED THE CRISIS ON OR BEFORE 1942. OUR POLITICAL SYSTEM SEEMS TO BE DOING VERY WELL, AND WE KNOW HOW THE STOCK IS YOU SAID AND WE KNOW WHERE WE ARE, BUT JUST WHAT IS AHEAD IN THE FUTURE?

Technocracy never made any statement that the Price System would go to pieces at any particular time. Now if you or any other person in this organization expected it to fall apart in 1942, that's purely your own -- not CHQ's. I think I'm borne out by that. Now what we have tried to show you is that the trends are accelerating in certain directions, certain movements. After all, we weren't wrong about this war or the production or anything else, and we're not going to be wrong about it now. If somebody is wondering -- a lot of people, you know, ask me questions. Is it going to be six months or a year? What the devil do you want a date for -- why? So you can get personal salvation ahead of your fellow American and hedge your investments? We're not God. We can't tell you the date. We're only analyzing the operating data of the physical probabilities of this country. What we're rendering is a close approximation. When a closer approximation is rendered, we'll be able to do better; but it's not prophesying or soothsaying or anything else. It's analysis of a different order. I think I've made it clear where we're headed. Let's sum it up in this nice little phrase: That the next five years in the history of United States will be the most socially decisive in that of mankind and the next ten years will be the most conclusive. Do you want it any better than that?

MEMBERSHIP MEETING

12-14-52

Come on, let's have .some fun out of this. Any more of you got any ideas?

WHY IS THERE A BULGE ON THE KOREAN FIGHTING LINE WHERE THE FIGHTING IS PREVALENT?

The battle line in Korea is 155 miles long. North of the battle line is the throat in Korea which is 100 miles wide. The battle line dips below the 38th parallel on the west. Now, then, it crosses the 38th and goes north in a little loop like this on the eastern end of that line. Well, right between the 38th parallel and the fighting line in the territory of the Republic of North Korea is the second largest producing tungsten mine in the world. Does that answer your question?

SOMEBODY WANTS TO KNOW ABOUT ABUNDANCE AND HOW MANY YEARS.

What I'd like to present for your consideration is this: that the march of energy consumption and technological capacity in U.S.A., we have, according to the power industry, 41 million kW slated for installation in our public utilities -- power houses. Now that is not in industry; that's only in public utility power houses -- 41 million additional kW. If you think this country is bothered with economic problems of labor and production with its present capacity of 76 to 78 million kW, what's it going to do when it gets 41 million additional put on top of it?

Now they also propose to put in \$26-27 billion of capital goods in 1953. Technocracy hopes they do. Let's get that clear, because the more capital goods that are installed in United States, the greater the finality. Am I making it clear? There will be no doubt about it.

And where is it headed? Let's state it in another way: We only have to keep this up a short time before United States will be able to produce and distribute abundance in this country of ours with a minority of the adult population. The majority of the adult population will not be required in the production and distribution of abundance in U.S.A. Then what the devil are you going to do with the majority? Give them ration tickets for mink coats, Coca-Cola, bourbon whiskey, champagne, night clubs, and

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

automobiles, so that the majority can consume the abundance produced by the minority? Do you think that our archaic political-economic system can handle that problem? The hell they can!

You've got 19,000 police forces in U.S.A., over 3,000 counties. We're the only major country on the face of the globe that hasn't undergone a fundamental revision in its political structure in the last 160 years. We're an anachronism. Do you think there's any relationship between our political structure and the modern technology we have out here? Oh, utter nonsense! Washington could have sat down and enjoyed the company of Plato of ancient Athens. They would have understood each other. They had the same values, the same concepts; and today we are farther and further from Washington than Washington was from Plato. Even Lincoln wanted to build the Union Pacific three feet wide. That's how much he knew about it.

SOMEONE WANTS TO KNOW: DOESN'T MACHINES MAKE MORE JOBS THAN THE PEOPLE THEY PUT OUT OF A JOB?

That's kind of naive -- positively. A couple of our members have just designed a plant that went into operation a little less than 60 days ago. You all know the product: those flashlight batteries that you use in your flashlights -- two for a quarter. Well, the new plant is completely automatic. All the material, the process of fabrication, loading the flashlight batteries in the little flat box and putting them into the big shipping carton. Production? One million flashlight batteries per shift. Cost? Six mils. Employment on all shifts? Eighteen. Johnny doesn't work here any more.

Now I had this same thing come up years ago at the joint session of the MIT and Stevens Technical Summer Session, when someone -- I think he was one of our financial brokers -- got up when I gave the analysis on the Corning bulb machine, and said, "Well, doesn't it take as many men to build the Corning machine as it displaced?" Well, he had forgotten that right in the audience was the chief engineer that had built it. He said, "Yes, it took 37 men six weeks, and then we're out of a job."

What's the reason for machines? The lowering of costs. The only reason you put in technological processes and equipment is

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

to reduce the cost. If there were no technological equipment and no extraneous energy, the population would be working from dawn to dark. Your hours have come down, and right now what? Tires? You have lots of tires, haven't you? Just loaded with tires. We're loaded with plywood. Whiskey? We have 768 million gallons of whiskey in stock in the hands of distillers alone, plus 115 million gallons of proof spirit. Now that does not include any whiskey in the hands of saloons, bars, liquor stores, importers, or wholesalers. That's only the distillers, and if they never made another drop starting tonight, they could satisfy the annual consumption of United States for the next nine years. You're going to have a lot of spiritual sustenance. You can fortify yourself against the exigencies of the coming economic situation. The quickest way to get it, too. It'll cost you less in the end.

Now we're loaded. We're not getting the hours. In industry after industry in the civilian stuff today, they are not making the hours to support their families. They have to go out and take two jobs. Yes, sir? [IS THAT CONFINED TO CIVILIAN INDUSTRY?] Not now; it's falling in the other. [THE LIBERTY STEEL PLANT, WHERE I WORK, HAS THREE ASSEMBLY LINES FOR MAKING 105-mm. SHELLS BY THE COLD FLOW PROCESS SET UP AND HAVE BEEN OPERATING -- WE'VE BEEN WORKING ONE OF THOSE LINES THREE SHIFTS, ONE LINE ONE SHIFT, THE OTHER LINE NOT.] Good. Thank you, sir. EWE HAVE A WAR EFFORT.] We have a war effort.

We have members of our organization -- one of them a member of the Continental Board of Governors is the chief designer of some big presses -- 35,000 tons, 50,000 tons, and 78,000-ton presses. If you think the presses you have in now -- you could take a block of stainless steel on that 50,000 or 78,000-ton one. What do you want, spaghetti? You can have it in stainless steel, correct? The 78,000-ton and the 50,000-ton will require a 22- to 25,000-ton extrusion press to feed the master one. Then the fun begins.

It's happening all over the country. There are more married women employed outside the home today than single and more than ever in history. There are more people holding two jobs -- millions of them. Even in the United States Steel general office right in New York, married younger men, younger executives, war veterans, their wife is working, and they're working outside of the United States Steel office in Macy's nights and Saturdays.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

We've got to work to keep up with your gadgets. In fact, the man today can't afford to marry one woman. The only way he can get by is to marry three of them, so there will be four jobs on each shift.

Studebaker just laid off 12,000 -- a nice Christmas present. Five plants in Detroit have laid off thousands. What's the cutback? A cutback of war materiel: tanks, trucks, guns, and shells. Why? Because you've got so damn many tanks and trucks, guns and shells, that you don't know where in the hell to put them.

This economy of ours, with its technological capacity today, can produce an abundance of consumer goods and an abundance of war materiel at the same time and drown us in both of them and still not give the employee enough hours to meet the high cost of living and no security. I think that's a fair statement.

What's happened? The General Motors plant in Trenton, New Jersey -- 4,600 employees were working there, and in answer to an investigator's question, they replied they owned their own home. Well, they meant they had purchased them on a 25-year basis, or 30. They didn't own them; they were paying for them. Then comes the startling thing when they get all the data in, that over 42 percent of all their employees had sunk themselves to this extent that they were paying practically two weeks' income in a month to maintain their mortgages and their installment buying; so, the food bills and the milk bills for the kids and the wife -- bang. And now they're worried. This is the greatest country on earth, isn't it?

Individually we're more competent and more intelligent than any other people and collectively we're the dumbest.

THE AMERICAN COLLEGIATE DICTIONARY THAT WAS PUT OUT RECENTLY HAS A DEFINITION OF TECHNOCRACY SPELLED WITH A SMALL "T". DOES CHQ HAVE THE COPY?

No, we haven't got that. We don't care whether it's a small "t" or a big "T".

I DON'T REMEMBER THE DEFINITION, BUT I THINK IT USES THE WORD "ADVOCATE" SOCIAL CHANGE. WOULD YOU SAY SOMETHING ON

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

THAT?

Well, I don't know the definition. [I MEAN WE ARE ADVOCATING -- TECHNOCRACY IS -- SOCIAL CHANGE. WOULD YOU COMMENT ON THAT?] Do you mean are we advocating social change? Well, all we're advocating is that the public of United States better get conditioned for it. Technocracy isn't creating the social change; the march of events is. We're the most unprepared country on the face of the globe for what's going to happen. We've had that beautiful Bourbon bourgeoisie. In other words, you've got heaven right here if you can get four Cadillacs in your garage, but you haven't gotten anywhere if you've got four Fords. You've reached a point what? Where if you get hit with a Ford, you're insulted; if you get hit with a Cadillac, you're honored. All right, admit it.

How can you tell an American? It's very difficult. Can you tell what he is? Well, if you see him coming out of the church on Sunday just after services -- a number of them pour out of the church -- you know at least he's been inside that church; but if you're two blocks away where there isn't a church, you can't tell a Christian from a Republican. You don't know where you are.

The same way as Union labor thinks it has some powers of negotiating job trust on the job. It would have more power off the job if it dressed its members and its children in the same type of things. You see what I mean? Like the CIO telling us in Detroit, "Mr. Scott, when Technocracy runs a motorcade into Detroit, the entire motorcycle police force of Detroit turns out with squad cars. Well, after all, we've got over a million members scattered in Detroit and environs and we can't do that. Where do you get the pull to get that?" "It isn't pull," we told them, "they have to if you turn out 200 or more cars. They have to handle it for purely physical reasons of traffic" So then they came back at us and said, "Well, Mr. Scott, if we painted them the same color and put the insignia of Technocracy on them, would we have to be members of Technocracy?" I said, "Certainly not. There's only one provision: you'll have to paint a minimum of 5,000 of them. That's all."

THE INCREASING DEMAND FOR PETROLEUM CAUSED BY OUR TECHNOLOGY AND OUR HAVING TO IMPORT MORE AND MORE -- HOW IS THAT PROBLEM TO BE DEALT WITH?

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Well, of course, under this system as it gets scarcer the price goes up. It's going to bring some rather interesting complications. We have moved out of our cities and caused blighted areas, and we've built so-called homes all over the lot wherever we could buy a couple of acres, 40 miles or 50 miles from anything. Why? Why could we do that? For the simple reason that we had cheap fuel automotive transportation. We could move out of the city's center, blight the areas, and go build shacks or houses or anything else miles away, and you could still get to work.

Well, it operates only provided you have cheap fuel. If you travel 30 to 40 miles a week from your place to work, that's 300 or more miles a week you spend travelling back and forth from the job, and if gasoline goes to 70 cents, what will happen? Will that home you've got out there be worth anything? Huh-uh. You'll have to congregate. This public of ours is going to be taught something the hard way. It's going to be awful hard.

The failure of one major oil field in Texas and you'd have 18 million Americans that couldn't go to work even if they did have the money. Well, are you going to tell 18 million Americans they can't go to work and make enough to feed the kiddies even if they do have to hold two jobs? They wouldn't even be able to drive to one job.

You think your Chambers of Commerce or your Rotarians or Kiwanis or your Masonic Order or your Knights of Columbus or any other association that you have has any solution to it? As for fellow Masons, I told the Masons long ago they had better wake up, because if they don't, the march of events is going to take those damn diapers from around their waists and wrap them around their necks. I won't go into the Knights of Columbus.

Well, have you had enough for a little while? What do you think about it?

HOW DID MURRAY FIGURE IN ON THIS LABOR DEAL? WAS HE REALLY WITH THE MEN AS CLAIMED OR WAS HE WITH THE CROWD THAT SOLD THEM OUT?

Well, Murray was Holy Name and the steel strike was pulled.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

There were 12 million tons of steel in the steel companies' yards, and General "Electric" Wilson was the one who proposed that the steel be increased \$12 a ton in price. That would have been \$144 million additional on top of the profit. But that was not enough. You still wanted to shut down in the steel industry.

You've gotten into a national condition where you finagle one industry over here for that industry? Oh, that's only part of it, but for half a dozen over here. What did you want to shut it down for? So you could have the legitimate excuse and reason to shut down the automotive plants, the stove, and the refrigerator. They were running into excess, so if you can shut the steel down, then you can shut down for lack of materials over here. That is the way this country is being operated. Nothing is what it seems. It's totally different.

As for Murray, he and Grady and all the rest of the steel officers -- Steel Worker's Union in Pittsburgh they represented a certain point of view and they followed it.

WHERE DOES LEWIS'S SALARY COME FROM? FROM THE POOR WORKING MINER?

Yes. Of course, he's getting enough now that he can retire and get quite a retirement.

NOW THAT THAT LADY BROUGHT IT UP, I THINK ONE OF THE FOOLISHEST QUESTIONS IN THE WORLD IS IN REGARD TO SALARY. NOW MR. WILSON GETS \$500,000, AND, OF COURSE, HE'S SET UP NOW TO RUN THE BOARD AT GENERAL MOTORS, AND GOD KNOWS WHAT HE'LL GET PAID. I DON'T KNOW WHETHER HE EVEN HAS A DAMN THING TO DO WITH IT. HE'LL SEE THAT HE GETS PLENTY OF GREASED FINGERS FROM GENERAL MOTOR'S BACK. LOOK, WHAT THIS LEWIS GOT IS ONLY PEANUTS TO WHAT THESE OTHER BURGLARS GET. WHY DON'T WE START HOLLERING ABOUT THAT?

Well, Charles "Engine" Wilson, he's half a million. A couple of more -- Humphrey and so on -- they're all up in that class. But the point is in United States is that you never feel good unless you're being trimmed by a bif chiseler. You never have. You started it out when the first President you had was what? The richest one in the country; of course, he only had 500,000 acres up here in lower Ohio, too, didn't he? I'm talking of Washington.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Oh, our George down in Virginia -- we know our George; but I mean, here's the whole background -- you're not satisfied. What do you weight as being something? Somebody that gets the biggest take, don't you? He can be the biggest moron alive, but as long as he gets it, oh, well, lovely.

When you get Charles "Engine" Wilson in there, you only get what you deserve. The entire Eisenhower Cabinet is all that the American public deserves. Let's face it. You voted for it, and it only took a shift of 3 million votes, didn't it? Is that correct? Three million. Now the Republican Party didn't score a victory -- Eisenhower did. He scored the victory, because he's going to lead the crusade. Well, we know what happens to the ordinary sucker whenever the crusades get under way. He gets a trimming and a beating.

ACCORDING TO MRS. NIXON'S STORY,- HER HUSBAND WAS OF A  
QUAKER FAMILY. IS HE STILL A QUAKER?

Well, I wouldn't care to comment on Nixon's religious background. The wife is Irish, of course, and he pulled a lot of maudlin, sentimental gibberish on the air, especially about the cocker spaniel. The public isn't interested in the doggie; it's interested in that \$18,000 pussy!

WHAT IS YOUR PROPOSITION TO CURE ALL THESE ILLS --  
TECHNOCRACY? PREPARE THE PEOPLE TO PULL IT IN?

Look, sir, you can't fight an ideology with bombs, bullets, and bayonets. It's never been done and never will be done. The only way you fight one ideology is to introduce a superior ideology one that will supersede it, and there is only one. After all, we consider Communism, Fascism, and those things -- they come out of the human toil-hand tool economy. Technocracy has pointed out for years what they are, and our regulations would not permit any of them joining this organization when? Years ago, long before you ever had any "Red" scare. We consider Communism radical enough for the Old World, but over on this continent it's so far to the right, in our estimation, that it's bourgeois. The present administration and the incoming one have always treated them as equals. Technocracy never has; and you're not going to defeat an ideology by marching bombs, bullets, and bayonets around the globe and repressing social change instead of

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

developing a scientific, technological ideology that is superior to anything else.

Now you can't do it as individuals. You can only do it as a collective organization with a strategy that does not succumb to the values and concepts of this Price and Political System as it is. It can only be done by organized, directed effort. As we stated years ago, we will never ask the public or appeal to them to use bullets or ballots.

What is going to produce change here? When you vote somebody into political office under this system, they're not going to change anything. Change will be forced on them by the march of events. I've pointed out that the exhaustion of one oil field -- or two -- Texas produces practically half the oil of the United States, East Texas, West Texas, the Sprayberry Field or the Permian -- if any two of them go, goodbye.

Years ago, on big construction jobs, we used to build buildings painted a firehouse red quite a distance away from any activity; and, of course, if you're conventional, you had giant white letters on the firehouse red building, the letters 6 to 8 feet high: DANGER -- EXPLOSIVES! On one of our big jobs, the superintendent of the explosives had a sense of humor. Here were these buildings across -- the size of that of a mountain -- you could see them for miles -- giant white letters on that firehouse red background. What did it say? It said, "GOOD MORNIN', JESUS." That's what I've got to say to you; in other words, if it goes ....

We're not organized. We're anarchic all over the country. We have no cohesion. You've got to develop that kind of cohesion nationwide. Now it isn't easy. Here CHQ maintains itself. We're paid all the same, \$35.00 a week. The withholding tax takes \$4.50; so, we get \$30.50 a week. It costs us \$10.00 for food, and we cook it ourselves. Try it sometime.

A lot of people have never understood our strategy. In 1939-40, we took photographs out in San Joaquin Valley of a few thousand Japanese with 500 or more children marching down the street with Rising Sun flags in their hands -- going down to the Shinto Temple to celebrate a birth of a warrior for the Emperor on the soil of United States. Now, that not only happened once

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

but it happened a number of times. As most Americans, even those on the Pacific Coast, were unable to tell a Japanese from a Chinese or Malayan, we introduced the temporary proposition that Asiatics were ineligible, although it is ironic that we have had and still have Asiatic membership -- a professor in a university who thoroughly and completely agreed with it, who understood it. In California, if we had taken in a thousand Japanese and they had been members of this organization in 1941, we would have had a problem on our hands. I think you can all understand that. We knew it was coming, so we simply made the clean-cut statement that Asiatics were ineligible. Well, if they're here and on this continent, they're eligible. I don't think the same thing will be repeated.

I remember when I was a guest at one of our tycoons of finance in his great mansion in Santa Barbara. He had most of the dignitaries on the Pacific Coast, plus the Admiral of the Fleet, high brass, and the rest. We were due to be there for the weekend. He has his own golf grounds, his own yacht, docks, and his own private landing field. When we drove in that big patio and were served the cocktails, we discovered that there were 27 servants in there who were Japanese or their equivalent.

In view of the fact that I was asked there to discuss national and international events, I begged to decline. The host and hostess were very much upset. Now this incident was referred to a little bit later by one of our scientists at that time who was head of Cal Tech and accused me of racial prejudice. It wasn't racial prejudice at all. When we were leaving, the major domo of that multimillionaire expressed his regret that we were leaving in very charming English; and my reply to him was this: "I am not interested in your regrets, but convey my respects to your superior, Takio Oharo, in Tokyo, and tell Mike that it doesn't go." We used to call him Mike when he was at school over here. Who was Mike? Mike was head of the top intelligence of Japan, and in 1942, G-2 and the FBI closed in and took every damn one of them. The man I addressed was only a colonel.

Now we had to go up against that kind of thing. Practically all your "Tokyo Roses" broadcasting from Japan during the war were graduates of the University of California, born on Californian soil.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Now CHQ has had to take action what? To protect ourselves from the public and also to protect Technocrats from making jackasses out of themselves occasionally, too, you know. I'm not trying to be nasty, but that was one of the deals; and we had to take it and keep quiet about it, because how are you going to explain that you had, in our considered judgment, sufficient evidence but you couldn't prove it. The only thing to do is take the steps you thought were necessary and keep quiet about it. We did it.

So here were Japanese, educated Japanese, who were members and who still are members, in the United States and Canada holding positions in a university who thoroughly understood our tactics and approved of them. We would have been in one tough position in 1941-42 if we had a thousand or two thousand Japanese members, wouldn't we? Now you couldn't go out and publicly tell the Japanese that or the public.

There are a lot of other things that happened the same way. For instance, in July, 1941, the last of July, Admiral King, Leahy, and Roosevelt all made the statement -- and it's in the records of the National Press Club in Washington and Drew Pearson repeated it on the air: that the Wehrmacht would be in Leningrad before the 15th of September and would be in Moscow before the first of the year and that the grass would grow in the streets of Leningrad by spring. Do you remember?

A delegation came up from Washington to check with us on it, and our answer was that they won't be in Leningrad by the 15th of September and they won't be in Moscow by the first of any new year you care to name. What little money we have isn't much, but we're willing to place it with you to place the bets in Washington. Now to tell the public that -- I believe some of you remember that dinner up in Cleveland -- they were asking me about Stalingrad? Do you recall it?

Well, you could only go so far; otherwise, you were called all kinds of names, but that's the way we've had to play it.

If we had a larger organization and money and all the rest of it, we could have an impact effect on the continent. Not having that size, it has to be a guerrilla tactics and dilution attack, correct? So that is what we have used, and we're still

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

using it.

If there's anything else on this question of Asiatics -- same way with negroes -- any Section wants to, you can sign them up, but it's your responsibility. You've got to screen them. If people -- what's the use? We've got white morons as well as black morons. We have negro members, yes. As I've pointed out before, the trouble with the negro today in the United States that's at least four better than the white bourgeoisie, and any negro that's on the up-and-up -- I'm speaking financially -- he doesn't want any change in this Price System. Why? He's in "glora honeyland" right now, and he doesn't want to join with any low-down whites who want to change this.

Now there are educated negroes. We can't expect this organization to make the negro, the illiterate one, literate. We might contribute somewhat but that's not our job. The negro is here and we'll have to treat them as such. Remember, there's just as much white prejudice amongst whites and there's just as much negro prejudice amongst negroes as there are black or white prejudice versus each other.

So, if it's going to create a problem in the community, it's not the job of Technocracy -- singlehanded -- to solve that problem of prejudice within the community. That we cannot do; but you can take in negroes. I'll give you fair warning that is what you'll find. Just the same as you can't expect any politician in your community to join Technocracy, can you? Well, then you'll find only a relative few of negroes who will come in on a sincere basis to be Technocrats, because, unfortunately, most of them are not literate enough and those that are literate, if they're any good at all, are in the gravy. Now you'll find them -- you'll find a percentage of them but it's small.

Now, what else have you got?

CHIEF, IS IT ALL RIGHT FOR ONE OR TWO TO COME INTO OUR HEADQUARTERS AND GO THROUGH THE STUDY COURSE?

Oh, bring them in. We've sent speakers out to negro houses and we've had them in the Sections. Do you remember that big dinner? We had negro members up there. We didn't segregate them. They were at different tables all over in that big ballroom in

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Cleveland. We've never segregated them. [WE HAD ONE THERE FRIDAY NIGHT.] Yes. [BUT THEY ARE AFRAID. WE'VE HAD SEVERAL CONTACTS THAT ARE INTELLIGENT AND ARE REALLY SINCERE.] Well, it's more than that. It isn't a question of the negro being afraid. You've had the creation of a negro bourgeoisie for the first time.

Now you go to New York, and Smalls and the other big things in Harlem that ran for years for the sole thing to collect money off the slumming whites. Are they for slumming whites today? No, they're jammed full of negro trade, and each year now, you have the debutante cotillion of Harlem where they bring out 4,000. They've got orchids on. The Mayor of New York and all the rest has to be there. Easter Sunday -- do you want to see something? Don't go on Fifth Avenue. The sharpest thing on Easter Sunday is up in Harlem. The bourgeoisie has arrived done in dark chocolate, and, brother, are they sharp!

Well, wait a minute. They have achieved that under this political system, and they're being catered to by all the political for their votes. They're making money. They want their brother negroes to stay exactly where they are. You'll find this out. They don't care so much about those whites, but they want the rest of those negroes to stay there where they can make money out of them. And, remember, your white bourgeoisie is bad enough, but your negro bourgeoisie has just lately arrived. Who has those big cars -- big Buicks, big Packards, big Cadillacs? Hmmm-hmmm! Now remember I'm not expressing any anti-negro sentiment -- no. I know what they are. And you have, as I say, a very small minority of educated negroes who understand it; and if I go anyplace, it's all over that darn city in no time flat by the negro grapevine. They know.

Ours were the only cars in the riots in Detroit that had safe conduct in the negro quarter -- don't ever forget that. If the police wanted to go in there, they went in in our cars. Now that's interesting.

CHIEF, HOW COME YOU SAID THE NEGRO WANTS TO KEEP JUST THE WAY THEY ARE ?

No, the negro bourgeois -- now that's not all negroes. The great mass of negroes is trying to make a living just like the mass of whites. Now, for instance, the bourgeois white -- does he

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

want the white coming up? Huh-uh. He wants the white to stay where he is. Well, the negro bourgeois wants the black to stay where he is. Twenty percent of the top families of this country get 53 percent of the national income. So 80 percent are only getting 47 percent. The bottom 20 percent in United States are only getting 3 percent. It's even worse with the negro, and the differential between the negro bourgeois and the average negro is greater than between the white bourgeois and the average white. Do you get me? Have I made this clear? It's a problem that we're up against.

For instance, in your annual bringing-out ball in Harlem, they all have to be in evening clothes and every negro debutante has to have orchids. "Has we" arrived? "Honey, we 'has.'" Now who are they imitating? They're imitating the whites, aren't they? Only with that true negro sense -- "go one bettah. Yes, suh!" Don't blame them for that. Who set them the example? The whites.

Well, what else have you got? Come on, you've got to give me some action if I'm going to stand up here.

ABOUT A YEAR AGO THERE WAS A REPORT IN THE PLAIN DEALER ABOUT ADENAUER MAKING SOME TRIPS TO THE KASSERINE PASS DOWN TOWARD ITALY -- IS THAT THE KASSERINE PASS THERE? The Kasserine Pass is in Africa. OH, THAT'S RIGHT. WHAT IS THAT PASS THAT GOES DOWN THROUGH SWITZERLAND AND NORTHERN ITALY? Brenner Pass.

Well, that's where all the northern Europeans made fools of themselves for centuries coming over the Brenner Pass to capture Italy when it wasn't worth capturing. It's a nice little trough. Of course, that's where Mussolini and Hitler met, too, you know. That's where the Vikings and everybody else came over and that's where Frederick Barbarossa came over. You can go on down history.

WHERE AND BY WHOM IS THE STRATEGY OF THE PROPAGANDA THAT'S PRINTED IN THE PAPERS AND SENT OUT OVER THE RADIO AND SO ON -- WHERE DOES THAT ORIGINATE AND BY WHAT MEANS IS IT DISSEMINATED TO ALL THE DIFFERENT ORGANISMS THAT DO PUT OUT PROPAGANDA?

Well, you've got higher echelon groups here in business in your National Chambers of Commerce and higher financial

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

institutions, and they get together and mull it over. Then your advertising boys are dished out a copy of one part of it and it's played up. The Associated Press services and all the other press services take a version of it and kick it out and send up trial balloons, and they find out that some trial balloons have no results and others do; so they play up the trial balloons that cause the reaction. It isn't any one man or anything.

SPEAKING OF THE PRESS, I WAS SOMEWHAT EXCITED A FEW MONTHS AGO WHEN A VERY SHORT ARTICLE APPEARED IN THE PLAIN DEALER STATING THAT RUSSIA HAD MADE A DEAL FOR IRANIAN OIL. I LOOKED FOR IT VERY EAGERLY TO FOLLOW UP ALONG THAT LINE BUT I NEVER SAW ANYTHING MORE ABOUT IT. WHAT WAS THE SITUATION? DID YOU HEAR ABOUT THAT?

They were trying to make out that the Russians were shoving into Iran, you see, and interfering. Well, of course, the joke is that the Russians are not; they've left it strictly alone in that sense. The same way in Egypt. The Russian Embassy compound in Egypt is one of the largest, but they don't take any aggressive action. True, of course, they have pulled in in the Middle East. A lot of the Mohammedans in Russia who are Mohammedans for their foreign embassy service -- that's quite understandable, but they have left Iraq, Iran, and those. The policy is to leave it alone. Why? Because it's boiling already. Why fool with boiling water -- or boiling fat, to put it more precisely? They don't have to touch anything off; it's going; so sit on the sidelines. You're the interested observer, but you're not in this fight, you see.

OUR PAPERS HAVE ALWAYS CARRIED THE THOUGHT THAT THE QUESTION OF WHO EVENTUALLY GOT THE OIL WAS OF SUCH TREMENDOUS IMPORTANCE. IT HAS ALWAYS BEEN A WONDER TO ME WHY RUSSIA, WHOM WE ASSUME DOES HAVE EXPERTS WHO COULD RUN THE IRANIAN OIL SETUP, HASN'T SENT THEM IN THERE TO DO JUST THAT?

Now you're beginning to get somewhere. If you go back in the history of petroleum deposits in Iran or Ancient Persia, those deposits were known way back in the days of Alexander the Great, You also had Greek fire, which was nothing but petroleum naptha and so on, and some of your priestcraft in Iran used the gas wells to further the cause of their particular faith and superstition; but in modern times, the first real concession that was granted in Iran was granted in 1895 to a Russian. This is

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

peculiar history. Now the Darcey Concession, on which the Anglo-Iranian Oil Concession is built, was not granted until 1905, ten years afterwards. Darcey was a West Australian engineer who made a fortune out of gold mines in West Australia -- same place that Herbert Hoover went when he worked in the [Sons of Grolio Mines] in West Australia after he left California.

The Darcey Concession is down on the southern edge of Iran along the Gulf, and in 1918 when General Wavell invaded Iran from Baluchistan, which is now part of Pakistan, and built that railroad about 70-80 miles into Iran and marched up Iran, and he and Anvor Bey and the Turkish troops that had been fighting the British combined to march into Baku, in Iran they found the Russian who had the concession and they placed him under protective custody arrest. Using certain measures, he wasn't released until a couple of years and he had signed over to the British the big concession that he'd gotten in central Iran, But when he was released and went back to what was in the process of becoming the U.S.S.R., he pointed out that the measures that were used were coercive and the concession was still his.

In the 30s -- here's the Anglo-Iranian -- Anglo-Iranian owns part of the Burma Oil , it owns 26-point something of the Iraqi oil along with the Standard group, the Shell, and the Iraqi oil and the Gulf own 50 percent each of Kuwait. You see the way it's all interlocked? Well, the Pavli Shah, the father of this Shah of Persia, cancelled the giant concession of the Anglo-Iranian, and Churchill sent the fleet and troops into the Persian Gulf. Well, they did reduce the amount o f the concession, that is, the acreage, but due to the pressure allowed it to go on.

The oil companies in Iran -- the Anglo-Iranian -- there is a very interesting thing. The gauges -- you can have the hand on the gauge register a certain pressure but you can also alter the gauge back of that hand so that the gauge only registers 200 but what's going through is 800. You see, anybody that is any mechanic knows how simple this is. The maximum number of wells operating in Iran was 82 -- the maximum number. The amount of oil that we're taking out of wells in United States today is 11 barrels per well per day. It's around 300 barrels per well per day in Venezuela. In Iran, up until the time it was stopped, it was in excess of 10,000 barrels per well per day. There never were more than 82 on flow at any one time. The others were

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

plugged in.

Now the situation was this: that the amount of taxes paid by the Anglo-Iranian Oil Ltd. to His Majesty's Government was four times greater than the royalties paid to Iran. They didn't have to have a Russian to find it out -- just merely one disgruntled or dissatisfied English or foreign or Iranian employee to detect those gauges, because the flow that was going out was greater than what they were paying royalties on.

The great Abadan refinery was underrated for years. That refinery has a capacity -- the world's greatest -- in excess of 900,000 barrels a day.

Now they did the other things that oil companies always do: they built schools and hospitals and they built a city, and the Iranian employees in there were what? Well taken care of, well clothed, sickness taken care of and everything, but they became the elite, did they not, of all the Iranian people? In Iran, there are 25 to 30 families, that's all, that drag down the gravy of all Iran. Now under that kind of a situation .... The Russians have oil deposits, oil fields. Russia was the leading producer of oil in the world before United States -- don't forget that and that the total amount of sedimentary formations -- possible oil-bearing -- in Russia, of even greater depth and thickness than ours, is over 3-1/2 times the original sedimentary deposits -- oil-bearing -- in U.S.A.

Tactically, should you step into something that is running toward its own climax, when, if you did, no matter whether you're right or wrong, good, bad, or indifferent, you get the worst end of the stick? Stay out of it and you hang the British and you'll hang anybody else that isn't Iranian. Have I explained it to you? [THE DEPOSITS OF OIL IN RUSSIAN TODAY .... ?] No, the sedimentary basin, the potential oil-bearing formation, in Russia is 3-1/2 times the total square miles of the original potential sedimentary basins of the United States before they were exploited. Who is the authority for that? Not Technocracy. The American Petroleum Institute. [YET THE PAPERS TELL US .... ] All right. Do you want to write to CHQ? We'll give you the document, the page, and the number.

---

EDITS A BOOK THAT I AM TOLD THAT BEFORE THE

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

CONVENTION IN JULY GOVERNOR DEWEY WILL INTRODUCE GENERAL EISENHOWER AS A CANDIDATE FOR NOMINATION AND THERE WILL BE ONE BALLOT TAKEN AND EISENHOWER WILL WIN IT. IT DOESN'T MAKE ANY DIFFERENCE WHO WILL WIN THE ELECTION, IT WILL ALL TURN OUT THE SAME FOR THIS REASON: THAT STANDARD OIL IS INTERESTED IN THE MIDDLE EAST OIL FIELD, WHICH IS IN IRAN AND IRAQ AND THAT PART OF THE WORLD, AND STANDARD OIL WILL CAUSE EVENTS TO HAPPEN THAT WILL PUT SO MUCH PRESSURE ON THE STATE DEPARTMENT (INAUDIBLE PORTION BUT SOMETHING ABOUT WORLD WAR THREE AND THE UNITED STATES BEING IN IT). DO YOU KNOW ANYTHING ABOUT THAT?

Well, you're trying to blame too much on the Standard Oil. Remember there's a Shell Oil and the Anglo-Iranian and others. The Gulf is in there -- the Gulf is known -- and the Standard Oil of California is not the Standard Oil of the Rockefellers anymore. Fifty-one percent control is the Bank of America -- Giannini et al.

WHAT OTHER STOCK DOES THE BANK OF AMERICA HAVE?

They have a lot of banks, a lot of wine companies, a lot of land companies, irrigation. They started out as the Bank of Italy, you know.

WHY IS IT THAT WARS PRODUCE ALL THESE NICE NEW BANKS? HOW COME? WORLD WAR I PRODUCED THE FEDERAL RESERVE AND NOW WE'VE GOT THE WORLD BANK. WHAT'S THEIR THEORY? IS IT ALL THE SAME OR WHAT?

The Federal Reserve is a kind of equalizing thing. [THAT TREND STARTED DURING THE CIVIL WAR, DID IT NOT?] That is correct. Then you had the greenbacks, remember? Populist and all the rest, and, in fact, you had that fight on in U.S. when Andrew Jackson on the Bank of United States .... [DO YOU THINK WE'LL GET A KOREAN BANK OUT OF THIS RACKET NOW?] You have a Korean Bank. Oh, yes, there's a bank of Korea, the Bank of Chosen. That's been operating for a long time. But if you're talking about banks, how about the Banco de Roma? The Banco de Roma has no public depositors. It's been operating for almost 500 years. The Bank of Genoa is slightly older, that is, that credit bank, but the Banco de Roma is not a public bank. It's the repository of the funds of the Holy See. [SWITZERLAND IS ALSO IN THAT BUSINESS TO SOME

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

DEGREE, IS IT NOT?] Excellent. They're a large repository. [IS THE BANK OF JESUS SPAIN?] There isn't any bank of that name. Your Jesuits do control several of your largest banks in Spain and have for a good many years. That's all right.

You have the Fabrique de Moreal in Montreal. You've never heard of it, have you? Fabrique de Moreal. It is the holding corporation of the Grey Nuns, the Dominicans, and the Society of Jesus, and the property in Moreal, can you buy it? Oh, no. You can ground-lease it -- just the same as the Sailor Snug Harbor in New York where the Chrysler Building is. That's built on Sung Harbor, and Radio City from Columbia University. Same type of thing. Fabrique de Moreal was the organization that loaned Morgan the \$40 million in gold in 1907 and got 40 percent interest.

DID TITO BREAK AWAY FROM RUSSIA OR IS HE MAKING A SUCKER OUT OF IT?

That I don't know, but he has nowhere to go; in other words, who put Tito on his feet? Now here it is operating on a Marxian philosophy, trying to run a collective economy. It has no blood relationship with the west. It's in a peculiar position. Of course, the biggest copper mine in Europe and the biggest zinc-lead Your Mines de Bor in Yugoslavia is the largest producing copper mine in Yugoslavakia, and your Trotzia is the largest zinc-lead. So there may be certain plays in there.

HOW ABOUT VOGLER AND THE OTIS CASE?

Vogler was trained in our intelligence school over here in the navy -- and the International AT&T, the telephone company, we fill up the Board full of army, but chiefly naval, intelligence officers and have the headquarters over there. What do you expect the Russians to do? They're not that dumb. We can give you Vogler's number if you want it. Do you know what number I'm talking about? His intelligence number. [WHAT IS IT?] Somewhere around 4471 -- something like that. We have it.

HOW ABOUT CARDINAL MINDZENTY?

Cardinal Mindzenty was in Hungary, and what was the name of the Fascist organization in Hungary? He was one of the officers of it. So they flung the victims in the Danube amongst the ice --

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

nice, kind Christian treatment. After all, you have to face the fact that the church in Europe -- the Catholic Church and the High Lutheran in Germany -- supported Fascism,

What have you got in Portugal? Salazar and that crowd. That's a Catholic country. Spain is Catholic -- Franco. Italy, Austria, Hungary, South Germany -- that's Bavaria -- Wurtemberg, Baden, the Lower Rhineland -- Bavaria is 96 percent. Himmler and Goebbels -- what were they? Where did they come from? That's what it was.

[WADE HENDERSON?] IS RESPONSIBLE FOR THE STATEMENT THAT TITO IS AN EX-CATHOLIC PRIEST. DO YOU KNOW ANYTHING ABOUT THAT?

I don't want to hurt anybody's feelings, but we have always been suspicious of him, because we said long ago that he is a Croatian. The Ustachi was about 98 percent Croatian. Do you know where Croatia is? Do you understand what I mean -- that thing was on there. Whether he was a priest or not, that I do not know, but there's been more double-dealing and assassination and everything else come out of Croatia in the last 35 years than in practically any other part of that area.

It was the Ustachi that assassinated the Minister of War of France and King Alexander of Serbia at Marseilles, remember? And that started the religious wars inside Serbia in which there was armed fighting, and Croatia has always been against the part of Slovenia and Serbia and the Montenegrins. There's always been that double-crossing. From our point of view, as I say, we were always suspicious of where he was going. This was long before there was any indication of any break when people would ask us back in the Mikhailovic days. Well, we said we didn't like it either because we didn't care for the setup. That's only our opinion. [IT RATHER TIES IN.] Yes.

WHAT IS THE LATEST TACTIC ON THIS PRAGUE FIASCO?

Well, most of those were Slovaks, correct? I mean, I'm not condoning any action that's taken by Czechoslovakia, the Russians or anybody else. I'm merely pointing out there's some peculiar twist to this. You see, when Hitler took over Czechoslovakia, he absorbed Moravia and Bohemia into the Reich, but Slovakia remained under Monseignor Tiso as Chancellor, a separate

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

autonomous entity. Now most of the double-crossing and so on that has occurred in Czechoslovakia since has been from Slovakia. As far as their trying to label it anti-Semitic, the Russian Government has stated frankly, years before this, that it was opposed to Zionism; so, if you can interpret it as suddenly becoming anti-Semitic, no, because it made the statement publicly in writing on Zionism years ago.

We in United States are in the peculiar position of where your native-born Americans of Jewish descent being elected ministers with portfolio in the Israeli Cabinet. I mean, which is it -- which are we? Americans or Israeli? Well, if the situation happens here .... Now the papers today in New York, Israeli is asking the satellite countries to release 535,000 Jews in the satellite countries to come to Israel. Where in the hell would they put them if they do go to Israel? That's one thing. But the other thing is Zionism as a political entity. Now you've got that same dual citizenship thing coming up again which we as Technocrats have always fought. In other words, we insisted that if you're of Italian descent, that's all right. You can be a member of Technocracy, but if you're going to join all these Italian-American things, we'll ask for your resignation. And the same goes for German, Irish, or anything else.

William Knight of our organization -- dead now -- was on the Continental Board of Governors. Well, he was born in the British Embassy in Rome. His father was of British Knighthood. His mother was Princess Katakazini, lady-in-waiting to Queen Margaret; therefore, he had an Italian title and a British title. He came over here, took out his citizenship, and remained a citizen of United States. He was Chief Liaison Officer under Pershing on his staff for Italy, but join the Italian organizations -- the Italian-American? Oh, no. So if we wanted somebody to talk to the Italians, we sent Knight out. Why? Because he could speak Calabrian, Sicilian, Italian of the Tuscan [Besque?], and several other things, and he could call them more names in five minutes .... two dozen of them.

In World War I, LaGuardia who was a Congressman then and became a Captain and then a Major, went over to Italy. His Italian was so atrocious, they'd have him speak first and Knight would come on the platform to explain in Italian what LaGuardia had said.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

We've had this same thing come up some years ago. We had a number of outstanding young Jewish intellectuals in Technocracy, and one of them is the son of a famous Rabbi. That was all right, but when they proposed to organize that giant Jewish parade down Fifth Avenue of all the Jewish organizations and to organize it as Technocrats, we said no. They said why? Just a moment -- you're organizing a racial, religious minority in United States to march in protest against conditions 4,000 miles away. You will not achieve your objective, but you will intensify the antipathy and the hatred in this country against the very thing that you're trying to do. It will become apparent for the first time just what your problem is. And it was -- it took seven hours down Fifth Avenue. It created more anti-Semitism than anything that's ever happened in the history of New York. They couldn't see it. Several top intelligent Jews argued and said, "This is the most intelligent thing that has ever been presented to the jury of United States and we should get back of them." I said, "It's all right if you get back of them, but don't make the mistake of trying to get in front and lead it; because you're a minority, and if you go to grab off most of the positions in the front of it, it won't work." We were only being frank. It seems that hypocrisy is preferred in United States and lies to the candid presentation of the facts. That was Rabbi Wise, by the way, his son.

Now I don't know if this is what you want to know, whether it's interesting to you. That you've got to tell me.

CAN YOU TELL US SOMETHING ABOUT OUR OWN COUNTRY IN THE NEXT FEW YEARS?

Well, what do you want to know that we know? You'll have to be more specific than just a general statement. [ARE WE GOING TO HAVE A 5- OR 10-CENT DOLLAR? IT'S ABOUT 27 CENTS ON IT NOW, ISN'T IT?] Well, you'll have more credit amplification. Those of you that put away money 25 years ago in the anticipation that the accrual would amount to sufficient size to put your son or daughter through the university -- well, what about it? Is it? Stop and figure out that if you'd bought bonds -- we explained it in our literature, didn't we? -- even at the end of the Interest period, you would have less purchasing power than when you started it.

.... THAT AMOUNTS TO PAYING OUT ON A \$1,000 BOND. IT AMOUNTS TO PAYING OUT IN 1940 \$750. IN 1950, YOU WOULD HAVE GOTTEN BACK EQUIVALENT IN PURCHASING POWER, I THINK, \$540-\$550, ABOUT 4-1/2 PERCENT PER YEAR. WE HAD A VERY INTERESTING EXAMPLE OF THAT HERE IN OHIO. SOME YEARS AGO WHEN JIMMY METZENBAUM, THE CLEVELAND CHAMPION APPROPRIATION FUND TO BUILD HOUSING FOR THE MENTAL CASES IN OHIO. THE BILL WAS PASSED UNDER BRICKER'S GOVERNORSHIP, AND BRICKER, IN ORDER TO CREATE THE IMPRESSION OF HUGE FUNDS INTACT IN THE STATE HOUSE, DIDN'T SPEND IT; AND BY THE TIME LAUSCHE DID GET AROUND TO SPENDING IT, IT WOULDN'T EVEN BUILD THE outhouses FOR THE MENTAL PATIENTS.

It might interest you "to know that the teachers', firemen, and so on pension fund in the State of New Jersey is \$272 million in the red. They're appealing to the federal government to come in to rescue the state pension. There are other states -- not identical, you understand, but in similar situations where their investment of their state pension funds do not amount to accrual to where they can pay off on the pension basis.

Now, remember in one large city there was a family where several of them joined Technocracy, but where the father was violently opposed to it. Oh, he'd have nothing to do with it. He was occupying a very top position. He was due to retire in 18 months to 2 years, and he fought it like mad. He called his sons and daughters all kinds of names. Finally he announced his retirement, and there wasn't anything in the pension fund, and he came down to beg for that M.A. (laughter). He's cursing his own children that they hadn't shown him sooner.

DIDN'T BELLAMY IN "EQUALITY" SAY SOMETHING ABOUT WHEN A MILLIONAIRE WOULD HAVE A MILLION BUCKS BUT ON THE PUBLIC MARKET COULDN'T BUY FIVE CENTS' WORTH? WELL, I WISH SOMEBODY WOULD PUSH THAT ALONG AS FAR AS I'M CONCERNED.

Well, it's moving. How much faster do you want it to go? All we need is a thousand painted cars in ten cities in United States -- that's all. They don't have to do anything but drive the painted cars, and your public will multiply it by 100 to 1 anytime.

THERE WAS AN ARTICLE IN THE BEACON JOURNAL NOT LONG AGO THAT THE POLITICIANS ARE GOING TO TRY TO MAKE A LIMITATION ON FUNERAL PROCESSIONS AND MOTORCADES. SO THE TACTICS ON THAT WOULD HAVE TO CHANGE JUST A SLIGHT BIT ....

No, we don't have to make it in convoy. [INAUDIBLE RESPONSE] Well, we ran a convoy in Operations Columbia. That was just to show what training could do. Sixteen hundred miles each way with a schedule of 55 miles an hour. Don't forget there were four cities on the Pacific Coast that were going to arrest the entire 600 vehicles. What -- they're going to come in here at 55 miles an hour? We'll throw them all in the hoosegow! What happened? They arrived on schedule and the State Police told the city, "Take over." When we arrived at the Canadian boundary, there were extra Canadian Government officials. There was the Provincial Police, the Province of British Columbia, there was the RCMP, there was the customs (border). They were all there -- "Welcome to Canada, sir."

Just as in Vancouver, Jerry McGeer, who was Mayor of Vancouver -- by the way, he introduced me years before the first time I ever spoke in Vancouver, Canada. He was the Jimmy Walker of Canada. He had become a Dominion Senator. Well, he cracked down. He is of a certain political persuasion, and I won't mention his religion.

We couldn't use our sound equipment; we couldn't use our floodlights or our searchlights. That was all very well. A telephone call came to the Empress and said, "Welcome to Canada, Mr. Scott. It's been a long time. I understand that our friend Jerry is trying to do a squeeze play." I said, "Yes." He said, "Two can play at that. Are you going to be there for an hour?" I said, "I shall be here." He said, "Send it over." I didn't even ask who it was. When the doorbell rang, two in uniform, a dispatch book, "Mr. Scott, sign here." I opened it. I called Paul King and said, "The roof's off. Tear it wide open."

Herb Clark was standing out in front of the pavillion and Captain Dunn. Now the Vancouver Police and the RCMP came up, and here's Herb Clark that went CCP, who is now stage manager for Father Duffy and his "Peace Campaign". Here he was telling a bunch of Technocrats that they were all going to go to jail because Howard Scott had disregarded the city ordinances that the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Honorable Jerry McGeer had refused to him, and we were breaking the law, when the Chief of Police and the others of Vancouver and the RCMP came along, and he said, "Isn't it true?" Dunn looked at him and said, "Clark, Canada is officially at war, legally, and when Technocracy gets an authorization like this, no city in Canada can touch it." He said, "Oh, is that so? You mean the Mayor has lifted it?" He said, "Mayor, hell! This comes from the offices of the Commanding Canadian Army."

Sure our floodlights went on. Our searchlights went on, and all our loudspeaker equipment. We tore it open. Two can play at that game.

Don't forget in the Fraser River disaster -- it wasn't called that -- our equipment rolled north. When the word came through in New York that the Fraser was in flood, I put in the telephone call to reach Vancouver. The long lines department in New York said, "It's impossible. There's an eight-hour delay. No calls are being taken." I said, "That is another matter. Get to control communications officer, Vancouver area." You could hear him on the line, "Technocracy, calling Technocracy headquarters in Vancouver. O.K., put it through -- priority." Vancouver telephone exchange says, "The line is busy." "Pull the plugs."

We had eight places, one after another -- 8 hours delay -- we got everything we wanted. We told the equipment to roll in and it rolled in. We served there night and day. They didn't have time to shave, wash or anything else. The Canadian Army laid the cables down the gutter from their headquarters to ours.

We were placed in charge of transportation and billeting and it was announced on the air that we were the only civilian organization. Let's get it clear. [GAP IN TAPE] The fun was on.

The American Legion in the State of Washington -- the State Commander called all the American Legion and they loaded up a whole train. They were going to Canada to help out. They got to the border and the Canadian Government said, "Huh-uh. You're not organized, you're not trained, and you're not disciplined to act in an emergency. You're a political organization."

Now our planes with those high-powered lights flew up the flooded Fraser. Our big searchlights were on top of the Patullo

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Bridge sweeping that water coming down there with houses and roofs and everything else. Our sound cars were out all along the rising water. Yes, we had charge of the gas, the cars.

Now, remember you were under martial law. There were roadblocks and they weren't funny ones. You stopped or else. What happened? Prominent citizens up there would see these grey cars come up -- whoosh, whoosh. They said, "How do they go by? The Canadian soldier says, "That's simple. They're the right color."

Yes, we went out to get trucks and other cars, and we rolled into one place that had several Cadillacs. No, sir, you couldn't take his Cadillacs! Called the shortwave and the Army came up there. They said, "Take it away." Take his car? "Sorry, Mr. So-and-So, you're in such-and-such zone of martial law. You weren't nice about it. We had to bring in the force. Technocracy, take it away!"

On the other hand, you get an entirely different example. We rolled into a big construction firm that had their diesels. They were running. They had their men in them. "Take it and the men stay with it until they are told to come back." So you wonder why we have freedom on cities up the Fraser Valley?

DO YOU THINK THE UNITED STATES WOULD BE THE HARDEST FOR US  
TO PERSUADE OR .... ?

That all depends. New York is the greatest sucker town in the world. If you ever drive a thousand painted cars into New York, there will be more dirty underwear in that city than has ever been in history. Don't forget that when we rolled into New Westminster in Vancouver in the bright sunshine, hundreds of thousands of people -- I'm not talking of Technocrats -- men and women stood at salute on the curb watching that go by. [THEY'D HEARD OF IT.] Well, but there were hundreds of thousands of Canadians up there thought that we were coming up to really -- it was an invasion. Most peaceful invasion they ever saw. [THEY WERE PROBABLY HOPING IT WAS ONE.] Right. Wanted to know if we had excess vehicles to go back in. We did bring 28 Canadian vehicles back with us but just for the trip.

IN YOUR TOURS ACROSS THE COUNTRY, WHICH CITIES DO YOU FIND  
TO BE ANTI-TECHNOCRAT?

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

There's no anti-anyplace. That's the interesting thing. No matter how big your audience is, you can't get a fight today. They won't fight with us. [THAT'S TRUE FOR PEOPLE I CONTACT. THEY HAVE NO RESISTANCE AT ALL. THEY WON'T ACT FOR IT -- THEY DON'T HAVE THAT MUCH DRIVE. THEY DON'T TRY TO GIVE ME ANY ARGUMENT.] Oh, no. You won't find any opposition to it, that is, open. Here I've been trying to get people to fight me on this tour all over. Ask a good-sized audience if there is any opposition to put up their hands. No, they won't put up their hands. "Are you for it?" All of them put up their hands.

Out on the Pacific Coast last winter, the same thing -- 2,500-3,000 people -- you couldn't get a fight out of them.

I HAVE BEEN ASKED A NUMBER OF TIMES BY PEOPLE I HAVE TALKED TO ABOUT TECHNOCRACY FOR THE FIRST TIME IF THOSE WHO ARE IN CONTROL -- THEY HAVE NO DELUSIONS ABOUT WHO IS IN CONTROL -- WOULD ALLOW US TO PUT THIS PLAN ACROSS. ISN'T IT TRUE THAT THESE PEOPLE -- I'M TALKING NOW ABOUT THE BIG SHOTS OF INDUSTRY AND FINANCE -- DON'T UNDERSTAND THE SITUATION WELL ENOUGH THAT WHEN THE PROPER TIME COMES THEY WILL BE BACK OF US RATHER THAN OPPOSING US?

Well, you see what people don't understand is that Technocracy isn't going to put this in. I mean, let's go back a bit. Franklin Delano Roosevelt went out and tried to grab every single ex-Technocrat and Technocrat he could lay his hands on. Yes. He got a lot of them -- 18 of them. Grabbed more so-called prominent men figures from Technocracy than any half dozen organizations in the country. Leon Henderson, Price Administrator; Leland Olds, Federal Power Administrator; Byers, Deputy Administrator, Office of Defense Transportation; Baker; Dick Tolman -- Dr. Tolman, Atomic Representative of the United States on the Combined Chiefs-of-Staff; Bassett Jones, National Strategy Consultive Board; Ackerman on Federal Housing. You can go on down the list. John Carmody, Rural Electrification and Maritime Commission -- where is he now? Dispensing the ECA funds in Europe. [CONGRESS DIDN'T GET THE LAST OF EVEN THOSE UNTIL TWO YEARS AGO.] No. And then they had to go back thirty years practically. Stuart Chase -- they grabbed all they could grab, and they thought in grabbing them they were going to get the cream of the intelligence to validate the New Deal and the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Redeal. It wouldn't work. Of course, now we're going to have an Undercover Deal.

We are in a sense architects and social consultants. All we can do is present the broad schematic design of operations. Who is going to put it in? The people will have to put it in. You build a bridge at the Golden Gate, you have consulting engineers. You have the fabricating firm that fabricates the material. You have the erecting corporations that erect it. Well, then, who instigates all of that? The fiat power of the state. The consulting engineers don't fabricate it, don't build it, don't do the instigating. Am I presenting it? [IN OTHER WORDS, THE ONLY THING WE'RE RESPONSIBLE FOR IS THE DESIGN?] That's correct, sir, and it's a dangerous idea. It's very upsetting.

There were two Technocrats who first proposed to Roosevelt the atomic bomb, and in discussing it, I said, "Let's get this clear: If it's \$2 million, it's no go; if it's \$2 billion, they'll take it." Now we didn't know until afterwards the dirty work that was connected with it. There were conferences in the White House, and this was some of the conversation: "That Howard Scott and the Technocrats didn't have any money and they could take us over." So they started the Continental Committee on Technocracy, and they had most of that bunch on the federal payroll. They went across United States supposedly speaking for Technocracy, but were actually a right deviation, which was sabotage, and we found out their payroll numbers. When they got to the Pacific Coast, we sent the federal payroll numbers to the Pacific Coast, and people in the audience got up and said, "Mr. Loeb, Mr. Fraser or whoever it was, is it or is it not true that your federal payroll number is so-and-so?" Finis!

In other words, grabbing them in was only one part of it. That was an attempt to delete the organization in one way. The other thing was to pull the rug out from under the organization by pressure and right deviation movements. I mean, this has been one continual battle and it isn't a nice battle -- it's war. And it's not as honorable as physical war. That, at least, is out in the open where your enemy can shoot at you and you can shoot at the enemy. This is the sleaziest kind of war.

DO YOU THINK HEAVIER PRESSURE IS GOING TO BE BROUGHT TO BEAR  
IN THE FUTURE?

On us? Well, they've tried about everything in the dictionary. They can't do a whole lot more. You can never dig up the campaign of vilification and calumny again, not the way it was before. I was a three-bottle-a-day drunkard in so many states. I was a dope addict in so many more. Oh, yes. [WHO PROMOTED IT?] Who promoted it? We have the evidence today. When Ivy Lee passed on -- the great publicist -- his manager came to see us and said the firm is dissolving and I think that you people ought to have this correspondence as a contribution to your collection of political Americana. They were paid and they instructed and they were sent out to various states. [IVY LEE WAS .... ] Oh, no, he was the top publicity man of his time and they were paid a nice handsome SUM, and there were expenses involved in sending men to [AN INDISTINGUISHABLE CITY NAMED] to set that up. I had arrived and stepped off the streamliner train to be welcomed on the platform by the mayor and other city officials, and the Health Commissioner looked at me and said, "Well, Mr. Scott, this is quite a surprise. We expected some person entirely different." I said, "Well, how different?" He said, "Well, one of these long-haired so-and-so's. By the way, what whiskey do you drink?" I said, "Why, I'm not particularly addicted to whiskey." "Well," he said, "you're supposed to be a three-bottle-a-day man. My God, if that's the way you look, for heaven's sakes, let me know what whiskey it is. I'm going to drink it, too." I've had that happen. Then I was a dope fiend.

Then you get to such crazy things as Congressman Aimley, remember, that Roosevelt proposed for the Interstate Commerce Commission and the Senate wouldn't pass him? He was Congressman from the 9th District in Wisconsin. He was speaking in public in Los Angeles only a few weeks after the big Hollywood Bowl address, and from that public platform -- over the microphone -- he stated that he had it on the best authority -- in answer to a question on Technocracy -- that Howard Scott had attacked the daughter of a professor in the automobile returning from his Hollywood Bowl speech. That's how dirty it was. But he made a misplay. He didn't know certain things. A Captain of the Los Angeles Police Force, in full uniform, stepped up on the platform and stopped him and said, "Congressman, you apparently do not know that Howard Scott was the guest of the Los Angeles Police Force before, during, and after that speech. You're indicting the Police Force of Los Angeles, too? You'd better retract it." It

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

was. But that's how far they would go. My answer to it was in another large city when it came up with that story, "Well, how about it?" I said, "That's very interesting, but the charges are ridiculous, because I've never known an automobile that's large enough for me to ever get into that kind of an action."

Do you see how absolutely stupid and ludicrous this thing became? When we were simply a research organization, I was invited to all kinds of people's homes for dinner. I was quite welcome. I could have dined out practically every night in my life. But the moment that you became a militant organization across the continent -- ah, right then and there you ceased to be nice. So long as it was purely research, you were a novelty; and when you went out to the public, then you were doing something you shouldn't do.

You've got to determine what you want me to say. If this is what interests you -- if not, ask your own question.

WHERE DOES UPTON SINCLAIR IN CALIFORNIA STAND ON THIS?  
WHAT'S HIS ATTITUDE LATELY?

Well, of course, Upton is pretty old now, but Upton Sinclair for 35 to 40 years or around 1910, away back in the jungle, remember? Well, he's been sincere -- there's been no doubt about his sincerity -- but he's espoused every single cause from raw nuts and raw fruit to special baby diets. He's written pamphlets. He is a pamphleteer; he is an author. He belongs to that sincere type of American who is conscientious and wants to have his fellowman in better condition.

He and some of his associates thought they could grab the Democratic nomination for Governor in California, and Aileen Barnsville, daughter of Barnsville of Oklahoma, the big oil and crane goods -- that's the crane company -- put up over \$400,000, I understand, and the other one and so on and it ran into a million dollars. They published the EPIC Newspaper, and, of course, the EPIC program -- E P I C, End Poverty in California. Well, he won the gubernatorial nomination on the Democratic platform, and he came east here on his way to see Roosevelt at Hyde Park and stopped in to see me. He wanted a Technocrat to support him, and we said, "Don't be funny. You can't end poverty in one state in the 48 and leave the other 47 out in the cold."

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Besides, even if you are elected governor, they'll cut you off in no time flat. They'll make a fool out of you. Now your record as a writer and a supporter of causes is clean. Why do you monkey with this thing? You're going to go up to the White House and he's going to agree with you, and that's as far as you'll get, but they'll spend money like drunken sailors." And they did. They spent around six million to beat him. [YOU KNOW WHO SPENT IT AND HOW THEY DID IT?] Somewhat. [LOUIS B. MAYER]

READER'S DIGEST CAME OUT THREE YEARS AGO CHORTLING WITH GLEE ON HOW LOUIS B. MAYER DID IT. THEY HAD TAKEN PICTURES OF EVERY POVERTY-STRICKEN OAKIE THAT HAD DRIFTED INTO CALIFORNIA IN THE LAST COUPLE OF YEARS, HAVING THEM STATE WHO THEY WERE FOR -- UPTON SINCLAIR, OF COURSE. "GIVE ME SECURITY." THEN THEY TOOK PICTURES OF ALL THE PROMINENT BUSINESSMEN WHO WERE FOR HIS OPPONENT, AND THEN BY ORDERS RAN THAT NEWSREEL IN EVERY THEATER IN CALIFORNIA DURING THE LAST WEEK OF THE CAMPAIGN. THE JOKE OF IT WAS THAT IT DIDN'T COST LOUIS B. MAYER A CENT BECAUSE THOSE CAMERAMEN WERE ON SALARY, BUT THEY HAD ALREADY SPENT SIX MILLION, BECAUSE THEY WERE JUST THAT MUCH AFRAID OF HIM. I CORRESPONDED WITH SINCLAIR DURING THAT ENTIRE CAMPAIGN AND WAS RATHER WOEBEGONE THAT HE HAD DEVIATED FROM OUR LINE TO FOLLOW THE EPIC AND TOLD HIM THE SAME THING THAT YOU DID AND CONGRATULATED HIM THAT HE LOST. So did I in California, [PERSONALLY?] Yes, personally. SO I JUST WONDERED WHERE THE OLD BOY STOOD -- IF HE HAD DRIFTED BACK OR WHETHER

Well, he doesn't know what's happened -- like a lot more.

HE MADE THE STATEMENT IN RALPH WAGNER'S SCRIPT -- THIS IS WAY BACK ABOUT THE TIME OF THE WAYNE PARRISH ARTICLE IN THE New Outlook IN '32 -- THAT TECHNOCRACY WAS "IT", THAT THIS WAS THE THING WHICH WAS GOING TO REVOLUTIONIZE AMERICA AND BRING US THAT HIGH STANDARD OF LIVING THAT HE HAD ALWAYS ADVOCATED, BUT I GUESS TOO MANY OTHER THINGS ....

Understand that I have no ill feelings against Upton Sinclair. [I KNOW HE WAS VERY MUCH FOR US AT THAT TIME.] Just the same as you had the Utopians out there, and the Utopians wanted this and that. And you had the \$20 every Tuesday and the \$30 every Thursday, and you had Dr. Townsend's Old Age Revolving Pension Plan. You also had the Farmer Labor Party in Minnesota

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

and the Dakotas, and you had the imitation of the CCF of Canada in the State of Washington. And where are they? They haven't even got a tombstone.

HOW ABOUT THE CCPers? ARE THEY ALL EXTINCT NOW?

Oh, they were extinct long ago. You had the [CB?] before you had the CCP, then after the CCP, you had the CSSD; then you had the ISE, and then the last one was the ACSE. The ISE hasn't any office. Langan is the only one left, and he has a little one-room apartment out in the back end of Chicago.

Now it was a dirty conspiracy. Do you realize that when Atwater and Briggs were in our office, the group paid \$5,000 to Murray A. Baron, a graduate of Fordham and Chairman of the Greater New York Committee of the Liberal Party, the party that has just put in Mayor Appeleteri and Hollings. We didn't know it at the time, but Atwater went over to Wallace's headquarters several times in May and June, 1948. Atwater was advocating that Wallace was going to get 17 to 18 million votes; so did Langans out in Chicago. They were advising the membership to vote for Wallace.

You had the individual up in Milwaukee who tried to take the Section with him into the CCP and didn't succeed. He commits suicide. Dean Riggins on the Coast -- there were only a few of them out there -- he's wanted by the federal government for kidnapping. Monty Easton is wanted for grand larceny in several states. Herb Clark, as I told you before, is on the platform doing the fund raising for Father Duffy's Peace Campaign. What a collection! [IT SAVED US CLEANING THE BARN.] Well, we knew that something was going on. The only thing was to let it boil up and get them.

DO OUR LEADING SCIENTISTS AND ENGINEERS SEE THIS AS A SOLUTION TO OUR DIFFICULTIES?

See Technocracy? [YES] They'll agree with you in private. Just try and get them to come out as a body. Here's the Federation of Atomic Scientists come to us as a delegation, and they point out, "Mr. Scott, we have had 100 of the top men in Washington. They have been before Senate and House Committees, military and everything else, for so many weeks, and there's been

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

over a million words of testimony and we haven't got anywhere." I said, "Why are you coming here?" "Because we consider you Technocrats experts." "Thank you for the compliment but you're a little late." "Well, but what are you going to do when you have 100 of the top nuclear scientists of the world explain it and you don't get anywhere?" "Oh," I said, "you didn't have to talk a million words. All you would have had to do was have that 100 turn up in grey and you wouldn't have had to say one single damn word!" Simple? You could grin at them.

THESE SCIENTIFIC MEN, I HAVE A LOT OF RESPECT FOR THEM, BUT OTHERS I DON'T HAVE A DAMN BIT BECAUSE IN THE FIRST PLACE THEY'RE PROSTITUTES OF THE SYSTEM THEY'RE TRYING TO UNLOAD. NOW HOW ARE YOU GOING TO GET THE "MIND" MAN INTO CONSTRUCTIVE THINKING FOR DECENCY AND A HUMANITARIAN WAY OF LIFE, AND HOW ARE YOU GOING TO TRANSPLANT HIM FROM THIS STUPID, LOUSY SYSTEM WE'VE GOT NOW INTO A DECENT SOCIETY?

Well, but you see, you're using the term that "they're prostitutes of this system." They're a peculiar kind of prostitute. There's never been that kind of prostitute in human society before. Now we don't care what the individual scientist, technologist, or engineer thinks, understand that. We don't care what he thinks -- whether he thinks he's supporting the status quo or whether he doesn't. All we're asking him is that every time he designs a process that he designs it to consume more extraneous energy per unit time, less energy per unit produced, and he's the kind of prostitute that kills off his customers. There are a few good ones like that.

There was the same thing years ago. A Russian commission wanted to know if we could recommend technologists to go to Russia. But what? They wanted to know whether these technologists and engineers -- why they wouldn't be Communists. We said, "That's got nothing to do with it. Never mind about what they are provided they can design." They couldn't see it then. As it turned out, of course, a lot of them were Trotskyites. I don't know whether that had anything to do with it or not, except they didn't hold their job long.

IN MEXICO, TROTSKY GOT HIS.

Oh, he got his before that. That was only the physical end

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

of it.

DO YOU KNOW ANYTHING ABOUT THE FARM?

The farm situation is this: We've been trying to buy a farm. We're going to make a report to the field. We have \$26,000 of funds. The money we have spent is a few hundred dollars for legal fees, for title search, etc. If we had another \$20,000, we could go into a different classification of land. In other words, you're face-to-face with the proposition of the increase in the price of land of any operating farm. Let's get that. You practically can't touch anything under \$40,000.

IS IT IN BUCKS COUNTY?

No, it's not Bucks County. It's in Mercer County. It's much less in Jersey than it is there. We thought we were going to close the deal on Labor Day, but then he decides he isn't going to sell until spring. You can't force an operating farmer to sell. The only way you can buy an operating farm today is either he breaks his leg or diabetes or something else gets him or his wife's health. That's the only thing. Why? Because they're getting an income out of that land. In order to equal the same income, they'd have to have \$300,000.

In other words, the Democratic Party, with their agricultural program, made first-class citizens and little businessmen out of the farmer. They're in the gravy. What we're trying to get, of course, is a farm with fundamentally good soil on it and water besides wells, and a house, and at least a good-sized barn with a good structure. As to whether they're fancy looking or not is not the point but a fundamentally sound structure that you can redo. The one we're after had a 14-room house, foundation under it. Well, of course, the decor inside was startling as far as the wallpaper and that are concerned. You'd scream, but you can fix that. But the joists were 8-inch white oak and the door frames were white oak. The window frames were white oak and the floors were 12-14 inches or more of 1-1/4 white pine. The rafters were pinned -- the same with the barn.

Now to do it over were two so-called bathrooms, although they weren't bathrooms -- they were placed in there -- and an old hot air furnace that didn't work very well; but it did have trees

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

and it did have water and the soil is good. It's 16 feet short of a mile in length. Three of the best loam soils on the Atlantic Seaboard. We know our soil maps, much to the consternation of real estate agents.

I UNDERSTAND A LOT OF THE SOUTHERN FARMERS ARE VERY UNHAPPY SINCE THE REPUBLICANS WON THE ELECTION BECAUSE OF THE DROP IN PRICE OF TOBACCO, CATTLE, BEEF ....

But that's happening all around the world. Africa is the big tobacco producer today. It's mounting fast; so are other areas. CARE WE IMPORTING TOBACCO?] We're importing a little bit, but the tobacco market of the world faces the upcoming producing areas other than United States. You see, in tobacco growing you can buy a farm down south, but that doesn't say you can produce tobacco on it. Oh, no. You've got to buy one of the licenses. That's a closed situation -- tobacco growing. Even if you buy a farm in the tobacco area, you can't grow tobacco unless you've got that quota license. [IS IT STILL FREE ENTERPRISE?] No, sir, not in tobacco. Ah ha!

In California, when I'd ask Californians who is the most upstanding Californian, they mentioned every name but the right one. The most outstanding Californian today is named George Harrison. He's the developer and father of Ocala-442. It is the only cotton you can plant in California by law, and you try to plant any other and they'll come in with a bulldozer and rip it up on you. It is a cross-development of the Mexican Jaca -- spelled with a "J". We leave the "J" off and it produces a prototype that's knocking over better than 700 pounds to the acre on the dry stuff, and down in the irrigated three bales to the acre in the big areas; and cotton pickers are walking down the field like this and you've got piles of cotton piled up.

THE ISSUE OF U.S. News STATES THAT IF THE CROPS ARE AS GOOD AS IT NOW APPEARS THEY WILL BE, WE WILL BE FACED THE FIRST YEAR WITH A BILLION DOLLARS TO BE PAID OUT FOR PRODUCT SUPPORT PRICES.

That's right. It is coming. Now the world cotton situation -- the acreage is increasing, and all the Russians and the Chinese have to do is put in some steel implements, a little fertilizer, and certified seed, and the five million bales of

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

China and India production can soar. The moment the world crop goes beyond 40 million bales, then our export market in cotton -- Goo' bye! We can have it all by ourselves. When it goes to 43 million bales, you can have the cotton out on the sidewalk.

This year Canada has 680 million bushels of what. Combined with our wheat and the carryover in U.S. and Canada, there are approximately 2-1/2 billion bushels of wheat in both countries. What are you going to do with it? They're pouring it down the chimney in the schools up there and filling other buildings with it. Give it away? No, you'll give it to the government on loan. So, if we have fairly normal weather in 1953 and we come in with similar crops, we're going to be loaded with cotton, cottonseed oil, wheat, and corn, sugar beets and tobacco, peanuts, and grapes. We've got so much wine now that we don't know what to do with it. They want the RFC to buy the entire wine crop, crush it and keep it in storage for the boys. One hundred eight million gallons of California wine is saturation for United States. When you get 240 million gallons, what have you got?

WELL, AS YOU SAID THIS AFTERNOON, THE SUCKER IS HOOKED TWICE. HE IS PAYING FOR THESE THINGS WITH HIS TAX MONEY AND PAYING AGAIN AS A CONSUMER.

That's right. You have the most amazing situation in the economic history of the world.

WITH THESE HIGH TAXES AND THE HIGH COST OF LIVING, WHAT IS THERE LEFT TO BUY?

What are you going to have left to buy? Well, you're finding that out now.

WHAT IS YOUR BUSINESSMAN GOING TO DEPEND ON?

Let's face the situation clearly. In food stores in United States, you have 6,000 supermarkets doing a greater volume of annual business than 320,000 other stores. Now the percentage of volume of business accruing to the 6,000 supermarkets is increasing, while that accruing to the 320,000 is declining. The same thing is happening to your farms, your small farms. Your dairy farms of Wisconsin and other places that have 15, 20, or 30 milkers -- even 50 -- it's too small. The total production is not

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

great enough to afford the capital investment to handle it. Besides that, labor doesn't want to work on a dairy farm 12 hours a day, 7 days a week. So the little farm is sunk, the little manufacturing is sunk, and the little store.

We're loaded to the eyes with stores, saloons, gas stations, and everything else. The population engaged in agriculture has declined -- continuing decline right along. Those employed in mining declined. Is manufacturing increasing? Take out the war materiel and no. So here all this population that once had an occupational thing over here in these various fields have gone into all the attempted what? Six million little new enterprises, five million additional to big enterprises after the war, you see. It clutters up the whole scene. Well, you're going to take the wringer and wring it out.

WHAT ABOUT REAL ESTATE, CHIEF? IS IT IN THE SAME ?

Real estate in various cities -- New York, for instance, is getting a surplus of apartments and a surplus of office space. It's showing up in various cities. In another year, if you build another million houses in 1953 .... CALL SET FOR NO DOWN PAYMENT.] Why, you can get it now for no down payment in certain places. [WHERE?] You just didn't look. Are you a veteran?

YOU WERE TALKING ABOUT HENRY WALLACE. WHAT WAS YOUR OBJECTION TO HIM?

Our objection to him? [I MEAN BEFORE .... ] Oh, before. He was suspect. He wasn't a good stooge. Our objection to Henry Wallace, and we stated it. He's the only millionaire that ran for election in '48, you know -- six nice, big hybrid farms in Iowa, hybrid chicken business besides the Agricultural Journal; but he's politically ambitious. Now in forming the Progressive Party, what did he form? A coalition of Communists, Progressives, Liberals, Socialists, and what happened? He put the finger on every single person that joined that party. Come on, admit it. That's what it was. There's a right deviation in the European sense with a vengeance; and then when the party tries to stand on its own, he deserts his own party. He's as bad as Norman Thomas on the platform in Madison Square Garden with Father Curran, Lindberg, Jasse, and all the rest giving the Fascist salute to the United States Flag. Don't take my word for it. Call up the

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Wide World or any picture bureau. You can get a great big picture of it. Norman Thomas started out to be a minister. He was always on a crusade, wasn't he? Well, that isn't the way to fight.

DIDN'T HENRY WALLACE ADVOCATE MORE PROGRESSIVE CAPITALISM? Certainly. IF WHAT HE DID HAVE WASN'T ENOUGH FOR HIM, I THINK ANY DECENT PERSON WOULD BE OPPOSED TO HIM.

Well, even if he hadn't advocated all of that, there's certain elements. In other words, you have to be suspicious of a right deviation any time. What happened? He couldn't win. He didn't even get electoral votes, while the Dixiecrats did. He made a fatal mistake in approaching the American public on the basis that he did. He gives his name, his time, and everything else to the support for a party and then immediately withdraws from the thing he creates. What kind of a thing is this? After he'd gotten the people to go to bat for him in various parts of the country, he got involved with the law, their jobs, and everything else. He put the finger on every one that joined him.

WHAT WAS THOMAS' ATTITUDE TOWARD TECHNOCRACY OR DID HE EVER EXPRESS ANY?

His attitude was, of course, we were kind of upstarts. [I RATHER WONDERED ABOUT THAT DURING THE PAST YEARS BECAUSE BACK IN 1932 I HELPED ARRANGE A MEETING FOR THOMAS IN DETROIT THAT REPRESENTED TECHNOCRACY AND THE FARMERS HOLIDAY ASSOCIATION, AND THE IMPRESSION I GOT FROM THE BOYS WAS THAT THOMAS WANTED THE SOCIALIST PARTY TO SWALLOW THE WHOLE KIT AND KABOODLE.] That's right. [OTHERWISE, HE WOULDN'T PLAY.] No. What's so strange about this organization -- in Canada, the WINNIPEG FREE PRESS or anything else frankly admits that we have a following in the public -- I'm not talking membership now -- of 100 to 1 in relation to our membership. We've drawn bigger paid admissions in cities in Canada than any Premier of Canada has ever drawn free. There must be something to it. We're not concerned whether they like us. After all, you know my technique. I probably have insulted more millions than any other human being.

I RECALL SO WELL YOUR CLOSING REMARKS IN AKRON ONE NIGHT. THIS WAS A GOOD MANY YEARS AGO. YOU ASKED AT THE END OF THE TALK FOR THOSE WHO THOUGHT THAT TECHNOCRACY WOULD BE A GOOD THING. A LOT OF HANDS WENT UP. "HOW MANY WOULD LIKE TO HELP

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

PUT THIS INTO OPERATION? COME DOWN FRONT AFTER THE MEETING. WE'LL TALK TO YOU." AS I RECALL YOUR SAYING, "THE REST OF YOU, GET THE HELL OUT OF HERE. YOU'RE NO DAMN GOOD TO YOURSELVES OR TO ANYBODY ELSE."

Still goes.

It's just like a certain big store owner right here in Ohio -- what? He was boiling mad, wasn't he? He said that I couldn't talk to him like that. I think a member said, "Well, how many meetings have you come to?" He said, "Well, every time he has spoken -- seven times or something." "But you weren't compelled to go. You bought a ticket. Why did you go if you didn't like it the first time?" Some member said, "Wouldn't you love it if the customers that came into your store came in there because they couldn't keep away from it?" I think you know who I mean up in Cleveland.

CHIEF READING A WRITTEN QUESTION: I DON'T UNDERSTAND THIS: "OPERATIONS OF COLUMBIAN SOLDIERS OF THE SUN, I SALUTE YOU."

That has nothing to do with Operations Columbia. That was said in Mexico in Nahuatl. Instead of saying the custom in very polite address in Mexican-Spanish, I used a few words that I know to an audience mostly of Mexican-Indian origin -- a form of address that hadn't been used in 1500 years. I didn't need the interpreters after that.

[ANOTHER WRITTEN QUESTION] SOMETHING ABOUT MRS. LINCOLN HAD TO SELL HER PERSONAL BELONGINGS OR SOMETHING IF MR. LINCOLN HAD AN ESTATE.

Well, I don't know offhand what personal belongings she sold, but Abraham Lincoln was a politician and occupied practically every political position one could occupy before he became president -- Postmaster on up. He became the legal representative of the railroad. As for his wife, of course, she put on that great tantrum scene before the inaugural train left Springfield, and she wouldn't get up off the floor, screaming and so on, until Abe promised her to put so-and-so in such-and-such position. I mean, he was the consummate politician of his time. He was for slavery in the slave states. He was opposed to slavery in the nonslave states. He wanted to build the Union Pacific

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Railroad 3 feet wide instead of 4' 8-1/2". Of course, his son Todd became president of the Pullman Car company, did he not? You want to check up on his estate? Try it. It's very interesting.

WHAT WAS LINCOLN'S AGE WHEN HE GOT SHOT?

Somebody else can tell you that better than I can.

I WAS TRYING TO FIGURE HOW LONG HE HAD SPENT AS A POLITICIAN. IT'S DAMN NEAR PHYSICALLY IMPOSSIBLE FOR HIM TO HAVE BEEN THE RAIL SPLITTER THAT THEY CLAIM HE WAS.

He never was the rail splitter.

HE DIED IN HIS EARLY FIFTIES. HE WAS BORN IN 1809. He never was a rail splitter. That was a publicity concoction. [HE WAS 75. HE SPENT 30 YEARS AS A LAWYER, 15 AS A SALOON KEEPER. THAT'S 45 OF IT AND .... ] Oh, well, that's not quite accurate. The saloon license, yes. The Postmaster, yes, and so on for several other things, but not the time element.

THE ST. LAWRENCE SEAWAY -- HAVE THEY STARTED THAT IN CANADA, AND, IF SO, WILL THEY FORCE THE UNITED STATES TO GO THROUGH WITH THAT?

Well, the Canadian Government is voting the funds and the political instrumentalities to proceed with the St. Lawrence River Seaway -- not actually digging, but preparations are all made. The nigger in the woodpile is this, that the power development will come under the jurisdiction of the Ontario Hydroelectric Power Commission, and under your treaty, the Ontario Hydroelectric Power Commission and the Canadian Government cannot engage with private enterprise on the U.S. side of the line. It has to be a government agency. [WILL IT BE A LONG TIME BEFORE IT IS COMPLETED?] Oh, no, the Canadian Government is intending to go through with it. THE FINANCIAL POST OF CANADA awarded the prize for the dumbest editorial of the year to THE NEW YORK TIMES on its editorial on the St. Lawrence Waterway. Big editorial -- the dumbest editorial.

Canadians feel rather strongly about this because they contend U.S. forces -- railroad, banking, and other interests -- have prevented the St. Lawrence River Seaway for years. [HOW

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

RIGHT THEY ARE.] Yes. Now, of course, with the Labrador ore and your Hanna boys up here and Republic all involved in the development of Labrador ore, along with the Hollinger interests, naturally they're going to push to get that Labrador ore in here. [BUT THEY WILL START DIGGING EVENTUALLY AND THEN FORCE THE U.S. TO GO AHEAD?] Oh, we'll come into it, but the mistake is that it should be 40 feet over sills, and the Welland Canal takes over eight and a fraction hours to go through there. If you had our locks, it would be 15 minutes -- 60,000 tons up and 60,000 tons down in 15 minutes, not 8-1/2 hours. Do you understand the difference?

YOU MEAN IT TAKES 8-1/2 HOURS TO GO THROUGH THE CANAL?

There are over 8 locks in the Welland Canal. They're water locks. Ours are hydraulic lift locks that do the 326-foot difference in elevation between Ontario and Erie in 15 minutes. [WILL IT CRAMP THEIR ENGINEERS TO SEE THE PRACTICALITY OF OUR DESIGN?] Oh, yes, their engineers see it but ours in United States refuse to admit it. [ARE THEIR ENGINEERS GOING TO BUY OUR DESIGN WHEN THEY BUILD IT?] Well, that's another matter. Out in the west, we've been able somehow or other to get the elevation of the big dam on the elbow of the South Saskatchewan the elevation we want. I can't say that we were directly responsible, but somehow or other the Dominion Water Resources Board arrives at the same elevation. [COINCIDENTAL] Yes. In other words, if they dam the South Saskatchewan at that elevation, in future developments all they have to do is cut across the little tongue and they could flood the Qu'Appelle Valley all the way down, 500 feet deep. That's a narrow gorge, you know -- the old glacial trough of the glacier, but until you make the St. Lawrence Seaway a complete development of all the waterway clean right up to Duluth and control the water levels of each lake and have 40 feet or more over sills .... Well, you can operate these Great Lakes in winter, because the new type of Kirby icebreaker will walk through 8 feet thick of ice at better than 5 miles an hour. It isn't the old kind that runs up on the ice and breaks it.

SPEAKING OF ELEVATIONS, LET'S TAKE THE COLORADO IN THE GRAND CANYON, THE COLORADO RIVER. FIRST YOU TAKE THE LITTLE COLORADO AS IT COMES IN THROUGH ALONGSIDE THE SANTA FE TRACKS, ELEVATION 2 TO 3 THOUSAND ABOVE SEA LEVEL DOWN TO WHERE SHE JOINS UP WITH THE BIG COLORADO AND COMES THROUGH

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

THE GRAND CANYON [INAUDIBLE] AT ELEVATION OF 7,000 FEET --  
WHAT'S YOUR GEOLOGIC ASPECTS THERE?

I don't know what you mean by that.

YOU'VE GOT A MILE IN DEPTH AT THAT POINT DEEP -- THERE'S  
5,280 FEET. COMING UP FOLLOWING YOUR LITTLE COLORADO AND  
YOUR BIG COLORADO, ITS ELEVATION IS BETWEEN 2 TO 3,000 FEET  
ABOVE SEA LEVEL -- NO GORHF THERE -- YET WE COME THROUGH  
THIS HIGH GROUND, THIS HIGH TERRAIN, AT THE GRAND CANYON  
WHICH AMOUNTS TO 7,000 FEET ELEVATION AND IT STARTS CUTTING  
DOWN AT AN ELEVATION WHICH IS LESS THAN THAT .... ]

Go on way up to the boundary of Utah and Wyoming and you've  
got Devil's Canyon up there. [I KNOW. THAT'S EVEN WORSE.] You've  
got such crazy things as the present Arizona proposal to take its  
share of the water where you build another dam above Boulder Dam  
to generate power, build your transmission line across the  
northwest portion of Arizona, put in a holding dam down below the  
Los Angeles pumping level, and then use the power with giant  
pumps to pump that water up over the ridge into the Saratoga  
Wash; then build a grand canal clean across Arizona several  
hundred miles to the Upper Salt and Verde. You could float a boat  
in it. Well, the evaporation is terrific.

What's our proposal? Put a dam up in Marblegate Canyon. You  
know where that is. Tunnel it through into the top end of the  
Verde through your generators into a holding basin. You'd  
generate more power and you'd have the water at 800-foot  
elevation for irrigation by pressure in the Salt and Verde  
Valleys. (AND THAT COMES DOWN WHAT THEY CALL THROUGH THE BLACK  
CANYON ROAD, IS THAT CORRECT?) Yes.

ISN'T THE WATER SITUATION IN THE SOUTHWEST GOING TO FORCE  
SOMETHING OF THAT KIND?

It is. You see, water is something no political party in  
this country will touch, and it's serious all over the country,  
not just one place. [IN THE SOUTHWEST .... ] It's more serious  
out there. The Bank of America has put money, for instance, in  
the Grasti. You come up over Tehachipi Pass, you look out there,  
and here's this Grasti development. It's been making money, but  
they've had to go down 360 feet deeper since the war.

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

Now looking north up the San Joaquin Valley, your little holdings are on the east; your big holdings are on the west side. You're drilling 2,000 feet down for water on the west side of the San Joaquin. Same way in Australia -- today there are four times as many wells in Australia, deep drilled wells, than there were 40 years ago, and it's only getting half as much water as they did when there was one quarter the wells.

WOULD THE CONTINENTAL HYDROLOGY ELIMINATE THE NEED FOR SO MUCH OIL?

Here's the proposition we're facing: Every single move that we're making is increasing the operating costs of this country. I'm not talking about wages or dividends now. Increasing the costs. Now we happen to have a continent that is ideally laid out by the geologic conformation of the ages. Your rivers and mountains run north and south. You can connect up the whole continent. It's the only continent in the world that you can do it with this facility. You can put in marine trains and develop waterways. I'm not talking of the old little dams. And you can haul 300,000 tons in each marine train. You can cross the continent coast-to-coast in several places -- 22 feet in internal waterways over sills, and your 300,000 tons in a marine train can be hauled for 1/11 to cent per ton mile.

Your marine trains would be over 6,000 feet long. They're in tandem -- 12 25,000-ton units. Your locks take two at a time. Also there would be giant recreation areas and hydrostatic pressure areas for water tables and fishing, etc. They would become a part of the permanent investment of the continent, but you also have to alter your railroad, and your railroads have to be redesigned to a 3-meter gauge or 9' 10-1/10" inside of rail to inside of rail. It brings your center of gravity down to below the top of the rail. Today your center of gravity is way up.

No matter how you attempt to design your Pullman car, your passenger car or your freight car -- take any speed and she'll whip like this; and every time she whips, she goes to work on the wheels, on the rails, and the roadbed, and your roadbed is continually being knocked out of place. Your rails are being pounded into spots in your wheels, and you can't do anything about it until you lower that center of gravity. When you do, you

MEMBERSHIP MEETING  
WITH HOWARD SCOTT  
8141-14, KENT, OHIO

12-14-52

can hit 150 miles per hour continuous speed.

Your passenger train, your freight train, don't have to be any longer than they are now, but they'll carry three times the tonnage; in fact, they could be shorter. Cars would be wider and lower, and as the main structural members today when you have to lengthen out your freight car, really a bridge-type of girder; therefore, that has to be steel. That's heavy. You shorten up your car and it's wider. You only need your through girder members steel. You can do the rest of it magnesium and your dead weight is down to a fraction of the present railroad car.

Don't be afraid to ask any detailed questions on any of these.

I DON'T UNDERSTAND HOW YOU GET THE CENTER OF GRAVITY BELOW THE TOP OF THE RAIL UNLESS THE RAIL IS UP QUITE HIGH ON THE TRAIN.

You have pedestal suspension. The bottom of your car is smooth like a boat -- no rods -- perfectly smooth; so you have no air turbulence. Your pedestal suspension comes up here on the side of the car and your wheels are up in it. Your frame comes on down like this. Would it lower it? I think you'll find that it does.

I'D LIKE TO GET BACK TO THIS PROPOSED TUNNEL ON THE COLORADO RIVER. WHERE ARE YOU ENTERING THAT -- AT WHAT LOCATION?

Well, that's up in Marblegate Canyon. I'd have to see the maps. And then you'd come south ....

END OF TAPE

NEW YORK BIRTHDAY TALK

4-4-53

HOWARD SCOTT

You know we Americans are somewhat naive, speaking collectively. We assume that there is a solution to every problem and that all problems are solvable. We've been led to believe that with all the propaganda and conditioning over the last 170 years; and in the last 25 years, of course, the intensity of the propaganda has increased manyfold. We have it thrown over our airwaves every day and now on television screens and in the printed periodicals that come out in the millions of copies. Those of us with a scientific and mathematical background realize only too well that there are various orders of problems, some of which are solvable, some of which have many solutions, others have only one solution, and there are some problems which are unsolvable.

For thousands of years, civilized man could only organize themselves around one general motif; namely, the application of human toil to the natural resources of their environment. Unfortunately, of course, they were sidetracked, delayed, betrayed, and every other adjective you can care to think up. Try to realize, if you can, that human society organized around human toil and hand tools has definite limitations and the problem has no solution; namely, the social problem of producing and distributing abundance to all.

It cannot be done now or at any time in the future by human toil and hand tools. There are two types, and only two types, of human civilization, although the sociologists and anthropologists like to classify them into many divisions; namely, those human societies which have operated in the past predicated on human toil and hand tools. The only way they could even have a slight increment in their total physical wealth was by having more human beings work longer hours. Now bear in mind that, regardless of the conduct of human affairs, no matter what theological-ecclesiastical system or philosophic concepts under which they operated would not make the slightest bit of difference. If the entire civilization of the Mediterranean had all been 100% Christians, it would not have raised their standard of livelihood 1/10 of 1

The same can be said of the Mohammedan, the Shinto, Lamaistic, Buddhism, or any other theocratic or philosophic conduct of human affairs, because they were imposed upon the

production of physical wealth by human toil and hand tools; and you can sanctify it around this globe as you please, but you do not alter the basic factors; namely, that 95% of any civilization producing its physical wealth by human toil and hand tools never had abundance. They only had a meager scarcity. The other 5% might, if it were organized somewhat more efficiently, achieve a few luxuries.

In the last 150 years, science and technology have come in. In the last 50 in this country, we have witnessed the technological growth never before seen by man; and it is having its astounding results. We in United States, of course, are the leaders of the world in technological application of physical science to the production of physical wealth. We have gone beyond anything, and yet our social and political concepts are back centuries ago along with human toil and hand tools.

It is very difficult for people to think in the new terms. They're still trying to think in the philosophic and political concepts prior to 1648. None of our leaders in the last 50 years has ever enunciated anything later than that. You read in the HERALD TRIBUNE a week ago on the editorial page -- it comes out smack! -- "Malenkov and the red technocrat." What were they trying to say? That the new regime coming in in the U.S.S.R., the ones that would displace the old Bolsheviks, would be the Red technocrats. Well, it's a kind of backhanded misnomer. What they were driving at was the technically skilled in the U.S.S.R. who have come up under the new regime would have to run it, and they were the experts, and they were harder-boiled than Stalin or Malenkov. Well, it's a kind of compliment in a way, if one cares to take it that way, but we in this organization have been like a voice crying in the wilderness for the past 25 years, and we have the satisfaction that we as an organization have maintained ourselves through the greatest depression in history and the greatest war in history. We're stretched out across this continent from Nova Scotia to Hawaii and from Alaska down to Panama. We've kept our nose clean and we've fought all kinds of enemies -- from without and from within.

True, people have accused me of many things. One of them is my inability to compromise. Well, that's correct. I'm not pleading any special virtues, but it probably was left out of my biological makeup. Here we are in 1953 looking forward to what?

Looking forward to a future that will be a greater vindication of Technocracy than the events of the last 20 years.

Now there are important factors in this world of ours today. One of them is arable soil, another is water, mineral resources, energy, and population. There is more propaganda put out every day on foreign relations -- what our policy should be, and it is still the same nonsense predicated on what? Somebody thinks somebody else thinks -- divorced entirely from reality. True, American business would like that kind of skullduggery to continue because it deludes the average American and there is nothing more deluded than our fellow countrymen when it comes to the physical facts of the world in which we live.

Climate on the long-range basis has a way of shifting. There is sufficient evidence to indicate that there is a long-range climatic cycle of approximately 800 years. In 490 BC, the Persians attempted with their armies to go northwest into Greece. The battle, of course, that ensued is famous in history, Ten years later, they were defeated again at Salamis -- mostly a naval engagement. That was the height or the depth, whichever you care to call it, of the climatic cycle. Eight hundred years later, Attila the Hun, in another climatic cycle in 420, reached France. Although he was stopped by military force, he was not defeated. Ghengis Khan, in another 800 years, came west in the 1220s and later in Batu in 1240.

In 1100, fruit was growing in Iceland, and what do we know today? The earth's temperature has been getting warmer for the last 50 years. Water? Why there would never be any trouble about water. This continent has more fresh water than any other continent on the globe. Down in Florida, why they have so many thousands of lakes that Florida would never have to worry about water. Travel north from Lake Okeechobee to Ocala in Central Florida today and you have bulldozers and graders tearing up the land by the thousands of acres. As far as you can see on either side of the central Florida highway, vast orange groves are going in, and they're pumping from the lakes. Some of the lakes are gone -- they're down to zero. Others are down to where they had to dig a channel from out here to let the water come in to their suction pump wells. Oh, and the water table of Florida is falling in spite of these thousands of lakes; and, remember, their pumping hasn't really started yet, because those orchards are

mostly young. When they come into the producing stage, when they throw the fertilizer on it by the ton, then they'll have to throw water on it by the millions and millions of gallons, and in 300 miles you can see it along each side of the highway. They're wondering how good their success is going to be.

A hundred years ago, the black flatlands of Texas were one of the great areas of this continent -- 27 million acres of it. It stretches in a broad band from northeast Texas -- what? In corn and cotton, cotton and corn, for 100 years. You drive through there today and the cotton is this high -- 130 pounds of cotton to the acre -- and they want to save it. And how do they want to save it? Same old nonsense: they wish to approach the individual farmer and have him mend his ways and do something about it. One doesn't tackle 27 million acres by individual farms, and it's not going to succeed.

Wherever you go on this continent, the story is the same. What is the story? The story is simply this: that we Americans, and I am including all North Americans, have in our application of extraneous energy to technological equipment in the exploitation of natural resources developed a rate of consumption that has never been known and is beyond the wildest dreams. It is one thing to think about tin cans as not being a problem, but when they exceed 34 billion cans a year, it's a story of a different order.

Automobiles? Yes, we're approaching the 50 millionth car. Steel? Why, yes, we are going to produce more steel in better plants, aluminum, anything you can name. Well, but what's the result? The Mesabi Range is gone as far as being the great producer of hematite. We'll have to erect costly plants to develop the taconite deposits that are 30% and less. We're developing Labrador and Venezuela. We have to go far afield for our iron ore.

Our petroleum? Now comes your nice little run: we propose to drill more wells this year than we have ever drilled. We'd like to drill 47,000 new wells. They even propose 55,000, but they couldn't get their allocations through. Well, the wells are going deeper and the yield is getting less. Oh, yes, we're producing 6,400,000 barrels a day. It's marvelous -- 47,000 new ones. Will it lift it? It's doubtful. What are the odds of finding a new oil

pool sufficient to meet the annual consumption of United States? The odds are greater than 1,000:1. What are we averaging per well in United States today? Eleven barrels per well [per day]. What is Venezuela averaging? Less than 300. What is Iran and Saudi Arabia averaging? In excess of 10,000 barrels per well per day.

Now you have a glorious example: down in Mexico, the Golden Lane Tampico field. They were one of the wonders of the world a few years ago, and every company, American and British and Dutch that was in there, went to it. Oh, yes. They had wells that hit 300,000 barrels of oil a day. The famous Serazul 4 and 7 -- one of them hit 82,500,000 barrels before it went saltwater from one single well. The Golden Lane. Why was it called the Golden Lane? Because its production of wealth was so great that you could have paved the area from the sea with gold. Well, what's wrong with it now? It's saltwater.

Now remember that our civilization here in this USA, there's never been any planning about it, but there has been the most glorious set of political expedients and economic business astuteness. We've gone in and exploited anything on the anarchic basis of you first and the devil take the hindmost. Well, we've got it up to such a peak, we've never concerned ourselves about continental costs of national operations, but only as to whether the individual can get by; and the sands are running out, because when you are in these orders of magnitude, you don't have to wait for your grandchildren. If you live another 10 years, you'll have it in your lap in probably the next 5.

Can you go on, can you operate 50 million passenger cars? It's extremely doubtful, even, if you can get them all on the road. The automobiles licensed in the State of New York are such that, if you put them out on the highway bumper-to-bumper, you haven't got enough road. Isn't it marvelous? We, who are so smart, we've got so much we can't even operate it. Well, it's going to bring its own reward; virtue, you know, always does. And we've been trying to warn this country what it is heading into, and we've been viewed as alarmists, pessimists, but we're in the amazing position that we're correct.

Now as a social movement, we're unique. We're the first social movement on this continent that is solely American. Every other movement that ever attempted to develop here was the result

of a foreign European importation. We didn't spring from any Communist, Fascist, or a so-called laissez-faire or Democratic background. Our intellectual godfather, if you like, was Willard Gibbs of Yale. We're revolutionary -- yes, revolutionary in our designs and our concepts -- far more revolutionary than Marxian Communism. We consider Communism in this day and age on this continent to be so far to the right that it's bourgeois. After all, if it hadn't been for technology in the U.S.S.R., there wouldn't have been much left of them today. And it was their technology that won in 1941 and '42 and '43 -- not their Marxian Communism. Very difficult for people to realize that.

We're headed into a crisis and the crisis isn't from without -- the crisis is from within. We have 5-3/4 billion horsepower of installed prime movers in United States. You get that figure? Five and three-quarters billion. And 92% of that is automotive. Let's realize that. Terrific! The capital investment, the terrific horsepower -- over 4 billion horsepower in passenger cars alone and one billion in trucks. And we're just going to blithely go on? We're going to get the oil from somewhere, aren't we? Well, it's very wonderful to be that naive. We'll have to learn the hard way, because costs across this continent are rising every day; and there's no attempt on the part of any state government, the federal government, or the Dominion Government of Canada or any corporate enterprise to devise and institute a reduction of continental costs.

Over 72% of your passenger cars are operated every day to take people to and from their work, and yet it's a costly form of transportation. We've gone out from our cities and put in subdivisions and created the suburbs -- predicated entirely on cheap automotive fuel and cheap automotive mechanisms. And those who have moved from the so-called blighted areas of the urban centers to the suburbs, what happens to them? They might have been something in the cities, but they go out to the suburbs and become more reactionary than those who lived in the suburbs originally. That's what happened nationally. Nothing more moral than a reformed prostitute or a reformed drunkard.

There's nothing more reactionary than those who just climbed up the last five layers in the social manure pile. So when they move to the suburbs -- they might have been liberals or Democrats in the cities, but they become the most reactionary Republicans

after a year-and-a-half to two years in the suburbs. And what do they wish? They want to see this country a collection of suburbs -- beautiful, nice little places all painted up, and they drive 30 to 40 miles to work every day. Isn't that wonderful? Well, if gasoline goes to 70 cents a gallon, do they drive? They don't drive. Can they walk? No, it's too far.

Well, how many wells has Texas drilled out of the total annually? How much oil does Texas produce out of the annual total, and how much deeper are the wells in Texas than the national average? They're going deeper, and that disparity is increasing every month; and when the bottom hole pressure of the wells in the Sprayberry Formation in West Texas comes down to 1,000 pounds, you've only got a couple of years -- 2-1/2 -- for that well to live.

We're living on top of a fictitious proposition, yet it is so ironic that we, the people with all this technologic knowledge and equipment, have so damn little vision that we propose to make this an American Century around the world to repeat and multiply all the jackass mistakes we've made in this country and make them bigger and better around the rest of the world. It's very hard for people to realize that.

We're going to uphold Japan? What are we going to uphold Japan with? American coking coal? American petroleum? American iron ore? Ah, but wait a minute! Japanese coal will not coke. It requires 55% addition of some other coking coal to make it coke. Japan has not the iron ore resources -- it hasn't any. Copper? Yes. Are we going to send the iron ore from here, the coal? Where is it going to come from? Why, according to Truman and according to Eisenhower, we're just going to vote funds, aren't we? If we can't get it over there any other way, we'll have the armed forces of United States escort it over. The only trouble is, these armed forces of United States don't know where in the hell they're going to get it from.

Now, these are serious things. Why? Because we're proposing, as a nation, to underwrite what? The economic future of 84 million people on one set of islands increasing at 1.6 to 2 million a year. It is a nation that has not the economic wherewithal of natural resources to support that many people today, and yet we're proposing to hold it up.

Well, let's go around the world with the same nonsense. We're proposing to hold up Italy. What's Italy got? We're proposing to hold up Britain, Greece, and other parts of the world. We are. Great Britain is buying 2.5 million tons of hematite ore from Wabana, Newfoundland, buying ore from North Africa, and it's trying to buy iron ore from the Russians. Only the Russians have kind of declined. Now, where can you get it? France? Yes, France has iron ore. Last year, in 1952, Western Europe produced just under 60 million tons of steel. In another year, maybe a year and a little more, they'll have 72 million tons of producing capacity, but where are they going to get the iron ore for 72 million tons? From Norway and its taconite deposits up on the North? Oh, no. That's the biggest installation of mining equipment in all Europe, just completed by a Technocrat, the Director of the Section in Milwaukee, Wisconsin. Nordberg Engineering. No, that will not produce enough.

The production of Swedish iron ore is limited by law. The export of it is further limited.

Great Britain has iron ore -- a little left. Most of it is 23% Fe.

Now let's get to it. Even to operate on the ilmenite ore of Alsace-Lorraine, it's only a 30+% Fe content; in other words, Alsace-Lorraine is less than 40%.

You have to mine 3 tons of iron ore to produce a ton of steel, and, at 72 million tons capacity, that means an iron ore production of 225 million tons. Let's bear in mind that United States never in its palmyest days ever mined 225 million tons of iron ore. We were millions and millions of tons from that peak. Could Alsace-Lorraine do it? There's a question.

Now, remember, that we in United States are officially underwriting all of these fallacies, one after another -- you can enumerate them. And we're living in that false paradise because of our creation of debt, both of the expansion of national credit internally and the underwriting abroad. We have never had it so good. But can we maintain it?

For the first time in our history, there are more farms in

United States than there are farmers, and there are less farms in United States than there are in Japan. The total number of farms is declining yearly. Farm employment has dropped 2 million since 1946. It will drop a further 2 million in the next 6 years. Our mining employment is declining. Our manufacturing employment, in spite of the increase in total production, is falling in weekly hours and gaining nothing worth mentioning in its total employment.

We are a kind of an aborted proposition of a capitalist welfare state predicated on the production of war materiel; in other words, war materiel production in United States accounts for approximately 15 million jobs. And we're in that beautiful position that, if we can't get a war of indefinite duration, what are we going to do with our so-called economy? Ikie doesn't know. Let's be frank about it. He doesn't know a damn bit more than Harry. They're not trained to know. It's not their job. Don't blame them as individuals.

Now we are in this state; try to visualize the picture that you have 6 million individuals since the war go into all of the little parasitical operations from gas stations to appliance stores and salesmanship and everything else, and 5 million were added to big business, and yet the productive employment and the operational employment in United States that it really required has declined. Bear this in mind -- has declined and will continue to decline. Well, where does it go? You have to have a war to hold it up, but wars don't last forever; and the last war wasn't so good for us, because it increased our total productive capacity, and we've been in a hell of a mess ever since trying to find areas to exploit and customers on which to dump our surplus; and those dirty Russians, you see, have pulled down an iron curtain, along with the Chinese bamboo curtain, and, of course, we can't get in there and do the squeeze plays.

Now all of this productive capacity -- big increases in here, but percentage-wise it's been bigger increases in other countries, and we have been responsible for it. What are we worrying about? Why, every American businessman is wondering what's going to happen next. Your small business is up against that unique proposition that their growth today is 3 to 4 times what it was 12 to 13 years ago, and their inventory is 5 times and 6 times what it was 12 years ago and their net is down.

Remember that Alice in Wonderland? "They're going faster and faster just to stay where they are." Well, how fast is it going? Let's take a grocery store, a chain store of this country. Six thousand supermarkets in United States are doing a greater annual volume of business than 326,000 other stores. The volume of business accruing to the supermarkets is increasing; the volume of business going to the 326,000 is decreasing. There are more supermarkets going in and the squeeze is on. All you have to do is watch your paper and you'll notice there's more and more consolidations of corporations all over the country. It's been going on but it's been played down.

Well, the same thing in agriculture. The farms that are really producing the products of the nation, the bulk of it, are only a small portion of the total farms. The great number of farms are those marginal producers who would be better off if they were taken off the land. They are only working themselves to death for nothing.

Years ago, when we first introduced the cotton picker down south, the southerners didn't like it. We pointed out to them then that human labor was too costly, even if you got it for nothing, and that the only way they could solve some of their problems that were peculiar to them south of the Mason and Dixon Line was to introduce sufficient technology to where their problems became the problems of the nation. How true it has become, because the negro has migrated and you can find empty housing in Georgia, South Carolina, North Carolina, Virginia, Alabama, and Louisiana. Where is it going? They "done gone" north and west. And the negro comes down there in big cars from the north, loads 8 or 10 in the car, and he "done" leaves there. And what does he say? Well, no matter how tough it is up north, you can't be as bad as you are down here.

Yet the south hasn't had a vision in God knows when. Don't forget the harvester was demonstrated in the fields of Virginia in 1832. I could go down a long list of inventions and discoveries done in the south by southerners, but it had to move from the south. Your beautiful plantations of South Carolina were started by that grant in 1670 and became the rice plantations. Oh, yes, they have the live oaks, beautiful gardens today -- flowers in them -- but that age is gone. They robbed the timber,

and outside of a few areas, what do you find? One mule trying to pull a little plow -- sometimes there's two mules. You can drive along the road and right alongside the power lines there are houses -- if you can call them houses -- with electric light in them, and others right alongside of them that have no electric light.

This is the nation, you know, that wants to lead the world, and it can't even lead itself; because it has never done a job of fundamental thinking, it's never resolved the conflicts that were fundamental in its political and economic makeup. They're still there and they're coming up today, and your Congress -- what? Votes the oil lands back to the states. What does it all mean? It means mainly that your bourgeoisie have never in human history been in the position that they are today. They're atop the biggest manure pile mankind has ever known, and it's so perfumed they simply cannot see beyond their nose.

Well, can we fight another war such as World War II with the iron ore resources of the Mesabi Range? No, it isn't there, and if we keep this kind of production up, the oil question is serious; so is our copper, our lead, and our zinc. So is water, whether it is Albuquerque, New Mexico, where you have water in one section of the city every alternate day, or California or Arizona -- all over the continent, it's the same way. There has never been any planning; we never had to bother.

Now with these huge orders of magnitude, we'll not only have to bother, we'll have to do something about it. One major oil field in Texas goes out, it won't make any difference whether Eisenhower is in the White House or Truman in Missouri. It won't alter the incontrovertible physical fact that you can't operate this high-cost transportation system of United States on 70-cent gasoline. It just won't go. We'll have to have a reorientation on this continent.

Bear in mind that we're the only major national entity on the face of the globe whose political institutions have undergone no fundamental renovation in 160 years. Yes, they were all right back when there were oxcarts and stagecoaches. George Washington could have sat down at the same dinner table with Plato and they would have understood each other thoroughly. Why? Because the pattern of the production of physical wealth was no different.

Abraham Lincoln or George Washington wouldn't know what it was all about today any more than our present elected political officials do.

Now remember, we are speaking from a background that few organizations -- in fact, no other organization -- ever had in this country. The Roosevelt regime developed a beautiful naive idea that if it could only grab enough Technocrats and ex-Technocrats, they would have sufficient brains to make the New Deal a lasting reality. They grabbed 18 of them. Yes -- Power Administrator. Price Administrator, Office of Defense Transportation, atomic representative on the Combined Chiefs-of-Staff -- go on down the list. They brought them in, and those Technocrats thought they were really going to achieve something. We said, "Farewell and best luck -- with your resignation first." And they were pretty sad. They served to the best of their abilities in a political administration with some distinction, but it did not achieve what they thought was possible; and Roosevelt, of course, an astute politician, was no different. It's no different -- the same kind of setup.

The problems are not insulated, and we're in that sad position that we're already committed to underwrite various parts of the globe and their continued operation, and at the same time to operate these continental United States in its anarchic conflict of high-cost, individual interests and political grab bag, and we of Technocracy contend you can't do it very much longer.

Thank you.

---

A QUESTION ABOUT BUSINESS CYCLES AND SOMETHING ABOUT A COMPLETE REVOLUTION.

Well, I don't know what you mean by one complete revolution.

WELL, WE'RE LIVING IN WHAT WE CALL PROSPERITY NOW; THEN THERE'S A RECESSION, THEN A DEPRESSION, THEN A REVIVAL, AND THEN PROSPERITY AGAIN. DO YOU THINK THAT WE ARE CAPABLE OF TURNING THE WHEEL ONCE MORE?

That's a misnomer in the way it's stated. We have an economy in United States that can attain an apparent equilibrium of purchasing power, provided you can create sufficient new debt each year in the capital goods industry in which an annual sum of salaries and wages will be paid out in the construction of that capital goods equal to or greater than the capital drag-down in the consumer goods field. Now, if you can do that, you can maintain an apparent equilibrium of purchasing power for a short duration. We have done it during the war by credit inflation. We, in United States, have been through the period of the last decade, and it is not monetary inflation -- it is credit amplification.

Monetary inflation only occurs where you have a dearth of goods and where you print zeros or additional currency. Now the difference is this: under monetary inflation, theoretically you could go to 100 zeros and you would not alter in any way, shape, or form the physical processes of any major national economy; but under credit amplification where you are continually liquidating the obsolescent equipment by government credit -- extended, of course, to private enterprise, you're wiping out the obsolescence. You're continually changing the physical processes, and the end result of national credit amplification is totally different from the wildest monetary inflation.

Now, how far can you go with it? Well, if we put in the 41 to 42 million kW that is under contract for the central stations of United States, that would mean a total possible -- at 100% load factor -- of the same number of kW hours per week as we now have. If you think that there is any problem of production with our existing energy conversion, what will it be when you double it?

Now this is not a question -- those terms of going through one complete revolution do not mean a thing, because you're not going to get a second Texas in oil or a second Mesabi Range. Am I making it clear? In other words, God and His Holiness the Pope will not, in their greatest moments, ever change the geologic conformation of Greece or of Japan.

Now he had to go because he has to drive down to Philadelphia. His father was Director of the Prince Albert, Saskatchewan, Section of Technocracy. Name is Dunlap. His father

was superintendent of the Canadian National Railroad, and his uncle-in-law was president of the Canadian National Railroad. I'm referring to the one that asked the question.

I don't know whether that answers some of you, but come ahead -- you ask me questions.

CHIEF, WHAT ARE SOME OF THE FIGURES ON SOCIAL SERVICES AND WHAT THE GOVERNMENT IS INTENDING TO DO ABOUT THEM, AND SO FORTH?

Well, the Eisenhower government is no different than the Truman. It's simply a multiplication of stupidity. And, after all, let's bear in mind that there are lots of Truman mess in Washington, and the campaign was what? On that Truman mess, was it not? And now we have the administration in Washington which is the greatest military junta that we ever had in the history of our country; in other words, we have more generals in this administration that we've had in all the administrations of the past 162 years. We have General Motors, General Rubber, General Petroleum, General Steel, General Eisenhower, General Mess, and General Confusion.

Now, let's take a short look at some of these things. Truman, with his Truman Doctrine, you know, when he pulled the rug out from Under Marshall in '47, we stepped in to aid Greece and Turkey; and, of course, there's been Point Four and ECA and other things. Now, Turkey was producing 60 to 70 million bushels of wheat -- just barely enough to get by in a good year. So we move in the fertilizer and the experts from the Department of Agriculture and the others, and we move in the tractors and the new farm equipment and certified seed wheat. What did Turkey do last year? 250 million bushels. She has wheat for export. It's going to have a bearing in a moment.

Argentina had a drought last year, with only around 70 million bushels. What's it going to have this year? It's going to have wheat for export, is it not? What's corn, for instance? What's soybeans and linseed? Australia will have 193 million bushels plus -- the crop is in. Canada had 688 million bushels last year. Combining United States and Canada, we're almost 2-1/2 billion bushels of wheat. We'll have one of the biggest carry-overs. In other words, United States Government is going to buy

wheat. Wheat exports have fallen and fallen terrifically.

Now cotton. The acreage -- they're trying to stop it this year, but lo and behold, the latest reports are that there are 26-1/2 million acres and it may top 27 million acres. In other words, we may hit in excess of 16 million bales of cotton this year of 1953, but our cotton exports have fallen, have they not? Brazil has surplus cotton. Remember that Brazil followed the example of U.S.A. and bought the cotton off the market, just as Uncle Whiskers did. So did Sudan; so did Egypt; so did Turkey. They all followed Uncle Whiskers' example, and now Brazil has got what? A nice, huge carry-over. And it was cotton that broke King Farouk, and now Maghi has stepped in and bought the entire output of Sudan. So he's making the mistake of following Uncle Whiskers, too.

Now the cotton acreage in Russia, China, India, and other places is being expanded. So the probabilities are that if there is no drought in the cotton acreages of the world, there will be a total annual crop somewhere in excess of 35 million and maybe it might reach 40 million. Now, let's put it this way -- a conditional statement -- that if the world crop reaches 40 million, we do not export cotton worth talking about. We can have it on the sidewalks to tie up the mules with, or bumper pads for the cars, because the rest of the world will have cotton and the rest of the world will have wheat. I'm not talking now of the areas that cannot eat the wheat -- do not misunderstand me. I'm talking of the producing and exportable areas that will have more capacity than they have ever had in history, and we in United States will buy more butter, more cheese, that is, the U.S. Government will, more than a thousand tons of butter a day -- let's get this clear -- and may have an excess; in fact, a little while ago it was in excess of 100 million pounds, but it may be in excess of 200 million before we're finished. The same way with cheese.

We'll have to buy wheat and we'll have to buy cotton to pull it off the market. And we're going to do what with it? The Eisenhower Administration isn't going to do anything different than what the damn Truman Administration did. But remember, that not only is a threat on the internal market of United States, but externally they're developing threats. The carry-over of wheat, of cotton, and Africa has come up as a great tobacco producer,

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

and we're not going to enjoy that lovable monopoly of being the world's great exporter of tobacco alone. So all of these things are adding up and they're adding up fast. It isn't going to take five years.

What will the population increase in Britain and Japan and West Germany be in five years from today?

Have I covered it the way you wanted it?

CHIEF, ARE THE SUDDEN CONCILIATORY MOVES OF RUSSIA GOING TO HELP TO GREASE THE SKIDS ECONOMICALLY AND POLITICALLY HERE?

Well, the one thing we cannot stand in this economy of ours is peace -- 15 million jobs. If we go on manufacturing war materiel and piling it up, it will all be obsolescent unless we use it right away. We can't use it right away because we haven't any allies and we don't know what to fight for in the first place.

Now remember here in the last two weeks you had a big lead article in LOOK MAGAZINE of the aviators objecting to the heavy American planes. I gave those figures in California over 20 months ago -- a matter of record. So it takes 20 months for it to get to be a big story in LOOK. As far as the jets are concerned, the Russians are taking the initiative again.

Eisenhower was going to do something about Korea. Well, he's just too damn slow, that's all. Be frank about it. And there's nothing sweeter than noblesse oblige, is there, in international relations. Now remember, under these circumstances the Russians are much more dangerous than they were under the previous one. Why? Because they're playing us at our dirty work. You catch the irony of it.

You've got a lot of questions on your minds. Come out with it.

I GUESS THE RUSSIANS REALIZE THAT WE GOT OUR EYES TOWARD SOME OF THE TRADE THAT THEY GET. THEY FIGURE WE'RE GOING TO GO OUT AND COLONIZE THEM. YOU CAN'T BLAME THEM MUCH FOR LOOKING OUT FOR THEIR OWN INTEREST.

Certainly not. You can never blame anybody for looking out for their own interest. [THEY REALIZE THAT IF THEY COME HERE, OUR OIL WILL ALL BE GONE. THEY GOT PLENTY OF OIL. THEY REALIZE WE WOULD LIKE TO GET OUR HANDS ON IT.] Well, the 8 and a fraction million square miles -- the land area of U.S.S.R., has 3 times the area of sedimentary rock formations of petroleum potential than we had in United States in 1859. In other words, if you go to play chess, don't send a pinochle player.

CHIEF, WHAT IS THE BACKGROUND OF THIS FELLOW BOLEN THAT'S GONE TO RUSSIA?

Well, both Bolen and Kennan were attaches in our Embassy in Riga right after World War I. In other words, that was the fighting front. They were fighting just across the Riga River, and when my erstwhile acquaintance, Bill Bullock, got the opportunity to be First Ambassador, he takes Skip Bolen and Kennan from the Latvian U.S. Embassy in Latvia to go to Moscow, Bolen, of course, is the relative of Count Krupp von Bolen of Germany. And Mr. McCloy, who has just been appointed Chairman of the Board of the Chase National Bank -- very interesting, isn't it? That's one of the payoffs in this offshore oil deal. The Chase Bank is controlled by whom? [ROCKEFELLER] Certainment.

Now, McCloy was our administrator in Germany. The Chase National Bank, in the years gone by, never was considerate of McCloy, You know he had to be of a different order, but he is made Chairman of the Board, and McCloy is the brother-in-law to Adenauer of West Germany. Don't take my word for it. Do you begin to smell something?

I CAN'T UNDERSTAND IF THAT'S THE CASE WHY IS McCARTHY, WHO IS ALSO OF THE SAME GROUP, WHY IS HE STALKING BOLEN?

You see, they are accusing Bolen of being soft towards the Russians because he was the interpreter at the Yalta meetings, Now you have this violent antipathy to his, Bolen's, and anybody else that was in on this presumed sellout by Franklin Delano Roosevelt of our particular interest. Of course, that's utter nonsense, because Roosevelt couldn't have sold it out and the Russians really didn't need it. Why? The Kuriles were in their grasp anyway and you're only giving them what they were going to take anyway.

Let's be frank about it, but this whole propaganda that's going on, that a few people who wrote books and the few who were in on it, caused the collapse of Chiang Kai-shek in China. Correct, isn't it?

Now remember, there's one thing that Jimmy Walker, the famous Mayor of New York, said in the relation to the ban on books, that "No book ever ruined a girl yet." Well, to say that somebody's idea as vague as Lattimore's or Bolen and his conduct -- official conduct -- of translating was able what? To turn the whole thing upside down? That's utter idiocy, and the reason, of course -- Eisenhower, in the election campaign, remember, made the statement that he'd say anything to win. Remember the press is sore on him for that reason. He made that statement publicly -- he didn't care what he said but he'd say anything to win.

What did he do? McCarthy, Jenner, and all the rest, he kowtowed to them. Now he's doing the same thing -- he, Dulles, and Stassen are bowing to McCarthy, because if they didn't, they'd be like Bolen. They'd be soft towards Communism and the U.S.S.R, Am I making myself clear? In other words, this is government by blackmail and intimidation. Pretty fast company! Bolen speaks Russian; so does Kennan. I was the first to bring out that Kennan was the "Mr. X," that Kennan was persona non grata; well, certainly, he deserved to be persona non grata. Stupid now to make a statement like that. The Russians treated him far nicer than I would treat him if he made that mistake. They were gentlemen -- they just told him not to come back. I don't know whether I've given you what you want on Bolen.

ABOUT THE NEXT GENERAL ELECTION, HOW ARE WE GOING TO BUY THAT?

Well, we're going to try. We're going to try to defeat the Social Democrats. After all, Adenauer and his Catholic Centrist Party of Germany, we built it up just the same as we built up De Gasperi and his Catholic Centrist Party of Italy. [COMMENT] Oh, yes. Well, we'll stoop to anything. Don't get me started on how dirty we really are. We bribe them in France, Belgium, Holland, West Germany, Italy, Greece, and Japan. And now the Japanese, who have got their freedom, don't like us anymore. Is it any wonder?

In other words, how long are we going to stay in Japan? How long are we going to stay in Europe? Britain and other countries in Europe and Japan have got to get resources from someplace. Can we supply them? And they've got to get markets. Can we supply the markets? We've pointed this out for years. They're pulling in Lattimore for investigation. Lattimore never said anything that was definitive categorically. We have stated it time and time again. We're not even asked to come down and testify. Why? [IT'S JUST ONE OF THOSE IMPONDERABLES.]

What else have you got? Come on, let's have some fun out of this.

SUPPOSE LIKE DURING THE LAST DEPRESSION -- SUPPOSE WE END UP WITH ANOTHER DEPRESSION, WOULD GERMANY HAVE THE RESOURCES TO WAGE ANOTHER WAR?

Which Germany?

WELL, EAST AND WEST -- IT DOESN'T MAKE ANY DIFFERENCE.

Oh, yes, it does.

I' LL SAY WEST. SUPPOSE THEY GET TOGETHER. HOW FAR DO YOU TRUST THEM?

Well, what resources has West Germany got? [WELL, THEY'D HAVE TO GET THE EAST OUT OF THERE.] What resources has West Germany got? Let's settle that first. [THE SAAR -- THAT'S ABOUT ALL.] No, come on. What resources? Give me the name of them. [POPULATION] Outside of that, what have they got? [COAL] Coal, that's all. [A CERTAIN AMOUNT OF IRON ORE] Where? [IN THE RUHR AREA] Where's your iron mines? [ANSWER INAUDIBLE! They once were, but they won't do anything. Austria has iron mines. [LORRAINE HAS IRON MINES.] Ah, well, that's differentthat's over in France. That's Alsace-Lorraine, that ilmenite ore I'm talking about. [YOU SEE, THERE'S STILL A EUROPEAN STEEL-COAL PORTION .... ]

That's the same old attempt. They've been trying in history to reconstruct the old Holy Roman Empire for over 6 or 7 centuries, and your Schuman Plan is an economic attempt to do what Hitler tried to do, what Napoleon tried to do. Now what was Napoleon's objective? Where did the Romans go to geographically?

Did they go east of Vienna? No. Did they ever reach the Elbe? No. What did Napoleon try to do? What was tried before him? And what was Hitler's objective? The abrogation of the Treaty of Westphalia, was it not? And if he had succeeded, he would have consolidated Western Europe.

Remember that Hitler's first program enunciated in 1919, at the same time that Mussolini started, was a separatist. To separate the Rhineland, Baden, Württemberg, Bavaria, and Austria to join with what? Portugal, Spain, France, Italy, and Belgium. What does that sound like? The old Holy Roman Empire again. The Schuman Plan is what? The Schuman Plan doesn't take in Denmark or Norway or Sweden, does it? You analyze the Schuman Plan down and you'll find in essence it is an attempt on the economic and business field as an intrusion to attempt the same thing; namely, the economic organization of the old Holy Roman Empire. I don't know whether you've ever considered it in that light before, but it is and it won't work.

Let the Holy Roman Empire belong in history along with the Crusades. Time and history have buried them; they might as well stay buried.

No, West Germany hasn't got the resources, but it has 9 million to 10 million additional population, and it's not raising the amount of foodstuffs that it raised before the war. We are committed again!

IT'S IMPOSSIBLE FOR US TO HAVE A DEPRESSION LIKE THE ONE WE HAD IN THE THIRTIES, ANYWAY.

It won't be the same. It'll be very different.

INAUDIBLE QUESTION

The more you pump into these economies, the more fictitious it becomes, because you increase their population growth. What are you going to do in 5 years? Japan will have how much population? It will be close to 100 million. Italy is 47 and going up at half a million a year. Britain now is getting close to 51 million.

All of this is predicated on what? That great naivete of the

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

assumption of the salving oil of our Christianity or our Mohammedanism or any of our other philosophic concepts; namely, that if you believe the good Lord is going to provide. Brother, when Sarazul went from night black to sea green, it didn't stop for Him -- it just went from petroleum to saltwater.

Now, it's all right personally having individual beliefs, but don't try to run the giant technological mechanism such as our country is today on any philosophic or theological assumption. It's dangerous. We're in a much more dangerous position than Russia was in 1917, because we have a population that is fully convinced that the only place change should happen is in the rest of the world but not here. We're satisfied.

It's like down in the Keys in Florida where I spent a few weeks. No water on the Keys -- you have to pump it in. The navy has a pipeline, and if you want to build on the Keys, well, you drill a hole in the coral, put in some dynamite, and you blow out the coral. Planning? They're not doing any planning, but they want to exploit it. Now there's no water, you understand; you have a number of cesspools -- it increases, doesn't it? And it goes in the porous coral rock, and the tide comes in a little and takes it out a little bit and shoves it back. Well, you don't need very many cesspools before there's no fish on the Keys in Florida. Oh, wait a minute! Long Island Sound? How about Boston Harbor? How about the Merrimac River? The Connecticut? [HOW ABOUT THE DELAWARE RIVER?] Yes, the Delaware, that you can't even swim in today, the bacteria count is so high. They have the Interstate Police posted there. The Chesapeake?

Now, the rest of the world is very rightly taking objection to it. They want our technology, they want our know-how, but they don't want our anarchic method of exploitation and waste. We're not doing so good in Burma or in India right now, are we? Or Ceylon or Indonesia.

I WOULD LIKE TO GET THE STRAIGHT OF A COMMENT ON THIS PARTICULAR MATTER THAT IS COMING UP TO THE FLOOR AT THE PRESENT TIME. WHEN THE MARSHALL PLAN WAS FIRST PROMULGATED, OF THE SUCCESSFUL MARSHALL PLAN WAS THAT IF EAST-WEST TRADE INCREASED BY 25% OVER THE BEST PRE-WAR . INSTEAD OF THAT, WE FIND THAT THE HAS DECLINED, AND NOW THE U.S. IS TRYING TO ENFORCE A COMPLETE EMBARGO OF ALL

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

EXPORTS FROM OUR ALLIES AND ASSOCIATED POWERS TO ANY OF THE IRON CURTAIN COUNTRIES AND SATELLITES. IT IS TO THE POINT NOW WHERE SENATOR MCCARTHY SEEMS TO BE ABLE TO PERSUADE THE GREEK SHIPOWNERS NOT TO TAKE CARGO TO THE CHINESE OR EVEN PORTUGAL. HAVE YOU ANY COMMENTARY ON HOW THE INCREASED PRODUCTIVITY OF WEST GERMANY AND OTHERS IS GOING TO STAND UP AND FOR HOW LONG TO THAT SORT OF A MARKET.

It's the same as I was pointing out about Japan and West Germany. It's the same thing. Where are they going to get the markets? Where are they going to get the resources from?

ARE THERE SOME PEOPLE IN WASHINGTON THAT HAVE ENOUGH REALIZATION OF THE CRITICAL REALITIES TO BE CONCERNED ABOUT THAT?

Look at the excerpts of our United States Senate and our Congress over the last 12 years on "the situation in the Far East, Not a single article written, even in the Pacific Institute of Relations, in which the physical facts on the Far East were given, but it is always that if you could -- if Chiang Kai-shek could modify himself or if the Germans could do this or that; in other words, if you could persuade them to be men of goodwill and see it our way, then the problem was solvable. Here I come back with this thing again.

Now there are certain problems, yes, in which there are thousands of alternatives, because they are minor orders of magnitude. When you get into major orders of magnitude, the number of alternatives decline to what? And there is only one solution, and we deny that. We, as a people, deny that there is any unique solution -- any unique problems and any unique solutions. Why, there's always thousands or tens of thousands of alternatives! And that isn't what happens in the physical world, and it's going to be proven to us.

WHAT I AM TRYING TO GET AT IS THIS: IN THE EISENHOWER ADMINISTRATION, THERE ARE A GREAT NUMBER OF MAJOR BUSINESS OPERATORS WHO HAVE--SOME OF THEM ARE FAMILIAR WITH THE NECESSITY OF FOREIGN TRADE IN ALL AREAS OF THE WORLD IN ORDER TO MAINTAIN A MARKETPLACE FOR THE HIGH PRODUCTIVITY WHICH IS CHARACTERISTIC OF WHAT IS CALLED THE WESTERN WORLD. WHAT I AM TRYING TO FIND OUT IS WHETHER THERE ARE ANY OF

THOSE IN WASHINGTON WHO CAN RAISE THEIR VOICE OR BE HEARD SOMEWHAT TO POINT OUT THE DIFFICULTY OF THE COURSE NOW BEING PURSUED OF CONSTRICTING MARKETS AT A TIME WHEN TECHNOLOGICAL PRODUCTIVITY ALL OVER THE WESTERN WORLD IS INCREASING AT AN ENORMOUS RATE?

And that behind the Iron Curtain is increasing faster. They have about a 6% faster rate of increase in industrial expansion than Western Europe. [THE BASE FROM WHICH THEY OPERATE IS SO MUCH LOWER THAN THE WESTERN WORLD THAT THEY THINK THEIR HIGHER RATE OF INCREASE IS UNDERSTANDABLE AS AGAINST A GREATER INCREASE ... It's coming up fast -- it's coming up faster. [I KNOW THAT, BUT, EVEN SO, THE BASE FROM WHICH THEY STARTED IS MUCH LOWER .... ] You can't continue that high rate of increase very long before you reach that point in technological capacity to where nationally you can commit technological miscegenation and then you're off to the races -- using it in polite terms; in other words, they have been forced to develop a technology.

Now, your latest Russian machine tools are developed on the coordinate, and why do you look through the eyepieces? To see the linears and ? No. They project it up on a screen, ladies and gentlemen, in front of you 50 to 100 magnification. And you've got a four coordinate, what does it mean? It means that you can take measurements to 1 millionth of an inch, and they're building them for sale and on exhibit. Your frequency electronic disintegration drilling a hole through a carbide block without a drill or taking it off the face of the metal. They have them for sale. In other words, let's quit this nonsense.

Try to realize that when the Japs came over here some years ago and went to your great loom builders up in New England and wanted to buy the latest type of loom, they were refused. And they went out in the second hand market and bought up the old Draper looms. They took them back to Japan and turned their engineers loose. What happened? They came out with the Toyota Loom, and the Toyota Loom -- was it slower or faster? Only 2-1/2 times! Now we're facing a textile revolution that's going to shake this textile world to pieces, because it's a circular loom and it hasn't got any shuttle -- it's vertical. Better get a conveyor belt, though, to take it away on this end. You don't even have to fasten it down to the floor, and when the thread goes in, how does it rotate? With a lot of mechanical noise? No,

it's rotated in a magnetic field -- no mechanical contact at all. Where have you got this? You have them operating, ladies and gentlemen, in the Belgian Congo, and you haven't a damn one here except the one on exhibit.

Now what did they discover down south where you build your brand new beautiful plants? The southerners -- wonderful construction crews come in -- big boom -- business all over the place; but the new plant? Each new plant employs less. You're building a gigantic hydrogen bomb plant down there, and you know how many men are going to be in one section of 37 acres of that plant when it's finished? Remember, there are thousands in there, trailer cities and everything else. How many men are going to be in 37 acres? Seventeen, and they're going to have motor scooters to run around the 37 acres. I mean it's really funny the southerner today -- the young southerner -- saying yes, look at it. Bigger and better than we ever had. Nice lake out here in front of the plant, beautiful park, and paved parking lot. Restaurant and cafeteria -- there isn't anything in New York City any better. A women's lounge room, if you please. Now this is in the south -- the women's lounge room. Hmmm. Oh, yes, they've got everything, but as they told me, the old four-story plant over here (Gastonia), that's got so many thousand employees. "Well," I said, "Don't you like the new plant? How many is going to be in that? "Maybe 104." They at last begin to realize that they are not going anywhere.

This thing is happening all over. Take the hours in the rubber industry today. You've got tires, you've got rubber goods galore, but can you get 30 hours in the plants in Akron? Can you get 30 hours? No, you cannot. They are out trying to get two and three other jobs. Are the average wages in South Carolina as much per week today as they were a year ago? No, they are not. They're \$4.21 less. Why? Because the overtime is going out; the hours are getting shorter. That's happening all across the country. And are our taxes going to be reduced? You laugh!

YOU DELIVER YOUR BEAUTIFUL SPEECH HERE TONIGHT TO THESE PEOPLE, AND ARE THESE PEOPLE GOING TO GO OUT AND DELIVER YOUR MESSAGE TO THE PEOPLE OF THIS COUNTRY?

This is on tape recorder. This can be heard across the continent. [WELL, IT SHOULD BE, BECAUSE I THINK TECHNOCRACY HAS

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

GOT A LOT ON THE BALL, BUT .... ] I know, but this happens to be a birthday dinner, sir, and you're a guest and you're privileged. If I were talking to a large-scale audience, I wouldn't be so nice. You've never seen me handle one.

CHIEF, I READ IN [Babson's Report] THAT JAPAN AND GERMANY, THEIR TOTAL DEBT AFTER FIGHTING A MAJOR WAR, THEIR DEBT -- THE COMBINED DEBT OF THOSE TWO COUNTRIES -- IS LESS THAN THAT OF THE CITY DEBT OF NEW YORK. Correct, approximately. AND THAT THE POTENTIAL THREAT OF BOTH GERMANY AND JAPAN, NOT FROM AN ECONOMIC STANDPOINT BUT PRODUCTION-WISE, IS GREATER THAN THAT OF OUR WORRIES WITH THE RUSSIANS ACCORDING TO HIS IDEA. WHAT'S YOUR COMMENT ON THAT?

Well, what we've done is, we've thrown in the technology all over -- France, Germany, all over the world, wherever we could throw it in. And in Africa, we've done a terrific job. We're in there for asbestos, we're in there for copper, nickel, cobalt, uranium -- everything. Now, you know when the harbors were full of boats with machinery going in -- Mombassa and every other port. All right, your South Africa -- where's it going? 2-1/2 million whites and 9 million blacks. Your confederation is coming up with North and South Rhodesia, Tanganyika, and Nyasaland. Well, you know a little of what's happening in Kenya Territory, they had to grab what?

Political overtures in West Africa? You're putting in railroads, you're putting in plants, you're putting in power plants -- but out of 160 million blacks in Africa, you've got the magnificent total of 5 million whites. Now the more you put in, the faster it's going to accelerate.

Technocracy's warning to the British and other whites in Africa: get out now and get out nicely before you have to go out in the dark of the moon with black cork on your face in high gear -- if you get out. You're not going to do it that way. There are things that could be done in Africa, but not what we're doing.

WOULD YOU ATTACH ANY SIGNIFICANCE TO THE FACT THAT RUSSIA'S NEW AMBASSADOR TO RED CHINA HAPPENS TO BE AN EXPERT ON STEEL AND LABOR RELATIONS?

Well, China has, of course, in Manchuria -- you have the

giant deposits at Fushun; one of the largest open pit coal mines in the world is there. The coal vein is 500 feet thick at one end and runs down to 20-some feet in more miles than that. Now, if you were looking at the map -- here is Fushun here. Fushin is next in Yao, and you come up to Sian and Chengta -- that is coal like that, and oil clean into Turkestan, and iron ore. [I UNDERSTAND THE COMMUNISTS ARE SHIPPING COAL INTO JAPAN NOW. THEY'RE BUYING IT SO THEY CAN MAKE BULLETS TO SHOOT BACK .... ] Oh, I know. Where is the coal coming from to run the Austrian steel plant? Our coal is rather expensive landed over there. You can't continue to pay that price very long. The coal will have to come from the Teschen, an area of coal in Czechoslovakia. And they are building what? A 1.5 million kW steam station in that area -- 100,000 kva unit in a single shaft -- 3,600 rpm, nitrogen cooled, 1,875 PSI and 950 heat. And those are standardized units. We're still building our units tailor-made for each one. See the difference? They can turn their standardized units out for a fraction of the installed horsepower cost than we turn out ours. We won't learn.

Our automobiles -- what? We have more millions of them; the same with telephones. There are more telephones in New York City than there are in one half of the world. And we still haven't got a transportation system or a communications system that is in accord with the technological advance. We're still designing cars that are a cross between Madame La Princess carriage and the old buckboard -- you know, the bronco buckboard. It's got to be dolled up, but it is not a transportation vehicle. If it was, it would be wider gauge and there would be no axles, individual wheel suspension, your engine would be pancaked in the rear, and there would be fluid drive to all four wheels. There would be about 1,100 less parts than the standard American automobile, and it would have about 460,000 miles of average life.

Now the automotive industry of United States is planning on an annual production of 6 million cars. In order to keep this thing up, you scrap them, junk them, you throw them away. Can you afford to keep on dumping these billions of containers of metal in tin cans, these millions of tons in automobiles, on the scrap heap? Tell that to an Austrian or a German. What would he say to you?

HAVE YOU ANY FIGURES AT ALL ON THE EXTENT TO WHICH NATURAL

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

RESOURCES IN THE FORM OF JELLIED GASOLINE, STEEL, AND OTHER METALLIC PRODUCTS HAVE BEEN USED UP IN THE KOREAN WAR SO FAR?

It's the most expensive war we've had. We have the figures -- the details, the millions of tons and so on. That doesn't mean anything to most people, because they can't carry them. The fact is that we've fired more shells per mile of front than we ever fired in World War I or World War II, and we fired more shells than the total expended in World War II. We dropped more bombs than we ever dumped on any section, by several times, in World War II, and our average bomb cost of our big bombs -- not the little fragmentary bombs -- is \$140,000 per ton delivered over target. Who's crazy?

YOU MADE A STATEMENT THAT THE UNITED STATES COULD NOT ENGAGE IN ANOTHER MAJOR WAR OF THE MAGNITUDE OF WORLD WAR II AT THE SAME RATE OF EXPENDITURE RELATIVELY AND STILL HAVE RESOURCES AVAILABLE TO MAINTAIN THAT FORM OF DISPERSAL OF MATERIALS. I WAS WONDERING HOW THE KOREAN WAR FITTED INTO THAT?

But the Korean War wasn't big enough -- 154 and a fraction mile front; and then we're only occupying a portion of that. [DID I UNDERSTAND YOU TO SAY THAT THE BOMBS THAT HAVE BEEN DROPPED IN KOREA TO-DATE EXCEEDED THE TOTAL IN WORLD WAR II OR MERELY GREATER THAN THE TOTAL IN RELATION TO THE SAME AMOUNT OF FRONTAGE?] Yes, and the shells fired are greater.

COULD YOU COMMENT ON HOW ATOMIC ENERGY IS GOING TO HELP US IN OUR PRESENT SYSTEM?

Atomic energy can be developed. [DO YOU THINK IT WILL BE?] But what have we been fighting about? We have been fighting to prevent the development of atomic energy in this country. [DO YOU THINK THEY'LL STOP IT? THE PETROLEUM INTEREST?] No, that isn't it. When it's safely in the hands of the du Ponts, the Monsanto, and the rest of them, it'll be developed,

Now, you're going to witness the greatest looting of natural resources still in possession of the federal government that has ever been known in our history. Public lands, where? Anything, they're going to give it away: they're going to grab it in a last vain attempt. I'm giving you fair warning, and it isn't going to

save the situation. It's going to accelerate it. They want to give back Grand Coulee and Boulder Dam, don't they? They want to give the forest lands of the states away. Charles "Electric" Wilson proposed to issue bonds and put them in the Treasury in private bonds and cancel the federal bonds and thereby reduce the debt. Well, Charles "Engine" Wilson, twenty years ago, was a good managerial executive, but today he's shot. He stayed too long with General Motors,

CHIEF, WHAT'S THAT VERY VALUABLE MINERAL DEPOSIT IN KOREA THAT .... ?

Where our front turns up like this on the eastern end? [I THINK SO.] Second largest tungsten mine in the world. We have ulterior motives, sir? You want to check on it, look it up in THE IRON AGE. THE IRON AGE will give you complete figures of production; that mine in 1952 ran over 400,000 tons. So, we're not quoting from any Russian document -- from a very conservative periodical. We had an election, and what happened? A beautiful sellout.

PERMIT ME, IF I MAY, TO SUGGEST THAT THERE MIGHT BE A CHALLENGE TO THAT STATEMENT. I THINK THE GENERAL SHOULD BE GIVEN CREDIT FOR ANNOUNCING IN ADVANCE TO THE AMERICAN PUBLIC THE FACT HE WAS GOING TO DO, NAMELY, TURN OVER THE ECONOMY OF THIS COUNTRY TO PRIVATE OPERATIONS; SO TO BELIEVE HIM AS A MATTER OF MORAL PRINCIPLE, SO YOU COULD HARDLY CALL IT A SELLOUT. YOU COULD CALL IT AN ADVANCE NOTICE TO THE AMERICAN PEOPLE WHO ACCEPTED THAT SORT OF ....

No, I wasn't talking about that. I was talking about the Democratic Party machine. The Irish Catholic Democratic machine and the Italian Catholic Democratic machine sold out. It only took the transfer of 3 million votes to do it. They knew about it in Rhode Island, they knew about it in Massachusetts, they knew about it right here in New York. They knew about it in Ohio and Illinois, And poor Stevenson, he didn't even know whether he was in or out. Look at the poor now, dressed up in trousers like this that don't fit him, his hat in his hands going in to see the Emperor of Japan. on a world tour to make out what? That there's unity in U.S.A. How low do you have to get? He wouldn't come out fighting, because he had the dead albatross of Truman and the rest around his neck; and I don't think he could

have come out fighting anyway, because Adlai is not a fighting man. I'm not unduly deprecating him.

From our standpoint, the election of Ikie was the best thing that could have happened to this country, because we're going to have the boys .... And the Italians can say it this way. The only thing that's going to bring it home, whether it's water or black wax of Texas or whether it's the Central Valley of California or our goal, oil, or where it is on this continent, the story is the same. The Socialist Party is defunct. Look at what Norman Thomas has done. He winds up really involved in the same garbage can.

WHAT ARE THE SOLUTIONS TO SOME OF THESE PROBLEMS?

You have to organize an entire continent today. One corporation, one county today is not enough, and how are you going to do it with a public that says, "Oh, I can go to Miami every winter -- what's the matter with me?" Look at the states he drives through to get to Miami. And he's afraid to stop in places for 300 miles at a time. The negro kids out in the fields walk like this up to the car to dance to get pennies. This is U.S.A, -- this isn't darkest Africa.

VOID IN TAPE . our national resources, national planning, let alone world resources? He could like the devil! As a lawyer, yes, don't misunderstand me, his habit patterns for thinking -- there isn't a perspective for these people. You can't expect somebody who has been in a position all his life where is looking to his record card -- you don't expect him to have vision, a perspective in new ideas. Do you?

What happens in this country? Why, if he develops something, we won't touch it. No, he goes abroad. He takes his smokeless powder and his machine gun with him, and the British make him a Knight and a multimillionaire. His name? You know it: Hiram Maxim.

Now we are using a smaller portion of our national intelligence than these other countries are, and if we don't snap out of it, it'll be too late. You're going to talk to 800 million people of the world when their steel and oil production is up, when they have a technological excess? Oh, no, you're not. Not

when you manufacture all these different kinds of automobiles, refrigerators, and everything else. When you're wasting your resources down the drain every minute? No, you'll have to have a planned operation of this continent.

What do you suppose we developed this map for? Down here is the only coking coal in South America -- right in that corner. There is no other. Now, if the dominant entity in this hemisphere had been in South America instead of in North America by historical accident, how far north would they have to go on this continent to achieve the same physical, economic balance of operation as this one would do if they were operating in this territory in red? The answer is they would have to come up to the Great Lakes. And this -- what's his name? -- managerial revolution -- he came in and asked about that, and then he was in a quandary as to why that was so. Then after an hour or so -- there was just too many figures -- he wanted to know, do you have to know that much? More than it takes to write a thousand books.

It takes a new kind of statesmanship -- not the kind of statesmanship that is predicated on devising ways and means of placing millions of human beings at a disadvantage, but of the maximum rate of operation of an area as an operational function. Now we have it here in essence. We have the capacity. We have the knowledge. We do not require a single iota of additional knowledge. Yet we as a people, collectively, are denying that change is necessary and imperative here. Change everywhere else, yes, but not here.

We have a failure of a major oil field -- two major oil fields -- and you'll have more revolutionists overnight in the United States than the Communist Party has in Russia, and it won't be because of Marx, or Engels, or Lenin. It will be because they're damned well spoiled. Are you going to tell 30 million Americans they can't go to work and feed the wife and kiddies? Is there any state or county or municipal government in this country, or the federal government, that takes that attitude? Oh, no. We're for the people, yes. They had better be under those conditions. And they are going to move fast. To do what? Duplicate the same errors they have been doing for the last fifty years. Then it is a question of whether violence breaks out or not.

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

Well, I don't know whether I've covered it for you or not. [DO YOU VISUALIZE A NATIONAL PARTY THAT WOULD -- OF TECHNOCRACY GIVING ITS BACKGROUND OR LINE OR WHAT HAVE YOU, DO YOU EVER VISUALIZE IT THAT WAY?] Look, a political party in the United States would be a gross error. What is required on this continent is even a limited creation and preparation of public opinion to where there is some understanding of the problems they face. Now, unless that occurs, any formation of political parties, the first half dozen will end in the debris of their own collapse when they attempt it.

We are naive in another way, you know. We think that all we have to do is get elected into office, and that the election to public office immediately transforms the average moron into what? A genius capable of designing a new civilization. It's very charming, but I regret to say ....

You see, we have never had in human history, never faced a change of the order of magnitude that has to occur here. The Russian revolution was nothing. Ninety-six to ninety-eight percent of the Russians went on living as they had been living for centuries. Here is a different world. We got millions overnight. So now we try to build it up that the Russians are going to come over and drop bombs on us. They don't have to drop bombs on us. The most dangerous thing we have is to permit the collection of business bourgeoisie to continue to operate this economy. That's the most deadly and vicious thing that any human society has ever had.

I WANT TO HEAR SOME ALTERNATIVES OF YOURS ON OTHER PLANS, BUT I AM A MEMBER OF THE COMMITTEE OF THE COUNTY MEDICAL SOCIETY THAT HAS A RATHER BROAD PROGRAM AT PRESENT AND EVENTUALLY WILL TRY TO PLACE AN ADVERTISEMENT IN THE PAPER WHERE THE MEDICAL SOCIETY WILL GUARANTEE MEDICAL SERVICE TO ANYONE IN THE CITY OF NEW YORK, EVEN TO THE EXTENT OF SEEING TEN OR TWELVE PATIENTS IN NEW YORK MONTHLY FREE IN WHICH ARE ATTEMPTING TO DISPENSE MEDICAL CARE TO ANYONE. NOW I REALIZE THE DIFFERENCE OF DISPENSING A REFRIGERATOR ON THE SAME BASIS TO ANYONE WHO MAY NEED ONE, BUT ISN'T IT POSSIBLE THAT BY GIVING AWAY A LOT OF THINGS, SOME GENERAL ..... COULDN'T BE INAUGURATED THAT WOULD HAVE AN IMMEDIATE APPEAL TO THE PUBLIC-AT-LARGE?

Well, of course, you see the reason we created Technocracy -- with its underlying motive was we created it in such a manner that everybody would steal it. That clear? And claim it as their own. Now we nailed a social ante up at the top of the board. Everybody in any move is going, in any political or social crisis, to move their ante up closer to that, aren't they? They have to, because all over this continent they'll say, oh, hell, the Technocrats got you people beat a mile. Why bother with that nonsense? Each time any group or any political unit in this country attempts to get social insurance by giving away more or what? Now the more you load this internal mechanism up with the aged, with relief, with care, with social benefits, the more you are loading up this political-economic mechanism, correct? And there comes the day [WITH NON-PAYING]. Right, and non-participating.

Now, you've got twenty-four million in this country that are over -- how old? [ .... ] And by 1970, you'll have double that. How many? .... ] And can it go on, can that curve continue ad infinitum into the mathematical blue? It cannot. So, we're all in favor of anyone wanting to give more and create more social benefits. We'll whoop it up anytime for that. It's only a short duration. Offer them all you can, Dr. Burton.

YOU SAY TECHNOCRACY IS ALL FOR GIVING IT AWAY FREE AS LONG AS IT IS ON THIS CONTINENT?

Giving what away free? [VARIOUS THINGS -- MATERIALS.] Well, you're going to have to offer them more. You're going to bribe them. You're going to offer bigger and bigger bribes. And is it going to help? It accelerates it, does it not?
